THE exhibitors at the recent poultry show in this city were all pleasant gentlemen, glad to answer questions and talk about their stock. Some of the best points in poultry management could be gleaned from them. A day can always be well spent at such an exhibition in talking with successful breeders and learning their methods of feeding, handling and breeding. The best plan is to think out a list of practical questions before you go, and to take notes of the answers. Strive to avoid all foolish questions. Frame the inquiries, if possible, so that they can be answered in a few words.

The use of incubators appears to be on the increase. The most successful breeders are evidently using them, and many of their prize chickens were hatched in this way. Good breeders say that they can raise 80 per cent. of incubator chickens with the use of brooders and constant care. The idea of supposing that an incubator can think and keep track of its own thermometer is absurd. Dozens of different incubators and brooders were on exhibition, with eggs in all stages of hatching. A large number of chicks broke the shell each day, so that visitors were able to study the process. As they first struggle out from the shells, the chicks appear to be about as insignificant specimens of life as one can imagine. After tumbling about among the eggs for a while, they become dry and gain strength enough to stand or run about. In several incubators we noticed these stronger chicks pecking at the eyes and combs of their feebler brothers who were unable to defend themselves. The little rascals had become canibals at the age of a few hours. This trouble could be obviated, however, by removing the chicks to a brooder.

It is customary to present these chicks to visitors. Many city people took the little things home to keep as pets. The strongest evidence of the vitality of incubator chicks came from an old colored women who stood watching an incubator: "Dey give me one ob dese chickens las' year, an' I took it home in my basket. It's so big now that it drive every rooster outer sight." When asked how she took care of it, she said: "I's de greatest critter you ever did see ter keep things warm and full of vittles." A good hint there for many more scientific poultrymen.

One curious exhibit that attracted much attention was a large Game capon taking care of a small brood of chickens. The capon looked like a large hen with a rooster's heavy tail and spurs. His comb was undeveloped and his beak and head had little of the warlike appearance for which his breed is noted. The chickens tumbled about over his great spurs in their efforts to get under him for warmth. The poor fellow looked unhappy enough. The practice of caponizing is but little practiced except by those who make a business of supplying fancy poultry for epicures. The work is most properly done by skilled veterinarians. There are men who make a specialty of it and are able to make good all losses. The ordinary poultryman will make but bungling and cruel work of the process, and had much better let it alone.

We were sorry to see a few lousy fowls among the rest. It is a shame to send such birds to an exhibition of this kind. Not only is their condition evident to visitors, but there is danger to other clean and healthy birds. Most breeders are seldom troubled with vermin. Lice are produced in filth, and will not live in absolute cleanliness. Frequent cleanings, and applications of white-wash, with dustings of buhach are the most practical methods employed in fighting vermin.

The successful poultry breeders appear to think almost as much of their birds as they do of their babies. Gentle treatment is absolutely necessary in successful poultry keeping. The birds can be handled about like kittens. One very successful breeder said that he could not expect to leave his flock of hens in the care of strangers, for ten days, without a shrinkage of 30 per cent. in egg production.

Most poultrymen believe that to get the best out of the business, one must devote his whole time to it. There appears to be less difference, as regards profit, in the breed of poultry than in the breed of man. A nervous, irritable, quick-tempered man had better leave the poultry business alone. He should never buy an incubator at all events. A man who is willing to learn patience and perseverance, cannot find a better teacher than an old hen, or a better college than a poultry yard. The poultry business is surely increasing in profit and importance. The hen on the farm, uncared for and often neglected, still pays her way. Poultry form the best combinations with the growing of small fruits, flowers or bees. The best results are obtained when the farm is given up to exclusive poultry growing. The whole attention is then given to the work, and the very best methods are studied out.

It seems strange to think of a hen worth more than a cow; yet there were plenty of such on exhibition. One little six-pound rooster could not be bought for $300. How many ordinary cows would it take to equal that price?

DRINKING FOUNTAIN FOR FOWLS.

A TIN or galvanized iron can that will hold about half a gallon, flat on top and bottom, is provided with three legs (Fig. 71). The bottom should be made like an ordinary pie tin, and the can part be large enough to come within half an inch of the sides at the bottom of the tin, and, about half an inch up from the bottom of the can, there should be five or six one-quarter-inch holes (shown at *c c*). In the bottom there should be an inch hole fitted for a cork or an ordinary can top screw-cap, as shown at *a*. To fill, invert the can and pour in the water through a funnel; cork or fasten up the hole and set the can on its legs; the water will run out of the little holes around the base, and partially fill the trough around the can. As the fowls drink out the water below the top of the holes, a little air forces itself in, and more water runs out, but not enough to flow over the edge of the trough. The advantages are, that the water is always fresh and clean, the fowls not being able to make it foul; nor can they get their wattles wet and so cause them to be frozen, as frequently happens in very cold weather. The legs should be about six or eight inches in length, and flare out at the bottom a couple of inches, so as to make it stand more strongly. It can be picked up by the legs and brought into the house if the weather freezes out-of-doors during the night. Another important advantage is that it can be made oblong or square, according to choice. J. T. C.

WHITE LEGHORNS. From Nature. Fig. 87.

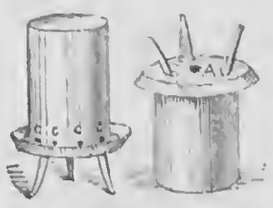

Fig. 71.

Miscellaneous.

OLD FRUITS UNDER NEW NAMES.

C. M. HOVEY.

(*Concluded from last week.*)

Prospective troubles from the innovation; need of a uniform rule in the new nomenclature; objections from personal experience; the proper course to follow; prevention, not amendment, in order.

IT is the coming generation of fruit cultivators that are to be burdened with this new style. The innovation has come just as many carefully prepared volumes have settled down upon a solid and ascertained basis—the result of nearly 50 years' labor in the importation, cultivation, identification and dissemination of all the fine fruits under generally accepted and well known names. There are to be cultivators after Messrs. Downing, Wilder, Barry, Thomas and others have dropped their earthly labors, who will be looking up the fine old fruits which they will read of in their fathers' day, and they will consult Cox, Kenrick, Prince, Thomas, Barry, the Magazine of Horticulture, and the Fruits of America, only to find that many of the pears and apples have, according to the new nomenclature, gone out of cultivation, their places being supplied by new varieties.

Again, there must be some uniform rule in the new nomenclature. Paradise d'Automne Pear is to be simply Paradise; but the Winter Paradise Apples and the Summer Paradise are, I presume, to remain, otherwise there would be inextricable confusion—in two Paradise apples, one Winter and one Summer. That old pear, Jalousie de Fontenay Vendée, was called in some catalogues, "De Fontenay Vendée," but having been described in pomological works of authority under the former name, it has been retained. It would be going backward to strike out the "Jalousie," although there was and is a "Jalousie" Pear.

Mr. Downing took the liberty of calling a pear raised by Mr. Knight, of Rhode Island, Knight's Seedling, creating the supposition that it was the same as some of Thos. Andrew Knight's seedlings. It was first generally described by me, in the Magazine of Horticulture, as "Knight's R. I. Seedling," which name should be retained in full. It is unnecessary to say that, though it is advisable to have short names, it aids persons who are selecting from catalogues, to know that a certain apple or pear is a summer or winter fruit, as Summer Queen, Summer Rose and Summer Bellflower Apples; and Winter Nelis and Osband's Summer Pears, which it is proposed to shorten to "Nelis" and "Osband's" only. "Brevity" is said "to be the soul of wit;" it is not always a safe guide in science.

Some years ago, I raised two seedling peaches, one of them the most beautiful peach I ever saw, as it was the richest I ever tasted. This one I named the "Cambridge Belle;" the new code would strike off the Cambridge—which would be as unmeaning as it would be absurd. The name had this significance, that I wished to honor the beauty of a Cambridge belle, and as the peach was the most beautiful of all peaches, so the Cambridge belle, to my eyes, was the most beautiful of all belles, whether a Washington, a Baltimore, or a Boston belle. So with the other, which I called "White Ball," to denote the snowy whiteness of its skin and roundness of form; to nickname it "Ball" would be an outrage on all the proprieties of pomological science. And who is to decide how many of the adjectives shall remain and how many be rejected?

One thing only can we do to purge hereafter our catalogues and books from these inappropriate and often vulgar names, and that is, to appeal to the intelligence of all cultivators, and kindly urge them to reflect before they bestow names upon their productions, which, if really meritorious, are to be known perhaps to future generations. A zealous raiser of seedling fruits might possibly produce a pear as good as Dana's Hovey, and name it the "Rooster" if he happened to be politically inclined; and nobody could deny him the right to do so. Like all prohibitory laws which attempt to prevent a man from doing what he pleases provided it is lawful and does not interfere with the rights of others, such attempts will surely fail. A gentlemanly protest will do more. No! Societies or individuals can only do what President Wilder has so well and gracefully done—suggest that no more inappropriate and ugly names be given to our fruits. It is what I urged 30 years ago in the Magazine of Horticulture. Mr. Bull, the raiser of the Concord Grape, asked me what name I thought would be most appropriate, suggesting one himself, which should embody his own name: but I said at once, "Call it by the grand, old, historic name of Concord," the site of the first battle-field for Liberty, and the place where the grape originated, which was to be as victorious over all other grapes as Capt. Davis's company was in their famous Spartan defence of the bridge a few rods from Mr. Bull's garden.

No! let the names remain as we find them in pomological works; but let us try and prevent the adoption so far as we can, by example and practice, of any but euphonic and appropriate names to express some characteristic of the fruit or tree, to honor the grower, his country, his town, his city, his friends, his family; or recall the pleasant reminiscences of romance and poem.

CATALOGUES, ETC., RECEIVED.

THE FOURTH ANNUAL REPORT OF THE NEW YORK EXPERIMENT STATION.—We are indebted to the very efficient Director, Dr. E. Lewis Sturtevant, for the above report. The New York Experiment Station is doing very much, and, for so short a time as it has been organized, is doing much good. Among other things we notice very carefully conducted feeding experiments; also trials of various cereals and vegetables. From experiments made with regard to the effects of various depths of planting on the germination of wheats, it seems that the best depth, all things considered, is from one to two inches. While a larger per cent. germinates, and that very quickly, at a quarter to a half inch, and while it makes a very satisfactory growth during the Fall, when the seed has been planted at those depths, the wheat does not seem so capable of withstanding an unpropitious Winter. Deeper than four inches, the proportion that germinates very rapidly diminishes, and the proportion that is winter-killed rapidly increases. Trials have demonstrated that White Australian, White Belgian, Welcome, New Australian and Race-horse Oats are all one and the same variety. Probsteier and White Probsteier are also identical. White Russian, White Novelty and White Zealand are all one. The same may be said of Chinese Hulless, Pringle's Excelsior and Pringle's Hybridized Hulless. In vegetables the confusion of names and the giving of new names to old varieties are many times worse, some varieties appearing under as many as a dozen or even more different names. Of the lettuces alone there are, in the list which is given, only 81 distinct varieties, and for these there are over 500 synonyms.

This is an abomination and is becoming simply unbearable. Too strong condemnation of this course cannot be expressed. Such a person as will be guilty of putting out an old variety under a new name is an enemy to every honest seed dealer, and no better than a highway robber, in filching from the planter his hard-earned, honest dollars for what he already has under some old name. The report also contains the result of Prof. Arthur's researches and examinations on the pear blight. It also illustrates and describes a fungus that is destructive to the clover-leaf weevil, and which he thinks will entirely rid the clover fields of Western New York of this destructive pest. The Board have showed commendable promptness in having their report printed and ready for distribution when presented to the Legislature.

THE FOOS MANUFACTURING COMPANY, Springfield, Ohio.—A little pamphlet, showing their scientific grinding mill for grinding corn and other grains on a new principle. It first breaks the corn coarsely, then rebreaks and rebreaks until it is quite fine, and then it passes between a pair of plates armed with small, inclined ribs, between which it is rolled and crushed in such a way that it is delivered as fine and soft as meal ground with the very best buhrs. It also grinds corn with the cobs on which it grew, and grinds it fine. There is no doubt that when properly ground the addition of the cob meal to that made from the corn alone, will produce much better results in feeding than would the clear corn meal. Prof. Shelton's experiments clearly demonstrate this point. We have thousands of readers not situated within reach of a custom mill, and thousands of others in the West where the tolls for grinding are so very excessive that they can do no better thing than to buy a mill with which they can grind their own grain. We recommend all such to send to the Foos Manufacturing Company for this circular, and see what advantages they claim for the scientific mill. They also make steam engines and portable forges, and furnish with them a full set of blacksmith's tools. This is a good house.

THE DINGEE & CONARD CO, West Grove, Chester County, Pa.—A New Guide to Rose Culture. If there is one kind of catalogue we enjoy looking over more than another, it is the *rose* catalogue. The present catalogue is issued by the most extensive rose growers of this country, and offers nearly every variety, both old and new. The prices are reduced. These roses are grown to be sent by mail so that at the prices appended, they may be delivered to any post-office in the country in good growing condition. There are two colored plates, showing three new roses of 1886 and three of 1885. The catalogue also offers hardy shrubs, vines, carnations, chrysanthemums, etc., and will be forwarded to our readers upon application to the above well-known firm.

R. H. ALLEN COMPANY, 189, 191 Water Street, N. Y.—Circular of the Dutton Mower Knife-Grinder. This is a little machine that can be taken to the field and attached to a fence-rail, wagon wheel or a wheel of the mowing machine, and the machine knife can be ground in a short time, and all sections will be ground uniformly. The stone is made hollow, and the water, being placed in the cavity, is forced through the stone, moistening it sufficiently for use. With this little machine handy in the field, any knife badly dulled by running against a stone can be quickly sharpened, and much labor be saved for the team. "A merciful man is merciful to his team." Send for this circular.

MR. C. HENLY, Richmond, Indiana. An illustrated circular showing the construction and method of using Henley's Improved Monarch Fence Machine. It is claimed that while this machine is very cheap, it builds a much better and more substantial fence than that made in sections and afterwards nailed to the posts. There are many advantages claimed for it, which we cannot specify, but it will pay any one having fences to build, or who wishes a good substantial and cheap fence, to send for this circular.

CALENDAR from N. W. Ayer & Sons.—The calendar sent out this year by this well known advertising agency is the largest and finest of any we have seen. The calendars of former years have been given away, but this one is so expensive that it will be sent only on receipt of 25 cents.

For Women.

CONDUCTED BY MISS RAY CLARK.

NAPOLEON III.

"NANCY, come out here and see what I've got!" called out exultingly the voice of John Hopkins, as he drove up to the kitchen door one Monday morning in October.

"Nancy," a tall, spare woman of some 35 years, appeared in the door-way, her bare, brown arms dripping with soap suds, a cloud of steam enveloping her like a mist, and her sharp, black eyes rested disapprovingly on the white, wooly object standing upright in the wagon.

"Now, John," she exclaimed, "you've ben a makin' one of your foolish bargains, I'll warrant. Paid a fancy price to a fancy man for a ornery beast no better than could be bought of some honest farmer for a quarter of the money!"

"Oh no, Nancy," replied John, "I got him dirt cheap. Morrison said he'd held him all along at $75, but seein' 'twas me, I might have him for $60; but I wasn't to say but what I give the whole $75."

"John Hopkins, you're a simpleton!" said his wife, and saying it, her look and tone expressed even more meaning than her words. "I'd like to see you get your money back! He's cross, too, I can tell by his eyes. I shouldn't wonder if he'd pitch into you the first chance he gets."

"But he's got a pettigree, Nancy; his name is down in a book, Napoleon III. And a sheep or a horse or any other anamile with its name in a book, is worth jest seven times as much as the same anamile without; Morrison said so. And he ain't cross at all, he's jest as kind as a kitten. Whoa there, Dolly!"

And as Hopkins turned towards his restless horse, Napoleon III. drew back the length of the rope with which he was tied, and with a sudden leap, brought his broad forehead into such forceful contact with the seat of his admirer's blue overalls, as to pitch him suddenly out of the wagon and head foremost into a barrel of boiled pumpkin and milk, which stood by the wood-shed door.

Old Dolly, startled by the splashing mass which flew all over her, started at a furious pace for the barn. The gate into the yard being closed, she cleared it at a bound, her heels hitting the dashboard with such force as sent it flying in fragments, the cross-bar snapped asunder and Dolly gained her stable, where she stood shivering with terror, while the wagon remained balanced across the gate, with Napoleon III. standing serene and untroubled, viewing the scenery from his elevated position with evident satisfaction.

Hopkins kicked and floundered, the barrel was upset and rolled over on the walk, and as he arose from the ground the yellow and white streamers rippled down his clothes, his hair and beard were matted with pumpkin and as he gagged and spluttered he growled "Dang that Morrison."

"You'd better have that performance set down in the book along with the name," said Nancy, drily.

Her careful, prudent eye viewed the wreck of the wagon with dismay, also the loss of that beautiful barrel of mush which was intended to feed a litter of young pigs for many a day. But she wisely restrained the expression of her thoughts and returned to her steaming tubs, her quick, nervous movements and vigorous rubbing bearing testimony to the conflict raging within.

Hopkins was the owner of a fine flock of Merinos which were the pride of his heart. During the late fall and winter months they were allowed to run in an orchard which was separated from the house-lot by a rather low board fence. Into this orchard was Napoleon turned, and here his owner (after a few days had passed and he had gotten over the affair of the barrel and the broken wagon) was wont to gaze upon his new acquisition with great pride and satisfaction.

Now, it so happened that the cellar drain of the Hopkins residence failed to fulfill its obligations, and Nancy's crocks and tubs were continually in a state of inundation not at all in accordance with her ideas of the fitness of things, and after due inspection and consideration, John decided that a new one must be dug in a different direction and tiled. Accordingly, he set about it with a will, and soon a long, deep ditch stretched away from the house, and all things being in readiness, one pleasant morning he called on Nancy to assist him by handing down the tile. This she was quite willing to do, and soon they were busily at work.

"The top of the mornin' to ye, mum!" said a voice in an unmistakable Irish brogue, and looking up Nancy beheld a short, stumpy figure clad in ragged, filthy garments. He had a bloated face half covered by a bristling, unshorn beard, and a little, twinkling, snapping eyes, and his coarse, red hair straggled unevenly from beneath the brim of a battered stove-pipe hat. He had a short pipe in his mouth and over his shoulder he carried a stout stick from which depended a pair of faded overalls stuffed with old clothing, a pair of worn-out rubber boots and a tin pail.

"An a foine mornin' it is, mum. And sure the sun's niver a bit plisanter to say than your swate face, mum. By me sowle, I've not seen your aiqnil in this counthry. I'm an unfortunate craythur, mum. I've thravelled nigh on to 200 miles to find worruk, and, Glory be to God! I can't find a bit. Could yez give me a bit of pie or cake mum, to kape the two sides of me from sthickin' togethir, mum? Bless me sowle, your two eyes shine like bugs in a chimney, mum."

"I'll give you something to eat," said Nancy, "but I don't want any of your blarny."

"Oh, but a lady of sinse ye are, and sure sinse comes before beauty. Me ould mither was a woman of uncommon sinse and I inherited the whole of it. Sure, afther I was born she hadn't sinse enough left to light her pipe, or peel a pratie. Sure, I've been a famous man in me day, but I had to lave the ould counthry on account of me principles. I'm down in the worruld now."

And truly he was down the next moment, for Napoleon III had marked the strange apparition, and no doubt thinking it something that would endanger the peace or safety of his many wives, had cleared the fence and with a few long leaps reached the spot. A well directed blow and the tramp was hurled into the ditch and came down on the bent head and shoulders of the unconscious John (who being much engaged in his work and quite hard of hearing, was unmindful of the presence of a third person), embedding him in the soft earth like a brick in a wall. The stuffed overalls flew from the stick and locked themselves around Nancy's neck, the rubber boots sailed away and were caught in a pear tree, and the tin pail landed in the midst of a flock of hens that were treating themselves to a bath of chip dust, scattering them in all directions.

As for Napoleon, the force of his charge had been so great he could not save himself, and he too pitched headlong into the ditch on top of the tramp, who, with a loud shriek of terror began calling on the Virgin Mary and all the saints to defend him. For a few moments there was an almost inextricable confusion of heads, arms, legs and horns, but presently Napolean freed himself from the struggling mass, and with the stove-pipe hat impaled on one horn, bounded along the ditch and soon regained his companions who had fled from him in terror. The tramp arose to his feet and with chattering teeth exclaimed:

"An' its an airthquake it is, and the devil has come from the bottomless pit to claim his own. I see his horns and felt his fiery breath! Oh, Saint Peter, deliver us!!"

Hopkins dug the mud out of his eyes and ears and looked at Nancy, who had freed herself from the embrace of the overalls, for an explanation. This was soon made and the candidate for pastry at length comprehending the situation, exclaimed,

"It'll take a whole pie and a moity big one at that to settle with me for this job."

He got his pie and a large slice of bread and jam besides, and having recovered all of his treasures except the hat, which was more than replaced by a similar one from the garret which had belonged to John's father, went on his wandering way.

The next Saturday was a lovely day, and along in the afternoon, who should drive up to the door of the Hopkinses, but Nancy's niece, Miss Aurelia Dunbar, from the city, and her beau, Mr. Gustave Delors Wannermaker, clerk in a fashionable jewelry store.

After tea, the young couple strolled out to a little grove of maples which crowned the summit of a gentle slope back of the orchard. Seating themselves on a bed of soft moss, they watched the glorious Autumn sunset, and Gustave taking the young lady's hand, murmured,

"My dearest Aurelia, there is something I have long wished to say to you, and what more fitting opportunity than this, here in this lovely spot, with nothing to disturb—

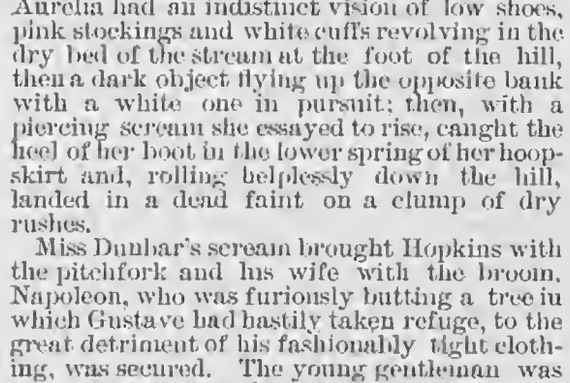
At that instant a rushing sound was heard. Aurelia had an indistinct vision of low shoes, pink stockings and white cuffs revolving in the dry bed of the stream at the foot of the hill, then a dark object flying up the opposite bank with a white one in pursuit; then, with a piercing scream she essayed to rise, caught the heel of her boot in the lower spring of her hoop-skirt and, rolling helplessly down the hill, landed in a dead faint on a clump of dry rushes.

Miss Dunbar's scream brought Hopkins with the pitchfork and his wife with the broom. Napoleon, who was furiously butting a tree in which Gustave had hastily taken refuge, to the great detriment of his fashionably tight clothing, was secured. The young gentleman was assisted down from his perch and the young lady restored to consciousness. But when an apology was attempted, it was received with dignified silence, and the visit, which was intended to bridge over the Sabbath, was brought to an abrupt termination by their immediate departure.

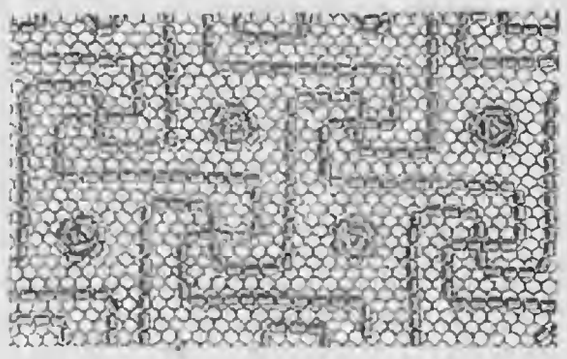
After this last unfortunate escapade, Napoleon III. was placed in close confinement. But, even then, John was obliged to "keep his eyes peeled," to use his own expression, when he gave him his daily rations. He began to think that a peaceable disposition was more desirable than a "pettigree," and made a solemn vow in his secret heart to consult Nancy before making another bargain. BRUNSWICK.

DARNED NET.

WE give our lady friends two patterns for



darning net. Linen floss and bobinet lace are the materials, and well pay for any amount of work done with them. A child's dress made this way, and lined with colored silesia, is exceedingly pretty, and has the advantage of being strong, durable and of washing well. It makes a pretty trimming for underclothing, and just as lovely and cool-looking bed-spread as can be imagined. The



lace can be bought two yards wide, and is not costly. Those who have time for fancy work will find this to be fascinating as well as profitable.

Domestic Economy

CONDUCTED BY EMILY MAPLE.

WASHING DAY

ANNIE L. JACK.

"THEY that wash on Monday have all the week to dry," sang the family Oracle. "But I don't *want* to wash on Monday, nor yet to be all the week drying the clothes," I said, though certainly in this Canada of ours, it takes nearly that long if they are left to freeze dry. Some people advocate Monday as washing day, because one is fresh and rested after Sunday, but I do not know that it always follows. I don't like going about picking up clothes on Sunday, and if done on Saturday, something is sure to be overlooked. So we try to be ready on Tuesday morning early, and to have the clothes soaked and sorted into separate tubs the day before. Of all the numerous washing sodas, I prefer pure borax kept in a wide-mouthed bottle; ten cents' worth will last for a dozen or more washings. There is nothing in the washing day to me so dreadful as some people make it out to be, even the smell of suds can be avoided if the kitchen is kept ventilated. But it is a great help and comfort to have a stove in an out-kitchen or shed where the washing will not interfere with the rest of the work, and to keep all the laundry utensils there. We have worked one of the small steam washers to great advantage for the last three years—they are a saving of labor, and help in cleansing the clothes. Blue is best in the balls, and rock salt is very useful in rinsing water when new prints are washed, to set the color. When the hot water is used, it sets the soiled places so that they are hard to clean; cold water loosens it so that it is always best to put clothes into cold water to boil, whether with a steam washer or without it. When to be wrung out of the soaking water, let them be put into good warm suds. There is a great deal of difference in the quality of soap now-a-days. I have not had an opportunity of trying some of the kinds so largely advertised, but I know there is a wonderful difference in the soaps of local manufacture that we purchase by the box. There ought to be analysis made of soap as well as of other articles of housekeeping to prove that it is fit for family use, as it doubtless often needs a purifying process. Washing now-a-days with a wringer and steam washer and all the labor-saving contrivances that can be bought so cheaply, is not such a terrible affair after all; and we thought the hanging-out the hardest part of it, till the handy man of the family put up ropes and pulleys in the woodshed, and the clothes hang there unmolested, and can get out-door air through a long window just behind them, as well as the doors, yet not be subject to the vicissitudes of all weathers. Clothes put through the wringer require to be well shaken out before putting on the cord, or they will carry the marks of uneven pressure along with them. I prefer a common hemp line to that of galvanized wire, as the latter cuts the clothes during a strong wind or when frozen. A bag for clothes-pins is a necessity, and I think I could almost tell the character of a family if I went to a house where, however fine the appointments, I found the clothes-pins left out in the yard and half embedded in the earth, broken and discolored;

Miscellaneous Advertising.

When Baby was sick, we gave her Castoria,
When she was a Child, she cried for Castoria,
When she became Miss, she clung to Castoria,
When she had Children, she gave them Castoria.

for it is one of the wasteful "straws" that show how the winds of extravagance blow.

SOLID AND VALUABLE.

THE best way to buy lamp-wicks is, uncut, at three cents per yard.

Best fastening for shoe-buttons: a small brass disk with a tongue cut out in the center; can be used time and again.

Best food, except milk, to raise fine pigs on: wheat shorts.

Best way to prepare clothes for washing easily is to put a pailful of warm, soft water into your tub, set in your washboard and soap clothes, one garment at a time, all over, giving extra soaping to extra dirty places; roll up each piece as fast as soaped, like damp clothes for the ironing, and put into the warm water behind your board; let lie an hour, if done on washing-day morning, otherwise do it the evening before. Saves two-thirds the rubbing.

The best mitten for men's wear in chopping wood, handling stone, lumber, etc., in very cold weather, is cut from heavy ducking (I use Stark Mills A grain sacks). Cut inside of the hand double, line with heavy woolen—old pieces from coats and trowsers will do. Can make a hundred pairs in a day on the machine after they are cut and basted.

Best way to use stocking feet after they are past mending: cut off with an inch or two of ankle and slip over your shoes when the walks about the yard are icy or the floor is cold. Saves putting on and fastening up overshoes a great many times.

Best use for a tomato jug that is cracked around the top: hold an iron against it to make it break true, and tap carefully with a rather light hammer, first breaking off the handle, till the dome is all off; it makes a good soap dish or drink dish for chickens, etc.

Best way to scald meal for johnny-cake, if you have not milk to do it with, is to use the water in which you boiled your potatoes.

Best johnny-cake is made by thoroughly scalding nice yellow meal with new milk, sweeten a little, let cool and then thin with well-beaten eggs; shorten with two tablespoons melted butter to the pint of milk; don't forget to add a pinch or more of salt.

Best way to ventilate and dry a damp cellar is our way: a four-inch tin pipe runs from near the cellar floor into the pipe of the kitchen stove through a hole cut in the floor.

COUSIN E.

WINTER BUTTER-MAKING EXPERIENCES.

CHURNING TRIALS AND TRIUMPHS.

I WANT to have a consoling talk with some of the younger housekeepers who, like myself, have been in the depths of despair on account of churning day. I have discovered a glimmer of light, a star of hope, and would like to say something to comfort and help some of you for the rest of your natural lives.

Oh! the anguish of butter-making when you churn on and on for hours, and the cream looks every minute as if it might turn to butter, but *doesn't!* Your arms ache—every bone in your body aches, and your heart aches worst of all, while the stubborn stuff in the churn still smiles up at you with provoking sweetness and tantalization. You old experienced housekeepers who never make mistakes or have such butter battles, know nothing whatever of our sufferings. This letter is not for you—you would only laugh—and you need not read any further. Neither is it intended for you who have large dairies, spring-houses, big patent pans, patent churns and butter-workers with all the other appliances and regulators that make butter-making so easy and sure. It is for those who, like us, have one solitary cow, and churn in an earthen jar with an old-fashioned dash—or beat the cream in a large bowl with a spoon or egg-beater. Last Winter we had a memorable scene—"John" and I—over some particularly fractious cream that we struggled with at intervals for nearly all one afternoon and till 11 o'clock at night. We churned it, we beat it, we shook it, we added milk, we applied hot water, cold water and warm water, separately and altogether; and, if there be any other earthly thing that people do to make refactory butter come, I'm sure we did that too. Well, perseverance was rewarded at last, but I ought to add that the triumph was a small one for the butter was dark and strong—hardly suitable for cooking. I have since learned that this is apt to be the case when it has been necessary to churn very long. I have also learned that the longer cream is churned the smaller become the butter globules, and that after a reasonable time, the less the chances usually are, so to speak, that butter will result. A few weeks ago, during some very cold weather, the butter stubbornly refused to come for several successive churnings. It looked so lovely and seemed so nearly ready to yield for hours that it was hard to give up, but we did. The cream was sweet and so we had cream cakes, cream sauces, cream pie crust and cream everything, but I was in despair about ever getting any more butter till "John" suggested a dairy thermometer. He immediately got one and some one advised us to scald the milk when fresh, just enough to make it look "crinkly" a little. We did that too, and now there is no more trouble. Earth is no longer a desert, and life is once more serene. With the cream at about 62 degrees, ten minute's churning is usually sufficient to do the work and the butter is firm, yellow and sweet every time. Perhaps we should be equally successful if the scalding were omitted, but a "burnt child dreads the fire," and while things work so well this way, I don't feel like launching out into any new experiments even for the cause of science.

RENA ROSS.

WINTER BUTTER.

IT is not very difficult in Summer to make good, sweet butter. But when December comes and the streams are frozen over, and the fields covered with snow, and the cows have nothing but dry feed, and the milk cools while bringing it to the house, then is the time that worries the housekeeper and brings the poor, white, bitter butter into market.

I have pursued a plan of my own for several years, and think it about as good a one as anybody can follow. Of course I am writing this for women who have no creamers, and are obliged to keep the milk in the pantry, as the majority of farmers' wives do. The greatest harm to butter made in Winter is in letting the milk stand too long before skimming. Some old butter-makers that I know think it must stand until it sours, or they do not get all the cream. The consequence is, it becomes bitter and full of white flakes. I churn every third day in Winter, no matter how little cream I have, and do not wait to get a large churning, for I would rather churn a little and have it good. The milk that is strained one morning I warm the next morning by setting the pans on the range or over a kettle of boiling water. Let it get just milk-warm, not hot; then let it stand until night or the next morning, and skim. The night milk I serve in the same way; it takes but a few minutes' time. I never have but three or four milkings on hand at once.

While I was sick a few weeks one Winter, I had an old lady, experienced in all household affairs, to attend to the milk. The first day I was able to walk, I inspected the milk room and found 11 milkings that needed skimming. She was waiting for it to "sour," with the thermometer down to zero.

I always try to keep my pantry doors shut while sweeping and while cooking cabbage, turnips or any vegetable, and raise the windows a little, never forgetting to stir the cream well after each skimming. I use a little coloring and have the cream as near 64 degrees as possible. When ready to churn, I usually set it near the kitchen stove a few hours until it reaches that temperature, wash it well while in a granulated state (you have been told that often), and my butter is nice and yellow, has no white flakes, no frowy, bitter taste, and is as good as "winter butter" can be.

ANOTHER important item I wish to mention is the necessity of washing the cow's teats with a cloth and warm water every morning, to remove the dirt that has accumulated during the night while lying in the stable, and which is too often found in the milk pail, and I have seen suspicious streaks in butter, which I attributed to the same cause.

FANNIE FLETCHER.

A FARM DINNER IN FEBRUARY.

Boiled ham; boiled potatoes; hot corn bread; pickles; celery; buttermilk or cold water. No butter—no dessert. Rule for corn bread: One quart of buttermilk, three eggs beaten thoroughly, three spoonfuls of melted shortening, a good pinch of salt, soda to neutralize the acid of the buttermilk (the quantity must be learned by experience), one cupful of flour and corn meal enough to make a rather stiff batter. Now I cannot say two or three cupfuls, for I do not know the size of the cups or the kind of meal you will use. By making corn bread of one kind several times in succession one learns how to proportion everything. Bake in a quick oven. AUNT NINA.

APPLE SAUCE FROM SWEET APPLES.

We are very fond of a good, sweet apple cooked as follows: Cut in halves and take out the core; put in a dish with a little butter and a little sugar and some water, and set in the oven and bake, so that the juice and sugar will be as thick as honey, pour it over the fruit and let it cool. Sweet Russet suits me best of any we have here. Can you tell me of a sweet apple that will keep at least two months longer and be as good to cook? H.

(The Winter Sweet Paradise is an excellent cooking apple and a better keeper than the Sweet Russet.—E. M.)

Miscellaneous Advertising.

Pain in the Side

Is a symptom of disease. It may be caused by Rheumatism, or by Neuralgia, but it usually indicates a disordered condition of the Stomach, Liver, or Kidneys. Ayer's Sarsaparilla corrects the action of the vital organs, and removes every trace of disease from the system.

Last fall and winter I suffered from a dull, heavy, pain in my side. I did not notice it much, at first, but it gradually grew worse until it became almost unbearable. During the latter part of this time, disorders of the Stomach and Liver increased my troubles. I began taking Ayer's Sarsaparilla, and, after faithfully continuing the use of this medicine for some months, the pain disappeared and I was completely cured.—Mrs. Augusta A. Forbush, Haverhill, Mass.

Ayer's Sarsaparilla,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by all Druggists. Price $1; six bottles, $5.

DIPHTHERIA, or SORE THROAT THEIR CAUSE AND CURE. Sent free. Address Prof. Drury, 108 TREMONT ST., BOSTON, MASS.

THE "COMMON SENSE" MILK PAIL.

This is the only *perfect* Pail made. There are no seams in the front to catch the cream. It has a perfectly filling strainer, which can be instantly removed, so that every part of the pail may be *quickly* and *thoroughly* cleaned. Should the strainer become foul or worn with use, we can furnish new ones at very little expense. The Pail is well made of heavy XX tin, and we offer it to the farmer at the very lowest price at which a really good article can be sold. *Send for special circulars* Price $1.25 each. Discount to the Trade.

MILKING TUBES,

FOR MILKING COWS WITH SORE TEATS.

This is the best Tube in the market. Sent, post paid, to any address on receipt of price. One Tube, 25 Cents. Five Tubes, $1.00. Send for special Circulars.

Send us your name and address and we will mail you, FREE, our

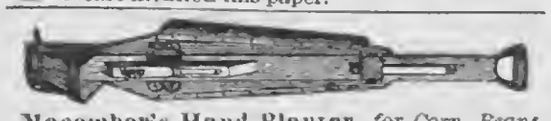
Seed Catalogue for 1886.

Choice New England Seeds. The very Best and Purest Stocks of Cabbage, Onion, Beet, Parsnip, &c. All grown by ourselves and sure to give complete satisfaction. TRY THEM.

BARTLETT & DOW,

LOWELL, MASS.

Please mention this paper.



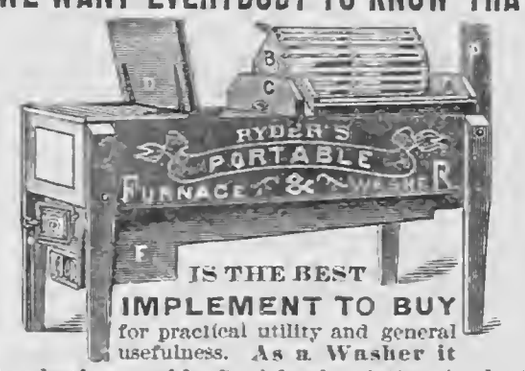
Macomber's Hand Planter, *for Corn, Beans, and Beet Seed.* The BEST in the world. Money refunded if it does not prove satisfactory, after a fair trial. Agents wanted. Send for circular and terms. S. M. Macomber & Co., M'f'g's, Grand Isle Vt.

MAKE MONEY.

The long evenings are at hand. Improve your time.

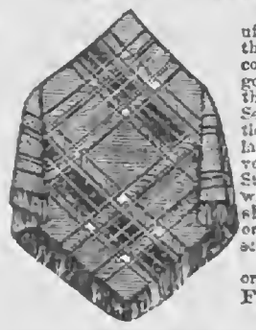
The House Patent Scroll Saw runs easy, cuts fast, and is a pleasure to use. You can decorate your walls with beautiful brackets, or sell the work and make money. Send 6c. for 36-pp. Illustrated Catalogue, giving full description of SCROLL SAWS, NEW DESIGNS, etc. Address A. H. POMEROY, Adv. Dept., 216-220 Asylum St., Hartford, Conn.

WE WANT EVERYBODY TO KNOW THAT



for practical utility and general usefulness. **As a Washer it leads the world.** Send for descriptive circular to **B. L. Ryder & Co**, P.O. Box B, *Chambersburg, Pa.*

PLAID SHAWL GIVEN AWAY!



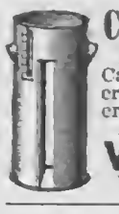
Through the failure of a large manufacturer of **Cashmere Shawls**, there has come into our hands a large consignment of Plaid Shawls, perfect goods, which we propose to present to the ladies in the following manner: Send us 75 cents for 8 mos. subscription to **Farm and Household**, a large **32 page** illustrated paper, devoted to Farm and Household topics, Stories and general miscellany, and we will send you one of these **beautiful shawls FREE** by mail postpaid, or we will send 5 shawls and 5 subscriptions to one address for $3.00 Satisfaction guaranteed or money refunded. Address **FARM AND HOUSEHOLD, Hartford, Conn.**

"SMOKE Your MEAT"

With Krauser's Liquid Extract of Smoke.

It is a liquid; you wash it on; it will keep it in a well preserved condition and free from insects; it is much more pleasant to the taste than meat smoked in the old way; it is done in less time, no trouble, and less expense. There is no danger from fire or of being stolen, as you can hang it in a more secure place than a smokehouse. Send for circular,

E. KRAUSER & BRO., Prop's and M'f's, DRUGGISTS, Milton, Pa.



CHANNEL CAN CREAMERY.

Makes more Butter than any other process. Calls for less labor and ice. Will raise all the cream without ice. Automatic Butter-workers, Churns, etc. One at wholesale. Agents wanted. Send for circulars.

Wm. E. Lincoln Co.,

WARREN, MASS., and FORT ATKINSON, WIS.

SAW SET

This set has given perfect satisfaction; is **durable, effective** and **cheap**, weighs less than 4 ozs., and is adapted to all varieties of cross-cut saws. Any man can perfectly set a saw in 3 mins. Also **CHAMPION GUAGE** for dressing raker teeth; warranted. Sample of each by mail on receipt of $1.00. Send for circular and prices to J. E. WHITING, MONTROSE, Pa.

KNAPP BROS.,

FABIUS, N. Y. (Box 74.)

BREEDERS OF THE LEADING STRAINS OF

WHITE LEGHORNS.

Highest honors at all the leading exhibitions, winning the **Grand Special Prize** for the Best Breeding Pen and Pair of any variety at the late New York Show. Send stamp for our new Catalogue.

"Preston's Wyandotte Gazette."

Size 9 by 11. Finest 50-cent Poultry Book in the world. Contains a large chromo of Wyandottes and two other elegant chromos in six colors. Also a magnificent engraving of my new $500 Wyandotte House and a cut, and complete working plan of our two mammoth Incubator Buildings, each 120 feet long by 20 feet wide, and containing two large incubators with a capacity of 4,400 eggs, giving a correct idea of how we are making some quick and easy cash. Original cost of other engravings over $600. A complete guide on selecting, scouring and breeding Wyandottes, by B. N. Pierce, illustrated with his drawings of head, neck, wings, feathers, etc. Also all manner of brief, practical and valuable information. Large Wyandotte Chromos at 10 cents each. Circulars containing 17 illustrations free to all.

GEO. A. PRESTON, D. L. & W., Ticket Agent, Binghamton, N. Y.

THE KEYSTONE WASHER.

OVER 300,000 IN ACTUAL USE

And all giving perfect satisfaction.

AGENTS WANTED.

Will wash Cleaner, Easier, and with Less Injury to Clothes than any other in the World. We challenge any manufacturer to produce a better Washer. **Every Machine Warranted FIVE Years,** and Satisfaction Guaranteed. The only Washer that can be clamped to any sized tub like a Wringer. Made of malleable iron, galvanized, and will outlast any two wooden machines. **Agents wanted.** Exclusive Territory. Our agents all over the country are making from $75 to $200 per month. Retail price, $7. Sample to agents, $3. Also our celebrated

KEYSTONE WRINGERS AT LOWEST WHOLESALE PRICES.

News of the Week.

HOME NEWS.

SATURDAY, Feb. 13, 1886.

THE House Committee on Railways and Canals has decided to report favorably the bill committing the Government to the construction and maintenance of the Henuepin Canal. It provides for the acceptance and enlargement of the existing Illinois and Michigan Canal from Chicago to La Salle, 96 miles, and the construction of a canal from Hennepin to the Mississippi River, at Rock Island, 74½ miles, with a feeder 37 miles long. The estimated cost is $6,673,000 for the canal and feeder, and $2,299,000 for the enlargement of the Illinois and Michigan Canal, or nearly $9,000,000 in all. It is proposed to begin with an appropriation of $1,000,000 and follow it with $2,000,000 a year until the work is done.....Some weeks ago Sir Ambrose Shea was appointed Governor of Newfoundland. He was the first native ever appointed and the first Catholic since the days of Cabot. His appointment, however, has just been canceled—the Orange body made such strenuous efforts that the Government couldn't resist the pressure.....The Virginia Assembly favors "local option," and a bill "ingrossed" provides that on petition of one-fifth of the popular vote cast at the last election, a special election is to be held in any county to determine whether liquor is to be sold within its borders. All cities and distilleries are to be excepted from the operations of the law.....The Mass. Legislature is likely to pass a bill requiring wages to be paid weekly to working people.....Major-General Winfield Scott Hancock, Commander of the Military Division of the Atlantic, died at his head-quarters on Governor's Island, at 2.55 o'clock last Tuesday afternoon. Although his death had been sudden, he had been in poor health all Winter, and had never fully recovered from the shock caused by the death of his only son, and sole remaining child, Russell Hancock, on December 30, 1884, on his Mississippi plantation. General Hancock was born in Montgomery County, Pa., February 14, 1824; entered West Point in 1840; graduated 1844; received commission as Lieutenant of Infantry in 1846. Served in the Mexican War, and against the Mormons under A. S. Johnston. Was made Brigadier-General of Volunteers in 1861, and greatly distinguished himself in all the campaigns of the Army of the Potomac, especially at Gettysburg, where he commanded the left-center, and on the third day repulsed Pickett's famous charge of 18,000 of the flower of the Confederate army, thus deciding the contest. His career since, who does not remember? Regret universal; condolences from all quarters multitudinous. Will have a quiet funeral, and be buried at Norristown, Pa.....The will of Wilber F. Storey, late editor and owner of the Chicago Times, has been declared valid. The Court says he was of sound mind, and not unduly influenced when he made it. The paper and most of his other property goes to his young widow—blood-relations left out in the cold.....John Bigelow, of this city, and Nathan Appleton, of Boston, appointed by the Chambers of Commerce of the respective cities to inspect the Panama Canal, according to the request of M. de Lesseps, started on their mission Wednesday.....Archbishop Gibbons, of Baltimore, is to be created a cardinal at the Consistory to be held in Rome next month. He was born in Baltimore July 23, 1834; ordained priest in 1861; made Bishop of Richmond in 1872.....The largest coal-producing combination in the world—one that will practically monopolize the whole coal production of the South—is being perfected at Birmingham, Alabama. A convention of the representatives of all the corporate and individual interests in the Warrior coal fields, comprising 244,700 acres, has met there "to secure a consolidation of interests for mutual advancement and protection,".....A syndicate, said to represent a capital of $50,000,000, is to reorganize the Reading railroad, Pa., and also to control the leading hard coal companies, and also the shipments of soft coal, for the purpose of putting and keeping up prices—"milking" the public.....It is reported that six mounted Canadian policemen have been ambushed and killed near Regina, Manitoba, and that a rising of the Indians and half-breeds in the Spring is a foregone conclusion. The police in some parts of the Northwest Territory are said to be insubordinate. A delegation from the Council of the Northwest Territory has arrived at Ottawa with a "bill of rights" from the people of the Northwest. It demands the grant of the right of habeas corpus, representation in the Commons and Senate, the construction of railways through the Territory, and a rebate equal to the duties now imposed on agricultural implements and lumber.....Tramps are overrunning Florida to such an extent that the County Commissioners have decided to anchor great lighters in the St. Johu's River, and corral the tramps there for 90 days each. .....Twenty-five horses—chiefly roaders and hunters—belonging to the Meadow Brook Hunt Club, were burned to death in the stable at Meadow Brook, near Hempstead, N. J., last Wednesday night. Some of the animals were high-priced; loss $25,000.....Horatio Seymour died at Utica, N. Y. yesterday.....President Cleveland has determined that the Government's suit to upset the Bell telephone patent shall be prosecuted promptly and earnestly. This extortionate organization, which has an annual income of millions at stake, finds hosts of supporters in the press. It is stated that for a single favorable article in one of the great New York dailies it paid $5,000. Of course the appearance of that single editorial would determine the whole policy of the paper in the controversy. Secretary Garland, it is said, will donate his entire stock in the Pan-Electric Company to some charitable institution, so as to be free from all "intangling alliances." What a godsend some of the political papers must find in the controversy—they can fill their columns with the matter and their coffers with the boodle!.....The Grant Monument Fund here now amounts to $115,194.57. It increases very slowly. None of America's millionaires has yet contributed. The United States Senate has passed the bill appropriating $500,000 towards the cost of the monument. Will the House be equally liberal?.....Peter McGeoch, of Milwaukee, well-known as a former large operator in provisions and grain at Chicago, is suffering from two late strokes of paralysis.....The Senate has passed, by a vote of 33 to 22, the bill providing for the division of the Territory of Dakota at the 46th parallel of latitude, and admitting the Southern portion as a State.....Very heavy rains since Wednesday east of the Alleghanies—west of the crest of the mountains only local rains have prevailed.....The anti-Chinese war on the Pacific coast is becoming more open and determined. All the labor organizations, under the guidance of the Knights of Labor, are boycotting the Chinese and threaten to boycott those who employ them or deal with them. All the Chinese scattered through the surrounding country were lately forced into Seattle, W. T., and then all the resident Chinese with the new-comers were expelled from the town, and their passage was paid to San Francisco. The Territorial militia was called out, and the compulsory emigrants were given the choice of going or staying—they preferred the former. The mob grew turbulent; the troops fired, killing a few and wounding others. The United States troops were summoned, and now hold the town with bristling bayonets. More trouble expected. At Portland, Oregon, an organization is being formed to expel the Celestials, and the greatest trouble of all is expected to occur soon in San Francisco. The people have given up all expectations of effective Congressional legislation to keep out the hated race, and seem determined to take the matter entirely into their own hands. The vast majority of the population is opposed to the presence of the Celestials in the country, though, of course, the antipathy is strongest and most active among the laboring classes, whom their cheap labor keeps in poverty.....The Canadian Government has expended $40,000 in relieving distressed settlers and half-breeds in the Northwest Territory.....Prohibition is said to have caused business failures at Atlanta, Ga. A large amount of capital—some say as much as $4,500,000—has left the city to be invested chiefly in Texas, and outside creditors are frightened and press for the prompt settlement of outstanding accounts with Atlanta merchants.....

80-DAY SEED CORN.

DEAR EDITOR: I have a limited amount of a very superior quality of extremely large *field corn* which has recently been originated, and which will mature in from 80 to 90 days. Ears are from 10 to 14 inches long, and has a slender cob and very fine, large grains; is a marvel of beauty; 134 bushels of shelled corn have been raised per acre. I am very anxious to know what this corn will do in other climates before advertising it for sale, and will send a large sample package *free* to any farmer who will take good care and report his success with it, and will inclose 25 cents in silver to pay postage, packing, etc., on same. Address W. F. RUST, Springfield, Ohio.—*Adv.*

AGRICULTURAL NEWS.

SATURDAY, February 13, 1886.

MR. GLADSTONE has reduced by about 25 per centum the rents of the farms on his Hawarden estate.....The eleventh annual meeting of the Ayrshire Breeders' Association was held last Tuesday in this city. President J. D. W. French said that the price of Ayrshire cows had not fallen off in the past year, but he doubted the advisability of the association sending an agent to Scotland to purchase 20 head of Ayrshire cows for breeding purposes. Prizes were awarded for 1885, and the list of prizes for 1886 was read.....The question of adopting a plan whereby all live stock will be shipped by weight instead of by the car-load, is being discussed by railway officials at Chicago.....Parties in London report that the shipments of clover-seed from the Continent to America continue on an unprecedentedly large scale.....A meeting of Western fruit preservers, representing the trade in six different cities, was held last week in Chicago, effecting a temporary organization preliminary to forming a permanent society.....At a meeting at Chicago Tuesday, in which 80 per cent. of the linseed oil crushing interests was represented, the organization of an association or pool was agreed upon, fashioned after the old Consolidated Linseed Oil Company in existence some years ago. Stock in the association will be taken in proportion to the crushing capacity of any given member. The price of oil was fixed at 41 cents per gallon, an advance of one cent. It is pretty sure soon to "regulate" the price of oil-cake also.....The cash system went into effect on February 1 at the National Stock-yards, St. Louis, and buyers must now pay before the stock is delivered. All stock is kept under lock and key and delivered only on a written order duly signed and stamped by the firm owning or controlling the same.....A telegram from Texas says: "It is estimated that fully 15,000 head of cattle lie dead on the prairie within a radius of 75 miles of Fort Elliott. It is the coldest Winter ever known in Texas.".....The Chief of the Bureau of Statistics reports that the total values of the exports of domestic cattle and hogs and beef, pork and dairy products for the month of January, 1886; also of beef and pork products for the three months and of dairy products for the nine months ended January 31, 1886, as compared with similar exports during the corresponding periods of the preceding year, were as follows: January, 1886, $6,671,597; January, 1885, $11,965,978; beef and pork products for three months ended January 31, 1886, $20,141,296; for three months ended January 31, 1885, $28,265,364; dairy products for nine months ended January 31, 1886, $6,977,354; for nine months ended January 31, 1885, $13,200,349.....Some New York jobbers have lately claimed that in the shipment of dried blackberries to the West, it was necessary and legal to apply a certain amount of water and molasses to the berries in transit. The West is the market for enormous quantities of dried blackberries, Chicago alone handling about two millions of pounds per year. The United States Circuit Court in Brooklyn yesterday decided that an allowance must be made in the price for the decrease in value of the goods owing to the water thus applied.

W. RUSSELL, Aurora, O., manager of eight butter and cheese factories belonging to Frank Hurd, says, Jan. 15, 1885:—"I have tried all the butter colors, and am convinced that Thatcher's Orange Butter Color is the best in the market." For 50c we will forward prepaid a 25c bottle to any express office in United States. H. D. Thatcher & Co., Potsdam, N. Y.—*Adv.*

For a full illustrated Description of our Free Seed Distribution for 1886, examine the Nov. 14 issue. Preserve it for future reference. It also contains a list of the $3,300 worth of Presents offered to those who send us clubs. This is distinct from the Rural's regular Premium-list.

Crops & Markets.

SATURDAY, Feb. 13, 1886.

Advices from Russia state that the increase in German duties on wheat has had the effect of reducing the value of Russian wheat to so low a point that it no longer pays to raise it, and that the acreage of 1886 will be much less than that of last year. . . . . France is said to be now receiving from India wheat which is able to pay the duty of about 16 cents per bushel, but it will not pay to import American, Chilian or Australian wheat. . . . The official report of the condition of the wheat crop in the Central Provinces of India, dated December 21, indicate a generally hopeful promise.

THE Every Evening, Dover, Delaware, says that peach-growers are despondent over the condition of the buds. Some predict an entire failure of the crop. No bad reports have been received from other districts.

The Cincinnati Price-Current reports that the total number of hogs handled by Western packers last week was 365,000, against 235,000 for the corresponding week of last year. This makes a total of 5,795,000 since November 1, compared with 5,790,000 for a like period in the preceding year.

The Chief of the Bureau of Statistics reports that the total values of the exports of breadstuffs from the United States during the month of January, 1886, and during the seven months ended January 31, 1886, as compared with the corresponding periods of the preceding year, were as follows:

	1886.	1885.
January.....	$9,407,315	$17,872,413
Seven months ended Jan. 31	62,406,047	97,572,920

The falling off has been exclusively in wheat; there has been an increase in our exports of flour, corn, oats, etc.

Wheat has been extremely dull in the Northwest during the whole week—prices have barely kept steady at 87½c. for No. 1 Hard. Receipts at Minneapolis have been a trifle short of 500,000 bushels for the week—mostly from grain stored in elevators, with some from sales by farmers. The condition of the winter-wheat crop will be the chief regulator of prices for some time to come. Recent mild weather and consequent thaws have left the crop exposed to injury from freezing and thawing in many sections. The flour market is better. The thawing weather has given the mills more water. Output for the week 89,400 barrels—shipments 79,000 barrels.

Grain has everywhere advanced during the week, mainly on account of reports of injury to winter-sown wheat in the Southwest and to the announcement that stocks in the United Kingdom have declined about 2,775,000 bushels since January 1, and the home visible supply 4,445,000 bushels since the same date. The amount on passage to Europe has increased about 2,050,000 bushels within six weeks. This points to a net decrease on land and sea (United Kingdom and United States) of 5,225,000 bushels within six weeks. The high price for cash wheat at interior markets, a number of points holding the grain higher than it is at New York, does not point at abundant country supplies. The interior milling demand from the central winter-wheat region, for grain at primary markets, has increased.

The Indian-corn market has been higher and more active. The advance has been stimulated by the strength shown in wheat. The visible-supply report indicated an increase of the quantity in sight of but 65,000 bushels. The demand for export has been noticeable, and this, with a little squeeze in the option market, managed to direct considerable attention to this cereal.

Oats have been firm and steady, but with limited transactions. The visible supply declined 170,000 bushels, which served to sustain the bullish view of holders.

The butter situation is entirely unchanged, demand being principally upon choicest grades, which are in limited supply. Outside of the better grades the market is dull, and overheld-stock sales are difficult to make.

	Feb. 12.	Feb. 12,'85.	Feb. 5.	Lowest, '84.	Lowest. '85.

LINSEED MEAL.

ABSOLUTELY THE BEST FEED FOR

CATTLE, HORSES, **CALVES,** SHEEP AND HOGS.

This Meal is the product of pure sound Flaxseed, Linseed being its other name, and is the most nutritious of all feed, because it contains the largest proportion of nitrogenous substance.

It is almost needless to say that, in order to derive much benefit from the use of Linseed Meal, it must be fed in quantity. At least one-half of all an animal consumes may safely and profitably be LINSEED MEAL.

☞ Please send in a sample order or for circular and prices. Orders will be promptly filled by any one of the following parties:

Cleveland Linseed Oil Co., Cleveland, Ohio.
Toledo Linseed Oil Co., Toledo, Ohio.
Detroit Linseed Oil Co., Detroit, Michigan.
I. P. Evans & Co., Indianapolis, Ind.
St. Paul Linseed Oil Co., St. Paul, Minn.
Cincinnati Linseed Oil Co., Cincinnati, Ohio.

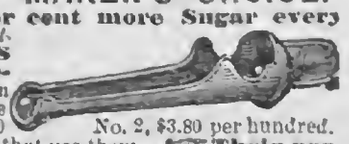
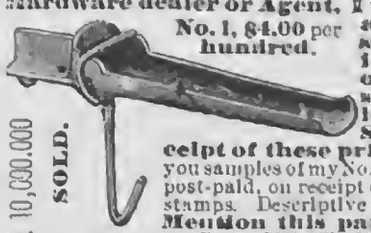
THE SUGAR MAKER'S CHOICE.

Twenty-five per cent more Sugar every year and *a better quality* from **POST'S Galvanized Eureka Sap Spouts** than from any others, is the verdict of over 20,000 Maple Sugar Makers that use them.



No. 2, $3.80 per hundred. ☞ **Their perfect working guaranteed.** Only a trial is needed to convince one of their **superiority over all others.** If every Sugar Maker not having tested them will tap half his sugar bush with the **Eurekas** the coming season, a full supply the following season will be the result. **If you fail to procure a supply of a Hardware dealer or Agent, I will deliver at any Railroad station named in the U. S. east of the Mississippi River not less than 100 Spouts on receipt of these prices.** I will send you samples of my No. 1 and No. 2 Spouts, post-paid, on receipt of five U. S. 2-cent stamps. Descriptive circulars sent free. **Mention this paper and** address orders at once to **C. C. POST, Burlington, Vt.**



No. 1, $4.00 per hundred.

10,000,000 **SOLD.**

Buy **Eurekas** only, and avoid becoming Infringers.

CHAS. R. HOE,
New Brunswick, N. J.

JERSEY BULLS.

I have for sale, at prices to suit the times, six young bulls from 1 mo. to 9 mos. old. Their sires are of a high standard, and of the favorite and fashionable butter strains; representing such blood as St. Heller, Stoke Pogis, Victor Hugo and Signal. The dams are all good cows of good strains, and some have butter records.

The calves are in good healthy condition, good colors, and of individual excellence and, will be registered if desired in the A. J. C. C. H. R. Prices very low either on selections or on the lot. Would take in exchange a perfect saddle horse 15½—16 hands.

J. R. RAND, Montclair, N. J.

Agents will be supplied with canvassing outfit on application.

Entered at the Post office at New York City, N. Y. as second-class mail matter.

For the Young.

I WISH some of the boys would write us about traps for catching rabbits and birds. I used to set snares and box-traps when I was a boy—now I want to know if any new kinds are in use. Let us hear about this, boys.

Many of the Cousins write me that they are studying music. I am glad of that. It is nice to be able to sing or play. It adds more to life than you can imagine. The trouble about learning to play on an instrument is that the practice is so tiresome that we lose interest in it. But we must remember that "practice makes perfect." If we could sing or play so beautifully without any work or trouble there would be little satisfaction in it. Pleasure is measured by work and self-denial. Never give up because a thing seems hard. Every good thing is hard to do at first. Only the bad things seem easy. I suppose many of the Cousins go to singing schools. The trouble with them used to be that the people cared more for the good times than they did for the singing. I wonder how they are now.

Will not a little chicken make a good pet for those who have no canary bird? To be sure it can't sing, but it will be cunning enough while it is small. I can remember that the first experience I ever had with a brooder was the result of an accident. We had an old hen that stole her nest, and hatched out a brood of chickens in January. There were six of the little fellows, and to add to their discomfort, the old hen broke her leg and had to be killed. The "men folks" thought the little things were not worth raising, but the "women folks" thought differently. If you will notice, you will see that the good mothers and sisters are the ones that generally look after those who cannot help themselves. They brought these little chicks in and put them in a large box by the fire. They were fed all they could eat, and had room to run about and get in the sunshine every pleasant day. At night, they would crowd up into a piece of an old blanket that hung in one corner of the box. We had a great air-tight stove where the fire kept all night long. We could put the box behind the stove every night, and there they would be safe and warm. And how they grew! We could almost see the growth from day to day. We had them all named, and we were all sorry enough when they got so large that they could run out-of-doors with the other chickens. No doubt they soon forgot us, but we always remembered them. Now don't let any of the poor little chicks die from cold or exposure. You can save them if you will only try.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK: I wonder if you and all the Rural Cousins have seen a mirage. Perhaps you have not, so I will tell you about it. We often see mirages here. On a clear morning, just after sunrise, houses and other objects that are out of sight over the hills come into full view, while those that are nearer and in sight seem to come still nearer and to be on lower ground. Sometimes it will look as if there were trees where there are none, or like a broad expanse of water where there is nothing but grass. Sometimes towns 12 or 15 miles away come into full view, and sometimes, but not often, are seen as if turned up-side down in the air. We all like the RURAL very much. I always look for the letters the first thing. We have no school here this Winter, so I study at home. We have been having steady cold weather. The mercury was 29 degrees below zero one morning. Uncle Mark I would like to know how many nieces and nephews you have. If you send us any beans or other seeds this year, I hope I will have better success.

Your niece,

Axtell, Kearney Co., Neb. ISA B. WELLS.

[I have a pretty large family. These letters are read by more than 50,000 people, so you see we have quite an audience.—UNCLE MARK.]

DEAR UNCLE MARK: The beans that you sent me I planted, but we live a little too far north for them to succeed well. But few of them ripened. Now I will tell you about my father's seedling strawberries that I spoke of last Winter. Most of them bore fruit in less than one year from the time that the seed was sown. We throw away all the weak plants when in the third or fourth leaf. The Prince of Berries, crossed by Great American, produced showy bunches of fruit, standing well up from the ground. The Vick, crossed with Sharpless, is low, with large fruit near the ground. The Daniel Boone, crossed by Kentucky, were strong, leafy plants with fruit of fine red color. We have the Amateur from Mr. Hart of Connecticut. We crossed it with Prince, Primrose, Bidwell and Mount Vernon. The plants are strong and vigorous. We prefer those kinds with perfect flowers. I will try to help my father remove the anthers in blossom time, and I intend to use an anther hook made from a pin, with the point bent acutely. It is recommended by Prof. Tracy.

From your niece,

Coopersville, Mich. MINIA A. WILDE.

[I hope you will be able to develop some good berries. Such experiments are valuable.

—UNCLE MARK.

DEAR UNCLE MARK: Here is another little boy wants to join the Y. H. C. My papa has a dry-goods store, but we have a small farm, too. Our Rural corn had a number of ears ripened, but the mice have got at them and nibbled some. We have enough left to plant a good many kinds, though. Something ate our peas, and we did not know what it was; but one day we went up to the farm and saw a little rogue of a woodchuck there. I guess he did it. I have two little brothers and a little baby sister. She is just beginning to talk. I think she is the best pet in the world, but you did not mean babies, did you? We have a dear little pony, all black; her name is Fly. I am going to have a little garden of my own in the Spring and when I learn to write better I will tell you about it. Mamma helped me write this letter, but I am going to school every day, and I will soon know how to spell all the words. Your nephew,

Peterboro, Ontario. LOUIS TURNBULL.

[That woodchuck was a rascal, surely. Babies just beginning to talk are very cunning. Never mind about waiting to learn how to spell and write better. Uncle Mark can read all the letters, and he is always glad to get them.]

DEAR UNCLE MARK: Last Summer I had a nice bed of geraniums, one of pansies and petunias. We also had a nice display of pop pies, the seeds of which were sent by the Rural. I love flowers very much and hope to have more next year than ever before. I am very much pleased with the letters written by the Cousins, Cousin Mattie Gray's in particular. I think she must indeed have her hands full attending to so much live stock. I would like to see her feeding ducks and Guineas. I have one brother. He is older than I, but I guess I will not trade him off, because he takes me on sleigh rides. He has a pony of his own. Her name is Dollie. I have also a baby sister. Her name is Mary. ANNA ROBERTS.

Elmira, N. Y.

[I hope you will have more flowers. You had better not let your brother go.

—UNCLE MARK.]

DEAR UNCLE MARK: I am a little boy 11 years old, and I want to be one of your nephews. We live on a farm of 208 acres, one half mile from town. I have half an acre of ground to cultivate for myself. I want your advice. Please tell me what to raise that will bring me the most money. I have $30 in the bank, and I always intend to have money there, but don't think I am stingy because I want to make money. I give some of my dimes occasionally for our church. I have never been to school because I am not very stout. I hope this will escape the waste basket. LEE WEBSTER.

Salem, Marion Co., Ills.

[I must know more about your land and how near you are to a good market before I can advise you properly. I guess you have more money than I have. I am glad you are not stingy. There are many other things besides money to be gained in this world.

—UNCLE MARK.]

DEAR UNCLE MARK: As I do not see many letters from Vermont, I thought I would write. I have a garden every year; last year I raised corn, potatoes, peas, beans, cabbages, turnips, onions, beets, carrots, radishes and melons. I planted some peppers last year, but the frost came so early that they did not get ripe. The corn and peas that you sent did nicely; some of the stalks were 14 feet in hight; one stalk had eight perfect ears, another four. Pa has taken the RURAL three years. His year is out, but he is going to subscribe over. I am 11 years old. I have 19 sheep to take care of, two cows and a calf, a pig and 20 hens, and a small lamb that was disowned by its mother. I would like to join the Y. H. C. As it is time to let out the cows and fodder, I will close.

Your nephew, ELVIN SAVAGE.

Windsor Co., Vt.

[I am glad you had such a nice garden. It is a good thing to learn to take care of stock.

—U. M.]

Don't be discouraged if your letters are not printed at once. Your names all go on the list.

GARDEN SEEDS FREE!!

Everyone knows that NORTHERN GROWN SEEDS produce finer, earlier and larger Vegetables than any others. We have bought 65,000 $1.00 lots of Garden and Flower Seeds, grown in Minnesota and Dakota, right under the North Star, and want you to try them. We publish THE HOUSEKEEPER, 85,000 circulation and in its ninth year ("no chicken," you see). We are ambitious to bring this Home Paper up to 150,000 circulation. Hence the offers we make you:
1st OFFER—THE HOUSEKEEPER is a monthly, $1.00 per year. If you send your subscription for 1886 and $1.00, we will send you $1.00 worth of garden or flower seeds. For every two additional subscriptions secured by you at $1.00, we will send you $1.00 in seeds as above, and will also send $1.00 in seeds to each subscriber secured.
2d.—If you send your subscription to THE HOUSEKEEPER for 6 months at 50 cents, we will send 50 cts. in seeds as above. For each two subscriptions for 6 months secured by you at 50 cents we will send 50 cents' worth of seeds as above, and same amount to each subscriber
3d.—To any lady who sends her address for a specimen copy (free) of THE HOUSEKEEPER, and 6 cents postage, we will send a 25 cent (retail price) packet of the new and beautiful Giant Pansy (imported Trimardeau, flowers 2½ to 3 inches in diameter).
On receipt of subscriptions, we mail catalogue of the well-known seedsmen Northrup, Braslan & Co., Minneapolis, Minn., with an order for amount due in seeds, which order will be filled immediately when sent with your selection, to Northrup, Braslan & Co. *The leading specialties of this catalogue will be advertised in March Housekeeper and selections may be made from that list by all subscribers.* Address BUCKEYE PUB. CO., Minneapolis, Minn.
☞THIS OFFER WILL NOT APPEAR AGAIN.

Please write me before you buy.
GEO. S. JOSSELYN, Fredonia, N. Y.

PERSONALS.

MAJOR BARNETT, Secretary of the State of Georgia for 40 years, is 85 years old.

MR. EDISON, the wizzard electrician, is betrothed to an heiress, a daughter of Lewis Miller, the reaper and mower two-millionaire.

JUDGE DAVID DAVIS got his great fortune by being compelled to take 80 acres of land near the village of Chicago, when he was a young man, for debt. The land is now in the heart of the city.

MR. BLAINE has an iceboat, and he is fond of scudding along the smooth reaches of the ice-bound river, near which he lives. "He is getting so fat," says William Walter Phelps, "that I fear for him should the boat meet with an accident."

MRS. CARLISLE, the wife of the Speaker, recently asked a visitor of her sex: "How many children have you?" "Only one," was the reply. "Only one! Is that all you have done for your country? Why, I have eight," was the rejoinder.

THERE are reports that Roscoe Conkling will soon be invited to lead the Republicans of New York State once more. In the absence of his organizing mind, they have met with successive defeats. He is now employed by a Republican Senate Committee which is trying to find out whether Jacob Sharp secured for nothing the right to lay a surface railroad track on Broadway, by bribing the Aldermen. Over $1,000,000 had been offered for the concession. Conkling is winning golden opinions from all parties, except the suspected bribers and bribed.

Humorous.

"THE whip is the parent of stubbornness. It will be found in the pedigree of every balky horse."

BOSTON POST: An anxious inquirer asks: "Where would you advise me to go to learn how to play the piano?" "To the woods, dear—to the deep, dark, dank, dangerous woods."

A SOCIETY paper in describing the order in which a bridal party passed down the church aisle, says: "The bride walked on the arm of her father." This may be all right, but it seems to us that a church was hardly the place for her to display her acrobatic accomplishments.

AT a dinner table in Massachusetts, a gentleman remarked that A——, who used to be given to sharp practice, was getting more circumspect. "Yes," replied Judge Hoar, "he has reached the superlative of life. He began by seeking to get on, then he sought to get honor, and now he is trying to get honest."

"WHAT kind of a man is he? Good, bad or indifferent?" "Well, that depends a good deal on who teeters on the other end of the plank with him." "How so, sir?" "Well, if you size him up alongside of Judas Iscariot, he looms up middlin' fair; but when you come to set him down between such fellers as you an' me, jedge, he do dwindle terrible surprisin'—he does, for a fact."

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XLV. No. 1883. NEW YORK, FEBRUARY 27, 1886. PRICE FIVE CENTS. $2.00 PER YEAR.

Entered according to Act of Congress, in the year 1886, by the Rural New-Yorker in the office of the Librarian of Congress at Washington.

The Vineyard.

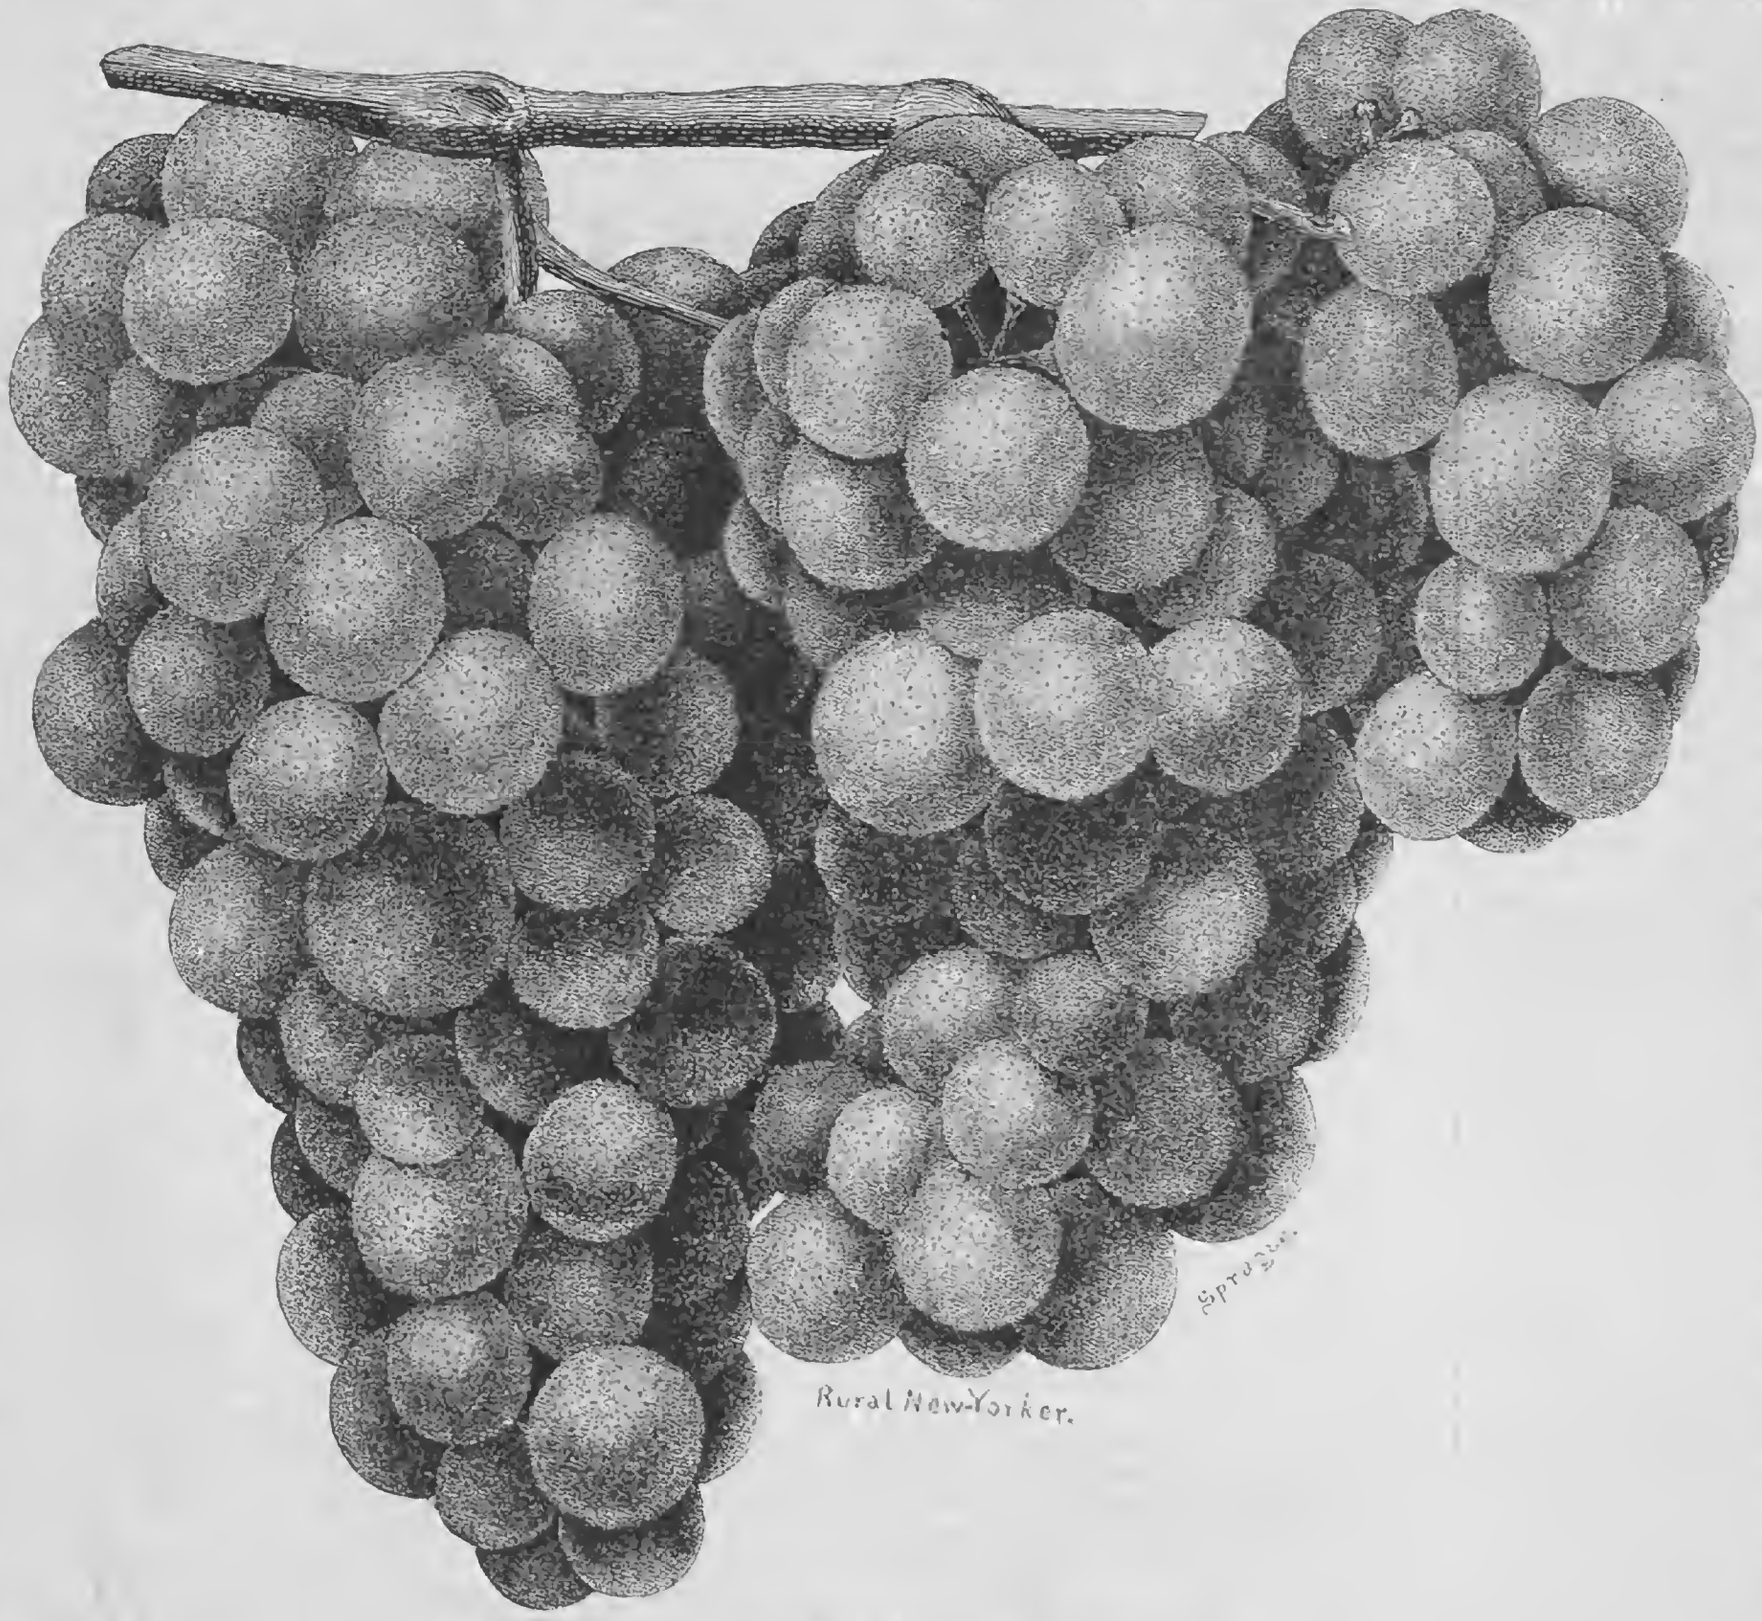
NEW WHITE GRAPE ROENBECK.

THIS grape, shown at Fig. 88, was first fruited in 1870. It is a chance seedling, originated on the grounds of Jas. W. Trask, Bergen Point, N. J. The wood is short-jointed and light-colored; vine hardy and prolific. Fruit needs thinning out, as the vine, like the Delaware, has a tendency to overbear. Our own notes on this grape, taken at the time it was left with us, are as follows: "One of the most promising white grapes we have seen, judging from the bunches left with us. Light-green berry, a little flattened. Pulp meaty and tender, two-seeded, sweet, vinous, not acid about the seeds. Skin very thin, though unusually strong. Bunches large, single-shouldered. Berry medium; hangs on well. Vine vigorous and hardy."

A PROFITABLE VINEYARD.

Concord cuttings set out on a quarter of an acre in March 1883, yielded in 1884, 1,000 pounds of grapes of extra fine quality and size. Such a crop on young vines injured them not a bit; for last year I sold 3,000 pounds of grapes which netted $125. In addition, I had 2,000 pounds from which I made 225 gallons of wine. The vineyard slopes gently to the south and is a sandy loam with a clay subsoil.

The posts were eight feet high. On their tops, at right angles with the rows, strips of oak 1x2 inches and three feet long were nailed, and on these No. 14 galvanized wires were stretched, one in the middle, and one at each end. The vines were trained to the tops of the posts and those bearing then allowed to grow, one to each wire. "P"



NEW WHITE GRAPE, ROENBECK. From Nature. Fig. 88.

Grapery.

SOME years ago, shortly after the plants had been moved to the open air, I cut about six inches of old wood from a Zonal Pelargonium and threw it aside. It had the customary rosette of small leaves at the tip. Some six weeks afterward I saw the cutting lying on the ground just where I had thrown it. It had not grown any, neither had the leaves fallen off; but the cut end had healed over and was well granulated. I put it in the border, where it soon rooted and grew. I was surprised at the amount of vitality stored up in that old stick. It was equal to a willow log. I have many times since cut off pieces of old wood, and thrown them about in various places to see how long they would live. I have kept them as long as three months, and then made plants of them. If the cut end should rest on the ground it will send roots into the soil.

* * *

Doubtless others have noticed this vitality in the old wood of the Zonal Pelargonium and some other plants. Being always on the lookout for something useful in everything I see, it occurred to me that this peculiarity might be applied to some useful purpose. Among other things, I thought it might be advantageously used for the transportation of cuttings over long distances. This I found to be true. Packed in sphagnum nearly or quite dry, and wrapped with oiled paper or muslin, they will bear transportation for thousands of miles, and arrive in good condition. If kept warm, the tips may grow a little and become etiolated; but these, when necessary, may be removed, and the cuttings will still be good. It is essential, however, that the cut ends should be thoroughly dry before the cuttings are packed.

* * *

But what I have particularly in view is the importation of pelargoniums from Europe. We almost invariably receive young, green-wooded plants, in full foliage. On the way the leaves and green wood mildew and rot, and a large percentage die. It requires, in fact, a good deal of nursing for several months before those that survive are good for any useful purpose. In the early part of December I saw the remnants of a lot of pelargoniums imported from London last Spring, and they were still far from being healthy-looking plants. This, in my experience, is a common case. I do not think these plants, however, were packed as well as they might have been, though they came from a well-known London firm. There is reason to doubt whether the English, the French, or the Germans pack plants for transportation as well as we do. The point I would make is, that, in ordering pelargoniums from Europe, we should make trial of cuttings from well-ripened wood, or rooted plants consisting mainly of such wood. The subject is one well worthy of consideration. I could anticipate some objections that will probably be made to the plan suggested; but I will drop the subject where it is for the present, simply stating that I propose to send some of these dried sticks on the long journey to Japan as an experiment, and will let the reader know the result in due time.

* * *

There is an old plant which I admire very much, which I do not remember to have seen noticed in the RURAL, at least not lately. I allude to Spiræa ulmaria (Meadow Sweet), a hardy herbaceous species, flowering late in the Spring. It is a most desirable plant for the border, bearing panicles of very pretty double white flowers. It is the variegated form, however, which I set out to notice. This is seldom seen now, though its bright variegation makes it a handsome plant, even when not in flower. It may sometimes be seen in some old country garden; but there seems to be no place for even such fine plants in the present style of gardening. I often, in the Spring, pull off a few side shoots, and send to friends, and try in that way to get it about again. In a rich soil, it will sometimes lose its variegation, and manure should therefore be kept away from it.

* * *

Abies Canadensis, it would seem, must now give place to Thuja Canadensis. Thus our old names, one by one, pass away, or mayhap, as Mr. Falconer found with the spiræas, they go in heaps. If this kind of thing keeps on, we shall have everything to learn over again.

* * *

I potted Friesia refracta alba about the middle of October. Those kept in a cool atmosphere are now (Jan. 21) just beginning to show color, while those kept in a warm temperature (but not forced) have been in flower for two or three weeks. With the help of a cold-frame, I think it would be easy to have this charming plant in bloom from the first of December to the last of March. It bears a good deal of cold, and responds readily to heat. It is one of the easiest plants to grow. I love the friesia all the more that it takes kindly to culture in the sitting-room.

* * *

Some people have not yet learned how to manage the pretty little Oxalis versicolor. It it a mistake, for example, to tie the shoots to sticks, or to try, by wires or other means, to keep them in an upright position. The plants should be started in the open air in the Fall, where they will make a strong beginning; but, whether started in the open air, in the green-house, or in the sitting-room, let them grow upright till they get ready to fall over, and then let them do so. They will form a pretty drapery around the rim of the pot, and flower abundantly. Half the bulbs are ruined by thrusting little sticks among them. It is a good rule never to put a stick to a plan

if you can grow it as well without. Besides, it is the nature of some plants to grow on the ground, and you can scarcely improve it. Sticks, I should say, are never ornamental.

HORTICOLA.

Dairy Husbandry.

DAIRYING IN THE NORTH STAR STATE.

(RURAL SPECIAL REPORT.)

Adaptation of Minnesota for dairying; bogus butter denounced; how to make the best butter; brains in dairying.

AT the recent annual convention of the Minnesota State Dairymen's Association, held in Albert Lea, on the 2d to 4th of February, some points were made which may be of general interest.

Col. John H. Stevens called attention to the peculiar adaptation of Minnesota climate, soil, grasses and water for successful dairying. All the tame grasses grow there in luxuriance, not excepting corn, which ripened in the short season of last year as far north as the line of the Northern Pacific Railroad. But the dairymen were not recommended to grow corn for fodder, as the tame grasses do better, are surer, and come on to make good pasturage when the prairie grasses begin to fail. The numerous lakes, so widely scattered through the State, give assurance of a never-failing supply of good water, while streams and wells are sources of satisfactory supply where lakes are not accessible. The numerous flouring mills make shorts, middlings, bran, etc., abundant. The State now has about 500,000 cows, turning out annually about $15,000,000 of dairy products. He urges the breeding of better stock and more attention to the practice of the economies of the dairy, as well as more conscientious and better work.

The bogus butter fraud was clearly laid bare and severely commented upon by W. D. Hoard. One man made the practical proposition to visit the boarding-houses, restaurants, hotels and dining cars, call for bread and butter, or other article with butter, and then pocket the pat and deliver it to the dairy commissioner for analysis, and the taking of legal steps where the butter is found to be bogus. A blow struck here would do much to suppress this dairy fraud, which is supported mainly by the class of establishments named. Resolutions were adopted calling for effective State and national legislation for the suppression of fraud and the protection of honest dealers in all kinds of food products.

Col. T. D. Curtis read a paper on how to make the best butter. He dwelt emphatically upon the importance of good dairy stock, good feed and shelter, scrupulous cleanliness in all particulars, and no exclusive dependence on the strainer to take filth out of milk. He said different conditions of milk and cream, some depending on the season, the care of the herd, etc., demand a wide range of temperature for churning. It may be from 55 to 70 degrees, and he recommended a higher temperature for winter churning, when the hard fats predominate in the butter globules and the cream is albuminous and viscid. In many cases it would be well to dilute the cream with tepid water. All intelligent dairymen now follow the granular process of washing butter, but only a few have yet got hold of the granular process of salting by stirring the salt into the butter, letting it dissolve, and then packing it into the tub directly from the churn or table, or first pressing it into a solid mass and then packing it for market, but avoiding all working. He condemned all coarse-grained, hard, impure and cheap salt as dangerous, and said the cost of using the best salt is so little—not to exceed one mill a pound—that no one can afford to take the risk of using any but the best. He recommended the small dairyman to purchase some one of the numerous patent creamers, which can be used anywhere, and occupy but little room. Most of them do good work. Ice, he said, could be saved by piling it on a crowning piece of ground and covering it with a straw-stack four to six feet thick all around and somewhat thicker on the top, which shall be built to shed water.

C. F. Defter commented on the importance of putting butter up in uniform, clean and attractive packages. He favored the tub holding 56 pounds net.

W. D. Hoard argued in favor of the reduction of cost of production, on which the net profit depends more than on high market prices for dairy products. Poor cows, exhausted soil, half crops, and half care and management are too expensive for a dairyman to indulge in. A little "cow sense" would do more to reduce the cost and increase the profits than any other one thing. Brains are a paying investment in the dairy. Secretary R. C. Jordan favored the keeping of a farm register as an efficient aid in enabling the dairyman to know the value of every cow, and improve his herd; also to lead him into the channel of correct business habits.

Resolutions denouncing the management of the last Chicago Fat Stock Show, in affiliating with the bogus butter men, and favoring a Northwestern organization for the exhibition of dairy stock and dairy goods, were unanimously adopted. C.

Farm Topics.

THE SUGAR BUSH.

Advantages; maple sirup; essentials in making it; straining; trouble in making; improved evaporators; profits.

OUR most thoughtful students of economics regret the rapid and wide-spread destruction of our forests, and are urging that the practice cease, and that we make up for the loss by liberal planting. It is very doubtful if we can magnify too highly the importance of Arbor Day. As the argument from æsthetics, and even from danger, when such danger is obscure, usually falls on deaf ears, I wish to offer an argument based on the pocket book. Nothing on my farm pays so well as a twenty acre sugar bush. Before this year I have tapped 400 trees; this year I shall increase to 600. Hence I urge that all who have sugar bushes should preserve them; others who have not, may add to the beauty of their place, the welfare of the country, and by securing good maple orchards, the prospective value of their farms.

The great point is to make a superior article of sirup, and that this may be perfection, we should spare no pains. Such an article is an incomparable delicacy and people who are able will have it if they once learn its excellence. Thus if we take a little pains to get an A No. 1 article of sirup on the tables of those who are able and willing to gratify the palate, we shall have no trouble to secure a sure market at from $1.25 to $1.50 a gallon for all the sirup manufactured.

The two things which the maple sirup producer must ever keep in mind are, first, neatness, second, dispatch. Like butter, maple sirup has such a delicate flavor, that it is easily tainted. Again, if not reduced from sap to sirup in the shortest possible time, it lacks in that indescribable flavor which we must secure. Only tin buckets should be used. They should be hung to the tree by a Post spout, and be all covered by an inch pine board cut square so as to cover the buckets and protect them from all snow, rain water and filth, like dust and leaves. We strain our sap through cloth as it enters the gathering tank, as it enters the store trough and as it passes into the evaporators, and the sirup as it passes from evaporator to can. This last filtering is through a woolen cloth. The store trough is kept covered, and it, the cask, and the buckets are all thoroughly rinsed with hot water after each run. We used to think only the first run would secure the best sirup. We now know that this is not true. If we keep all as neat to the last as it is at the beginning, the sirup will lose none of its excellence. Sap souring in trough, bucket or cask is what taints the sirup. Our house is kept clean; even the wood-shed is separate from the evaporating room, that all possible dust may be avoided. One trouble in manufacturing the sirup arises from a mineral which is held in solution in the sap, and usually in the hot sirup, but which is thrown down as the sirup cools. In Ohio they call this silica. Prof. Wiley of the Agricultural Department, says it is malate of lime, while another chemist tells me it is sucrate of lime. This substance forms an incrustation on the bottom of the evaporators, which is very difficult to remove.

Again, it is sure to form a deposit as the sirup cools, so the sirup must be cooled and then carefully poured off, after which we heat it and seal it in close, air-tight cans or jugs, where it will keep indefinitely, losing none of its delicacy and flavor. The improved evaporators are made in sections, so that these small light sections can be made to change places daily, and thus the old trouble of the lime crustation forming on the bottom of the pan is avoided. Siphons carry the sap from one section to another and are thought to act as filters and so add to the neatness. With these improved evaporators with iron furnaces, the sap is reduced with astonishing quickness and passes from sap to sirup with no intermixture of fresh sap, which is a matter of great importance. So valuable do I consider these improvements, that I have laid aside my old Cook's evaporator, although used only three years, and have secured one of these improved evaporators. I have also procured the iron arch which works so much better than does the brick arch, that it soon saves the extra cost. There is an automatic feeder that admits the sap to the evaporator, so that it will run in fast or slow, just as the evaporation is rapid or prolonged. Thus we can fill our furnace with good hard maple well seasoned wood, and leave for the night with perfect security that all will be safe.

Let us now compare the profit with our Short-horn. The evaporator will cost $125; 600 tin baskets at 18 cents each, $108; 600 spouts at $4.50, which equals $27; house, $100; cask, store trough, etc., $40.00. The total cost is $350, about the value of a good Short-horn cow. The work is in the Spring, when there is no press of farm work, especially if the fences have been fixed in Winter, as they should be, and the manure kept well drawn. Although this labor is, perhaps, more than that required to care for the cow, yet not much more. Each tree will give us 30 cents worth of sirup; this is a low estimate, which gives a total of $180, which is certainly more than we can hope to secure in profits from our cow. Thus it seems very evident that the maple bush well managed is one of the most valuable adjuncts on a good farm. M. S.

Owosso, Mich.

Horticultural.

EARHART EVERBEARING RASPBERRY.

LAST year, Nov. 21, page 789, we spoke of this new raspberry, and gave illustrations of it drawn from Nature. Briefly restating what was then written, we may say that this raspberry was found some 15 years ago in a grove in Mason County, Ill., late in the summer season, loaded with ripe berries. Thinking it a valuable sort for cultivation, plants were sought after the next Spring. Not being able to find them at the time, it was some years later that it was again discovered by Mr. Earhart in the Fall; and at the proper season,

EARHART EVERBEARING RASPBERRY.
From a Photograph taken July 3. Fig. 89.

plants were removed to the family garden, and it proved to be in truth an "everbearer," never failing of a crop even after the most severe Winters.

Mr. J. H. Hale, of South Glastonbury, Conn., who sent us the photographs from which our illustrations are made, says of this berry:

"The plant is a strong, vigorous grower, hardy as Souhegan or Tyler, ripens its first or main crop with the Doolittle; fruit larger, jet-black, and of superior quality (some think it equal to the Turner, a red variety), and as productive as any of the leading sorts now in cultivation.

The new canes of each season's growth begin to bloom when two or three feet high, ripening their berries very soon after the main crop is gone, and continue to bloom and fruit till frozen up in the Fall, the most of the fruit, however, ripening from the first of August to the middle of September, although ripe fruit can be found at all times from June to November.

While the first or main crop is fully equal to that of any of the old and reliable varieties, the second or after crop on the canes, ripening from July to November, is about twice the size of the first or main crop; so that all the fruit is equal to three full crops each season. And what the Earhart has done for the past six or eight years, it is likely to do in the future.

Plants set out early in the Spring, if they get a good start, will produce quite a crop in September and October in the year in which they were planted. And on older plantations, should the canes for the first crop get killed or cut to the ground in any way, the new canes will soon repair the damage by producing a heavier crop than usual, the only loss being a delay of some three weeks in the first ripening."

Fig. 89 shows the vine as it appeared July 3 in the middle of the first crop. Fig. 90 (p. 135) shows the vine as it appeared Sept. 15, and Fig. 91 (p. 136) as it appeared Oct. 15. As intimated last year, we have now specimens of this plant at our own grounds, and shall report in due time.

Miscellaneous.

CATALOGUES, ETC., RECEIVED.

JAMES J. H. GREGORY, Marblehead, Mass.—Mr. Gregory has an advantage over many seedsmen in being himself a hard-working farmer and farm student. His books on Fertilizers, Onion-raising, Squashes and How to Grow Them; Cabbages and How to Grow Them; Carrots, Mangolds, Sugar Beets, What Kinds to Raise, How to Grow Them and How to Feed Them, are before the public. The catalogue is one of "warranted seeds, vegetable, flower and grain." Cory Corn is referred to as being the earliest sweet corn known—earlier than the Marblehead. The All Seasons Cabbage is said to be a Drumhead, as early as Henderson's Early Summer, yielding heads a third larger. Among other novelties are Beauty Tomato, Pride of Georgia Watermelon, King of the Garden Lima Bean, Horsford's Market Garden Pea (introduced by the R. N.-Y.), Bird Cantaloupe and many others. Mr. G.'s Race-horse Oats were tried at the Rural Grounds last season, and were among the best kinds tested. Send for the catalogue and mention the R. N.-Y.

RUSSELL & COMPANY, Massillon, Ohio.—A fine illustrated catalogue of the "New Massillon" thrashers, of which they make six sizes; also their independent stacker, with which the straw may be put upon the highest stack and one situated in almost any position from the machine; also their mounted and down horse-powers. It also shows and describes their portable and traction engines, of which they make sizes from four to 16-horse power, both portable and traction. They are now at work perfecting a new traction engine, which they confidently expect to be perfectly practicable as a motor for steam plowing. We certainly wish them success, for this is the next great step in successful American farming. This firm also makes any number of sizes of stationary engines and saw-mills. Of the latter they build everything from a wood saw with tilting table to the ponderous machine capable of cutting all the lumber that can be got to it. Send for the catalogue; it will interest you.

THOMAS HARROW CO., Geneva, N. Y.—A descriptive catalogue of the widely renowned Thomas Smoothing Harrow, of which this firm now makes several styles. The distinguishing feature of these harrows is the slanting position of the teeth, which was the invention of the veteran agricultural writer John J. Thomas. We have long used these harrows and consider them indispensable for certain purposes. This catalogue, by illustrations, shows the advantages and also plainly tells the uses to which these implements may be applied, and the best manner of arranging and using them to accomplish the most effective work with the least expenditure of power. The easiest way in which to learn all about how they are made and what they will do is to send for this catalogue, which will be sent, free of cost, if you mention the RURAL.

TABOR ORGAN CO., Worcester, Mass.—An illustrated catalogue of the several styles of the Tabor organs, with a full description of each. These organs have the following improvements: A patent stop-action; patent valve tremolo; patent octave coupler; patent divided octave coupler; a very deep-toned sub-base; a double-action bellows; a grand crescendo knee swell, and a grand organ knee attachment. There are nearly a dozen styles from the Gem with a single manual, six stops and a single set of five octave reeds, to a double bank and pedal base chapel organ with

double manual, 18 stops and 10 sets of reeds, capable of filling a very large church with the richest melody. All these organs are well made, and finished in rich style with beautiful woods. Send for the catalogue and prices, mentioning the RURAL.

PRESTON'S WYANDOTTE GAZETTE. By Geo. A. Preston, Binghamton, N. Y.—A large, nicely gotten up circular, devoted to the description and illustration of Preston's fowls and poultry houses and to telling the good qualities of the Wyandottes. It contains many articles from the best poultry breeders and much useful information to those keeping poultry. Among the best articles is one written by Mr. B. N. Pierce, of Ohio, especially for the Gazette, which gives very full information respecting this new breed. It is fully illustrated and is worth the reading. We can't begin to tell all the good points of this circular, but we know it will please you. Send for it, mentioning the RURAL, and see if it does not.

FERTILIZERS: Where the Materials come from; where to get them in the Cheapest Form; how to Compound, etc., etc. By J. J. H. Gregory.—A book of 116 pages, written, he tells us in the preface, by a farmer for farmers. Mr. Gregory uses annually from 20 to 40 tons of commercial fertilizers. He has studied the matter till he thinks he knows where to buy and how to buy cheapest. He takes up and treats separately each of the fertilizing elements needed for successful plant growth. It will pay careful study. Issued by Rand, Avery & Co., Boston. The price is not given.

W. G. RICKER, Rochester, N. Y.—New circular showing the celebrated Rochester Hay Carriers and Slings, Hay Forks. This circular shows several kinds of carriers intended for wooden and iron tracks, and the way in which they are fastened in the barn. It also shows the Rochester Hay and Grain Stacking Frame, a very convenient thing to use, and with which hay is put into stack in better shape than it can be done without. Hay slings are very convenient and expeditious devices for handling hay, and with them, grain in bundles is as easily handled. Send for this circular. It is worth your while.

JAMES LEFFEL & Co., Springfield, Ohio.—A neat little book of 65 pages showing by cuts and descriptions the distinguishing features of the Bookwalter engines, of which they make a specialty. These engines are light and durable, but at the same time they are strong, give the full power claimed for them, and the price places them within the reach of many farmers for shelling and grinding corn, sawing wood, pumping water, cutting feed and other uses on the farm. There are hundreds of places in this country where a good engine and feed mill would not only be a great convenience, but would be a financial success. This circular free to readers of the RURAL.

CROWN M'F'G Co., Phelps, N. Y.—Catalogue containing full description of the Crown Grain and Fertilizer Drill. It has a perfect force feed, no gear wheels to change, and dial indicators. Their continuous steel axles with ratchets in hubs and simplicity in gearing make the Crown of extremely light draft. It has a steady unaltered motion to the distributors, which is essential in preventing fertilizer from clogging in the box. They also make an excellent wheel-barrow grass seeder, hay carrier adapted for the use of shir slings instead of the horse fork. Everyone send for a catalogue: free. First premium received at New Orleans Exposition and N. Y. State Fair, 1885.

EMPIRE WRINGER COMPANY, Auburn, New York.—Circular showing the Empire Wringer which is said to wring drier and run easier than any other wringer. It also shows the Empire Hammock Standards, Empire Swing, Empire Folding Cot-bed, and the Empire Clothes Drying-bars. It is claimed for the Empire Wringer that it is the only one which does not have the crank attached to the shaft of either roll. Send for this circular.

BROOKS & PARSONS, Addison, Steuben Co., N. Y.—Illustrated circular of the Smith's Self-adjusting Swing Cattle Stanchion, containing a description of the same, a list of prominent breeders using it, and many letters indorsing the same. Among others Mr. Ed. F. Towner, of Mass., says he has 70 in use and he thinks they have more than paid their cost in the saving of feed. Messrs. Woodward & McClellan, of Georgia, say they think a barn incomplete till it is provided with these stanchions. They will be glad to send these circulars if you mention the RURAL.

REPORT OF THE MINNESOTA STATE HORTICULTURAL SOCIETY for 1885, together with the Transactions of the State Amber-Cane Association.—In this report we find an interesting paper on the cultivation of ginseng. It seems that this plant is very profitable in some parts of the country and it seems a pity that more experimenting is not done with a view of discovering some feasible method of cultivating it. We notice that Turner is the favorite raspberry in Minnesota. This report also contains a list of fruits recommended for planting in Minnesota. This volume goes to every member of the society. S. D. Hillman, Sec'y, Minneapolis, Minn.

REYNOLDS & LANG, Ithaca, N. Y.—A catalogue of portable engines for thrashing and farm use, of which they make several sizes. They also make a superior traction or self-propelling engine, which they claim is not excelled for simplicity, durability and effective work. The power is conveyed through a series of close gears to a shaft having pinions on each end, thus applying the power directly to each wheel. This causes the engine to drive strong and saw smoothly, without jerks.

R. H. ALLEN Co., 189 Water Street, N. Y.—This is an illustrated, descriptive catalogue (90 pages) of farm, garden and flower seeds, roots, plants and garden requisites. Among the specialties may be noted the Deacon Lettuce, Oak-leaved Lettuce, Allen's Superb Pea, Pearl of Savoy Potato, Pine-apple Squash, Beauty Tomato, etc. This firm also offers fertilizers and farm implements of all kinds. The Eagle Pruner is an effective instrument which we heartily commend to all who have any kind of pruning to do. Send for the catalogue and mention the R. N.-Y.

SMALL & MATTHEWS, 21 South Market Street, Boston.—An illustrated circular of Small's Calf-feeder, an invention entirely novel in its way, and from which a calf takes its food by sucking. We used one last Spring and it gave very good satisfaction indeed. The milk is merely put into a can which is securely fastened against a building or broad post set up for the purpose, and the calf cannot upset it or "bunt" it over. We think you would like it. At least send for the circular and see how you like it.

BINGHAMTON SCALE WORKS, Binghamton, N. Y.—A circular of Osgood's Patent Combination Scales, giving a full description of the several styles made, and showing by cuts their various parts, and telling, in a plain way, wherein one is superior to another. It also shows wherein scales are apt to be defective; and how they should be cared for, to prove most reliable and last the longest. Send for it, mentioning the RURAL.

THE UNIVERSAL PLOW COMPANY, Canton, Ohio.—This circular fully describes and shows by cuts a new rear-adjusting right and left hand, also a front-adjusting right and left hand plow for one, two and three horses. These plows are made of chilled iron, crucible steel, or a combination of the two. We cannot describe these implements, but you can send for the circular and read up for yourself.

THE ANDREWS HATCHER CO., Elmira, N. Y.—A pamphlet setting forth the advantages claimed for artificial incubation in general and the Andrews Hatcher in particular. There is no doubt but the old hen must do her level best or take a back seat, as the incubators are working remarkably well. Send for this circular and study it well. They also make a very fine stationary engine having the cylinder frame, guides and main box all cast in one piece, making it very strong and rigid; also boilers and several sizes of portable saw-mills. Every person interested in machinery or needing an engine should send for this catalogue.

HENRY A. DREER, 714 Chestnut Street, Philadelphia, Pa.—A Garden Calendar and Guide to the successful management of the flower and kitchen gardens. This book of 130 pages, full of illustrations, gives lists of vegetable, flower, grass and farm seeds of all kinds; plants of new and standard sorts; small fruits, trees, shrubs, fertilizers, insecticides, books, implements and all sorts of garden appliances. Free to our subscribers.

F. R. WILSON & SON, 57 North Young Street, Columbus, Ohio.—A circular of Wilson's swivel-center, spring single-trees, which both shows and describes how this very valuable device is used. By its use the strain and jar on the horse's shoulders are greatly relieved and much of the wear and tear of drawing hard loads saved. It would pay every street car line as well as farmers to send for this circular and look into it.

A. D. COWAN & Co., 114 Chambers Street, New York.—A bright, tastily arranged catalogue (65 pages) of seeds, etc., well worthy of examination. Eight pages are devoted to novelties. A specialty is made of the Hales's Perfect Mole-trap, which we unqualifiedly commend to all whose gardens are infested with these animals. Mailed free to our readers. Apply as above.

ROBERT BUIST, JR., 902 and 904 Market St Philadelphia.—An illustrated catalogue (98 pages) of flower, vegetable and farm seeds.

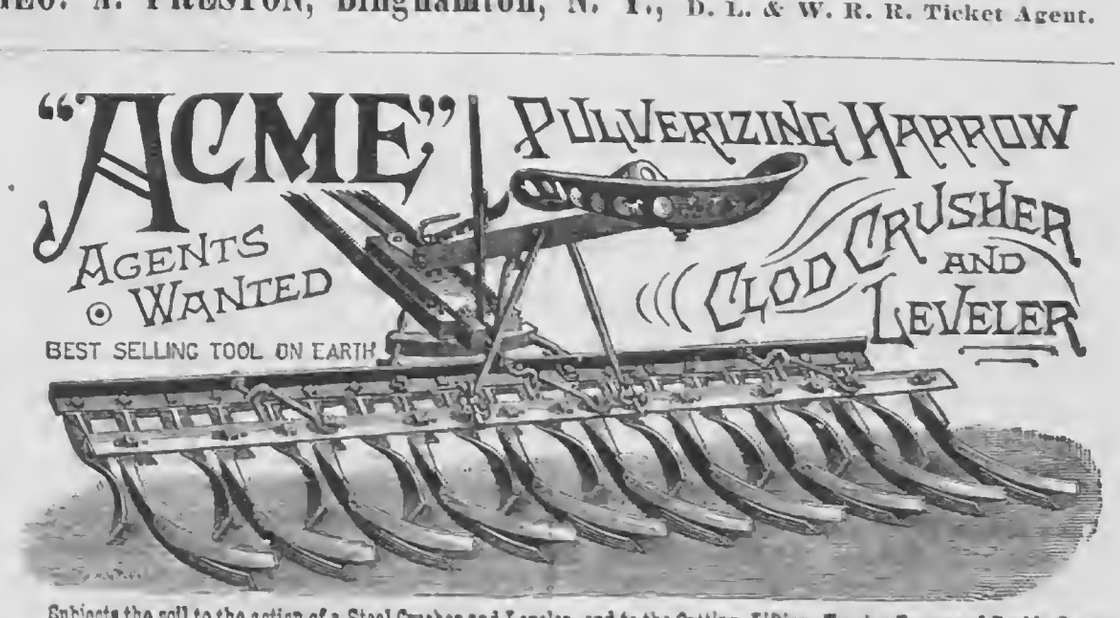
PRESTON'S WYANDOTTES!

15 *GRAND BREEDING PENS FOR* 1886.

EGGS from Two Pens of First Premium Stock, headed by "Earl and Truston," at $5.00 per 13; $10.00 per 39. Eggs from 13 other pens of good breeding birds, carefully selected, and mated for best possible results, at $3.00 per 13; $5.00 per 26. Eggs from one pen each of fine Langshans, Light Brahmas, Plymouth Rocks and R. and S. C. Brown Leghorns at $2.00 per 13.

Elegant Wyandotte Chromos at 10 cents each. Large circulars with illustrations FREE to all.

GEO. A. PRESTON, Binghamton, N. Y., D. L. & W. R. R. Ticket Agent.



Subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting, Lifting, Turning Process of Double Gangs of Cast Steel Coulters. Immense cutting power. Crushing, Leveling and Pulverizing performed at the same time. Entire absence of Spikes or Spring Teeth avoids pulling up rubbish. Only Harrow that cuts over the entire surface of the ground. Sizes, 3 to 15 ft. wide. With and without Sulky attachment. We deliver free at Distributing Depots.

FAIR PLAY. **DO NOT BE DECEIVED.** Don't let dealers palm off a base imitation or some inferior tool under the assurance that it is better. SATISFY YOURSELF BY ORDERING AN "ACME" ON TRIAL. We will send a **double gang** Acme to any responsible farmer in the United States; if it does not suit, he may send it back, we paying return freight. We don't ask pay until tried on his own farm.

Send for pamphlet containing thousands of testimonials from 18 States and Territories.

Branch Office, HARRISBURG, PENN. **NASH & BRO.,** Manufactory and Principal Office, MILLINGTON, NEW JERSEY.

N. B.—"TILLAGE IS MANURE" and other essays sent free to parties who NAME THIS PAPER.

CATALOGUES, ETC.

(*Continued from page* 135.)

The formation and use of cold-frames, hot beds, formation of the kitchen garden are well explained. The lists of peas, potatoes, cabbages, beets and beans are especially good. Send for the catalogue and mention the R. N.-Y.

B. L. BRAGG & Co., Springfield, Mass.—This is a bright, handsome catalogue of 98 pages, with many desirable new things in addition to the usual lists of seeds, small fruits, fruit trees, ornamental trees, implements, etc. This firm is headquarters for the remarkable "Top-over" Corn, which is distinct in many ways. The ears, though small, are crowded with large kernels, always covering the tip and butt ends (hence Top-over), which latter are united to the stalks by stems scarcely more than a quarter of an inch in diameter. The cobs are the smallest we have ever seen. The catalogue gives a true portrait. It will be sent to all who apply to the above firm, mentioning the R. N.-Y.

ALFRED BRIDGEMAN, 37 East 19th St., N. Y.—A substantial, plain, unpretentious, but trusty catalogue (75 pages) of vegetable, grass and flower seeds. Established in 1824, this firm is everywhere favorably known. After reading the exaggerated, sensational stuff with which many of the catalogues of the present day abound, the terse statements, simple arrangement and well-selected lists of this catalogue are quite refreshing. Among novelties will be found the Rural Blush Potato, Rural New-Yorker Pea, which our newer subscribers may wish to try.

JAMES VICK, Rochester, N. Y.—A portfolio (14x11 inches) of beautiful flowers consisting of six large chromo-lithographic plates from original paintings. They are accompanied by interesting letter-press descriptions, all on heavy paper of the first quality, making the colored plates suitable for framing. The pictures are various orchids, a passion flower and roses and pansies. It is, indeed, a work most creditable to the enterprising publisher. A descriptive circular will be sent to all who apply to Mr. Vick.

THE STORRS & HARRISON Co., Painesville, O.—A combination catalogue (138 pages) of all sorts of fruit and ornamental trees; small fruits of all kinds, including the latest novelties; grape-vines, roses in great variety, chrysanthemums, cannas, pelargoniums, flower and vegetable seeds of all kinds with cultural hints—all fully illustrated. Very liberal inducements are offered in the way of various collections of plants and seeds. This is a good house of long experience.

ROBERT J. HALLIDAY, Baltimore, Md.—A large illustrated catalogue (130 pages) of all sorts of seeds, garden and greenhouse supplies, including valuable hints for the amateur, and a guide to seasonable work for the year. Many new plants are mentioned, and excellent cuts of new roses, chrysanthemums, etc. presented. It is a lively catalogue, and will well repay an xamination.

E. H. RICKER & Co., Elgin, Kane Co., Illinois.—Here we have a circular of evergreens and a few of the leading deciduous trees. Norway Spruces are offered from six cents to 75 cents each, according to size; Scotch Pines from 10 cents to 50 cents; Arborvitæ from five cents to 35 cents, etc. Very much lower prices are given by the hundred.

SHAKER SEED Co., Mount Lebanon, N. Y.—An illustrated Catalogue and Amateurs' Guide to the flower and vegetable garden. This company claims to grow all of its own seeds that can be successfully raised in its section of country. The catalogue (77 pages) is well worthy of an examination. Free.

P. M. AUGUR & SONS, Middlefield, Conn.—A circular of the promising Jewell Strawberry, with testimonials from good men. Probably no other strawberry has been introduced that has had so much said in its favor and so little against it. Try it all. It originated with the above firm.

F. N. LANG, Baraboo, Wis.—Illustrated catalogue (48 pages) of flower, vegetable, field and tree seeds. Lang's Hand Weeder which we have used, is a handy little implement. The Badger Queen is mentioned as the earliest oat in cultivation. Catalogue free.

MASSACHUSETTS: ESSEX COUNTY AGRICULTURAL SOCIETY.—We are under obligations to the Sec'y, D. D. Low, of Gloucester, for a copy of the transactions of this honorable old society. This is its 65th year.

F. K. PHŒNIX, Bloomington, Illinois.—Catalogue (20 pages) of trees (fruit and ornamental) shrubs, roses, etc. We see that huckleberry plants two to three feet high are offered. Free.

W. W. HEILBORN, Arkona, Ontario, Canada.—A catalogue of small fruits, which should interest not only our many friends in Canada, but those at home as well.

EVART H. SCOTT, Ann Arbor, Mich.—A circular of the Woodruff Red Grape, with testimonials as to its vigor, etc. This is a large, showy grape, certainly, but the quality is not much better than that of the fruit of wild Labrusca vines.

W. H. SMITH, 1018 Market St., Philadelphia, Pa.—A catalogue (100 pages) of all sorts of farm and garden seeds. The specialties are very well selected, though too numerous for mention.

Fig. 90. (See p. 134.)
EARHART EVERBEARING RASPBERRY. From a Photograph taken Sept. 15.

COLE & BROTHERS, Pella, Iowa.—In addition to the usual list of seeds, this catalogue offers "Dollar Collections" of trees and plants suitable for mailing, postage paid.

S. FROGNER, Herman, Grant Co., Minn.—Circular of potatoes and Spring wheat.

ANNOUNCEMENT.—The old and popular firm of J. Stevens & Co., of Chicopee Falls, Mass., manufacturers of the celebrated Stevens' Fire Arms and Fine Machinists' Tools, have sold out their business to the new corporation just formed under the name of the J. Stevens' Arms & Tool Co., with the following officers: Joshua Stevens, President; William B. Fay, Joshua Stevens, George S. Taylor, Directors; Irving H. Page, Secretary; James E. Taylor, Agent and Treasurer. The above took possession of the business January 1, 1886.

THE record of the New York Life Insurance Company is a brilliant one. When it was first organized, 41 years ago, life insurance was a doubtful experiment; now the great majority of our business men hold policies in one or more companies. Since 1845, the New York Company has paid $33,921,708.69 as death claims. Last year $7,681,873.75 were paid to policy-holders. The great success attending this company has been the result of liberal dealing with policy-holders, and great care in the acceptance of risks and in making investments. The man who wishes to insure his life, for the purpose of providing for those who are near and dear to him, cannot be too careful in selecting an Insurance Company. Our readers will do well to investigate the Statement of this company.

A CARD FROM DR. LORING.

I assure you a statement in a late issue of the RURAL NEW-YORKER that the "Loring ring was overthrown" at the organization of the Massachusetts Society at Worcester, is without foundation. I welcome all new agricultural societies, and I have no desire to control them in any way. The statement that the New England Agricultural Society, of which I am President, desired to exert its influence in either of the agricultural meetings at Worcester, is also a mistake. No such effort was made. The New England Agricultural Society has its sphere, and confines itself to it.

Washington, D. C. GEO. B. LORING.

THE DR. REEDER PEAR.

IN the RURAL of January 23d is presented a very correct illustration of the Dr. Reeder Pear. If I mistake not, this pear was raised by Dr. Henry Reeder, of Seneca Co., N. Y., from seed of Winter Nelis. We have fruited it at Geneva for several years, and find it "best" in quality every time. While, probably, it will never prove profitable as a market variety, as the average customer will persist in buying for looks rather than for quality, every man who cares to have a desirable fruit for his own eating, will plant it. To my taste it is superior in quality to most, if not to all, varieties ripening in October. The tree appears to be hardy, healthy and fairly productive. HOWARD A. CHASE.

Fig. 91. (See page 134.)
EARHART EVERBEARING RASPBERRY. From a Photograph taken Oct. 15.

THE RURAL'S AVERY SEWING MACHINE.

BELIEVING that the RURAL always tries to "hew to the line," and being in need of a good machine, I sent for an Avery, which I have now had for two months. I believe it as good as any made in every respect, and better in some. It doesn't seem possible that a lighter lock-stitch could be made, unless the shuttle were made to run on "thin air," and so noiseless is it that it can be run while baby sleeps—and both these are important considerations with a woman. M. C.

Scranton, Pa.

[The Avery is given for 40 subscriptions. The retail price is $60.—EDS.]

J. C. MASON, of this city, advertises that sufferers from piles "will learn of a simple remedy by addressing" him. In answer to inquiries he sends a pamphlet puffing his remedy "Electrobole," and other stuff. This mode of angling for gudgeons is that of a charlatan. The "Electrobole" is not a whit more effective than any of the pile-curing salves or other remedies obtainable at the nearest drug-store. The best treatment of piles, according to the different causes which have produced them, is to diminish the amount of blood sent to the parts, by active habits, abstemious living and attention to hygienic rules. In case of irritation, leeching or cupping in the neighborhood, fomentation, poultices, enemata, refrigerant and soothing lotions, are beneficial. Strict attention to cleanliness, a stringent applications, like tannin ointment, pressure by bandages and pads, and ice will suffice in most cases; but a surgical operation is often necessary for a radical cure. This consists of excision by knife, cautery or ligature, usually the last. It is excessively painful unless the patient is placed under the influence of anæsthetics. It would be much cheaper and better in every way to consult a skillful physician than to patronize any advertised nostrum.

TO SEVERAL INQUIRERS.—We don't recommend the Connecticut M'f'g Co., Hartford, Conn.....The Chicago Dried Fruit and Produce Company, which solicits consignments, is a light concern financially. The name is by far too big for it, and one is usually safe in doubting small concerns with big names. It may be honest, however, and we are inclined to think so, but as its means are quite limited, it may collapse at any time, and in such an event the consignors would, of course, be the sufferers. Any concern (especially a new one) which offers patrons unusually favorable terms should be treated with great caution. As there are a multitude of thoroughly trustworthy and responsible business houses in all large cities, wouldn't it be wise to deal with these and thus make the risks of loss as small as possible?.....We do not recommend the Crown Manufacturing Company, of Cincinnati, Ohio.....We have twice already given our opinion here of T. S. Page of this city, who advertises a remedy for deafness. There is no doubt that he has afforded relief in a number of cases; but we have also learnt of some in which his treatment was of no use. As deafness has a great number of widely different causes, no single method of treatment can prove effectual in all cases. To send money for a "cure" under such circumstances is like investing it in a "blind pool;" and while "blind pools" occasionally turn out very profitable for investors, it is only when the managers are well known to be quite trustworthy, and even then losses are nearly as frequent as profits. In other cases losses are the rule.....We have had quite a number of complaints about the Kensington Art Co., Kensington Outfit Co., etc., of Boston and one or two other places in Massachusetts. Judging from the locations mentioned in the advertisements of this concern, it must be of a migratory nature. It is one of the work-at-home humbugs, which after selling "outfits" at a large profit, seldom or never fulfill their promises.

WE cannot recommend the Crescent Art Company, or the Decorative Art Works, of Boston. The "Hub" is becoming the headquarters of a lot of advertising humbugs and swindlers with high-sounding names and abundance of "brass" instead of silver, gold or greenbacks for capital. The work-at-home dodge is "played for all it is worth" by most of them. They appeal chiefly to women in search of genteel employment, by which they can make a little pocket money or eke out a scanty income. Boston is a good center for such sharpers, as there is a great superabundance of women in New England, and many of them with artistic inclinations are in genteel but straitened circumstances, so that any quiet way of earning a little money clandestinely would be welcome. The unscrupulous fishers for gudgeons are sharp enough to put on their hooks the bait most likely to attract their intended victims. Hence, art and art "companies" are temptingly dangled before them.

What Others Say.

ONE farm journal, the Agricultural Epitomist, says that the editor of the RURAL NEW-YORKER raised at the rate of 7,391¼ bushels per acre of the Green Mountain Potato!.....

THE children might amuse themselves making paper bags with which to cover grapes next Summer.....

BY careful experiments made last year at the N. Y. Ex. Station, it appears that pinch-

ing off the terminal shoots of potato plant does not increase the yield of tubers.....

CONTINUING the experiments to ascertain the difference in the yield between seed potatoes taken from the most and least productive hills, it was found that the former exceeded the latter as seven to ten. Hence, it appears that it pays to select seed from the most productive hills.....

EXPERIMENTS were made to ascertain the effect of spraying trees with Paris-green and water to destroy the Codling Moth. It appears that the percentage of wormy fruits from the trees sprayed with Paris-green and water was about 22 per cent. less than from those not sprayed. In other words, at this rate 100 barrels of apples picked from the sprayed trees would have yielded 22 barrels more fruit free from worms, than the same number from the unsprayed trees.....

The N. Y. Ex. Station finds White Novelty, White Russian and White Zealand the same oats.....

IT also pronounces the following oats the same: White Australian, White Belgian, Welcome, New Australian and Race Horse. The RURAL reported the first three the same several years ago, but the Race Horse, as tested last year, was thought to be different. But *then* there were no neighboring plots of the others to compare with.....

APROPOS of the untiring efforts of politicians to use agricultural associations for their own purpose, the Macon Telegraph says: The Georgia Agricultural Society is holding a fair in Columbus this week. Ceres makes no spread, but the exhibit of gubernatorial candidates is nobly large and varied.....

GRIEF counts the seconds; happiness forgets the hours.....

DECORATING a home that is never irradiated with hearty good-nature is like frescoing a cellar wall.....

GEORGE ELIOT once remarked that pride helps us; and pride is not a bad thing when it only urges us to hide our own hurts—not to hurt others.....

J. J. H. GREGORY remarked at a late meeting of farmers, as reported in the Massachusetts Ploughman, that there was a time in the early agriculture, when barnyard manure was just as much an innovation as our commercial fertilizers are now.....

How much does potash cost you in wood ashes? In muriate of potash it costs four cents per pound. But in wood ashes we have some phosphoric acid, you know.....

THE Michigan Horticulturist speaks of the Lida Strawberry (a seedling of Durand's King Cluster) as a pistillate variety of large size, and as being very productive, a good shipper, of bright red color and excellent quality.....

PRES. LYON in the same journal has something to say as to honesty in fruit-growing. A fruit grower may go to the manufacturer and insist upon being supplied with packages, in which his fruits are to be packed, just enough short of honest measure so that the buyer will not be likely to observe the shortage. Another, having discovered the poteney of fine appearance, deliberately selects for market planting a showy but worthless variety, knowing full well that in so doing he is planning to deceive the buyer, or rather leading him to deceive himself by anticipating more from his purchase than it is capable of realizing .....

MR. LYON on one occasion was present at a large meeting of market fruit-growers, where the propriety of the use of "snide" packages was being discussed; and he was astonished to hear one of the prominent Lake Shore fruit-growers openly and positively declare that he had been using short packages, and that he should continue to do so so long as they could be sold at full prices.....

MR. KNISELEY, of Benton Harbor, Mich., is of the opinion, as expressed in the Horticulturist, that it is better to plant a good tender blackberry and protect it, than to rely upon "hardy" sorts without protection. The "hardy" varieties, after last Winter's cold (30° below zero), were found to be almost entirely killed, while the Wilson and Lawton came through all right, and yielded a bountiful crop.....

IN his locality, there are probably four times as many Wilson Blackberries as of all others combined. Yet the Wilson is one of the tenderest plants, and that is just why it succeeds so well. Everybody knows it is tender, and therefore everybody protects his plants.....

PROF. TRACY, speaking from careful experience, says there are no beans which are unquestionably superior to the old Golden Wax, Black Wax, Valentine, Horticultural and Dwarf Kidney.....

IN his remarks about vegetables in the Michigan Horticulturist elsewhere alluded to, Prof. Tracy thinks that while the several "self-blanching" kinds of celery have here and there proved a success in private gardens, he does not know of any large commercial growers who had found them profitable.....

OF Kolb's Gem Watermelon, he says that it is so hardy that many can succeed in raising good melons, who fail with the more delicate sorts.....

IN Michigan, it appears that the Worden is at least a week earlier than the Concord. Thus far at the Rural Grounds, we see no difference in this particular.....

SPRING approacheth. If you want eight plants of the new Jewell Strawberry, or six plants of the new Golden Queen Raspberry, or three plants of the Earhart Raspberry, or 12 of the Marlboro or Rancocas Raspberries, or one plant of the Poughkeepsie or Ulster Prolific Grapes—then any *present* subscriber can get them by sending us one *new* subscriber...

ALL who have not yet received it should send for the R. N.-Y. of November 14. It gives a full account of our present Free Seed Distribution, as well as a list of the $3,300 worth of presents offered to subscribers for clubs.....

THE National Press calls the apple the pomological index of civilization. It is found wherever man can live in comfort. It is more extensively disseminated than even the great cereal, wheat.....

THE same paper states that the terrible thirst of drunkards can be at least partially assuaged by the use of fruits.....

A. W. CHEEVER says that Connecticut spent $40,000 in investigating poisons in the stomachs of two murdered persons, and yet refused an appropriation of $5,000 to investigate the condition of some of her polluted streams and ponds.....

J. J. H. GREGORY points out the fact that a big crop of cabbages necessitates a big lot of manure. It would take 60 tons of ordinary barn-yard manure to provide the potash found in 60 tons of cabbage. There is where commercial fertilizers come in to advantage.....

THE dust-bath is the surest, safest, cheapest and most complete treatment for hen-lice, says O. S. Bliss in the N. Y. Tribune.....

THE vital statistics in the census report present some suggestive facts. The total number of deaths reported for 1880 were 756,893 from 118 diseases. Of these 91,170 were due to consumption, 104,824 to other diseases of the respiratory system, chiefly pneumonia, 32,824 to digestive troubles, 81,905 to diseases of the nervous system and 38,143 to diphtheria. Nearly 250,000 deaths were caused by diseases more or less acquired by exposure and neglect. The frightful prevalence of consumption is shown in the fact that in 33 out of 47 States and Territories, the greatest number of deaths was due to this dread disease.....

LICE are sapping the vitality of thousands of cattle at this season. Kill the vermin.....

IF you live in a hilly country, be sure the boys have a good place to coast. If you get blue and discouraged, borrow a sled and slide down a few times yourself. You will feel better for it.....

STILL we find farmers who claim that grain fed to cattle in Winter when they are in fair condition, is wasted. The Husbandman rightly says that farmers who keep life in their cattle with hay and sell grain for cash, disgrace their calling.....

THE calves will be making their appearance soon. Have things ready to give them a welcome. Get over the idea that calves are produced simply to be knocked on the head. You can make money by raising the little fellows on skim-milk, oats and meal if you only think so.....

A TURKEY hatched in April should be fine eating by Christmas. Remember this in your calculations for the year.....

IT is well to remember that the turkey must have wide range. Confinement is death to him. He will show his gratitude, if permitted to forage, by making most of his living.....

IT is evident that the demand for thoroughbred Merino rams is looking up. For the past year or so they have been almost a drug.....

AN egg is the natural product of warm, sunny weather. It is produced in Winter only when the hen is induced to believe that Summer is coming. The ordinary hen accepts as evidence warmth, ability to exercise, variety of food and cleanliness.....

How do you provide green food for the hens? Did you ever try feeding them hay cut in small pieces? Try it once.....

PEOPLE used to say that the amount of an animal's food should be estimated by its live weight. It was said that three per cent. of the live weight daily would support life. This is not a reliable doctrine. Health, activity,

nervous force and occupation have much to do with the feeding. There are plenty of boys of 75 pounds who eat as much as men of 140. Why are not animals much the same? The only safe way to feed stock is to watch each one and see what its needs are.....

An English farmer has found that hop vines, preserved in the silo, make a good cattle food. He proposes to grow hops wild for stock.....

Be careful about drying off the cows. The udder is not a meal bag or a milk can. Do not let it become inflamed. Milk often enough to keep the udder limp and cool. Better milk up to the time of calving than to have the udder hard and inflamed.....

Everywhere.

TRANSCONTINENTAL LETTERS.—XLIX.

MARY WAGER-FISHER.

The finest farm in the White River Valley; a profitable meadow; farm hands' home; hiring them; domestic co-operation; potato digging; Indian and Chinese labor; a fratricide; twins among the Indians; a stoneless region.

At the head of steamboat navigation on the White River, on the right-hand side, lies the finest farm in the valley—a domain of 1,100 acres, owned by Mr. and Mrs. T. M. A., both natives of Cortland County, N. Y. They came to the valley 26 years ago, soon after their marriage, and have lived on this farm since that time. As I spent several days at their hospitable dwelling, I am able to give some details of the life and work on the farm, that I found very interesting.

Three hundred and twenty acres were taken up as a donation claim (a privilege no longer in operation) and the rest has been acquired by purchase. Five hundred acres are cleared and 280 are in meadow. It has cost from $40 per acre up, to clear the land, and the farms in this valley are held at $100 per acre. The meadows are cut once and yield three tons to the acre when in first-class condition. One meadow which was seeded 18 years ago and has been cut annually since then, yielded the present season at the rate of 2½ tons to the acre. When the grass shows thin in places, a dressing of barnyard manure is occasionally applied. About 900 tons of hay were harvested this year, and the price received for hay during all these years has ranged from $7 to $17 per ton—$7 being a "bed rock" price. Four mowers are on the farm for the hay harvest, and from 25 to 35 men are required to do the work in the haying season. They are boarded at the farm, but bring their own blankets and sleep in the hay. There are four large barns, but some of the hay is stacked outside, but under roof. One of Mr. A's sons—still a pupil in the University at Seattle—invented, last Summer, an arrangement to be used in connection with the hay fork, which dispenses with the labor of one man. The young fellow is full of inventive genius, and has a large, airy work-room in the "wood-house" loft, in which to work out his ideas. A place in which to store fire-wood is an important adjunct to these valley farm-houses, and the cords and cords of cut wood that I saw piled up in different places, bore testimony to the thrift of the farmers. The wood-house is a separate building, and painted like the dwelling. Another out-building in corresponding style is the lodging-house of the farm hands. It has a sitting-room in which is a fire-place, where the men can dry their clothing if wet, and enjoy the comfort of an open fire. They make their own beds, and care for their own rooms, and they were reported as keeping them in good order. Occasionally a Klootchman (Indian woman) is hired to wipe up the floors and clean the windows. During the Winter, four men are employed—one man for each barn—as cattle are stalled for fattening purposes. The barns have eaves, there are large tanks to hold rain water for all requirements.

There is an Indian reservation a few miles from the farm, and Indians are employed, more or less, in the farm work and receive in haying the same wages as do white men, but are fed at a separate table. The wages paid during the last harvest ranged from $1 to $1.35 a day. I asked Mrs. A. how they managed to secure so large an extra force for the haying season. She said that as the time approached, men began to come asking for work, and they were engaged until a sufficient number were secured. If Mr. A. was not about she hired them, and at night they compared notes to see how many each had engaged. She said that she had had so much experience in hiring men, that she could now tell from the appearance of an applicant, whether he was the kind of man they wanted or not. And I may as well put it in here, as later on, that probably one of the important factors in the success achieved on this farm has been, and still is, due to the efficient and intelligent co-operation of the two heads of the house. Mrs. A. is thoroughly conversant with all the details, keeps accounts and the bookkeeping is not small, and is as much interested in the making of a road, the building of a bridge, or the harvesting of a crop, as is her husband, and is thoroughly capable, in his absence, of directing the men in their work.

Potatoes were being dug when I was there, the work being done by Indians—men, women and children all in the field. The bargain was made, of course, with one Indian who agreed to do the work at the rate of $6 per acre, and a sack of flour. They also do most of the weeding, but in clearing new land they are less desirable that the Chinese. The Chinese work in large bands, attend to the work with strict faithfulness and so accomplish it quickly. Like the Indians, they camp and feed themselves, which is a great convenience to the employer. There was quite a camp of Indians on the farm on the river bank, and on the morning after our arrival word came that a murder had been committed in the camp on the previous evening—that one "Jim," a tall Indian, had been stabbed in the neck by his brother while drunk. As a young woman was dying in the camp from consumption, and as Mrs. A. wished to take to her something appetizing, we walked over to the scene of the tragedy. The laddie had never seen a dead human being, and I hesitated to have him accompany us, as it seemed shocking that his first experience should be that of a murdered man—and I myself had never seen one. He was very desirous of going, however, and I thought, perhaps, the body might be quite out of sight. But as we reached the camp, we came at once upon the dead man who had been very decently cared for by his friends, and all traces of the crime had been removed, save the inch-long cut in the neck—one of the men lifted the covering from the head sufficient for us to see the wound. The body was wrapped in a bed quilt, and lay on the ground in the open air. At its feet sat the poor mother—suffering the double agony of one son murdered by another—and the latter was still asleep in a tent,—not yet awakened from his drunken stupor and all unconscious of his awful deed. The old woman sat bolt-upright, her eyes almost sightless from weeping, the tears streaming down her face, and she kept up a continuous monotone of wailing most pitiful to hear. I was never more touched at a spectacle of grief, and the laddie who had quietly surveyed the dead Indian with no apparent emotion, was moved to tears by the heart-broken mother and sought to comfort her by giving her an apple which he had in his pocket. In the early evening of that day, I saw from the tower of the dwelling-house, the body borne away in a box, on the top of which sat the mother, whose wails rung far out on the air. The murderer meantime had awakened, and stolen away on horseback, but was, later on, apprehended. An amusing incident was connected with the affair. The Indian who hired a team and wagon to remove the body to the reservation, or place of burial, returned in the night, and in passing a farm house a dog ran out and frightened the horses, and the wagon wheels ran over a stump. But neither wagon nor horses were injured, but when the man made out his bill for expenses, he made a charge of $1.50 for having been so frightened! Mrs. A. told me that the Indians never rear twins. When there are two children born, the weaker one, regardless of sex, is killed. The Indians here are religiously looked after by the Roman Catholics, which religion "has had more than the ordinary success in converting them." The Indians dig potatoes with a stick and their hands—an easy thing to do, as the soil is loose and fine like the best garden loam, and entirely free from stones. I asked Mr. A. what led him to leave New York State to farm on this coast, and he said, "I didn't like the cold Winters there and I was tired of picking stones." His wife said that their first cook-stove here burnt on the bottom in baking, and she requested her husband to bring her a flat stone from the fields when he chanced upon one—as she had heard of housewives making use of one under their baking tins. But in 26 years he had not come across the stone. Potatoes yield 200 bushels to the acre in a good season—the present season being very dry, there is only a half crop. The tubers until sacked are put into huge bins out-of-doors, under a roof built for the purpose. California absorbs a good many potatoes, and owing to the better price this year the half crop will be more profitable by far than the full crop of last year with a drugged market. One farmer told me that last year he had 6,000 bushels and the entire crop yielded him a profit of but $401 Indians plant the potatoes and a Vermont plow is used in cultivating them.

RURAL SPECIAL REPORTS.

Indiana.

Mexico, Miami Co.—Last Winter killed all the peach, and a part of the apple trees, and badly injured those not killed outright. Owing to the increasing severity of our Winters there is little hope in setting out new orchards. As our forests disappear, the cold increases. Artificial protection must be given by those determined to raise fruits, instead of the natural protection offered by timber belts. Not until farmers set out shelter trees, can they expect to raise fruits successfully. N. B. G.

Monrovia, Morgan Co., Feb. 12.—Of the "Flageolet Beans" I got about five pints, quite an acquisition for this locality. The "Prince of Wales Peas" produced a full crop. Of the Stratagem Pea those that grew produced fine peas. Corn no better than old sorts. I consider what I raised from the seeds received in 1885 worth more than the subscription price of the Rural, though it is the best agricultural paper I know. The practice of the Rural's system of potato culture has been worth more to me than the cost of the Rural for one year. J. H.

Kansas.

Ayres City, Lyon Co.—The Cross-bred Corn grew of all sizes; some early, some late; but all too small for Kansas. Peas and tomatoes fine. Diehl-Mediterranean Wheat and Thousand-fold Rye all winter-killed. Garden Treasures the finest flowers I ever saw. D. C.

Salina, Saline Co., Feb. 5.—The weather was so very cold that several hundred cattle, hogs and sheep perished in this county last month. The Stratagem and Prince of Wales Peas and also the tomatoes did well. The 50 crosses of corn were all a failure. The beans were killed by a little black bug that perforated the leaves. Johnson Grass too coarse and woody. Garden Treasures a failure; but we cannot do without the Rural. W. B.

Minnesota.

Howard Lake, Wright Co.—We are much pleased with the Flageolet Beans and the Prince of Wales and Stratagem Peas. Most of the former ripened by the middle of August and were very fine-flavored—quite as good as the best Limas. Garden Treasures very pretty. M. E. B.

Nebraska.

Nebraska City, Otoe Co.—Although a fourth of the Diehl-Mediterranean Wheat froze out, I got over half a peck. I had also over a peck of the Thousand-fold Rye. Both were sown again in the Fall and were looking well when Winter set in. N. R.

New York.

West Oneonto, Otsego Co.—The Prince of Wales Peas did splendidly; Stratagem not so good; Green Flageolet fine. Tomatoes better than any we have had. The corn stalks grew from six to 12 feet high, and set as many as six ears apiece—too late, however, for this section. Garden Treasures very fine. E. G.

Pennsylvania.

Indiana, Indiana Co.—The Rural New-Yorker Pea and Flageolet Bean for quality and productiveness could not be excelled. Prince of Wales Pea productive, but of inferior quality. King Humbert Tomato not valuable, but a good yielder. Rural Cross-bred Corn did well. I have about a bushel of very fine seed. W. W. L.

West Virginia.

Newark, Wirt Co.—The Rural seeds did well. I got about a quart of Prince of Wales Peas. The flowers sent did not germinate well. The tomatoes bore abundantly, but the fruit was small. E. A. L.

Wisconsin.

Ketcham, Fond du Lac Co.—Owing to cold, wet weather corn and potatoes did not do well. With the latter I followed the Rural system of flat culture, but mine rotted badly. Oats and wheat fine crops. Apples scarce. Rural corn too late. The oats rusted badly. Garden Treasures did well. Dairy business not a success here last year, as prices ruled too low. Bogus dairy goods hurt dairymen badly. Prices now: wheat, 80c.; corn, 40c.; oats, 30c.; barley, 40c.; potatoes, 60c.; butter, 18c.; eggs, 17c.; dressed pork, $4.25 per 100 pounds; cattle on foot, 3c. H. D. P.

Outagamie Co., Feb. 12.—Harvest scarcely an average, yet most farmers have enough and to spare of most products. Rot has made potatoes scarce. Apples plentiful, but they come from New York and Michigan. Our trees were mostly killed last Winter and Spring. We have some Duchess, Wealthy, and a few other hardy summer and fall kinds, but of good long-keeping, hardy, winter apples we have none. Prices of produce are: 80 cents per bushel for wheat; 40 cents for corn; 30 cents for oats; 60 to 75 cents for potatoes; $4.50 to $5.00 per 100 pounds for dressed pork and beef. Hay from $10 to $12 per ton. Butter, 20 cents; cheese, 14 cents; eggs, 20 cents per dozen; wood, $3 to $5 per cord. E. N.

THE FARMER'S CLUB

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention. Before asking a question, please see if it is not answered in our advertising columns. Ask only a few questions at one time.]

FERTILIZER FOR POTATOES, ETC.

H. H. B., Bloomfield, Mo.—1. Will Timothy and Red-Top do well if sowed in Spring? 2. Will they grow on sandy land? 3. What fertilizer is best to produce a good crop of Irish potatoes on sandy land in this climate?

Ans.—1. They should be sowed very early in Spring, and then they will do well except in case of severe June droughts. They are both better if sown in Autumn, say the middle or last of September, or even later. 2. Very well, if not too light and dry, and even then Timothy does well if the land is fairly rich. 3. A complete fertilizer, but one containing much potash. On many soils, a liberal application of ashes will double the crop. If 30 or 40 bushels of hard-wood ashes are used with a good brand of ammoniated phosphate, a good crop should be the result. On the light lands of New Jersey, growers often use as much as 1,000 to 1,500 pounds per acre of a fertilizer containing from four to five per cent. of ammonia, from eight to ten per cent. of phosphoric acid, and about seven per cent. of potash. Dr Combs reported a yield of nearly 400 bushels per acre with such a fertilizer. We think a mulch would also pay on such soils.

ROOF FOR BARN.

D. J. B., Harbourton, N. J.—I have a barn 40x50 with 20-feet posts, covered in "48" with pine shingles. They are now so decayed that they let the water through. I wish to cover the old roof and I fear slate would be too heavy and tin would need painting often, and the barn being on a nine foot basement is pretty high; is there anything like copper that would not cost more than slate or tin ($6 per square), that would not require painting and that rats could not eat through when the barn is full of grain?

Ans.—If the rafters are sound we do not believe you can get a better roof than one of slate, or a comparatively cheaper one than slate at $6. We think that even a copper roof would need painting occasionally. But if you use Rossie paint and a good raw oil, it would not need paint oftener than once in from six to ten years. A slate roof well put on will last for a life-time without paint or repairs.

AN AILING COW.

W. E. E. (no address).—A swelling as large as a man's arm, on the lower jaw of a cow, extended from the angle of the jaw back to the gullet. The back part of the tongue was swollen so as to fill the mouth, so that she couldn't take feed or swallow anything. She was fat when attacked; three weeks after her tongue swelled she had a calf, and is now so poor she can hardly walk; what is the matter?

Ans.—Knowing nothing of the nature of the swelling, we are unable to give a definite answer. From the description it may be due to one of several causes. No treatment can be recommended. Although the case is now most likely a chronic one, if the cow is valuable it would be well to call in a competent veterinary surgeon.

Miscellaneous.

W. M., Mt. Gilead, Ohio.—1. Is Cole's New Agriculture of any value, and will it increase crops four-fold as he claims? 2. Is Eggine made by W. W. Clough, good to feed poultry as a steady food? 3. Can eggs of Phœnix fowls be had at reasonable prices for spring hatching?

Ans.—1. There is no doubt much that is good in the trenching of land and the filling of the trenches with stones or other material offering storage of water; but it is very expensive and we doubt whether it is practicable, except perchance near large cities and where land is very dear. We doubt whether it would increase the crops two-fold. We understand the use of manure has had fully as much to do in producing the yields Mr. C. claims, as has the expensive preparation of the land. 2. We have never used or seen it. Good food containing a variety of grains and vegetables is the best steady diet, and this with good care should keep the hens healthy and profitable. 3. We don't think the Phœnix fowls have any value beyond mere ornament. We doubt whether eggs are for sale; as few specimens of the breed have as yet been imported.

F. O. C., Washington, Kans.—A late frost last May killed every bud on my grape-vines

and there being no dormant buds, canes were thrown up from the roots and bore no fruit; 1, how can I prevent the killing of the buds by late frosts? 2. Can pruning be delayed till the leaves are half-grown and the fruit set, or would it be better to mulch the ground to retard the flow of sap in Spring? 3. Would it be advisable to plant Concord vines to be used as stocks for grafting better varieties? 4. Is there any grape that ripens with the Concord or later, that would be as profitable here?

ANS.—1. Only by retarding growth by mulch and shade as with evergreen boughs, etc. 2. No. Our own experience is that it is not well to allow mulch to remain during the season. It induces a surface growth of roots, harbors fungi, etc. 3. We should doubt it. 4. We would mention Eaton and Niagara.

J. L. McA., Medicine, Neb.—1. In latitude 40 degrees, 51 seconds, north; longitude 100 degrees, 34 seconds, west; at an elevation of about 2,700 feet, what evergreens would serve as a wind-break? 2. Should the seed of evergreens be planted where the trees are to grow? When should they be planted? 3. Can Osage Orange seed be drilled in, in the Fall, where the trees are to grow? 4. Where can Paradise Apples be obtained?

ANS.—1. The Austrian, Scotch or White Pine. 2. No. It is better to start them in frames. They may be planted in Fall or Spring. 3. Yes, but it would be better to raise them in plots and transplant. 4. Try Storrs, Harrison & Co., Painesville, Ohio, or Ellwanger & Barry, Rochester, N. Y.

Dr. L. E. H., Harrington, Kans.—1. Is sheep manure a good fertilizer for potatoes? 2. If so, how much should be applied per acre, or how thick should it be spread? 3. Is the Golden Tankard Mangel a good food for hogs, and what is the most profitable way of feeding it?

ANS.—1. Yes, a capital manure, especially if the sheep have been grained. 2. That depends upon how poor or light the land is—from 10 to 30 loads. There is but little danger of getting it too thick. 3. They are splendid to feed in connection with corn or other dry food, especially where the animals are kept in warm quarters. We have always fed them sliced or cut with a root cutter.

L. E. S., Richmond, Va.—1. Would it be injurious to grape-vines to paint the cedar posts that support them with coal tar? 2. Will paint made of linseed oil and Venetian red be injurious to vines? 3. Can I club the N. Y. World with the RURAL?

ANS.—1. Not in the least, if the paint does not come in contact with the vine? 2. It is not good to have paint of any kind applied to any living plant. The bark has an office to perform as much as the leaves, and paint of any kind stops up the pores and is injurious. It will do no harm, however, if on posts or wires. 3. Yes for $2.65 for both papers, and the RURAL's Free Seed Distribution.

"B" (no address).—1. Are corn-cobs of sufficient value as feed to pay for grinding, except as extra bulk in a very rich ration? 2. How long should corn-stalks be cut for feeding? 3. Would it pay to steam cut stalks?

ANS.—1. No. We much prefer to extend the meal with wheat bran. 2. Three or four inches—just short enough so they can be handled well with forks when in the manure. 3. No; every man we ever knew who tried steaming food, has abandoned the practice. It is a good plan to raise a few roots to feed along with the dry food.

Williamsboro, N. C.—A seedling of the Niagara Grape grew 12 feet the past season, having been cut back to two buds; should it be cut back as severely? This is its third year of growth.

ANS.—It depends upon how many branches there are. If the main stem divides into two branches, then cut each back to two or three buds. If there is but one stem, we should cut that back to four or six buds, depending upon its size (thickness).

J. H., Dayton, Ohio.—What will induce a three-year-old hybrid perpetual rose, which did not bloom last year, to do so this? It grew to a large bush; but was not cut back last Spring?

ANS.—If our friend will cut it back severely and root-prune the bush by sinking a spade around the stems within a foot of them, it will bloom next season. Its vigor needs a check.

C., Sandusky, Ohio.—My finger nails are very pliable and brittle, what will harden them? What will prevent the skin from peeling off the hands whenever I wash them?

ANS.—The business one follows may have a great effect upon the nails and hands. Carpenters or wood-workers, hatters, soap-makers or those handling acids or alkalies are perhaps most liable to such troubles as those mentioned. They may, however, depend upon some constitutional disturbance or condition of health depending on hereditary or acquired taint. Consult a physician (not a quack) and be guided by him.

W. B. C., Shippersburg, Pa.—1. Is the Niagara Grape superior to the Lady? 2. From whom can I procure the Colorado Blue Spruce three to four feet high?

ANS.—1. It is about the same in quality, but ripens later—with the Concord. 2. Storrs Harrison & Co., Painesville, O., can give you as large trees as any nurseryman we know of. This spruce is a magnificent tree and we commend it to every reader of the R. N.-Y.

A. P. L., Sheboygan, Mich.—1. In the trench-mulch system of planting potatoes is the ground spaded between the trenches? 2. What variety of barley is best for a black loam?

ANS.—1. No; the land is merely plowed between the trenches. 2. The Manshury is the best we have ever tried. It can be got from any prominent seedsman, we suppose.

A. B., Centralia, Kans.—My grape-vines bore a heavy crop last season; but the wood has not ripened enough to make good canes for next season's fruiting; how should the vines be treated?

ANS.—Cut them back severely, and let them form new canes. It is a misfortune to let any vine bear too much fruit, and with some it is a fatal error—the Iona, for instance, never recovers after bearing an over-crop.

W. N. F., New Alexandria, Pa.—Would it be advisable to raise kale for feeding milch cows during the Winter? 2. Is rye better than corn for egg production?

ANS.—1. We should prefer cabbages. 2. It is; but we much prefer a mixed diet, such as rye at one time, corn at another, and wheat screenings at yet another. To lay well, hens should not be made too fat.

E. W. B. (no address).—What is the best grass or combination of grasses for a permanent lawn, and how much seed for a quarter of an acre?

ANS.—We would choose either Blue Grass or Red-top, sowing at the rate of three bushels to the acre. You may add Agrostis canina and some White Clover.

G. D., Carysville, Ohio.—As our forests are disappearing, and wood for fuel is getting scarcer in most parts of the country, it is important our dwellings should be warmed for the least outlay of money and labor. What experience have RURAL readers had with wood-burning furnaces? Are they more economical and convenient than stoves, and above all, are they healthful? What style is best, and what is the cost of heaters, pipes, etc.? How often must they be replenished, and what length of wood is used?

DISCUSSION.

A. A. M.—In a late RURAL, Inquirer asks why the butter did not come. I think it was because the person did not churn the cream before it had turned sour; at least my experience tells me this, and I have made butter for 27 years. When I first began I met with similar troubles; but of late I never have had any. I seldom have to churn more than 30 or 40 minutes. I always skim when the cream is sweet, set in a warm room, and churn as soon as it sours; for if it stands very long it is difficult to make the butter come and the quantity will be less.

S. E., ALEXANDERVILLE, Ohio.—In a late Farmers' Club the statement was made that it doesn't pay to cut hay for stock. From personal experience I know that it will pay to cut hay and straw to be mixed with the grain ration—corn meal, mill feed, etc. I have found that hogs will starve when following cattle fed in this way, as so little grain will pass out undigested. On the other hand, I have found that hogs following cattle will thrive as well when the latter are fed corn meal unmixed with cut rough food as when whole corn is fed. There is certainly no economy in grinding the grain for cattle, if it is fed unmixed with cut hay or other rough food.

Care for the Children

Children feel the debility of the changing seasons, even more than adults, and they become cross, peevish and uncontrollable. The blood should be cleansed and the system invigorated by the use of Hood's Sarsaparilla. Give it a trial.

"Last spring my two children were vaccinated. Soon after, they broke all out with running sores, so dreadful I thought I should lose them. Hood's Sarsaparilla cured them completely; and they have been healthy ever since. I do feel that Hood's Sarsaparilla saved my children to me." MRS. C. L. THOMPSON, West Warren, Mass.

Hood's Sarsaparilla

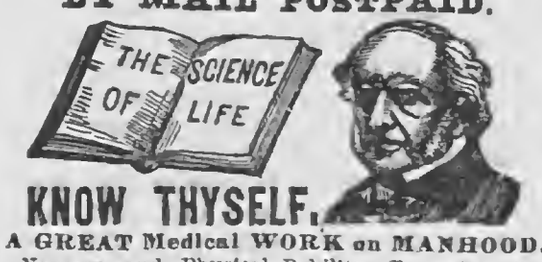
Sold by all druggists. $1; six for $5. Made only by C. I. HOOD & CO., Lowell, Mass.

100 Doses One Dollar

ORGANS The most beautiful and finest toned in the world. Low prices, easy payment. Send for Catalogue. Address Weaver Organ & Piano Co., YORK, PA.

SAVE Your POSTS and use SHAW'S WIRE FENCE TIGHTENER. Can be adjusted to any wooden post; can lighten or slacken, according to climate, with an ordinary monkey wrench. Price $8 per doz. For full particulars, apply to W. SHAW, Delaware, Ontario, Canada. Agents wanted. Patent applied for.

THE SCIENCE OF LIFE. ONLY $1. BY MAIL POSTPAID.



KNOW THYSELF.

A GREAT Medical WORK on MANHOOD.

Nervous and Physical Debility, Premature Decline in man. A book for every man, young, middle-aged and old. It contains 125 prescriptions for all acute and chronic diseases, each one of which is invaluable. So found by the author, whose experience for 23 years in such has probably never before fell to the lot of any physician. 300 pages, bound in beautiful French muslin, embossed covers, full gilt, guaranteed to be a finer work in every sense—mechanical, literary and professional—than any other work sold in this country for $2.50, or the money will be refunded in every instance. Price only $1.00 by mail, postpaid. Illustrated sample 6 cents. Send now. Gold medal awarded the author by the National Medical Association, to the officers of which he refers.

The Science of Life should be read by the young for instruction, and by the afflicted for relief. It will benefit all.—*London Lancet.*

There is no member of society to whom The Science of Life will not be useful, whether youth, parent, guardian, instructor or clergyman.—*Argonaut.*

Address the Peabody Medical Institute, or Dr. W. H. Parker, No. 4 Bulfinch Street, Boston, Mass., who may be consulted on all diseases requiring skill and experience. Chronic and obstinate cases that have baffled the skill of other physicians a specialty. Such treated successfully without an instance of failure. **HEAL** all **THYSELF**

THE LINE SELECTED BY THE U. S. GOV'T TO CARRY THE FAST MAIL.

Burlington Route

C.B.&Q.R.R.

It is the only line with its own track from

CHICAGO TO DENVER,

Either by way of Omaha, Pacific Junc., St. Joseph, Atchison or Kansas City.

It connects in Union Depots with through trains from NEW YORK, PHILADELPHIA, BOSTON and all Eastern points. It is the principal line to

SAN FRANCISCO, PORTLAND & CITY OF MEXICO

It traverses all of the six great States of ILLINOIS, IOWA, MISSOURI, NEBRASKA, KANSAS, COLORADO with branch lines to all their important cities and towns.

From CHICAGO, PEORIA or ST. LOUIS, it runs every day in the year from one to three elegantly equipped through trains over its own tracks between

Chicago and Denver,
Chicago and Omaha,
Chicago and Council Bluffs,
Chicago and St. Joseph,
Chicago and Atchison,
Chicago and Kansas City,
Chicago and Topeka,
Chicago and Cedar Rapids,
Chicago and Sioux City,
Peoria and Council Bluffs,
Peoria and Kansas City,
St. Louis and Omaha,
St. Louis and St. Paul,
Kansas City and Denver,
Kansas City and St. Paul,
Kansas City and Omaha,

For all points in Northwest, West and Southwest.

Its equipment is complete and first class in every particular, and at all important points Interlocking Switches and Signals are used, thus insuring comfort and safety.

For Tickets, Rates, General Information, etc., regarding the Burlington Route, call on any Ticket Agent in the United States or Canada, or address

THE
RURAL NEW-YORKER.
A National Journal for Country and Suburban Homes.

Conducted by
E. S. CARMAN, Editor.
J. S. WOODWARD, Associate.

Address
THE RURAL NEW-YORKER,
No. 34 Park Row, New York.

SATURDAY, FEBRUARY 27, 1886.

If the number on your address label is 1883, your subscription expires with this number; if 1884, next week; 1885, in two weeks, etc.

SPECIAL.

All orders (applications) for the Rural's present Seed Distribution received *prior* to Feb. 10th, have been mailed. Those who have not received the seeds will please notify us by postal card.

EXCEPTION.

The seed packets to *Canada* will be mailed all at once in a few weeks.

The catalogues which we notice this week on pages 135 and 136, are of especial interest, and we take the liberty of inviting all to send for them.

We are sorry to see that J. A. Everitt, of Watsonville, Pa., quotes the Rural as having stated that the Green Mountain Potato has yielded 1,391½ bushels per acre, instead of at that rate per acre, as estimated from a few hills cultivated in rich soil.

If all we have heard regarding the Earhart Everbearing Raspberry be true, it is the most remarkable cap variety ever produced. We have just examined the canes of our own plants, and find them plump, green and sappy to the very tips.

For small lawns we prefer the White to the Norway Spruce. It is more compact and symmetrical; its foliage is lighter and brighter, and its branches, being less spreading and heavy, never give to the tree that gloomy appearance often seen in the Norway after it arrives at the age of from 12 to 15 years. Nurserymen charge about the same price for either, viz., from 25 to 75 cents, according to size.

Referring to our illustration of the Roenbeck White Grape, on the first page of this issue, it should be said that we speak of it only from having seen and eaten the fruit, the single specimen at the Rural Grounds having been planted not until last Fall. We have rarely eaten a grape that impressed us more favorably. The quality is much like that of the Duchess; the fruit being meaty and tender, is without pulp. The seeds are few and small. The skin is thin, but tough. From this description, it will be judged that it has foreign blood in its veins. Be this as it may, the vines are said to be both healthy and hardy.

Several subscribers ask us to explain how and when the prize cantaloupes, melons and peas are to be measured. The rules governing the measurement of the corn appear to be plain enough. The heaviest cantaloupe, melon and peas will win the prizes. The peas are to be weighed while green. The others can be weighed at any time, and the record at once forwarded to us. The greatest care should be taken to preserve the prize melons or cantaloupes from the frost. We think that this can be done in most latitudes, so that they can be shipped to this office after October 1.

Well, we have orders for a good many lots of the various plants which we offer—some for one kind and some for another, and some for more than one kind and some for all of them. But yet we know there are thousands of farmers' homes without a single small fruit plant to bear its welcome fruit to refresh and bless the family. Too many of these are among our readers, and so long as we offer them such favorable terms, we want every family to have more than one kind. This is a good work that the women and children can do. A kind word fitly spoken will induce some friend to subscribe for the Rural, and secure you a choice of the plants offered. Such a result would make three happy parties—the friend in receiving and reading the Rural would be made happy; we in getting one more subscriber will be made happy, and yourself and whole family will be made many times happy as you pick and eat the fruit. Is not this worth the effort?

NOTICES.

Send all potatoes, seeds or plants of any kind direct to River Edge, Bergen Co., New Jersey, and not to this office.

All letters of a strictly personal nature for Mr. Woodward should be mailed direct to him at Lockport, N. Y., until further notice. Mr. Woodward is giving increased attention to sheep husbandry.

A bill has been introduced into the New York Legislature by Senator Low, creating a State Department of Agriculture under charge of a Commissioner of Agriculture with a salary of $4,000 per annum for two years, to be elected on the State ticket with other State officers, in November. He is to have the powers and duties now assigned to the Dairy Commissioner, the Forestry Commissioners and the Director of the State Experiment Station, and the power to appoint fish and game protectors. The offices of the parties named are to be abolished. Among his chief duties are to be the enforcement of the anti-oleomargarine laws and the suppression of contagious pleuropneumonia among cattle. There will doubtless be some objections to this measure, especially in connection with the Experiment Station; but they cannot be on the score of economy either in money or labor. By the combination of the three Departments, the work of all could all be laid out under a single head so that there would be no clashing, no going over the same work twice, and each could be made to help the others. A single Department with one set of clerks should spend less money than three separate Departments, each with its own clerical force and its own line of contingent expenses. The main advantage, however, would be that the agricultural interests of the State would, most likely, be better cared for, if all were under the control of a single, honest, capable and efficient head.

Gabriel Dumont was Riel's chief lieutenant during the late half-breed rebellion in the Northwest. He has a ranche up in Montana, and reports are frequent that delegates from the Crees and other Canadian Indians have been visiting him for the purpose of planning another campaign to be started early in Spring. It is also announced that arms and ammunition are being supplied to the malcontents by traders on this side, and that the Sioux and some other tribes of Indians on this side of the line, are to reinforce their brethren on the other side. The United States should promptly take a hand in this matter. When savages combine against scattered and helpless frontier settlers, a great Government like ours should not stand on too much ceremony before acting. If Mexico permitted denizens within her borders to aid the murderous Apaches, what a howl of indignation would be justly raised in this country! What would be culpable in Mexico in the Southwest, cannot be blameless in the United States in the Northwest. An Indian campaign means ruthless slaughter of the helpless and weak, and should be prevented if possible.

FAULTY LIBEL LAW.

Journals which, like the Rural, expose the humbugs and frauds that prey upon the public are greatly hampered by the present law of libel. The rascals denounced often threaten and sometimes actually begin suits for damages. Of course, they do not intend that the cases shall ever come to trial; but by impudent "bluffing," they hope to be able to carry on their nefarious operations a little longer with a brazen face. The publishers, however, have to incur considerable expense and annoyance in engaging lawyers, collecting legal evidence and in other ways, however cautious the statements in their papers, and however strong the proofs of the rascality of the plaintiffs. If these never appear, to the publishers' useless trouble and outlay is added exasperation. If by some strange freak they do appear and are shamefully defeated, the publishers' satisfaction may be great, but does it compensate them for their outlay? For, of course, they must pay their own costs, as the plaintiffs are sure to be penniless, irresponsible "nobodies." The same trouble exists among our Canadian friends, in an aggravated form, and the Canadian Press Association is about to apply to the Legislature for an alteration of the law. In all cases some security for costs should be required in both countries from those who have no property which can be attached therefor. Reputable papers are very careful in making charges; they can have no personal motives in the exposures; why for honestly and disinterestedly serving the public should they be exposed to annoyance and expense by humbugs and swindlers?

MORRISON'S TARIFF BILL.

Representative Morrison, of Illinois, last Monday introduced his new tariff bill in the House. It will effect a reduction of about $20,000,000 in the revenues from duties on imported goods. All undressed wood and lumber are put on the free list; but this does not apply to imports from Canada and other countries which impose an export duty on these articles. Other agricultural additions to the free list are hemp, jute, jute butts, sisal and other fiber grasses, chicory, grease, tallow, beeswax, corn, oats, hay and potatoes. On various grades of sugar there is a reduction of 20 per cent. There is a slight reduction on starch and a large one on rice, duties of 2 and 2½ cents per pound, being cut down to 1 and 1¾ cents. There is no reduction on wools, except that one grade of carpet wools at 28-10 is substituted for two grades at present taxed 2½ and 5 cents. The present duties on the additions to the free list are: hemp, $25 per ton; jute, 20 per cent; jute butts, $5 per ton; sisal, $15 per ton; chicory, 2 cents per pound; corn and oats, 10 cents per bushel; hay, $2, per ton; potatoes, 15 cents per bushel; grease, 10 per cent; tallow, 1 cent per pound; beeswax, 20 per cent. The change will affect agricultural products almost exclusively, the change of duty on sugar alone making a difference of $10,000,000. Is this discrimination against agriculture fair?

The tobacco growers of Connecticut who expected an increase of duty on Sumatra wrappers, loudly express their bitter disappointment. The rice growers of South Carolina and Louisiana who have been pleading for more "protection," will think seriously of giving up rice growing, should this tariff be enacted. The sugar producers of Louisiana find it hard to make a slight profit under the existing tariff, what will they and the makers of beet sugar in California, of sorghum sugar in New Jersey, Illinois and Kansas, and of maple sugar in a large number of States, do when exposed to the keener competition produced by lower duties on imported sugar? The abolition of duties on potatoes and hay would be as grateful to our Canadian neighbors as it would be exasperating to the farmers of New England and of all the States bordering on the Dominion. The wool-growers of Ohio and the rest of the country, who have been expecting, or rather begging for a restoration of the tariff in force before 1876, must be sadly disappointed. The bill may pass the House; but it is very likely to be killed in the Senate.

THE JAPAN CHESTNUT—ATTENTION!

There is no other tree that we feel like talking about more at present than the Japan Chestnut. As a purely ornamental tree it is by no means to be despised. It is of dwarf stature, round-headed, and its lower branches will sweep the ground if permitted so to do. It is as hardy as the American Chestnut, and, being short-jointed, never develops long, far-reaching, leafless limbs. But as a nut-bearing tree we are disposed to urge it upon the consideration of our readers. Five years or more ago, we did this with an "if." The "if" is now removed, and we unqualifiedly commend it to our readers—for the lawn, for the field, or for the orchard, to use this word in a somewhat unusual sense. As we have said, seedlings bear at a very early age, though they vary of course. Some will bear in *three* years from seed, while the tardiest of those we have inquired about will bear within six years. The size of the fruit borne by seedlings varies as much as that of the American, but the smallest fruit of the Japan is, so far as we have seen, larger than the *largest* of the American, while the quality is nearly as good and in some cases fully as good. We have referred to the Japan Chestnuts recently sent to us by Luther Burbank, of Santa Rosa, Cal. There were five and they weighed 4¼ ounces. Grafted trees are now growing on Long Island (N. Y.), which bear nuts nearly as large, while the quality is excellent. The best way to do is to plant the nuts and graft the shoots to the best kinds known.

Inasmuch as the Japan Chestnut is twice as large as the largest native variety and of about the same quality, it is plain that it will meet with ready sale in the markets. The Long Island farmer above mentioned remarked to a friend, a few days ago, that if he had planted 100 acres of his farm to seedling Japan Chestnuts five years ago and worked upon them varieties he then knew of, the farm would now yield him an independent income. We have no doubt of it.

Some of our cranky readers may fancy that we have the Japan Chestnut "on the brain." P'raps so. It will not be the first time that, through our Experiment Grounds, we have been enabled to give our readers several years the start of those who wait for the news to reach them through the usual somniferous channels.

BREVITIES.

Try the *Japan* Chestnut—not the Spanish.

We are still receiving communications as to Meech's Prolific Quince. They are all of the same tenor, viz., that Mr. Meech has no right to give this quince his name.

Try the Earhart Everbearing Raspberry. To any present subscriber who sends us a new subscriber, we will mail three plants well packed and delivered postage free.

J. T. Macomber, of Grand Isle, Vermont, writes us that he has found the kerosene-and-soap emulsion very effective in killing and preventing mildew on roses. It is, he says, a dead shot for the red spider and rose thrip.

The oldest and, as we believe, one of the hardiest of evergreen conifers is the Umbrella Pine—Sciadopitys verticillata. The specimen at the Rural Grounds makes but a slow growth, however. We illustrated this tree in the R. N.-Y. about five years ago.

Don't buy the Champion Quince. It is later than the Orange or Rea's Mammoth, and in no respect better. The Rural was among the first to test this quince, and its first report was an unfavorable one. We have since had no occasion to change it.

A good movement is on foot, started by Prof. Bailey, of the Agricultural College of Michigan, to urge the Commissioner of Agriculture to make an investigation of the disease in peaches known as Yellows. A good deal of investigation has already been made, but with no very positive results.

A friend writes us regarding the new self-husking corn already noticed in the R. N.-Y., that "its great merit lies in its departure from the habit of all other corn, in the inclination to strip itself clean of its husk." If this self-husking operation begins before the kernels harden, it would not answer for the Rural Grounds, where sparrows abound.

Prof. Sheldon, our valued English correspondent, writes us: "There is a good deal to admire in the vigorous phraseology which you in America employ in reference to things which vex you, and the term 'Bogus Butter' is the most telling designation I have yet seen applied to the article which has done and is doing so much mischief to dairy farmers," See next week's R. N.-Y.

Representative Beach, of New York, has introduced into Congress a bill which extends the benefits of the Patent Laws to discoverers and producers of new varieties of plants, fruits and flowers. Such a measure is perfectly just; but is it feasible? Certainly some way of affording legal protection to property in such productions should be devised.

There are hundreds of farmers in this country who should have a good sulky plow, and who will, next Summer, do more walking in a single week following a walking plow than would be sufficient now to secure one of the Syracuse iron sulky and steel-beamed plows offered in our premium-list. And this splendid plow once their own, would last for many years, lightening their labor, and making them happy. Is it not sound wisdom to make the effort?

We have come to look upon the "weather prophet" as a national benefactor. In sugar-making districts, the "sugar prophet" is a greater man than the "oldest inhabitant." Mr. Timothy Wheeler, of Waterbury, Vt., who has prognosticated for several years, with only one failure, says that the coming season for sugar making will be "the very best." Mr. W. judges from the appearance of the maple trees in November.

Some of the most reliable information pertaining to gardening and horticulture will be found in the seed catalogues of the present year. The value of such information grows from year to year. The facts sent out this season render the use of horticultural text books almost surperfluous. We hold that a person sending for such a catalogue is in duty bound to inclose stamps for postage, and to state where he saw the advertisement. No honorable farmer desires to depend upon charity for his horticultural information, and surely he is always ready to return thanks for useful guidance.

How the farmers are fleeced in some parts of the West, while the merchants and bankers grow rich, is well illustrated in an "interview" held here with A. M. Cannon, banker of Spokane Falls, W. T. In early days in Spokane he made from 75 to 100 per cent. on the goods he sold: now he can make *only* 25 per cent. Until lately he was getting two per cent. a month, or 24 per cent. per annum, on short-time loans; now he can wring from the distressed only 1½ per cent. a month, or 18 per cent. per annum. He can borrow money here on 40 years' time at six per cent. Shylock is given to boasting in these days.

SUMMARY

OF THE RURAL'S SEED DISTRIBUTION FOR 1886.

A full description, with illustrations, was given in the R. N.-Y. of Nov. 14, and this number will be mailed (free) to all who apply.

The Nov. 14th Number also presents a full account of the

$3,300

worth of presents which are offered to subscribers (not to regular agents) for clubs.

N. B.—One package (six in all), will be sent to all REGULAR SUBSCRIBERS who apply, and to them only. A two-cent stamp should be inclosed in the application, except by those who subscribe for the R. N.-Y. in connection with some other journal which offers the seeds in connection with the combination. In that case, an application is unnecessary. The seeds will be sent without application.

FIRST.

The Alaska Pea.

It is claimed that this is the earliest blue pea; that it is the best of its class; that it has superior shipping qualities, the pods remaining green longer than those of any other variety. It has never been offered for sale.

SECOND.

The Best of the New Watermelons.

Comprising a few seeds each of Kolb's Gem, Mammoth Ironclad, Scaly Bark, Cuban Queen, and Pride of Georgia.

THIRD.

Angel of Midnight Field Corn

This proved last season the earliest field corn ever tested at the Rural Grounds, though it may not so prove again. The longest ears measured 14 inches. The ears were borne low, with often three to a plant. Plants short.

FOURTH.

Garden Treasures,

for our lady friends, being a packet of not less than 100 different kinds of flower seeds mixed together.

FIFTH.

THE BIRD CANTALOUPE

(From Colorado.)

Introduced by the R. N.-Y. Oblong in shape, thickly netted, deeply ribbed; flesh thick and light green, sweet and delicious. Very early. The largest specimens weigh 20 pounds, as grown in Colorado.

SIXTH.

Hackensack Valley Muskmelons.

Gathered by the R. N.-Y. from the best growers of the Hackensack Valley of New Jersey.

IMPORTANT.

1st.—The RURAL NEW-YORKER never SELLS seeds or any plants grown upon its Experiment Grounds.

2d.—ONLY Regular Subscribers need apply.

3d.—IN MAKING application, it is only necessary to write "SEND SEEDS."

4th.---Strangers should send for the Nov. 14th issue of the R. N.-Y., which fully describes the Free Seed Distribution. Mailed without charge.

Address
THE RURAL NEW-YORKER,
34 Park Row, N. Y.

The Poultry Yard.

POULTRY NOTES.

SCIENTIFIC amateurs claim to be able to determine the sex of an egg before it is hatched. Many rules have been propounded, taking into consideration the shape of the egg, the size, the age of the hen and her condition, and the number of hens placed with each cock. We interviewed the best breeders we could find at the late poultry show, to learn how practical men regard such ideas. Every man with whom we talked declared such "rules" to be the worst kind of nonsense. No man can tell what the egg will produce. In fact, it is almost impossible to tell, after the chicken is hatched, until the comb and tail begin to grow. It seems safe to assume that the rules for determining the sex of eggs will be monopolized by "scientific amateurs."

The favorite egg for setting appears to be as nearly oval as possible. The best breeders reject every pointed or irregular egg, or a very large one. It is customary to pick out the eggs very carefully in breeding fine stock. Generally 80 per cent. are rejected as liable to produce inferior chickens. In the ordinary practice, little attention is paid to the shape of the egg. Thirteen eggs are picked out "just as they come" and put under the hen. Farmers generally have as an argument that the hen that "steals her nest" always brings out good chickens, even though the eggs are of all shapes and sizes. But few farmers can tell how really good these "stolen" chickens are. They appear to be vigorous when young, but running about as they do with other hens, any comparison as to egg production is mere guess-work. The ordinary farm poultry could be greatly improved by a more careful selection of eggs for setting. Eggs with soft shells, with a ring or crust on the shell, or with an uneven or rough surface should be rejected. Very large eggs containing a double-yelk are frequently set in the hope of producing a very large chicken, two chickens, or a curious monstrosity. Such eggs very rarely hatch and should not be depended upon. As the best seeds are selected for planting, it seems natural to suppose that the best eggs should be picked out for setting.

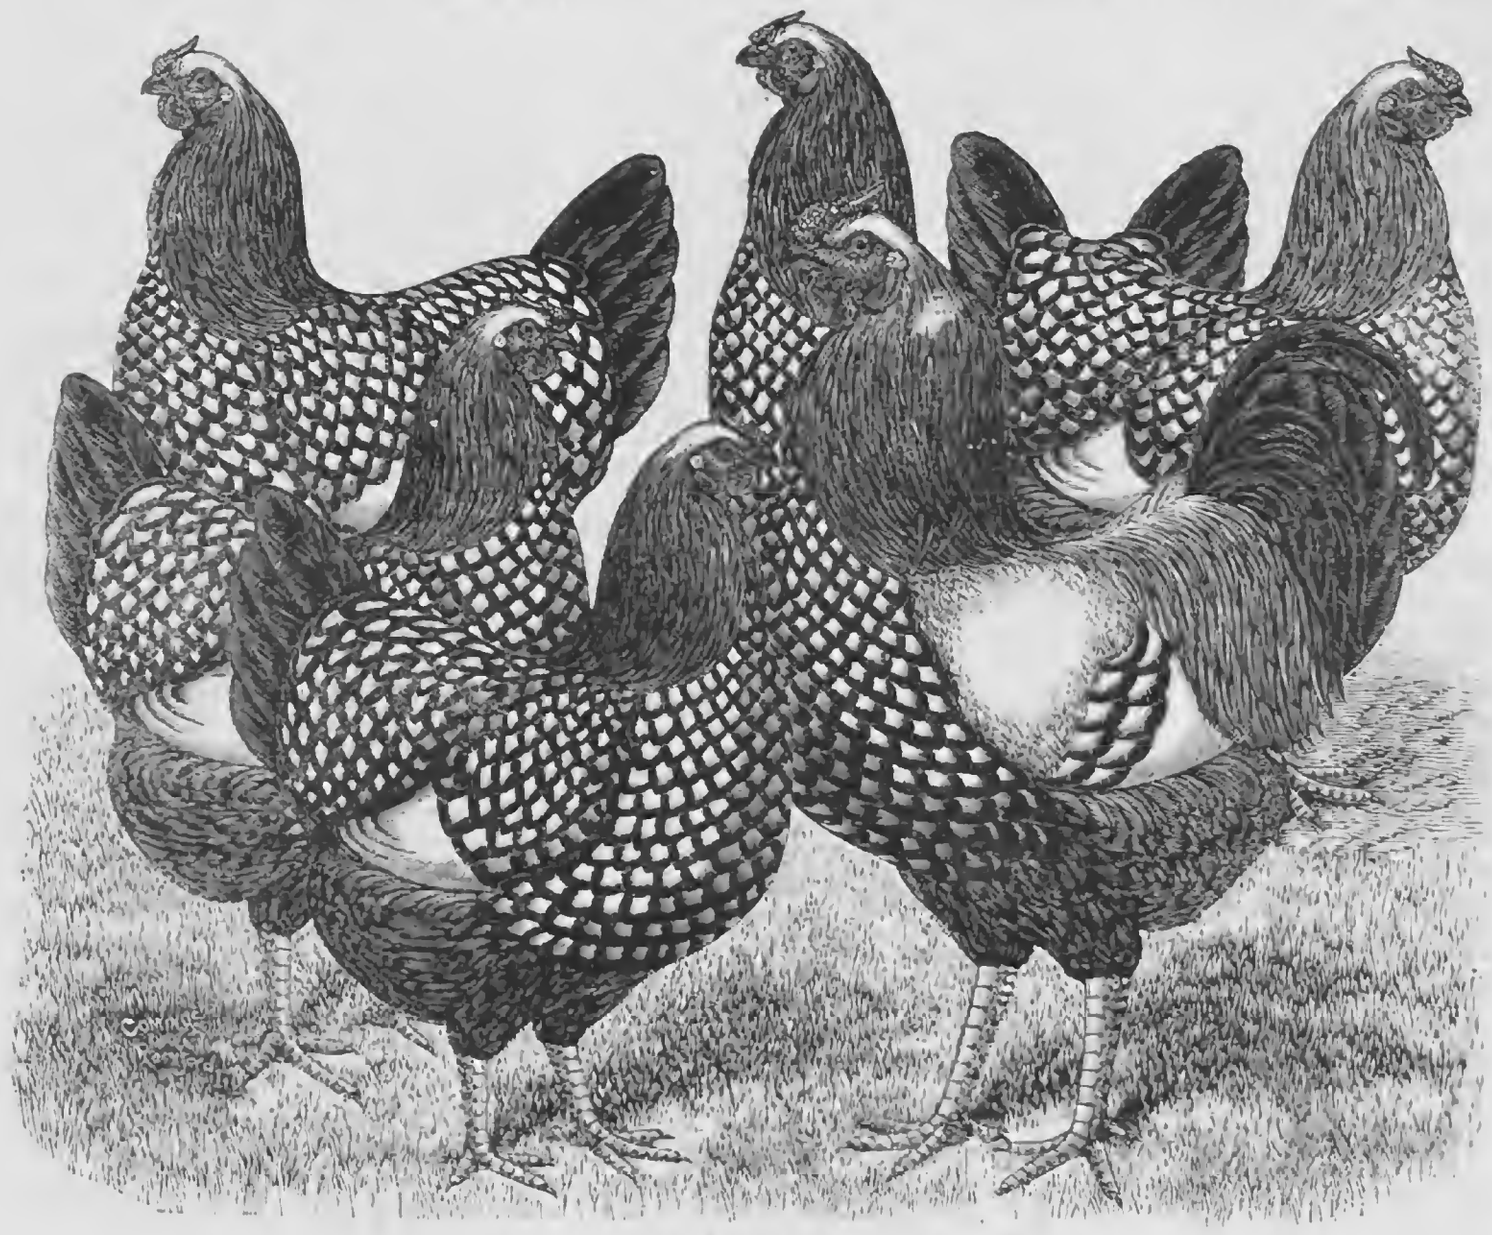
With regard to the shape of an egg, the point was raised by some breeders that certain hens always lay a pointed egg, and that it would be safe to set eggs from a good hen even though they were pointed at both ends. By examining any large quantity of eggs, one will be surprised to see how few of them are really egg-shaped or oval. Almost all are much larger at one end than at the other. It appears that the shape of the egg is greatly determined by the condition of the hen. A very fat hen will never lay a perfect egg, neither will a weak or thin hen. A fat hen's egg is always pointed and small. The shape of the egg is determined in its passage through the oviduct. Experiments have shown that a pullet kept fat from the time it begins laying, will always lay a pointed egg. An over-fed hen with little exercise will lay small eggs of poor shape. With proper care and feeding the shape and size of the egg can be improved. The best eggs are obtained from hens that are kept in good growing condition, just hungry enough to exercise freely. Breeders stated that they would not set a badly shaped or pointed egg from the best hen in their flocks. They would prefer to feed her so that her eggs would be of better shape. That much can be done to improve the shape of eggs by careful selection and feeding was proved by several collections of eggs on exhibition. Taken just as they were brought in from the nests, the shape was remarkably uniform.

A FLOCK OF WYANDOTTES.

WE show at Fig. 92 a splendid flock of this popular breed of fowls, bred by Mr. G. A. Preston, Binghampton, N. Y. Mr. Preston writes as follows concerning this breed:

"For an aspiring fancier to have predicted a few years ago that the Wyandottes would soon be the most popular fowls bred, would have seriously endangered his reputation for foresight. Yet to-day these same birds are not only welcomed into the yards of our American fanciers and farmers, but are almost daily sent to England, Ireland, Scotland, New Zealand and to many other countries; and truly they merit their success, as, for layers of eggs they have convinced their admirers that they stand unrivaled; and for broilers no bird can be said to be more juicy, or as roasters, finer in texture. For the market they are heavy and profitable, and their bright yellow skin wins for them a preference. For beauty no other variety can excel a flock of well-bred Wyandottes. They have beautifully laced hackles and saddles; solid black tails, white breasts heavily laced with black (no spangles), and wings which when folded show the much coveted duck-wing, or bars of black. They are low, medium-sized. Comb with well defined spike. Comb, wattles and ear-lobes a deep, rich red; legs smooth and yellow. They are exceptionally hardy, standing our severe Winters fully as well as, if not better than, any other breed. They mature very early—pullets often commence laying when five months old. I have mated and bred many of the other varieties described in the "Standard of Excellence," and I can truthfully say that of all the breeds recognized in that book, I regard the Wyandottes as the most desirable for all purposes for which fowls are kept. This opinion has been formed after several years of practical experience in raising them for market and for fancy breeding."

The RURAL was the first paper to call attention to the superior qualities of the Wyandottes. Our experience with them has been most satisfactory. They have given the best satisfaction of any of the 13 breeds tried at the Rural Grounds. As winter layers and as general-purpose fowls we have found them unexcelled. The eggs average eight to the pound. Nine hens laid in December 131 eggs.



FLOCK OF WYANDOTTES. Fig. 92.

LOSSES IN LARGE NUMBERS O CHICKS.

P. H. JACOBS.

Losses of hen-hatched and raised chicks; losses of incubator-hatched and brooder raised chicks; the hens at a disadvantage.

IT may not have occurred to the readers of the RURAL NEW-YORKER that a comparison of the losses of chicks among large numbers and small broods will show curious results, yet, though every farmer will admit that but few hens succeed in raising all the chicks in a brood, they may not be prepared for a review of losses that annually occur on every farm.

The most profitable chicks are those that are hatched early in the season. The number of eggs to be placed under each hen, according to general opinion, is 13. If the hen succeeds in hatching 10 chicks from the 13 eggs, she will be considered as having faithfully performed her duty, though often the whole number of eggs will produce chicks; while at other times the number will be as low as two or three. If, however, we have 100 hens sitting, and each brings off 10 chicks from 13 eggs, no complaint will be made, as 10 is above the average. Having hatched 10 chicks, the reader will admit that if the hen loses only two, especially in the Winter season, she will be fortunate. But, for the purpose of comparison, let us suppose that a hen hatches 10 chicks from 13 eggs (which is about 75 per cent.), and raises eight of the ten, the loss, being but two, will appear small, and will consequently often be overlooked.

When, however, the farmer attempts to hatch thousands of chicks, the most discouraging spectacle is the apparently great mortality that occurs. He becomes appalled, and wonders how the "old hen" can be so successful, while the brooders seem to fail. But let him reflect, and apply the standard of eight chicks raised from ten hatched, and make his comparison. Figures are said to be truthful, and they make out a very bad case for the "old hen." Supposing, for illustration, that she was capable of hatching 100 chicks. 20 of them would be lost, and, raising the number to 5,000, she would lose 1,000. Hence, with the use of incubators we may hatch 5,000 chicks, suffer a loss of 1,000, and be proportionately at par with the hen that hatches 10 chicks and raises eight.

This great mortality of 1,000 chicks in 5,000 occurs every year on all farms if we look at the loss proportionately; and yet farmers continue hatching and consider the loss a small one, while the poultryman who makes a specialty of hatching large numbers, can better afford to lose 1,000 chicks in 5,000 than can the farmer two in ten. No doubt some will disagree with such a statement, but the merciless figures again place the "old hen" at a disadvantage. It must be remembered that labor is a very important factor in raising chicks, and it must receive its reward, whether the poultryman performs it himself or purchases it. It is proportionately cheaper to care for 1,000 chicks than for 100. The cost of raising 100 chicks, if they required the whole attention of the poultryman, would be greater than the receipts, while, with the same labor, he can manage 1,000 or more, according to his conveniences for the purpose. He can better afford to sell his 1,000 chicks at 25 cents each, than the 100 at $2 each, and the advantage is, therefore, in favor of the larger number. One or two hens on the nests require some care, and when they bring off their broods the labor is increased, as the chicks must be fed and very often the hens kept separate in order to avoid

quarreling. It must be admitted that in feeding a single hen and brood, the attention so given is but little less than that required for several. It requires, therefore, no argument to prove that the larger the number of chicks the cheaper the cost of production, in proportion to numbers, and that it is simply custom that permits us to accept 20 per cent. loss on the part of the hen, though regarding the same ratio of loss as excessive when it occurs in brooders.

I venture to affirm that a majority of farmers would make the hatching of early chicks a matter of greater interest if they could be assured that they would lose only two out of ten, and the farmer who uses incubators and attempts the hatching of large numbers, will find that he can afford to lose 200 in every 1,000 better than two in ten. I am prompted to make the above comparison for the reason that figures can be used with terrible effect against incubators and brooders, and though entertaining the greatest respect for the "old hen," and willing to give her all the advantages in the comparison, yet when the facts are presented in their true light, she is shown to be far in the background.

Atlantic Co., N. J.

WYANDOTTES AND LANGSHANS.

LAST year I raised 15 Wyandotte chicks, which hardly came up to my expectations as layers. The Langshans are very large fowls, and with me better layers. The eggs, too, are larger and the birds more profitable. I keep my hens in a large, warm barn-cellar all Winter, feed corn, buckwheat and baked potatoes, and give them plenty of gravel, coal ashes and old plaster, and I have never had a sick fowl. If I found one in that state, I would cure it and save the others by cutting off its head. O. H. A.

Charlotte, Vt.

PLASTER IN HEN MANURE.—I sprinkle land plaster freely twice a week under the chicken roosts. I think it keeps the house sweet and improves the manure, making it easier to handle. F. I.

Dundas, Ontario, Can.

For Women.

CONDUCTED BY MISS RAY CLARK.

AN "OLD HOME" DREAM.

Back to my Old-time Home again—
  Last night, in a dream, I say
I stood as real beneath its roof
  As I stand 'neath my own to-day.

My hand on the cherry rail, again,
  That led up the winding stair—
Going a "skipity-hop and jump"
  With my child-feet, warm and bare.

To the sunny chamber where we slept—
  My darling sister and I;
To the bed, with old-time coverlet
  And its curtained bedstead high;

To the roses on the mantle shelf—
  Three tumblers full brimming o'er—
Picked in the dew of the early morn
  From the bush by the half-way door;

To the chimney-place, with narrow hearth;
  To the snowy-white, pine floor,
Much worn by sand and the scrubbing brush,
  During forty years and more.

We heard the touch of a weary foot
  Come softly across the floor,
Then a face looked in, with a smiling "good night!"
  And gently closing the door.

Our precious mother!—we heard the step
  To the old north chamber go,
Then, down the stairs, and across the hall
  Into the bedroom below.

We knelt by the open window, where,
  June zephyrs were passing by,
And called, "good night!" to three pet lambs
  That out in the clover lie.

Nature was pouring an anthem, then,
  Abroad on the evening air,—
We filled our child-souls with her sweets
  E'er we said our evening prayer.

The mountains were echoing from their sides
  The rush of river below,
To the minor tones of the insect world's
  Small voices, that come and go;

There was "whip-poor-will," in lilac bush,
  And bleating sheep in the lane—
A barking fox on the near hill side,
  And the morning doves refrain;

The monotone of the poplar leaves,
  The owl in the "hickory tree,"
The croaking frogs in the "willow ditch,"—
  All, all, a marvel to me.—

We laid us down, my eyelids closed
  Repelling the moonbeams' light,
Lips pressing mine were whispering low,
  Sweet sister, dear "good night."

A dream—Oh, Heaven.
Time has printed my brow and frosted my hair—
  And fenced in my life with sorrow and care.
But why do my laggard pulses so thrill
  With the old-young love of the vanished years?
And why, does my mental vision thus view
  My dream world's picture through mists of tears?
Ah!—that darling sisters last good night!"
  Was spoken to earth, in the long ago,"—

And the precious mother soon had rest
  In her lowly, narrow bed, I know.
And the dear old home! ah, bitter thought!—
  By the stranger hands has been swept away—
And my childhoods ever sacred haunts
  By the stranger feet are trodden, to-day.

MARIETTA HUNTLEY.

WHAT TO READ, AND HOW TO READ IT.

II.—BIOGRAPHY.

IF each period of time could be distinguished by its most prevalent species of literary composition, ours would surely be known as the Age of Biography. Almost every review that falls into our hands contains a notice of some recently published work of this class. "A Biography," says the author of "Rab and his Friends," "is either a golden goblet wherein a man holds on high the memory of his friend, or a millstone tied around that memory to drag it into swift oblivion." A large proportion, certainly, of the biographies of our own time belong to the "golden goblet" order; and, if the overtaxed student or the wearied workman had ever an excuse for taking up a worthless story by way of relaxation, he has none now. All around us lie the garnered memories of high and heroic lives, of genial and charming characters, of severe and untiring searches after wisdom, of sweet and saintly souls. We may have, as we lie resting upon our lounges, a society around us which we would vainly seek in the world of the living. In former days men made long and even dangerous pilgrimages to enjoy the privilege of a single interview with some intellectual giant, whose works claimed their reverence. Now, by our own firesides, we take a little volume in our hands, and lo! the giant rises before us, like the famous imprisoned genie of the Arabian tale! We are admitted into his confidence, we read his letters, we see him in his family, we know what he thought, what he suffered, how he fell or conquered. And we learn to separate what was great in him from what was small: we learn,—to quote from a noble letter handed me since I began to write this paper—that "The grand lives are those that endure, and repress self and self-indulgence: that submit bravely to the quenching of light, taste and ambition. Anybody with education and talent can write grand things. Who can *live* them?" We learn that nothing worth the doing has ever been done without strenuous toil, and "a great patience." We learn to be very pitiful to the failings of these children of genius so high-strung, so quiveringly sensitive, so tried in a thousand ways that we know nothing of, and, lastly, we learn that all faithful work bravely and honestly done, puts us into the same guild with these, the world's great workers. Do you remember how poor Mrs. Carlyle, struggling in the watches of the night with her obstinate loaf, was cheered and strengthened by the recollection of something in the biography of Benvenuto Cellini? "What matter," thought she, "whether the aim be perfect bread or a perfect statue? I am one with the artist in my labor and in my patience." When we "stand in our lot," and do "with our might" the work before us, we touch hands with every one of those who have made the world better because they have lived in it! And who shall estimate how great a privilege it is to go from our dish-washing and our sewing-machine, from our laundry and our cooking-stove, into the illustrious society which admits us through the magic power of a well-written biography?

I shall pay my tribute to the educational and moral influence of the best novels; and yet, when I recall the many admirable biographies so little known to the general public, I am tempted to say: "Leave for awhile *all* novels, even the greatest, and learn to know the real men and women who have toiled and achieved, on this earth of ours!

Time would fail me to name the biographies of soldiers, statesmen, or specialists—such as artists, or musicians. I can only recommend to you such memoirs as are of interest and instruction to the general reader. These are chiefly to be found in two classes, the literary and the religious. That the parent of all good biographies is Boswell's Life of Johnson, is perhaps, unnecessary to name; and yet I fear, after the fashion of our age, we are more familiar with the title than with the pages of that unique book. I once knew "a man of one book," and that book was Boswell's "Johnson!" I used sometimes to think he knew enough! Read it, and decide for yourselves. But we people of the 19th century—particularly young people—like our own time. I am half afraid to recommend old Boswell as your biographical pioneer. Begin, instead, with Mrs. Gaskell's "Life of Charlotte Brontë," or Trevelyan's "Life and Letters of Macaulay," or the delightful series of "The English Men of Letters," or Trollope's charming "Autobiography." Then you will be ready for Boswell, and *via* Boswell, for Johnson's own, "Lives of the Poets." Indeed, among so many admirable lives, it is difficult to discriminate. It is safe to say, in the region of secular biography, read what most attracts you. Not so, however, in the region of religious memoirs. The Roman Catholic Church has its hagiology, and the Protestant Church is not far behind. Eschew in both what may be termed the school of dyspeptic piety—the people who spent their lives "i' lookin' t' their own insides"—who have minutely recorded every sympathy of their spiritual *malaise* in diaries intended for "no eyes save their own." Avoid especially the sad, sad little stories of the morbid children, nurtured in the shadows of gloomy creeds, the poor little "Nathan Dickerman's" who found, let us hope, in a heavenly home, a natural, spontaneously gleeful childhood, never accorded them on earth. It is not good for one's own spiritual state, to think of their parents—they seem scarcely less cruel than the parents of the famous Welsh Fasting Girl!

But there is a religious biography far different from these—a biography which is like a fresh mountain breeze in its bracing tonic to our souls. Read Stanley's record of Arnold's manly piety. Read Mrs. Kingsley's story of her great-souled and loving-hearted husband's Christian ministry. Read the recently published "Life and Letters of Frederick Denison Maurice, whom Kingsley loved to call his "dear master," and to whom Tennyson dedicated his "In Memoriam." Read, above all, the "Life and Letters of Frederick Robertson," and when you have finished it, read again; and then turn to the end of the volume, and read the addresses, especially those to the workingmen. Never lived a more gallant spirit, a purer heart, a more sensitive nature, a more consecrated soul!

What would not be our own possibilities, if we threw away now and forever all the mawkish sentimentality of romance and religion, and lived during our leisure hours with these high and holy souls, whose manhood and whose Christian faith were one!

A COUNTRY HOUSEKEEPER.

"A MAN MAY BUY GOLD TOO DEAR."

—Old Proverb.

A MAN who for mere desire to accumulate, toils unreasonably long and hard, every working day of his life; denying himself the comforts which he can well afford, and depriving his family of books, papers and other intellectual enjoyments, until, although he may show a large bank account, his health has became sadly impaired, and his mind narrowed down to one idea, that of saving and hoarding money, has paid too dearly for his wealth.

Other things besides money may be too dearly purchased; a woman who for love of excitement spends an undue part of her time in society, leaving her domestic duties unperformed, leaving her little ones to the care of others, thus losing the purest affection; who allows her mind to become filled with frivolous ideas, and who wastes her time and means in vain display which is beyond her means, pays too dearly for her enjoyment.

The student, who in the pursuit of knowledge gives the time to study, which rightly belongs to sleep, or recreation, until health is broken, and himself become a mere bookworm, with no practical experience to assist him in making his way in life, will find that a good and desirable thing may be when carried to extremes, a ruinous investment.

Whatever worthy thing in life is too exclusively pursued, to the detriment of other things equally desirable, will even if the point is gained, have been too dearly bought, if the mind has by means of it been unequally developed. SOLITUDE SWEETENED.

Domestic Economy

CONDUCTED BY EMILY MAPLE.

A KITCHEN CONVENIENCE.

AT Fig. 93, is shown a little device which I have found very serviceable and convenient. It is a box in which I keep materials for scouring table cutlery, and for polishing silver-ware, putting the scouring materials on one side of the partition, and the polish on the other. When not in use, it may be hung up by the screw eye, or it may be stood up on the broader end in any convenient place. The shallow part in front forms a convenient place for scouring knives, forks and spoons; and whatever scouring material that is drawn out but not used, falls back into its place again when the box is hung or stood up. The box is made of half-inch pine boards, and is 13 inches long and seven inches wide, outside measurement, and about four inches in hight at the broader end. To make one like it for mother, will give Johnnie a chance to take a lesson in the use of tools. HOUSEKEEPER.

Fig. 93.

ON THE CARE OF THE HANDS.

AT this particular time of the year most women are apt to suffer from chapped and cracked hands. This state of the skin is exceedingly painful, and to be avoided if possible. There are many popular formulas for giving to the hands the softness and smoothness which comfort requires. Some of these are very desirable, taking kindly to the skin of some persons, while to others they render matters worse. If the hands are extremely sensitive it is advisable to avoid the use of soap as much as possible. This can be done to a much greater extent than one would suppose from first thought. Even dishes can be washed without soap if one is careful to have good hot water. When through using your hands, wash carefully and before wiping them put a few drops of glycerine on them, rubbing it in thoroughly and then drying. This will be found effective in almost every instance. But if it does not act satisfactorily, try vaseline, applying the same way. In using either vaseline or glycerine in this way there will be no sticky or greasy sensation left on the hands. It is often recommended to wear gloves at night or about your work, but this will not be found to be necessary. In blacking stoves it is advisable to cover the hands, and you may slip a paper bag on the hand that holds the brush.

The finger nails seem to come in for their share of attention in this connection They should be properly trimmed, neither cut too short nor allowed to grow long. Follow the contour of the finger in paring them, and have them of medium length irrespective of Fashion's dictates which, just now, decrees that they shall be allowed to grow abnormally long. If cut too short, Nature, to protect herself, causes the ends of the fingers to grow fat and broad, and so gives an ungainly appearance to the finger which should be rather small and tapering. Have a dull instrument to clean the accumulation of earthy matter from under them. A small bone paper cutter with one end pointed, will be found very good for the purpose, and remember always to clean them while they are wet, scrubbing them with a brush after. In this way you will avoid breaking the smooth surface of the nails, and will be able to keep them perfectly clean and polished. If the flesh has grown over the root of the nail, force it down, while still wet, and in drying your hands be certain to rub around the finger nails with the towel, pushing the flesh back to its proper place. An exceedingly small scissors is often used to cut this troublesome skin away, but by following the direction above given you will experience no difficulty in keeping your hands in that nice order in which every lady likes to have them.

AUNT ADDIE.

OMELETS.

ARTISTIC AND APPETIZING.

"NEITHER FISH, NOR FLESH, NOR GOOD RED HERRING."

WE do not think that omelets could have been invented, when Horace wrote, "The vulgar boil, the learned roast an egg." For certainly the perfect omelet—a symphony in golden-brown, luscious, and quivering like a jelly, is more a poetical subject than a roasted egg. In the hands of the ordinary kitchen fiend, an omelet, tough and scorched, or half-cooked and colorless, is a thing to be shunned.

The principal causes of failure are in using too many eggs in one omelet, or in having the pan and fire too hot or not hot enough. The pan to be used for omelets should be of wrought iron, and about nine inches across the top. Most cook books insist upon having a pan to be used exclusively for omelets, and Professor Blot says further, that this pan should never be washed, but simply heated and wiped with a clean cloth before using. With due deference to higher authorities, we have learned from actual experience that to have a clean, smooth pan is sufficient. The smoothness is essential, as the least particle of roughness will cause the omelet to stick. Use no more than five eggs at one time; break these into a bowl, season with salt and fine, white pepper, and beat just enough to break the yelks; add three tablespoonfuls of rich cream, put the pan over the fire with one tablespoonful of butter—the fresher the better, as very salt butter will often cause the omelet to stick—melt this slowly, shaking the pan to

Miscellaneous Advertising.

When Baby was sick, we gave her Castoria,
When she was a Child, she cried for Castoria,
When she became Miss, she clung to Castoria,
When she had Children, she gave them Castoria,

keep it from browning. As soon as it is all melted, pour in the beaten eggs with a circular movement, so as to distribute them evenly over the pan with one dash. Stir with a broad-bladed knife until the eggs begin to set, raising them here and there to prevent sticking. It must be done quickly, and should not take more than two minutes to cook. The moment the mass begins to set, fold it over from opposite edges towards the middle, reverse a warm, oval dish on the pan, press firmly, describe a circle with your wrist, turning the pan upside down, and, presto! your omelet lies a "thing of beauty," which you will do well to use no delay in serving.

Having made a plain omelet successfully, you may vary it indefinitely by the addition of herbs, vegetables, meat or fish. A dainty omelet is made by spreading three tablespoonfuls of chopped water-cress over it just before folding; parsley, chives or the green tops of very young celery plants may also be used; they must be minced as fine as possible and a tablespoonful of either will be sufficient; parsley, thyme and sweet marjoram, mixed, give the famous French "omelette aux fines herbes," so popular at every wayside inn in the most remote corners of sunny France. Chop fine parsley, chives, onions, shallots, a few sprigs of chervil and a few leaves of sorrel; mix two tablespoonfuls of them with the beaten eggs, cook and dish as directed. It will take a little more butter to fry it than a plain omelet. This omelet is called by the French a "jardiniere." A tablespoonful each of grated onion and minced parsley, mixed with the beaten eggs, gives a most savory omelet and is a pretty accompaniment to veal cutlets.

The French also serve omelets on a purée or sauce of stewed onion, tomatoes or sorrel. According to the taste of many epicures, the best tomato omelet is made by adding, just before the folding process, a few tablespoonfuls of tomatoes that have been seeded, chopped, drained and seasoned.

A delightful summer omelet is made by using in the same way, a little boiled sweet corn, grated, seasoned and heated in a bit of butter. There is nothing more delicious than pea omelets. The peas simply require to be cooked, drained and seasoned, and if they are cold ones left from a preceeding meal, heat them in a bit of butter. Fold some in the omelet and put a circle of them around it. Asparagus tips and sprigs of cauliflower can be used in like manner. For those fond of mushrooms, there can be no greater delicacy than a mushroom omelet. Fry in butter a few thinly sliced mushrooms, and spread them, butter and all, over the omelet. Do not let the butter scorch.

Two tablespoonfuls of boiled ham, tongue or cold, cooked veal chopped small, heated in a bit of butter with just cream enough to moisten it, a dash of Cayenne added, and spread over before folding, gives a delightful breakfast dish or entree at dinner.

Space fails to tell of the many other varieties. They are all made as above, however. Kidney and cheese omelets are highly esteemed. PALMETTO.

BREAKFAST DISHES.

Dried beef is very good for breakfast. Cut thin, put into a frying-pan, cover with cold water, and, while other things are cooking, let simmer. Then pour off the water and add to the beef, cream, pepper and salt, if needed, also a tablespoonful of melted butter and a very little flour thickening. Cover and heat through; keep hot till needed for the table.

Codfish is good if cooked in the same way if one has the dessicated article, which is not so salt as the fish in bulk, and can be simmered and cooked almost as easily as the beef, only requiring a little more flour thickening.

A little minced beef or lamb can be made up with any palatable scraps into balls, and fried as are codfish balls. If an egg is beaten up with them to hold the particles together, and properly seasoned, this can be made a dainty dish.

An omelet makes a very good breakfast, and for a small family can be made by beating separately yolks and whites of five eggs and adding to the former a little flour (less than a tablespoonful) rubbed smoothly, with a cup of milk, and seasoned to taste. Put in a buttered baking dish and cook in the oven. The cook must use her own judgment as to when it is done. A. L. J.

A FEW HINTS.

How few know the convenience of sand bags? Long ones, rather larger round than a broom stick, are so handy to put over the lower sash of windows to shut out the air which comes in between the sashes, or on the sill close up to the sash, or across the lower edge of a door. It is surprising how much cold they keep out, thus adding to the comfort of the house. Then a bag made like a round bolster, about 12 inches around and a little longer, filled with sand and thoroughly heated in a warm oven, is about the best way of applying heat to a person's feet, and these cold nights, if one is put in the bed an hour or so before retiring, it makes one much more comfortable. The bags should be made of heavy unbleached muslin, and finely sewed.

After you have boiled a ham it improves it much to skin it, sprinkle with pepper and bake in a brisk oven for one-half hour.

Do you want good fried mush? Dip it out of the kettle it is boiled in, while hot, and fry in round cakes on the griddle. AUNT EM.

DOMESTIC RECIPES.

CHICKEN CROQUETTES.

Boil a chicken—one weighing about five pounds will make two dozen croquettes—when cold chop very fine, season with salt, pepper, a little grated nutmeg or mace, and a teaspoonful of minced onion. Put in a saucepan one and a half cup of milk or cream, and two ounces of butter; when this boils, stir in a tablespoonful of flour (which has been rubbed smooth with a little cold milk); let it boil a minute to cook the flour, then put in the chicken, and mix thoroughly. Flour a bowl, put in the mixture, pressing it down, and set in a cold place until cold and stiff. Flour your hands, mold the croquettes in any shape you prefer, roll in beaten egg, then in crumbs, and fry in boiling fat. Calf's brains are considered by many to be a nice addition to chicken croquettes. They are simply boiled and added to the minced chicken. Still another way is to add a cupful of boiled rice to the above quantity. E.

OYSTER KROMESKIES.

Cut three dozen fresh oysters into small pieces, and chop fine an equal bulk of cold cooked chicken, and half a cupful of cooked mushrooms. Boil the oyster liquor until it is reduced to a gill, add two tablespoonfuls of cream, the oysters, chicken, and mushrooms and the beaten yelks of three eggs; stir over the fire for a few minutes, remove and spread on a dish to cool. When cold roll in small sausage-shaped pieces, wrap each piece in the thinnest possible slice of fat bacon, dip into frying-batter, and fry in boiling fat.

CUISINIERE.

BREAD JELLY.

This simple delicacy comes under the head of cookery for invalids and requires a little skill in its preparation to make it as palatable as it really should be. Cut a French roll into thin slices and toast a golden-brown on both sides; then put them into a saucepan with a quart of water, and simmer over the fire until they begin to jelly. When done, strain through a thin cloth and flavor with lemon-juice, nutmeg and sugar. A little sherry or port wine is an improvement. If a French roll is not at hand, light, stale home-made bread will do very nicely. ALICE.

BAKED PARTRIDGE.

Although the Game Laws expire February 1st, it is possible that a stray bird shot by the hands of some enthusiastic sportsman, will find its way into a few homes. This recipe, at any rate, is worth keeping until next year. This bird is called pheasant at the South, but by "any other name is just as sweet." Like all game, it is better for having been kept some time. A French cook hangs the bird by the feathers of the tail, and when it falls they prepare and eat it, but we would scarcely advise this for an American palate. Clean and truss the bird as you would a chicken, stuffing it or not as your taste may direct. An ordinary bread stuffing, with a great deal of minced onion, is nice. Cut thin slices of salt pork, and tie them over the breast, or fasten them on with small skewers; put the bird on its back in a baking-pan with a lump of butter, and half a cup of hot water; set in a quick oven and baste often. Forty-five minutes will be sufficient to cook it, but as the flesh is naturally dry it must be basted frequently. Boil up the gravy in the pan, thicken slightly, add the juice of half a lemon, and serve. Raw potatoes, thinly sliced and fried in hot fat, or spinach, are nice accompaniments. If you have any left, it will make a nice breakfast dish. Boil up the bones with the ordinary soup seasonings, and when you have a cup of stock, strain. Put a bit of butter in a frying-pan, stir in a tablespoonful of flour, add the hot stock; lay in the remains of the bird cut in neat pieces; simmer for five minutes and pour over buttered toast. A few chopped mushrooms are a great improvement. If served as a dinner or supper dish, some kind of jelly or pickled or spiced fruit should be passed with it. MRS. A. G.

THE SEED DISTRIBUTION

of the RURAL NEW-YORKER is sent to all REGULAR subscribers who APPLY INCLOSING A STAMP. It is sent ONLY to REGULAR subscribers.

Miscellaneous Advertising.

Clergymen

Lawyers, Actors, and Singers, are often troubled with loss of voice, resulting from a slight cold, weakness of the vocal organs, or inflammation of the throat, and in all such cases may be promptly relieved by the use of Ayer's Cherry Pectoral.

I would not be without Ayer's Cherry Pectoral on any account. It is an invaluable remedy in Bronchitis and Lung Complaints, and speedily relieves Hoarseness or Irritation of the Throat, caused by public speaking.—Rev. E. Bethune, Janesville, Tenn.

I have been so much afflicted with Bronchitis that I should be unable to perform my clerical duties without the use of Ayer's Cherry Pectoral.—A. G. Kirk, Pastor Baptist Ch., Hillsville, Pa.

News of the Week.

HOME NEWS.

SATURDAY, Feb. 20, 1886.

OWING to the large deficit in the Canadian Treasury (between five and six million dollars), the Government will not be able to enlarge the Welland Canal this year—cost would be about $1,500,000. All interested in the carrying trade of the West are urging the abolition of tolls on the St. Lawrence canals, as most of their former traffic has been diverted to the Erie since this State made it free. The maratime Provinces, however, and other sections which gain nothing by the traffic, while they have to contribute largely to the maintenance of the canals, are strongly opposing their being made free.....Montreal is said to have 1,000 cases of diptheria, and the disease is terribly prevalent in Quebec, Toronto, St. John, Halifax, and several other Canadian cities.....Several of the Ontario cities, Toronto and Hamilton among them, have memorialized the Dominion Government to cease spending public money for the purpose of inducing immigrants to come to Canada..... .....George Q. Cannon, the "brains" of Mormonism, who had been hiding for some weeks from officers seeking to arrest him for polygamy, was arrested last Saturday, while trying to steal away from Winnemucca, Nev. .....Gens. Howard and Terry are likely to succeed Hancock, dead, and Pope, "retired," as Major-Generals. They are highest in rank as Brigadier-Generals. Though Gibbon and Stanley are their seniors in service, their real rivals are Crook and Miles..... ....The License Law of Connecticut provides that liquors shall not be sold to minors. The State Supreme Court has just decided that this means for their own use; and that it can be sold indiscriminately to minors for the use of adults. An amendment of the law is probable.....There is a movement to transplant Mormonism into Mexico, negotiations for large tracts of land being, it is said, under way. Pres. Diaz is reported to favor the transfer.... There are four propositions with regard to Dakota, before the House Committee on Territories. First, to amend the Senate bill so as to wipe out the present State organization and submit the question of division to a vote of the people. Second, to pass an enabling act for the southern half of the Territory. Third, to divide the Territory into two parts on the Missouri River, and admit the eastern part as a State. Fourth, to divide the Territory and postpone the admission of either portion. Neither of these propositions is popular with the Dakota people, who still hope to see the House pass the Senate bill admitting the southern part of the Territory as a State. .....The anti-Chinese agitation continues on the Pacific coast steadily but more quietly. The anti-Chinese Congress at Portland, Oregon, recomends the impeachment of Governor Squires, of Washington Territory, for his vigorous action against the anti-Chinese rioters, and the abrogation of all treaties with China that permit immigration. It commends newspapers that indorsed the rioting at Seattle and Tacoma, and permanently boycotts those that went in for "law and order."..... The Government telephone suits will be brought to trial probably at Columbia, Ohio, certainly outside the District of Columbia, as it is thought that juries there are too easily "influenced" by corrupt considerations..... The Knights of Labor demand postal savings banks, to preserve their savings from the clutches of bank cashiers starting for Canada. .....In Texas the Knights are still boycotting the Mallory line of steamers, and soliciting merchants all through the State not to patronize it. The wholesale dealers are chary of making promises; the retailers, whose trade is directly affected by workingmen's patronage, are more compliant..... The business of the Morgan railroad and steamship line which monopolize the trade between Texas and New Orleans, is at a standstill, as the men have struck for higher wages. No freight is received or handled—all means of transportation are "tied up."...All over the country "labor troubles" are injuring or paralizing regular business in places; and the strikers are much better organized and much more successful than ever before. The Knights of Labor are everywhere the "brains" of the movement, and strikes and boycotting the weapons.....In Congress the Fitz John Porter bill has passed the House by a large majority..... .....A bill providing for a fine of not more than $500 and imprisonment of not more than one year or both on all going on Indian lands with the object of settling there, passed the Senate Wednesday..... Senator Mitchell, of Oregon, has introduced a bill for the repeal of all treaties permitting the immigration of Chinese, and prohibiting their coming, except in case of deplomatic and official personages.....The Republican Senators, who are in a majority, will not confirm appointees to office where the heads of Departments refuse to furnish information as to the reasons for the removal of former officials, when it is asked for by the Senate.... ....The House Committee on Agriculture has agreed to report favorably the bill introduced by Representative Hatch to establish experimental stations in connection with agricultural colleges.....The Pan-Electric controversy is to be investigated by the House..... Claims for damages caused by the anti-Chinese riots at Rock Springs, Wy., last Fall, have been filed with the Secretary of State; others are expected on account of the riots in Oregon and Washington Territory. The Cabinet is about to urge legislation to indemnify the Chinese.....The House has passed a bill reducing from eight cents to five the charge for money orders not exceeding $5.... Again a bill is up in Congress to allot lands in severalty to the Indians. This is the best way of cutting down the vast territory assigned them.....The battle for and against a continuation of silver coinage is loud and hot in Congress, with advantage hitherto in favor of the silver men; but Eastern papers expect the case will be reversed soon.....The Transcontinental R. R., Association which for some time has controlled passenger and freight traffic between the Pacific and Mississippi has burst up, as some of the roads wanted a larger share of the traffic than the others were willing to give. Some say rates will at once be cut; others that another conference will soon be held.....The New Jersey Supreme Court has decided that the railroad and canal tax law of 1884 is unconstitutional. It was supposed that no taxes would be needed except those on railroads and canals. The Court decides that these can be taxed only under a general law taxing corporations. The States will have to refund over $1,000,000 already collected, and it has made no provision for income from other sources. It is considered temporarily bankrupt. The Treasurer refuses to pay out a dollar. Decision of Court to be contested..... .....

THOSE who have used the BOSS ZINC and LEATHER COLLAR PADS and ANKLE BOOTS say they are the best and cheapest, because most durable. They will last a life-time. Sold by harness makers on 60 days' trial. DEXTER CURTIS, Madison, Wis.—*Adv.*

AGRICULTURAL NEWS.

SATURDAY, February 20, 1886.

A MACHINE just invented in France, it is said, perfectly separates the fiber of ramie, ready for bleaching, carding and spinning. If the report turns out true, the culture of ramie in the Gulf States is sure to take a new start, as the difficulty of separating the fiber has hitherto been the great obstacle in the way of utilizing it.....The exports of hog product in January were nearly 40,000,000 pounds short of corresponding month last year..... .....The production of St. Louis flour mills for 1885 is officially estimated at 1,838,782 barrels; for 1884 at 1,960,737 barrels, and for 1883 at 1,892,633 barrels.....The low price at which Nebraska corn can be laid down in San Francisco, has been taken advantage of by large stockmen and dairymen. Some have abandoned feeding barley, and are substituting corn and low grades of wheat, which can be purchased cheaper and are said to produce better results.....Telegraphic reports from all the great cattle-raising sections of the Northwest, West and Southwest are rosy. Loss in Texas not over five per cent.; in Kansas, 25,000 head instead of 100,000 as earlier reported; in Colorado, two per cent.; in Wyoming, one per cent.; in Dakota, all wintered well; in Montana "cattle were never looking better at this season"—mildest Winter since 1877; in New Mexico, Winter exceptionally severe; but little loss of cattle, as they found shelter in the cañons and arroyas. Losses light in Manitoba and throughout the Canadian Northwest..... .....Interviews with cattlemen do not give estimates quite so favorable. Loss throughout the Northwest is put three per cent. Letters from ordinary travelers and prospectors through the cattle ranges are still less favorable. "Native" stock have everywhere suffered less than pure breeds or even crosses or high grades. In farm stock there has been little loss, as even the rude shelter and care they got, have saved them from death, though many are in poor condition. Curious—isn't it?—that owners of range cattle everywhere say they expect unusually high prices for their stock, although the losses have been so "insignificant."..... Massachusetts proposes to impose a fine of $250, or imprisonment for six months, on any one who negligently or willingly sets fire to another person's woods or to his own if another person's property is injured.....In the matter of Green's driven well patent, which expired about a year ago, ten appeals were taken to the United States Supreme Court from the decision of Judge Nixon of the Circuit Court of New Jersey, who had supported the validity of the patent. The Supreme Court has dismissed all the appeals, putting the costs on the well owners, and establishing the validity of the patent—good job it runs no longer!..... ....Comte de St. Vallier, the French statesman who died lately, had for 20 years, in consequence of a disorder of the stomach, lived exclusively on milk, of which, during his splendid dinner parties, he sipped glasses. .....The New Jersey State Board of Agriculture asks the Legislature to remove legal protection from the English sparrow..... Great Britain consumed 365,000,000 pounds of wool the past year, and the United States 308,000,000.....The McCormick Reaper Works, at Chicago, have been shut down, throwing 1,400 men out of employment. After a late strike the wage question was arranged quite satisfactorily: and the men then insisted on the discharge of all non-union hands—hence the shut-down.....A decree has been signed by the Queen Regent reducing by 15 per cent. the duties on Spanish flour imported into Cuba. The law will be in force until the 1st of April next.....Eight more arrests of retailers of bogus butter in this city yesterday. .....In the year from May 1, 1884, to April 30, 1885, the shipments of fertilizers from Baltimore constituted 45.6 per cent. of the whole fertilizer trade of the country. The total shipments were 801,229 tons. The shipments to the different States were: Alabama, 47,282; Delaware, 10,040; Florida, 5,546; Georgia, 265,202; Illinois, 3,533; Kentucky, 216; Louisiana, 355; Maryland, 57,141; Michigan, 389; Mississippi, 6,748; New York, 18,633; New Jersey, 32,957; North Carolina, 105,147; Ohio, 2,295; Pennsylvania, 68,347; South Carolina, 136,577; Tennessee, 5,751; Virginia and West Virginia, 92,066; Western States, 15; District of Columbia, 84; New England, 1,905..... ....The House Committee in Agriculture has practically agreed upon amendments to the Bureau of Animal Industry Act, which will provide for the condemnation of animals infected with pleuro-pneumonia, or suspected of such infection. These amendments will fix a maximum price on animals so condemned, of $60 for common animals, and $120 for blooded cattle.

OUR EXPERIMENTS, substantiated by dairymen and the proprietors of creameries in all the fancy butter districts, warrants us in asking strangers to try Thatcher's Orange Butter Color. We know it will please them. Ask your dealer for it.—H. D. Thatcher & Co., Potsdam, N.Y.—*Adv.*

IF you grow Cauliflowers or Cabbages, send 20 cents in stamps to Francis Brill, Riverhead, Long Island, N. Y., and get his book with practical information in minute detail.—*Adv.*

Crops & Markets.

SATURDAY, Feb. 20, 1886.

A cargo of California wheat was sold in the Mersey (at Liverpool), last Wednesday, at 31s. 6d. per quarter (93¾c. per bushel), the lowest price on record. California wheat is the highest-priced American wheat in the English market. As it is quite hard, it is usually mixed with softer English wheats by millers in grinding.

The general impression in England is that prices of wheat have touched bed-rock; still English importers are slow to make an advance, although purchases are chiefly for legitimate wants—not speculative purposes. The Mark Lane Express says the Liverpool grain markets are "paralized" and that "the American option is the curse of the world." The pressure of Russian wheat in the German markets holds prices down on the Continent. The high tariff shuts American wheat entirely out of France and almost entirely out of Germany.

Compared with corresponding date last year, the amount of wheat on passage from all parts of the world to Europe shows a decrease of 6,960,000 bushels and corn of 640,000 bushels. The visible supply of wheat in the United States and Canada, with the amount of wheat afloat for Europe, is 71,125,170 bushels, against 73,237,803 bushels one year ago, and of corn 11,391,000, against 10,314,000 bushels last year.

Bombay exports of wheat in January, according to Beerbohm's reports, were 137,000 quarters for the Continent and 54,000 quarters for the United Kingdom, making an aggregate of 191,000 quarters, or 1,628,000 bushels. Bombay exports to all ports during the calendar year 1885 were 20,169,467 bushels, the largest on record. For 1884 they were 12,523,754 bushels, and an average of 16,918,354 bushels for the three years 1881 to 1883 inclusive. The Agricultural Department of India reports a decrease of 125,000 acres in the wheat crop, compared with last year's area in Gujerat districts of the Bombay Presidency, and of 25,000 acres in the Native States. In the Deccan there is an increase of 100,000 acres, and in the Karnatic country the area is 50,000 acres above average. This is an improvement on previous reports. The British receipts of Indian wheat within two years past were: In 1884, 15,119,832 bushels, and in 1885, 22,590,336 bushels. The estimated probable British receipts of Indian wheat, January 1 to July 1, 1886, was given at 8,000,000 bushels. India, with its extremely cheap labor, fast developing transportation facilities, and great area suitable for wheat culture, is now our great rival in foreign wheat markets, and there is a growing impression that it will soon shut us out from them, by selling at prices with which we cannot afford to compete. We should, therefore, keep well posted with regard to its wheat crop.

The home wheat market has been very dull, with a slight downward tendency during the week. The prices vary considerably more each day, however, even in dull times, than the variations recorded for the week in the various markets. Cables announce the lowest prices yet in England. Reports of injury to winter wheat, by frost, have been made and strongly denied—probably there is some, but not much hitherto. Heavy orders have been coming to Toledo and other collecting centers for wheat wanted by millers in the interior, which shows that there is little wheat in first hands, and tends to enliven trade. The superabundance of wheat on the Pacific Slope lowers prices "east of the Rockies," by competing with "Eastern Slope" wheat in the United Kingdom. Prices at San Francisco have declined three cents per bushel owing to heavy supplies. Walla Walla wheat has sold at Portland, Ore., at 66c., which, with the current rate of freight to the United Kingdom, would make it cost about $1 per bushel, delivered. The receipts of wheat at Minneapolis during the week were 460,000 bushels, which is quite as much as the mills can dispose of; so that there was no diminution of the stocks on hand. Those at Duluth are increasing. It is said that little of the supply came from farmers' hands, most of it having been drawn from the elevators along the various roads. It is thought that unless war news or trustworthy reports of extensive damage to the winter wheat crop interfere to bolster up prices, there will be a drop in wheat within a few weeks. The output of flour was 78,000 barrels; shipments, 76,000; market dull.

The Cincinnati Price Current of Thursday says the number of hogs packed last week in the West was 210,000, against 265,000 for the preceding week—total since November 1, 6,005,000, against 5,995,000 last year.

ADVICES dated February 15, from Elgin, Ill., the great butter market of the West, say that on that day 15,720 pounds of butter were sold at 33 cents; with small choice lots at 34 cents, closing firm. Cheese was firm at five cents for hard skims. The sales for the day aggregated $12,472.

A change has been made in the dressed and live beef freight rates from Chicago to the seaboard. The old live stock rates were based on 25 cents per 100 pounds from Chicago to New York; the basis now is 35 cents. The old dressed beef rate was 43½ cents; the new is 65 cents. Formerly there was a distinction of 74 per cent. between the live stock and dressed beef rates in favor of the former. The dressed beef rate is now made about 85 per cent. higher than the live cattle tariff, and all the pool lines are pledged to accept it. The change is in favor of Eastern butchers, cattle owners and drovers, and is likely seriously to diminish the Western dressed beef trade in the East. The prices of roasts and steaks are sure to go up.

As soon as practicable after the close of the year, the Department of Agriculture made special investigation with regard to the last cotton crop. Its report estimates the cotton remaining on plantations on February 1, the proportion of lint to seed, the quality, average date of close of picking and the price of cotton seed. The quality is poorer than last year on the Atlantic coast with much discolored and trashy fiber. The staple is shorter than usual, except in favored places west of the Mississippi, and the yield of lint which should average at least 32 per cent., is only about 31 per cent. from Virginia to Alabama and Tennessee. It is 32 in Mississippi and about 32 to 32½ in States west of the Mississippi. The quantity on the plantations on February 1, is apparently about one-sixth of the crop, five-sixths having gone forward, appearing at the ports about February 5. The percentage of the crop marketed is as follows: Virginia, 82; North Carolina, 82; South Carolina, 84; Georgia, 85; Florida, 87; Alabama, 84; Mississippi, 83½; Louisiana, 88½; Texas, 83; Arkansas, 83; Tennessee, 82. General average nearly 83. The indications thus point to a crop approximating the November estimates of yield per acre, which looked to a product of about 6,500,000 bales.

Sudden Changes of weather are productive of Throat Diseases, Coughs, Colds, etc. There is no more effectual relief in these diseases to be found than in the use of BROWN'S BRONCHIAL TROCHES. Price 25 cts.—*Adv.*

MARKETS BY TELEGRAPH.

SATURDAY, February 20, 1885.

CHICAGO.—Compared with prices a week ago, "regular" wheat is ¾c. lower; No. 2 Chicago Spring, ½c. lower; Corn, 1⅛c. higher. Oats, ¼c. higher. Rye and Barley unchanged. Pork, 5c. lower. Cattle, slightly higher on most kinds. Hogs from 10c. to 25c. higher. Sheep, steady on lower kinds; higher on best quality.

WHEAT.—Sales ranged; February, 79¼@79⅝c; March, 79¼@79⅜c; May, 84½c@85½c.; No. 2 Spring, 79¼@81½c

No. 3 Spring, at 71¼c. CORN.—Cash, 37⅞@38c; February, at37⅞@38¼c., March, 38@38½c; May, 41¼@41¾c. OATS—firm; sales ranged: Cash, 30½c; February, 30@30⅝c; March, 30@30¾c.; May, 32⅞@33½c. RYE—No. 2, 59c. BARLEY.—No 2, 60c. PORK.—Cash, $11 00@$11 05; February, $11 00@$11 05; March $11 00@@$11 05; May, at $11 17½@$11 22½. LARD.—Quiet and steady; sales ranged; Cash, $6 05@$6 07½; March, $6 05@$6 7½; May, $6 17½@$6 20. BULKMEATS.—Shoulders,$3 90@$4 00; Short rib sides, $5 50@$5 55; Short Clear sides, $5 80@$5 85. CATTLE—Shipping steers, $3 50@$5 75; stockers and feeders, $2 00@$4 40; cows, bulls and mixed, $1 75@$4 00; bulk,$3 00@$3 10. HOGS.—Rough and mixed, $3 85@$4 15; packing and shipping, $4 20@$4 52; light, $3 70@$4 15; skips, $2 90@$3 60. SHEEP.—Market firm; Natives, $2 00@$5 40; Western, $2 50@$4 50; lambs, $4 00@5 80 Texans, $1 75@$3 50.

ST. LOUIS. — Compared with cash prices a week ago, No. 2 Red Wheat is ¾c. lower, Corn, 1¼c. higher, Oats, ¾c. higher, Pork, unchanged, Cattle, Native Butchers' and Stockers and Feeders higher; others unchanged. Hogs, all grades, except "packing," higher. Sheep, from 5c. to 25c. higher.

WHEAT.—No. 2 Red, Cash, 91c.; February, 91c.; March, 91c. bid; May, 93⅞@95c. Corn quiet; No. 2 Mixed Cash, 36@36¼c.; February, 35¾c.; March, 36c; May, 37¼c. Oats quiet; No. 2 Mixed, Cash, 30@30½c. bid; March, 29½c., May, 32c. Rye at 59½c; Barley American, 60@80c; Butter quiet; creamery, at 24@30c.; dairy, 18@24c; Eggs steady at 19c. Pork, $11 25. Bulk Meats — Long Clear, $5 45; Short Rib, $5 55; Short Clear, $5 75. Lard firm at $5 90@$6 05. Cattle.—Market active. Fair to Choice Native Shipping Steers, $5 00@$5 35; Native Butcher Steers, $3 25@$4 25; Cows and Heifers, $2 25@$3 75; Stockers and Feeders, $3 00@$4 20. Hogs.—Light, $3 65@$4 05; Packing, $3 85@$4 15; Heavy, $4 20@4 45. SHEEP.—Market active; Common to Choice, $3 25@4 80.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, February 20, 1886.

STATE OF THE MARKET.—Compared with cash prices last week, flour is 5c. to 10c. higher, "regular" wheat ½c. lower, corn ½c. lower; oats unchanged; pork unchanged; butter 1c. advance on best grades; cheese steady; eggs 2½c. higher for State; poultry unchanged, fruit a trifle lower; vegetables steady.

FLOUR, FEED AND MEAL. FLOUR—Quotations: Fine at $2.20@$2.90, Superfine, $2 85@$3 25; Extra No. 2, $3 20@$3 75; Good to Fancy Extra State, $3 60@4 25; Common to Good Extra Western at $3 20@$4 00; Good to Choice Extra Western, $4 05@$5 50; Common to Fair Extra Ohio, $3 20@$3 75; Good, $3 80@$4 30; Good to Choice, $4 25@$5 25; Common Extra Minnesota, $3 20@$3 65; Clear, $4 00@$4 50; Rye Mixture, $4 00@$4 25; Straight, $4 50@$4 80; Patent, $4 75@$5 50; Bakers' Extra, $4 25@$4 60; St. Louis Common to Fair Extra, $3 20@$3 80; Fair to Good, $3 85@$4 75; Good to Very Choice, $4 80@$5 50; Patent Winter Wheat Extra, $4 50@$5 50; City Mill Extra for West Indies, $4 90@$5 00; South America, $5 00@5 10. SOUTHERN FLOUR—Common to Fair Extra, $3 85@$3 75; Fair to Choice do., $3 80@5 30. RYE FLOUR—Superfine, $3 15@3 50, latter for choice. BUCKWHEAT FLOUR, at $1 85@$2 00. CORN MEAL—Brandywine, $3 03@3 05; Yellow Western, at $2 75@$3 00. FEED—Bran ranges from 85@92½c. from track and mill; for 50 lb. average at 80@82½c.; 90 lb. average at 80@85c.; middlings at 85@97½c., and sharps at 97½@$1 07½. Rye feed at $16 00@$17 00 per ton.

GRAIN.—WHEAT.—No. 1 Northern, $1.01½; No. 1 Hard Duluth, $1.03½; No. 2 Red, 92c; Ungraded White at 91½c, No. 2 Red for March, 91½@92c.; do. for April, 92¼@93½c.; do. for May, 91⅝@91⅞c; do. for June, 95½@95¾c.; do. for July, 95¾@96c; do. for August, 95¾@96¾c; do. for September, 96¾@97¾c; do for October, nominal at 97½c; do. for December, $1.00¾@1.01. RYE—59@62½c. for Western, and 61@65½c. for State. CORN—Ungraded Mixed 47@50½c; No. 3, 48@48½c.; Steamer Mixed, 49½@49½c.; Steamer Yellow, 49¾@49½c; No. 2, Mixed, 52¾@53c.; Yellow, 51c; No. 2 Mixed for February, 53½@55c; do. for March, 50¾@51¾c; do. for April, 49¾@50½c. do. for May, 49¾@49¾c; OATS—No. 3 Mixed, at 37½c.; No. 2, 38¼@38½c.; No. 1 quoted at 38½c.; No. 3 White, 39¼@39½c.; No. 2 do. 40¾@40½c; No. 1 quoted at 43c.; Mixed Western, at 37@39c.; White do., 39@45c; White State, 40@42c; No.2 Mixed for February, 38¼@38½c.; do. for April, 38¼@38¼c; do. for March and May, 38¾c. Barley, ungraded Canada, 79c.

PROVISIONS.—PORK.—Mess quoted at $10 50@$11 00 for Old and $11 75@12 for New; $11 50@$12 00 for Family Mess; $12 75@$14 50 for Clear Back; and $8 50@$9 25 for Extra Prime. BEEF.—City Extra India Mess, $17 50@$18 00; Extra Mess, bbls., $10; Packet, $11 00@$12 00 in bbls.; Family Mess, $12 00@$13. BEEF HAMS.—Quoted at $17 75@18. CUT MEATS.—Pickled Bellies, 12 lb, average, 5¾@5¾c; do. 11 lb, 5¼c; Pickled Shoulders, at 4⅝c.; Smoked shoulders, 5¼@5½c; Pickled Hams at 8¼@8½c.; Smoked do., 9½c. MIDDLES—Long Clear in New York quoted 6c. for Western delivery. Long Clear, 5.55c.; Short Clear, 5.80c. DRESSED HOGS.—City Heavy to Light, 5⅝c. LARD.—Western Steam spot, 6.85@6.87½c; March, at 6.32@6.33c.; April, at 6.39@6.40c.; May, at 6.47c.; June, 6.52@6.53c; city steam, 6.30c; Refined Continent at 6.65c, and South American, 7c.

BUTTER.—Eastern Creamery, 34@35c; Western Creamery, 18@31c.; Elgin do., 35c.; State Dairy half-firkin tubs, 19@27c.; Western Factory, 11@20c.; Imitation Creamery, 25@26c.; Western Dairy, 12@18c.

CHEESE.—State, 7@10¼c.; Night Skims, 5¾@7c. Western flat, 7@9¼c.

EGGS.—State, 23c.; Western, 24½@25c.; Southern, 24@23c.; Limed State, 18@18½c.; do. Western, 17@18c.

LIVE POULTRY.—Fowls, Jersey State and Pennsylvania, per lb, at 8@8½c.; do. Western, per lb, at 8c.; Turkeys, per lb, at 6@8c.; ducks, western per pair, at 65@86c.; geese, western, per pair, at $1.12@$1.87; pigeons, per pair, at 35@40c.

DRESSED POULTRY.—Turkeys, Philadelphia, at 12@13c; 11@13c per lb for Jersey, and 12c per lb for western; chickens, Philadelphia large, at 13c, per lb; do. small at 11@12c; Jersey scalded at 11@12c; do, State at 10@11c; do, western, at 9@10c; fowls, Philadelphia, prime, 11c; do, Jersey, 10@11c; State and western, 8@9c. Ducks, Philadelphia, at 15@16c; do. Jersey, at 14@15c; do, western, at 13@14c. Geese, Philadelphia, at 10@12c; do, Jersey, at 10@12c; do, western,at 9c.

GAME.—Wild ducks, canvas, per pair, at $2 75@$3 25; do., red-head, per pair, at $1@$1 50; do. mallard, western, per pair, at 50@75c.; do., teal, blue wing, 60@75c.; do. wood, at 30@45c.; do. common, at 25@30c.

COTTON.—The quotations, according to the American classification, are as follows:

LIVE STOCK MARKET.

NEW YORK, SATURDAY, February 20, 1886.

BEEVES.—Receipts for six days 7,032 against 8,341 for same time last week, Market is lower and diffiler. The dressed beef trade injures sales perceptibly. Shipments of meats for the past week, 126 live cattle, 8,150 quarters of beef, 149 live sheep and 700 carcasses of mutton. Among the sales were three cars of tidy, Corn-fed Cherokees, at $4 80; and four cars of little Ohio "Stockers," at $4@$4 12½. Dry Cows, Bulls, and mixed lots of Oxen, Stags and Cows sold at $3 25@ $4 37½; but outside of a few poorish Steers which sold at $4 25, the range for Decent to Prime bullocks was from $4 50@$5 65; with a few selected tops reaching $6 per 100 lb. Chicago steers, 1,377 lb, at $5 40; do, 1,428 lb, at $5 30;do. 1,122 lb, at $4 50; Cherokees, 1,033 lb, at $4 80; St. Louis steers, 1,308 lb, $5 27½; do., 1,247 lb, at $5 25; Still Bulls, 1,225 lb at 3½c; St. Louis do., 1,322 lb, at $3 35; Ohio steers, 1,271 lb, at $6; 1,156 lb, at $4 85; Pennsylvania do. 1,319 lb, at $5 20; oxen, 1,765 lb, at $5 15; do. 1,845 lb, $5 40; State Steers, 1,290 lb, at $4 75; do. 1,126 lb, at $4 70; Indiana do. 1,150 lb. at $4 70; do. 1,315 lb, at $5 05; oxen, 1,371 lb, at $4 30; stags, oxen and cows, 1,160 lb, at $3 38¾.

CALVES.—Demand good and prices steady at 2¾@3¾c. for grassers; 3¾@5c. for fed calves, and 5@8½c. for poor to prime Veals, with a few Extra reaching 9c.

SHEEPS AND LAMBS.—Receipts for six days, 34,419 head against 29,494 head for the same time last week. On an increased supply the market ruled dull at a still further reduction in selling rates at fully ¼c. per lb. on all grades except Choice and Extra heavy. Common to prime sheep sold mainly at $4 50@5 50; Choice at $5 65@$5 75, and one car at Extra at 6c. Ordinary to choice lambs, ranged at from $5 50@$7 25; one deck selling at $7 37½. Michigan sheep, 92 lb, at 5½c; Western do, 90 lb, at $5 40, Ohio do, 70 lb, at 4¾c; State lambs, 62 lb, at 6¼c; Culls, 56 lb, at 4½c.; Western Sheep, 81 lb, at 4½c; State do, 77 lb, at 4¾. Western lambs, 73 lb, at 6¾c; Jersey ewes, 100 lb, at 4¾c; Michigan do, 79 lb, at 7¼c; State Lams, 87 lb, at 7¼c.

HOGS.—Receipts for six days, 38,297 head, against 37,781 head for the same time last week. Nominally firm at $4.40@$4.50 per 100 lb,

I WILL INSURE YOUR HOGS!
DR. JOS. HAAS'
HOG AND POULTRY REMEDY

(None Genuine without this Trade Mark.)
Is the only Practical Preventive of the so-called Swine Plague.
It has never been surpassed as an increaser of pork and general system tonic. Aiding digestion, stimulating the biliary organs, preventing torpor and engorgement of the liver, and regulating the bowels, it removes and prevents the formation of disease germs, and preserves to the well bred hog his natural constitution. Where it has been fed to such animals in the prescribed quantities, and other directions faithfully observed, it has proved a thorough preventive against swine disease.
AS AN EVIDENCE OF FAITH
in my remedy I make the following offer:
I will insure herds of swine of not less than one hundred in number against disease, at a small fee per head, provided they are fed my remedy under my direction, and prove upon examination prior to contract that they are in a healthy condition, and are neither in-bred, close-bred nor the progeny of such.
1. I will forfeit $100.00 to any breeder whose offer to examine for insurance I decline, provided he forwards remittance to cover my expenses to and from location of hogs, or I fail to prove to the satisfaction of any disinterested party, that failure to respond to invitation is caused by prior engagement or by matters of at least equal importance.
2. I will forfeit $500.00 if I decline upon examination to insure such herds, if my judgment as to their condition of health is overborne by the result of an examination made by at least two properly qualified and graduated veterinary surgeons.
Facts are Better than Assertions.
Please read the following testimony:
GIBSONTON P. O., PA., Feb. 2, 1885.
Dr. Jos. Haas—Dear Sir: About a year ago our herd here numbered about 2,700 head. Disease broke out, and no remedy we had would arrest the trouble. Our losses were heavy and we had to give up feeding entirely for about two months. We then heard of your remedy and bought a trial lot, and began feeding again. We have used it constantly ever since. We have since April last received about 5,000 head of hogs into our herd and have not had a single death from swine disease. This is our experience. Our opinion is that the remedy has prevented disease, and we would not think of being without it. As an aid in fattening pork, we believe it to be good. On this point, however, we have not made an actual test, *as we would not risk feeding a pen of hogs without the Remedy.*
Yours very truly, WHITE & CO.
[N. B.—White & Co., since writing the above letter, have purchased $450 worth of the remedy.]
The remedy can be procured of all Druggists, or from my laboratory. Prices, $2.50, $1.25 and 50 cts. per package. 25 lb. cans, $12.50.

Agents will be supplied with canvassing outfit on application.

Entered at the Post-office at New York City, N. Y. as second-class mail matter.

For the Young.

TEN LITTLE WATERMELONS.

Ten little watermelons, growing on a vine,
A little rabbit came along and left us only nine.

Nine little watermelons, each day gain in weight,
Mrs. Biddy scratched off one, and then we had but eight.

Eight little watermelons, we'd rather had eleven.
Piggy found an open gate, then there were but seven.

Seven little watermelons, Nell, the baby, picks
One of them to make some pies, and left us only six.

Six growing watermelons, how rapidly they thrive.
Paul went out to see them grow, and we had but five.

Five pretty watermelons, our Ransom looked them o'er;
He slyly cut one into halves, and then we counted four.

Four lovely watermelons, but green as green can be;
Lewis plugged another one and left us only three.

Three watermelons. Bessie thought that one would do;
But 'twas hardly fit for piggy, then we had but two.

Two precious watermelons ripening in the sun.
Mamma tried one, found it green, and left us only one.

One darling watermelon left for all our care,
But when Papa went to pick it, he found it wasn't there. S. G.

HERE is a letter that speaks for itself. Now you have a chance to get something that will be of great value on the farm. Remember that a very small club may win the prize. Let every one of the Cousins see what they can do. Remember this is to be the property of the boy or girl who sends in the largest club. It shall not be "father's pig" unless father pays for it. I will see that every boy or girl who sends in a single subscriber is paid for the work. Now, let us see what we can do:

"UNCLE MARK: If you will accept my offer, I will give as a present, to the boy or girl under 16 years of age, who by the first of June, 1886, will secure the largest club for the RURAL NEW-YORKER, a pure bred Poland-China pig, either sex, as desired. Pig will be eligible for record in Northwestern P. C. Record, and of the finest strain.

Very truly, ROBERT I. YOUNG.
St. Joseph, Mo."

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK: My little brother and I wish to join the Y. H. C. I am 10 years old and he is four years old. We have lived here almost four years. It is a new country; when we came here, we did not have any house to live in, and we had to camp out. The antelopes would come right close to camp. They are very pretty. I have seen two pet ones; they didn't look very nice; they were poor. We have a little baby. It is not our own; its Mamma is dead, and our Mamma has taken it to keep a while. We had a very nice garden last Summer. Squashes and cucumbers, melons and such things will not do well here. The vines grow nicely but they will not bear. They will be covered with flowers, but no fruit will set.

JOHNNIE AND JESSE MONTGOMERY.
Meagher, Co., M. T.

[We would like to see the antelope I am sure. I hope you will take good care of that baby.—U. M.]

DEAR UNCLE MARK: I would like to join the Cousins. I am a little boy. My Papa is dead and my Mamma is poor, so I live with Mr. Magers. He says if I am a good boy I can stay until I am a man, and I intend to try to be good. They live in Johnson Co., Kansas, on a farm, and have three horses, three cows, two pigs, one dog and lots of hens. I can't write, so Mrs. Magers writes this for me. If you will let me join, I will try and write the next letter myself. WESLEY NEW.
Zara, Kans.

[Yes indeed, you can be one of my boys. Uncle Mark knows just how you feel, my boy. He could tell you a story about his own life that would read very much like yours. Be a good boy and do what is right. I want you to make a strong, earnest and good man. Don't forget your mother either. Uncle Mark can't help feeling an interest in boys who do their best. He is always glad to help them.]

DEAR UNCLE MARK: I would gladly accept the offer of joining the Y. H. C. I am ten years old. My father takes the RURAL, and we all like it very much, but I enjoy reading the letters of the Cousins best. We have no flowers. I have the prettiest kitten I ever saw. Its name is Frisk. On week days it is so very playful, and it seems to know when Sunday comes, and that it ought not to play, but will come to my lap to learn its Sunday-school lesson. I am going to take singing lessons. We live two miles from town. I go to a district school. It is half a mile from our house.
Paw Paw, Mich. BERTHA A. GLIDDEN.

[I have seen some pretty kittens. Yours must be very pretty to excel them. I know certain boys who make more fuss about learning their Sunday-school lessons than Frisk does.—U. M.]

JACK FROST.

"AHA," said Jack Frost, after a warm pleasant day in the winter, "I must start out for a little fun now. First I will ornament the houses and barns with a fringe of icicles on the eaves; and I really think a fringe on these board fences would be an improvement."

Now let me see. Here comes a boy. He is looking at that pretty girl sitting by the window across the way. I will teach him better manners than that. Here is a wet place and I will freeze it over. Ha! down he goes, and the pretty girl is looking at him. He won't look at her now. You will learn to look where you step, and not at the pretty girls next time, my boy.

Here is the little boy's sliding place all spoiled by the thaw. That is too bad, I will fix it up. There they come. Hear them shout. They are glad that old Jack Frost has come. It does my old heart good to see them.

This young gentleman has been giving his lady-love a ride, and they are several miles from home. It was warm when they started and they were too proud to take any extra wraps, though they were cautioned by their prudent mothers to do so. I will make their ears and noses tingle. Cold hands and feet are not conducive to happiness. To-morrow, when the young gentleman has thawed his ear out, and it is all swollen, and the young lady, with her throat tied up, is taking doses of pepper-tea, etc., they will wish they had not been quite so proud and had heeded their mothers.

Now I will thicken up the ice on the pond and give the boys and girls some fun this evening. Here they come boys and girls and old folks too, I declare. Well, they shall all their fun, but beware, the ice is smooth. There goes a boasting young chap flat on the ice. Just see how careless farmer Brown is to leave his watering trough uncovered. I will freeze it solid and he will cover it over to-morrow. Mrs. Green has left her canned fruit in this cold room. I will snap a few cans for her. She must learn to tend to her things better than that.

I will hang up my frost pictures now I guess. This poor sick girl can see nothing through her window except the sky. I will hang up such lovely pictures in her window that when she awakes in the morning she will think she is in fairy land.

Here are some plants close by a window, and the fire has gone out in the room. Such carelessness; I will give them a nip. And here are some bottles of vinegar in a castor. It is strange folks never will learn to take care of their things. I will snap the bottles. This man is too proud or too lazy to have his house banked. He says he will risk the frost. The idea; with such a poor old wall. I will teach him a lesson. Here is a good bin of potatoes, and there are some barrels of turnips, and yonder some nice apples His wife has some canned fruit on this shelf. He must learn that he cannot have good things without taking care of them. I will give them all a nip, and smash a few cans. Here is a schoolhouse close by. The water-pail is half full of water. I will make it solid. They will have to get a new pail to-morrow and some new ink, too, for I am going to take the color out of this.

Here comes the milkman. I will nip his toes to make him hurry around faster. There are some men going to their work. I will hang some icicles on their beards. The boys and girls are on their way to school. I will give them a sharp bite, so as to sharpen their wits and make them keen and bright.

Here is a dandy all dressed up in his best style. There are a couple of young ladies coming toward him. He is fixing to make his best bow. I will glaze that spot. Down he goes just as he is lifting his hat. When he goes to rescue his hat from the street he will find it hopelessly mashed by a passing team. A group of students are coming from school. Poor old Mrs. B. is coming along too. I will see whether any of them are polite enough to help her across this icy spot. If it was a stylish young lady every one would jump to help her. Oh, yes; they are good hearted young fellows. One takes her basket and another helps her across. The young ladies are just behind, and one of them picks up a little girl who has slipped down, and holds her hand till she is across the ice. Widow Gray says that Jack Frost brings out the good in folks, and they all bring her wood and coal and provisions when Jack Frost comes." GLENNIE HOPE.

["Jack Frost is a good old fellow after all. I hope our friends will all heed his teachings. —U. M.]

PERSONALS.

THE estate of the late Senator Sharon proves to be only $5,500,000—it was supposed to be $15,000,000.

SENATOR HAWLEY is one of the most versatile of Congressmen. He can make a good speech, write a good editorial, sing a good song, paint a good picture, or give good music lessons on the piano-forte.

GERMANY gets the services of her Iron Chancellor remarkably cheap. Besides the use of his official residence, he receives only about $18,000 a year. Mr. Gladstone's salary is $25,000, and that of the British Lord High Chancellor $50,000.

M. GOUNOD, the musical composer, declares, "There are three things which most people can never forgive: First, the good which you have done them; second, the evil which they have done you; third, the evil that they have not been able to do you."

SECRETARY LAMAR, the other day, called on the family of Congressman Blount at their hotel; but when, on receipt of his card, they reached the reception room, he wasn't there. Late in the evening his card came up again, and he explained that he had wandered away, having quite forgotten what he had come to the hotel for. After his apology he departed—without his hat.

Miscellaneous Advertising

Last week we asked you to watch this space. Now, if you will write Hallett & Co., Portland, Maine, you will receive, free, full particulars about work that either sex, young or old, can do, at a profit of from $5 to $25 per day, and upwards, and live at home. GREAT SUCCESS TO OUR NEW DEPARTURE IN THE SEED TRADE

SEEDS AT YOUR DOOR AT WHOLESALE PRICES.

In order to sell our seed crop—1885—direct to the planter, we make the following PROPOSITION: For 60 CENTS in postage stamps or money, we will send by mail post-paid, 19 PACKETS one of the following new and improved seeds:—Bastian's Early Blood Turnip Beet, the earliest and best for table use. "BEST OF ALL" BEANS most remarkable snap bean in the world. Pods as tender and buttery in winter as in summer. Hawaii Sugar Corn from the Sandwich Islands; the sweetest sugar corn that grows. Early Etampes Cabbage, best and earliest of all early varieties. Sure Head Cabbage, best winter cabbage in cultivation. Wilson's Early Green Cluster Cucumber, good for early cucumbers or pickles. Golden Self-Blanching Celery, needs no banking up; excellent quality; keeps all winter. Perpetual Lettuce, tender and crisp all summer. Pride of Georgia Watermelon, none sweeter or better. THE SPANISH NECTAR a new muskmelon from the south of Spain. First premium at Penna. State Fair. Pronounced the best-flavored muskmelon in the world. New Red Rocca Onion from Italy. Grows large onions from seed first year. Tennessee Sweet Potato Pumpkin, none better for pies or custards. Abbott's Improved Sugar Parsnip. Ruby King Pepper, the largest and finest sweet pepper ever seen. Improved Long Scarlet Radish, best for early use. Half-long Strasburg Radish, good for spring or summer. New Brazilian Sugar Squash, sweetest and best-flavored, for summer or winter. Livingston's Favorite Tomato, large, smooth as an apple; productive; solid. Early White Egg Turnip, sweetest and best for table use. In all 12 PACKETS for 60 CENTS; TWO COLLECTIONS for $1.10; FOUR for $2.00. ANOTHER PROPOSITION To adorn your homes and make life pleasant, as we grow flower seeds by the pound, bushel, and by the acre, to give our lady friends the benefit of the wholesale trade, we will send by mail 13 PACKETS one each, of the following, for 30 CENTS Asters, fine, double, mixed. Balsams, extra large, double, mixed, scented. Double Rose-flowered Portulacca, nearly all double; all bright colors. Pansies, finest strain. Petunias, large-flowering; Phlox Drummondii, all bright colors. Verbenas, ten beautiful colors. Zinnias, large, double, bright colors. One fine Ornamental Grass. One splendid Climbing Plant. One beautiful Everlasting Flower. In all, 13 PACKETS for 30 CTS.; TWO COLLECTIONS for 50 CTS. *Directions for cultivating on each packet.* ONE COLLECTION OF FLOWER SEEDS AND ONE OF VEGETABLE SEEDS FOR 80 CENTS, OR TWO OF EACH FOR $1.50. Our Beautiful Illustrated Catalogue accompanies each order. No changes. Address **SAMUEL WILSON** SEED GROWER, MECHANICSVILLE, BUCKS COUNTY, PENNSYLVANIA.

All who mention this paper will receive a copy of "Orchard and Garden" gratis. J. T. LOVETT, Little Silver, N. J.

FAIR AND SQUARE DEALING.

Believing that if a man has dealt squarely with his fellowmen his patrons are his best advertisers, I invite all to make inquiry of the character of my seeds among over a million of Farmers, Gardeners and Planters who have used them during the past thirty years. Raising a large portion of the seed sold, (few seedsmen raise the seed they sell) I was the first seedsman in the United States to warrant (as per catalogue) their purity and freshness. My new Vegetable and Flower Seed Catalogue for 1886 will be sent FREE to all who write for it. Among an immense variety, my friends will find in it (and in none other) a new drumhead Cabbage, just about as early as Henderson's, but nearly twice as large! James J. H. Gregory, Marblehead, Mass.

THE BEAUTIFUL POSTERS

OF THE RURAL NEW-YORKER WILL GLADLY BE MAILED WITHOUT CHARGE TO ALL WHO APPLY FOR THEM.

Humorous.

A CRYING baby at a meeting is like a good suggestion—it ought to be carried out.

"WHAT are pauses?" asked the teacher of a primary class. "Things that grow on cats," piped the small boy at the foot.

"WHAT is the worst thing about riches?" asked the Sunday-school superintendent. And the new boy said: "Not having any."

"I'LL make you dance!" cried an irate mother, pursuing her erring son, slipper in hand. "Then," remarked the juvenile, "we shall have a bawl."

JOSH BILLINGS earned $100,000 by his wits and bad spelling; but some men have made a million without the wit, and they were worse spellers, too.

A LADY of charitable disposition asked a tramp if she could not assist him by mending his clothes. "Yes, madam," he said, "I have a button; and if you will sew a shirt on it, I will be greatly obliged."

JERROLD said to an ardent young gentleman, who burned with a desire to see himself in print: "Be advised by me, young man; don't take down the shutters before there is something in the window."

Will you have white meat or dark.

THE SPANGLER

Corn Planter, Single Row and Broadcast Fertilizer Distributor, Vegetable Seeder, Lime Spreader and Grain Drill.

The Spangler Corn Planter can drop fertilizers with corn, or mix with soil before covering. The dropping of the corn is fully exposed to the operator, and can drop it in hill or drill. **The Spangler Vegetable Seeder** can sow any seed large or small, put in the fertilizer, cover and roll it, all at one operation. **The Spangler Potato Fertilizer Distributor** distributes fertilizers six inches wide in potato rows with cultivator tooth attached to mix with soil; shovels can be lowered or raised. **The Spangler Lime Sprender** will spread unsieved lime from 20 to 60 bushels per acre. **The Spangler Broadcast Distributor** will sow ashes, plaster and all kinds of fertilizers from 200 to 1000 pounds per acre with perfect regularity. **The Spangler Grain Drill** gives full view of the discharge of grain and fertilizer, and is made with or without seed regulator.

The merits of the **Spangler Fertilizer Feed** are attested also by their most successful use by A. B. Farquhar or. his Pennsylvania Drill, Keystone Cultivator (under conditional license from J. W Spangler which expires January 1st 1887), and on Hench's Cultivator. **Galvanized** feeds are furnished when desired. For further information send for illustrated catalogue.

SARDY'S CONCENTRATED PLANT FOOD

A COMPLETE BONE MANURE FOR ALL CROPS.

GUARANTEED ANALYSIS.	
Available Phosphoric Acid,	8 to 9 *per cent.*
Bone Phosphate (undissolved),	4 to 6 "
Ammonia,	2 to 2½ "
Sulphate of Potash,	4 to 5 "

Price $28 per Ton.

FREIGHT PAID TO YOUR NEAREST R. R. STATION.

Discount on orders for one or more car loads.

Every batch of this fertilizer is analyzed by *Messrs. STILLWELL & GLADDING*, Chemists to the N. Y. Produce Exchange, whose high reputation is abundant guarantee that the goods are equal to the analysis.

Buyers are invited to have samples drawn and analyzed by their STATE CHEMISTS, and the fertilizer is guaranteed to come up to the above standard by their tests.

This Concentrated Plant Food is the result of 20 years' experience in the manufacture and use of chemical manures. It is a far higher grade than any fertilizer ever before offered to FARMERS for $28 per ton, PROPORTIONATELY cheaper than any higher or lower priced brand, and cheaper than farmers could buy the ingredients and make it.

It is warranted to contain no leather, shoddy, hoofs, horns, or similar material; all its fertilizing elements being in their most *available forms.*

Compare the analysis and price (*which includes freight*) with other brands.

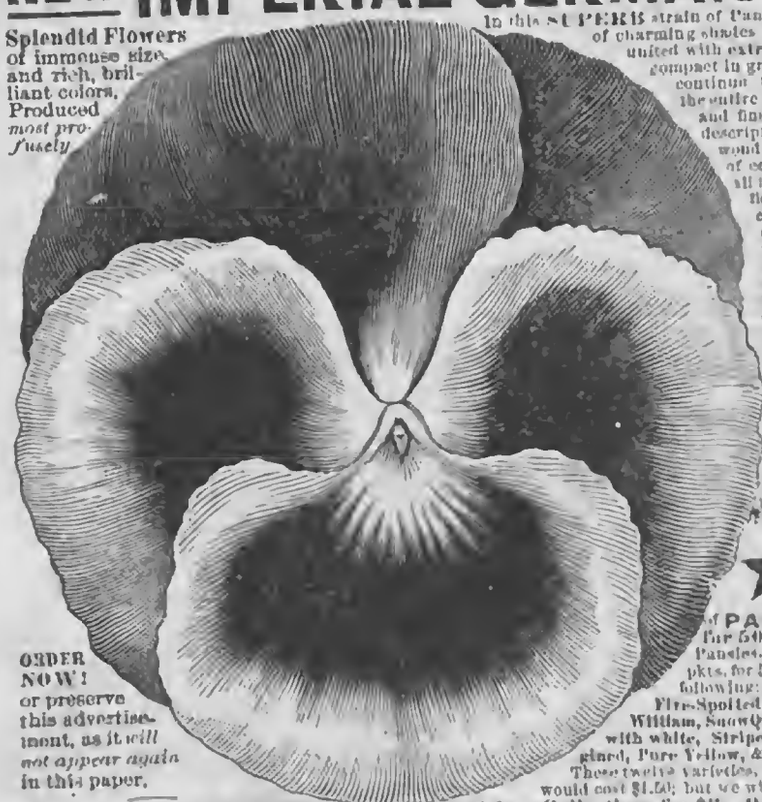
SUPERB LARGE FLOWERING NEW IMPERIAL GERMAN PANSIES



Splendid Flowers of immense size and rich, brilliant colors. Produced *most profusely*

In this SUPERB strain of Pansies we have an almost endless variety of charming shades of color, and good circular substance, united with extra large size of flowers. The plants are compact in growth, and flower very profusely. They continue to **bloom most freely** throughout the entire Summer, the flowers being much larger and finer than in other strains. In a written description, it is impossible to do justice to the wondrous beauty and countless combinations of colorings of the flowers. They embrace all the solid or self colors; delicately shaded flowers; five-spotted on backgrounds of every color, large spotted, edged or bordered flowers of various colors, each with a distinct rim of white, yellow or blue; dark and light marbled varieties; flowers with bold, distinct eyes; striped flowers of striking beauty, and vividly-colored fancy varieties, blotched, mottled, veined, and margined in combinations that would be thought impossible until the flowers are actually seen. We offer, in our Catalogue, seed of **50 distinct varieties** of these **NEW Imperial German Pansies**, making in all the finest collection of Large Flowering Pansies ever offered for sale. Price of mixed seed of all the 50 vars. of the Imperial German Pansies—per pkt of 100 seeds 25c. 3 pkts 50c, 6 pkts. $1.00, 13 pkts $2. 20 pkts. $3. *postpaid.*

ORDER NOW! or preserve this advertisement, as it *will not appear again* in this paper.

★BURPEE'S★ STAR COLLECTION

of PANSIES—12 pkts. (12 distinct vars.) For 50 Cents. We want every one to try our Pansies. For this purpose we offer for 1886 12 pkts. for 50c., embracing 1 packet each of the following: New Imperial German (mixed), Fire-Spotted or Odier, Lord Beaconsfield, Emperor William, Snow Queen, King of the Blacks, Violet margined with white, Striped and Mottled, Azure Blue, Gold Margined, Pure Yellow, & Extra Choice Large Flowering (mixed.) These twelve varieties, purchased in our regular retail packets, would cost $1.50; but we will send the entire collection, postpaid, to any address, on receipt of 50c. in postage stamps, or 5 Star Collections for $2. Order Now, and if you have not already received a copy, ask for **BURPEE'S FARM ANNUAL FOR 1886**, with colored plate of the New Imperial German Pansies, and illustrated descriptions of all the best Garden, Farm & Flower Seeds, Plants, Bulbs, etc., including **RARE NOVELTIES** in Vegetables and Flowers, which cannot be obtained elsewhere. It is a handsome book of 128 pages, and is pronounced one of the neat and most complete catalogues issued.

W. ATLEE BURPEE & CO., PHILADELPHIA, PA.

HOLSTEIN-FRIESIAN CATTLE!

ALL AGES AND BOTH SEXES. HOME-BRED AND IMPORTED.

Cows and Heifers Bred to best Netherland and Auggie Bulls.

The average Records of a Herd are the true test of its merit.

The following Milk and Butter Records have all been made by animals now in our Herd:

MILK RECORDS.

Five Cows have averaged over 19,000 lbs. in a year. Ten Cows have averaged over 18,000 lbs. in a year. Three Cows have averaged over 20,000 lbs. in a year.

We know of about 20 Cows that have made yearly records exceeding 16,000 lbs., and 14 of them are now in our Herd and have averaged over 17,500 lbs

Twenty-five have averaged over 16,000 lbs. in a year. Sixty-three, the entire number in the Herd that have made yearly records, including fourteen 3-year olds and twenty-one 2-year olds, have averaged 12,785 lbs. 5 ozs. in a year.

BUTTER RECORDS.

Five Cows have averaged 20 lbs. 7 ozs. in a week. Nine Cows have averaged 19 lbs. ⅛ oz. in a week. Fifteen Cows have averaged 17 lbs. 6 ozs. in a week. Six 3-year olds have averaged 14 lbs. 3 ozs. in a week. Eleven 3-year olds (the entire number tested) have averaged 13 lbs. 2 ozs. in a week. Six 2-year olds have averaged 12 lbs. 1¼ ozs. in a week. Fifteen 2 year olds (entire number tested) have averaged 10 lbs. 8 3-10 ozs in a week. The entire original imported Netherland Family of six cows (two being but three years old) have averaged 17⅞ lbs. in a week. This is the Herd from which to get foundation stock. Prices low for quality of Stock.

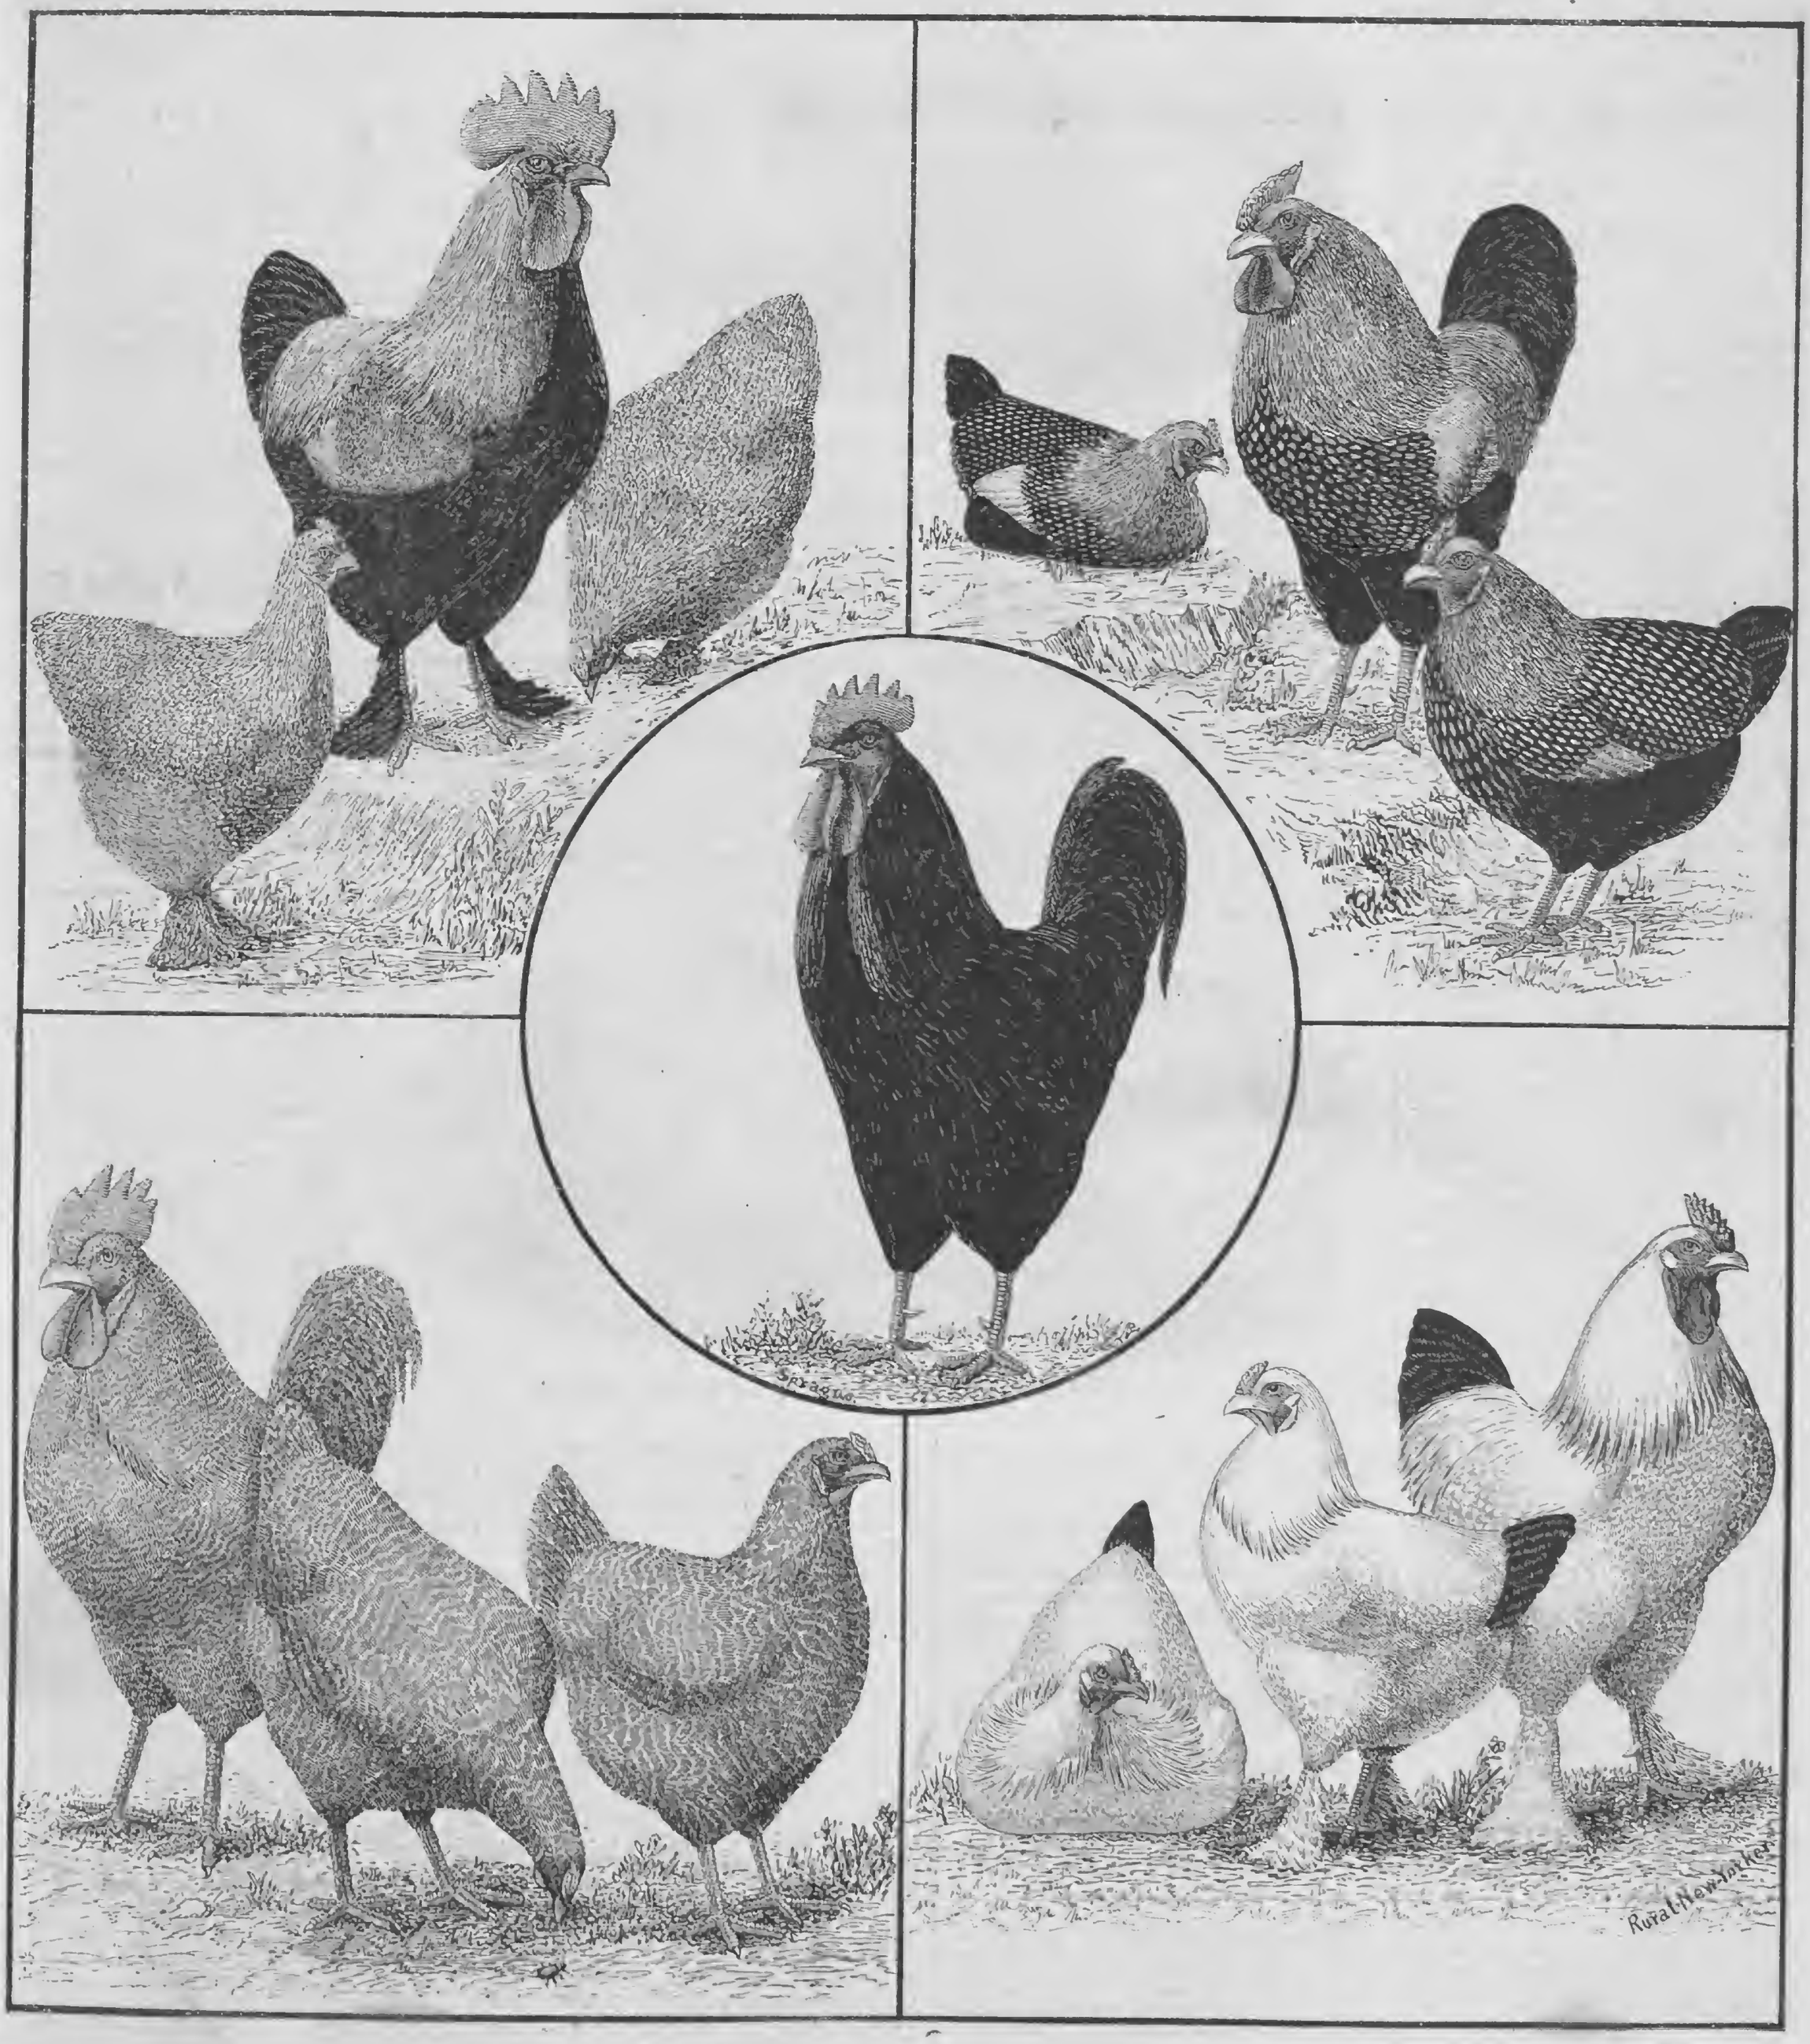
THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XLV. No. 1884. NEW YORK, MARCH 6, 1886. PRICE FIVE CENTS. $2.00 PER YEAR.

Entered according to Act of Congress, in the year 1886, by the Rural New-Yorker in the office of the Librarian of Congress at Washington.



PRIZE POULTRY. Fig. 94. (See page 156.)

Rural Topics.

MACOMBER'S NEW RASPBERRY.

NEW VARIETIES OF CORN—THE TOP-OVER, ANGEL OF MIDNIGHT AND BEAVER-DAM.

NEW VARIETIES OF POTATOES—GILEAD RED, PRESIDENT CLEVELAND, EVERITT, AND MANHATTAN MARKET.

Experiment Grounds of the Rural New-Yorker.

MACOMBER'S ANTWERP SEEDLING RASPBERRY.

HALF a dozen plants of this seedling were received from J. T. Macomber, of Grand Isle, Vermont, and planted last May. They made a fine growth, beginning to fruit in early July and continuing in fruit for a long time. Mr. Macomber supposes it to be a seedling of the Yellow Antwerp. It was found in his garden far away from any plants of the Yellow Antwerp; but its resemblance is such that there can be little doubt as to its parentage. Mr. Macomber writes: "It is a better bearer and we think more hardy. It is entirely hardy here, but its situation is well protected by cedar hedges and numerous fruit trees. We now grow it in preference to the Yellow Antwerp."

Now, while no sort of a positive opinion should be based upon the trial of a single season, the quantity of berries borne by these plants was a surprise to all who saw them during the entire fruiting period. The berries averaged very large. They were of a light amber color, adhering firmly to the stem, and as full of juice as a raspberry well could be. The drupes were large with few and small seeds. The flavor, though not of the highest, was yet most agreeable on account of the juiciness and tenderness of the fruit. It is a beautiful family berry and we hope, rather than expect, that it may prove hardy enough to endure this climate without protection. The plants at this time (Feb. 14) show they have been injured a trifle by the present very trying Winter. It is probable this fine variety will prove hardy further north, where it receives the protection of snow

It is a matter of regret that all fruits, when drawn true to nature, look upon paper much smaller than they really are. The berries shown at Fig. 109 (see p. 157) *average* as large as any raspberries we have here, though smaller in the engraving than many of the nurserymen's cuts of Hansell and Cuthbert.

NEW VARIETIES OF CORN.

ANGEL OF MIDNIGHT.—Since this strangely-named variety of field corn was placed in the Rural's Seed Distribution, we have received two letters stating that, as grown with the writers, it is not so early as the Rural represents it to be. One of those letters (already published) was from our friend and contributor, Dr. T. H. Hoskins, of Newport, Vermont, whose statements are always worthy of consideration.

We now give our report of this corn as raised here the past season on a poor soil enriched with chemical fertilizer at the rate of about 600 pounds to the acre, from careful notes taken at various times from planting to maturity.

"Planted May 13, kernels one foot apart, rows four feet apart. Begins to ripen August 5. One of the earliest we have tried. The early part of the season cold and backward. Fully ripe August 18. Plants six feet high. Ears low, often two to a stalk. Some ears 14 inches long, eight-rowed. Many plants bore three and four ears. Kernels fair size, yellow flint, about 60 to the row. Cobs small, shanks long. Plants sucker considerably. Leafy at bottom, slender at top. The ears from 47 plants weighed 32 pounds."

Following are extracts from letters written to the introducers, and by them kindly forwarded to us at our request. We have copied from the best and worst reports—all from Vermont or New Hampshire.

HEBRON, N. H.—It did not get quite ripe with me. Season very poor. I shall try it again. F. M. JESSEMAN.

STOWE, Vermont.—The corn did not ripen very well. It was about half soft. There was a big yield. I never saw so large a yield in my life. Two to four ears to a stalk, and one was 14½ inches long. Plants six to seven feet high. I shall plant some of it another year. IRA H. FULLER.

MOUNT VERNON, N. H.—The Angel of Midnight Corn ripened a little later than that usually planted about here. The yield was double. L. E. DILLON.

ALEXANDRIA, N. H.—Planted one quart. It ripened in splendid shape. The ears were long and perfect, generally two to a stalk. I cut off ripe ears before the King Philip ripened. I shall plant this alone another year, and would recommend it to farmers as far north as N. H. J. F. PHILLIP.

POWNAL, Vermont.—It ripened satisfactorily with me as early as any field corn, and yielded well. Ears 14 inches long and over 500 kernels to the ear. It will take well. W. J. BARRINGTON.

The above extracts will show the tenor of 30 letters. One writer speaks of stalks eight feet high. Another (Middlebury, Vt.) says it yields at the rate of 220 bushels of ears to the acre, etc., etc. Our object in presenting these quotations is to show how greatly the same variety of corn may vary under different conditions of soil and climate. It may also vary from season to season, even if grown in the same field and given the same manure and care. Our statement is that the Angel of Midnight is the earliest field corn we have ever raised, as judged by one season's trial.

When it is considered that the chief object of the RURAL'S Free Seed Distributions is to introduce or popularize *improved* varieties, it will be understood that we can fully share the disappointment of our subscribers when, after incurring considerable expense, we fail to do so.

BEAVER DAM was received from M. V. B. Andrews, of South Berwick, Maine. It is an eight-rowed yellow flint, the twin rows often separating widely. The ears are about 10 inches long, 40 or 50 kernels to the row. Husks leafy; very long shanks or ear-stalks. The suckers often terminate in an ear. It suckers considerably. Plants six feet high, very leafy at bottom. One or two ears to a stalk. Mr. Andrews writes us that it has been in the neighborhood for 50 years or more. These plants gave us roasting ears July 23. Seed planted May 13. It is one of the earliest varieties ever tested here.

TOP-OVER.—This was tried in 1884 and again last year. It is now offered in many catalogues. Planted May 13, it was not ready to cut until September 1st. The plants grow six feet high, very leafy at the bottom—bushy in fact. Joints short. Each plant has from three to five suckers which do not bear ears generally. The main stalks bear from one to three ears, always low and covered with leafy husks—the leaves often of full size. The ears average eight inches in length, kernels large, from 37 to 40 to a row. Rows straight and close together. The tip is almost invarably covered with kernels, hence the name "Top-over." The shank or ear stalk is scarcely larger than a pipe-stem. Sixty-three plants gave 73 ears, which weighed 25 pounds. Ninety-five plants on another plot with less fertilizers and no nitrogen gave 79 ears, which weighed 22¾ pounds.

TESTS OF NEW VARIETIES OF POTATOES CONTINUED.

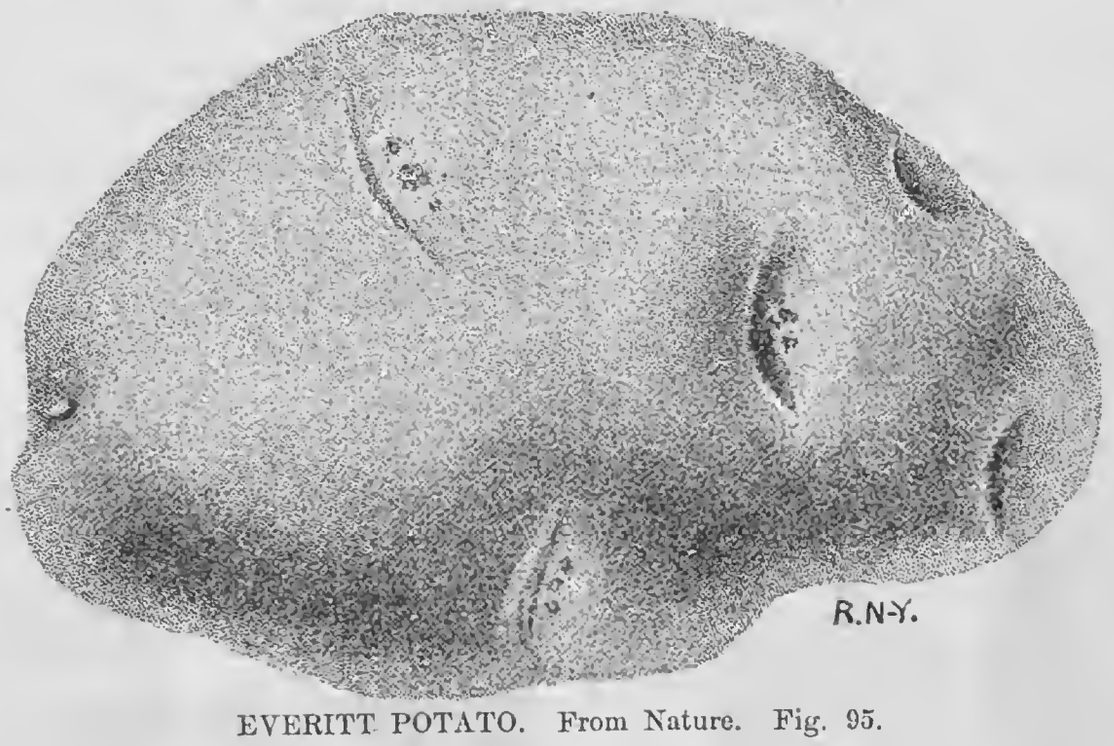
SOIL, CULTURE, ETC.

SUBSCRIBERS should understand that these tests are made in a rich, moist, garden soil. The crop never suffers seriously either from drought or too much wet, as the land is well drained. Not only has farm manure been liberally supplied, but fertilizers of every kind have been used in abundance. Potatoes have been raised on this plot for six consecutive years. Trenches are dug one foot wide and six inches deep, and three feet apart. Two inches of soil are raked back in the trenches, and the seed pieces (two strong eyes each) are placed one foot apart. Two inches of soil are then raked over them, and the fertilizer is strewn evenly at the rate of about 1,000 pounds to the acre. The rest of the soil is then returned to the trenches as loosely as possible. The cultivation is then effected by hand cultivators, and hilling up is studiously avoided.

GILEAD RED. Received from Wm. Murray, Mt. Gilead, Morrow Co., O. He writes: "It is supposed to be a sport of the Belle. Very nice shape, smooth, not very large."

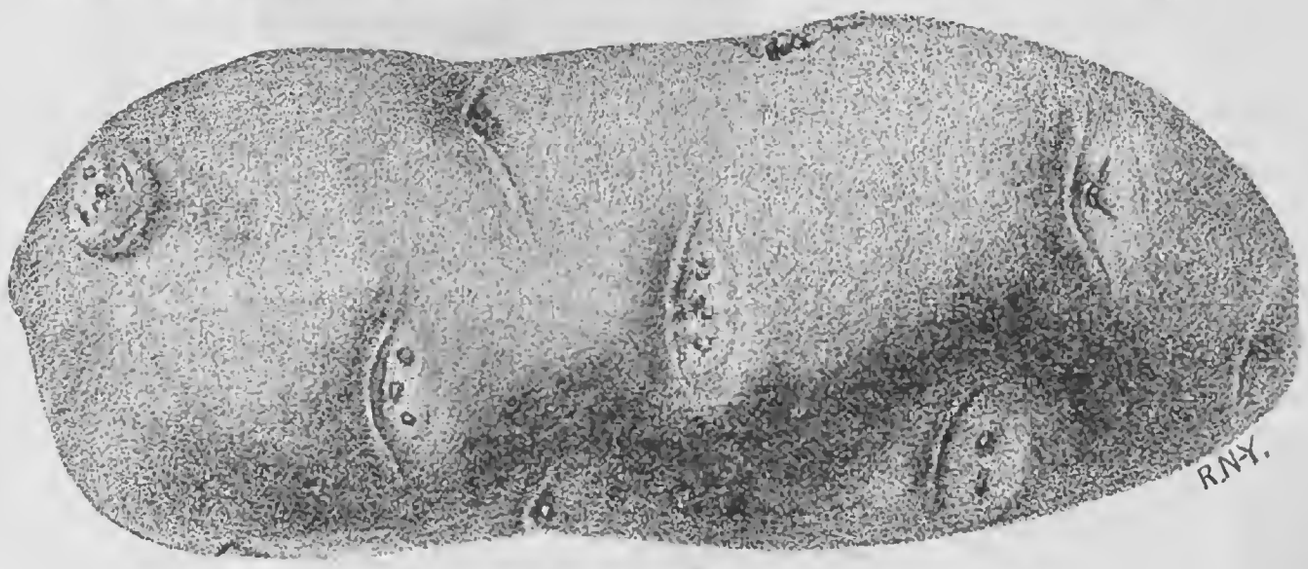
Six pieces were planted April 20, which matured August 31. The yield was 10 pounds, or at the rate of 403 bushels to the acre. There were 34 tubers—25 marketable. The best five weighed two pounds 10½ ounces. Shape, oblong-flattened; skin, russeted pink. Eyes a little deep, medium as to number. A solid looking potato, nearly white flesh and quite mealy and nutty as eaten Nov. 15.

PRES. CLEVELAND, from Alfred Rose, of PennYan, N. Y., who writes: "It is a seedling of the good old Peachblow. You will find it as good as you ever ate." Ten pieces were planted April 20 and yielded 6½ pounds. There were 35 potatoes of which 16 were marketable. Best five weighed two pounds two ounces. Yield per acre at the rate of 238 bushels. Shape irregular. Eaten Nov. 8. Nearly white flesh, not dry or mealy.



EVERITT POTATO. From Nature. Fig. 95.

EVERITT, shown at Fig. 95, from J. A. Everitt, Watsontown, Pa., (no history). Planted seven pieces May 30. One hill yielded six-and-one-half pounds, which is perhaps the largest hill we have ever dug. There were 22 tubers nearly all of fair size. The yield of the seven hills was 24 pounds, or at the rate of 826 bushels to the acre. There were 88 potatoes, 70 of which were marketable. None large, few small. The illustration shows the characteristic shape as nearly as we could find it. Skin, light. Eaten Nov. 14. White flesh, mealy. About like Early Rose.



MANHATTAN MARKET POTATO. From Nature. Fig. 96.

MANHATTAN MARKET, from Ira W. Green, East Avon, at the request of W. P. Andrus, Rochester, N. Y., who says that they give great promise of being superior for yield, quality and appearance. Twenty pieces were planted April 22, and yielded 52 pounds—243 tubers, 170 marketable. Best five weighed three pounds, three ounces. The yield per acre would, at the above rate be 620 bushels. In shape they are rather irregular, long, cylindrical, tapering at ends, often curving as shown. Eyes medium in number and depth. It would generally cut to waste. Buff white skin, white flesh, quite mealy, as eaten Nov. 6th. See Fig. 96.

THE SEED DISTRIBUTION

of the RURAL NEW-YORKER is sent to all REGULAR subscribers who APPLY INCLOSING A STAMP. It is sent ONLY to REGULAR subscribers.

Dairy Husbandry.

ENGLISH DAIRY NOTES.

BUTTER-MAKING IN WINTER.

PROFESSOR J. P. SHELDON.

Trouble in churning; requisites indispensable for prime winter butter; food of cows; temperature; causes of butter "not coming."

EVERY dairyman and dairymaid who has been used to butter-making all the year round, has had trouble at times in Winter—trouble with the churning. For it is in the churning that the difficulty lies, most of all, rather than in preliminary and subsequent operations. The act of churning, indeed, is the leading and central feature in the domain of a butter dairy; and if that part of the ceremony passes off well, the rest is tolerably simple and almost certainly satisfactory. In any time of the year, in fact, everything else may be taken to be in order if only the churning is a success—everything preliminary, I mean. The mechanical operation of churning is, after all, in reference to winter butter, the leading test of the whole business, in the cow-shed as well as in the dairy. If butter comes within an hour, it is usually a proof that the cream was in good condition, and that the cows were properly fed; it proves, too, that the temperature of the dairy was properly regulated, and that the cows, or some of them, have not been too long in milk.

It is hardly possible to make as good butter in Winter as in Summer; some say it is impossible to do so. But, in any case, there is one condition indispensable to the making of first-class butter in Winter, viz.: the cows must have calved pretty recently. I do not believe that the best of butter can be made from cows which are six months after parturition; and in winter time the butter from such cows will, as a rule, be only tolerable at the best. Much depends, of course, on the system employed in feeding the cows, on the kind of food they get, and on the state it is in. One of the reasons why summer butter is, as a rule, the best of the year, is found in the sweet and fresh and succulent grass on which the cows are fed; and another in the rule that the cows are not long after parturition. These two reasons, indeed, providing the cows are well-bred for the purpose, are all-important—either in cheese and butter-making: and we may lay it down as an axiom that, all things considered, there is no cheese or butter equal to that made in June.

The condition and quality of the food given to cows in Winter have a good deal to do not only with the quality but with the quantity of the butter produced. By "condition" I mean the measure of easy digestibility with which the food is endowed, its physical and mechanical state, and also the degree of succulency found in it. These considerations touch everything by reason of which silage is superior to its equivalent in hay. Dessicated forage, as compared with the succulent vegetation from which it is made, is deprived of its condition; it is no longer easily digestible, it is no longer succulent and easy to masticate. The labor involved in masticating hay first and in digesting it afterwards, as compared with the ease and facility with which grass is masticated and digested, supplies an explanation of the general superiority of summer butter, and of the greater yield of it at that period. This, however, is not the whole of the business, for isothermal considerations come in as well; and temperature is a condition we cannot afford to overlook, though to our loss we do overlook it a good deal. Given the same food, the same cattle, the same everything excepting only temperature; given also the same kind and quality of food, except that it may be dry and hard instead of succulent and soft: here we include a range of conditions, over and above the cow herself, which sufficiently account for the difference found in the quality and quantity of butter yielded in Summer and Winter respectively.

These considerations have a good deal to do with the trouble there is with churning in Winter, though they are not the whole cause of the mischief, or even the chief cause of it. It may be said, in fact, that if the cows are in good form, and are decently fed, there will be no very great deal of trouble with churning in Winter after all. But when cows calve in April and May, or earlier still, and we try to make butter from them in the following Winter, it is frequently found that the butter shows

great reluctance to come in any reasonable time, and once in awhile will not come at all. And even when it does permit itself to be separated from its matrix of cream, it is almost always of inferior quality. Butter obtained under these conditions is similar to that which comes from the second and third risings of cream on milk produced under more favorable conditions. In both cases the butter globules are inferior in size, in color, in flavor, and in quality; for the longer the time a cow is in milk, the smaller are the globules, and in the case of milk of good quality the larger globules rise first, say in 12 hours or so, the smaller ones ascending afterwards, in a more take-it-easy fashion.

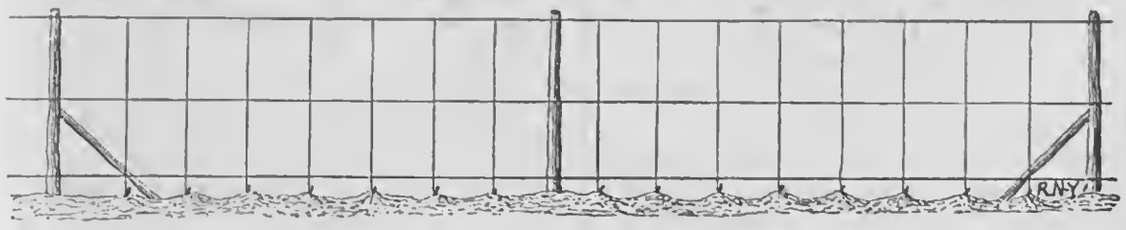
It is sufficiently obvious that these smaller globules, whether they come from inferior milk to start with, or from the later risings on better milk, will be more difficult to churn into butter than the larger globules which abound in the milk of Jersey cows, or in the milk of almost any other breed in the early months after parturition. Such cream, too, produced from dry forage in Winter, is apparently in a condition, which, in a chemical, no less than in a physical sense, is inimical to easy churning. What this chemical condition is, in reference to what is known as "sleepy cream," does not appear to be well understood, if understood at all, and it remains a problem whose solution has already occupied a good deal of hitherto fruitless inquiry. It is not owing to acidity, or an alkali would alter it, and acidity in cream, indeed, commonly causes butter to come in less time than when the cream is fresh. Be it whatever it may, however, it may be taken for granted that an improvement will be effected by giving the cows a generous supply of food that is in an easily digestible condition.

Surrey, England.

Horticultural.

RAISING LIMA BEANS WITHOUT POLES.

LIMA beans, as a general thing, grow well, if good seed is planted, and the hills are well made and good manure is put in each hill. Still some people never succeed in raising a good supply, simply because they plant their



RAISING LIMA BEANS WITHOUT POLES. Fig. 97.

beans, never have any poles of their own and cannot afford to pay from four to five cents apiece for them; consequently the vines run and spread over the ground and begin to rot, and the bean crop is ruined.

The following plan for raising beans will be useful to this class:—As shown in Fig. 97 the substitute for poles can be very easily made, costs but little, and is far better than poles in every respect, as Limas need plenty of space for branching out, as shown in Fig. 98. Fig. 97 shows posts which can be set in the ground 20 feet apart. Dig holes two feet deep, and pound the dirt firmly around the posts. Set them in line with each row. This can be done before or after planting the beans. Old wire which has been used for other purposes, is as good as any; if there is none of this kind, some can be bought at very little cost. At the ends of each row, brace the posts as shown. Fasten the wire with small wire staples, pull tight—two or three wires are sufficient. Then if the beans have commenced to run, use small cut labels which can be bought at any label manufactory, as shown at Fig. 99.

Fig. 99.

Fig. 100.

If these are not satisfactory, use small crotch sticks about five inches long, as shown at Fig. 100. These can be cut very quickly, and, costing nothing, answer just as well. Tie a string, as shown at Fig. 100, around the crotch, then to the ground in the middle of each hill of beans, then tie it to the wire. If the vines have grown long enough, tie them around the strings a few times so as to give then a fair start, and in a few days you will be astonished at seeing how soon the vines will spread out, covering the wire, as shown in Fig. 98. There will be no bother from poles breaking down, letting the beans in the dirt; nor will there be half the bother in taking up, and they will be always ready to take right in after the beans are gathered in Autumn. If preferred, you can leave the wires fastened on the posts; dig up the latter and roll the wires around them; then put them away in a dry place until Spring, when they will be as good as ever. It is not necessary to have large posts: light ones are more easily handled, if sound. This plan always gives good results, and each hill of beans will yield one-third more. Very simple!

J. S. BENNETT.

The Poultry Yard.

CHEAP HEN-HOUSE.

THE house shown at Figs. 106 and 107 is in use by Mr. Ira A. Merritt, who says the size is 10x20 feet, and it is six feet high at the eaves, sills 6x6 inches, plates 5x5; no posts; sided

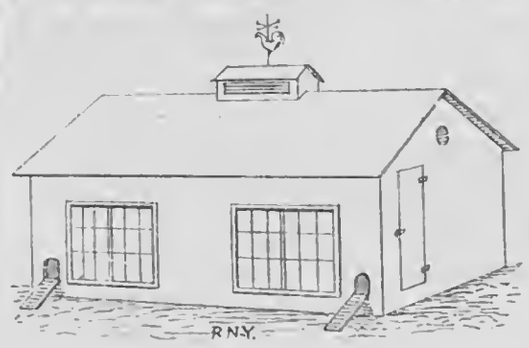


Fig. 106.

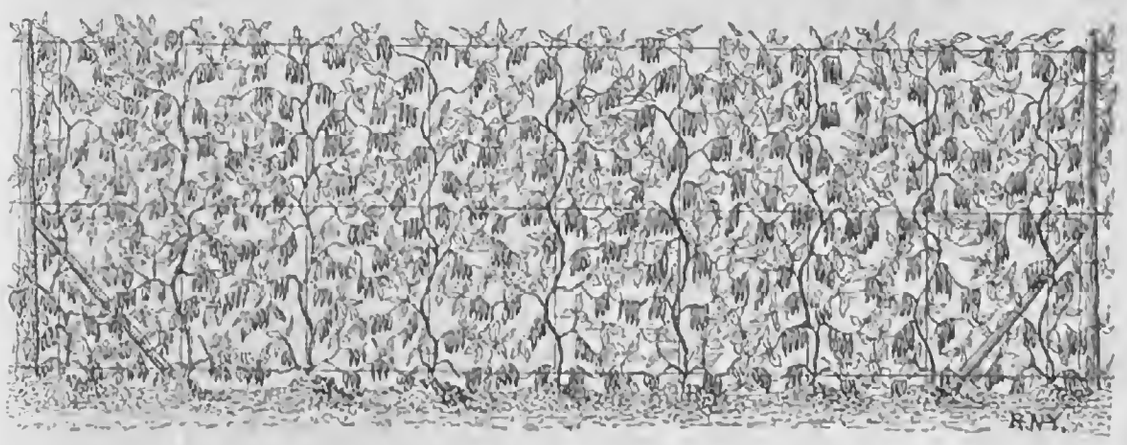
with thoroughly seasoned planed and matched hemlock. Ordinary rafters and roof boards, on which is laid a covering of tarred paper, on which the shingles are placed. Inside plan: two rooms 10x10 feet, divided by wire netting. Each room accomodates 20 hens. Wire screens, 1½-inch mesh, are put over the windows in the south side to protect the glass in Winter, and to take its place in Summer, thus, in connection with the ventilator, insuring excellent ventilation during the warm summer months, with entire safety to the fowls from stray foxes, skunks, owls or other nocturnal visitors. The ventilator is arranged with a sliding board, so as to be closed during the coldest weather. The little entrances are closed with sliding boards on the inside, which are suspended above them by hooks when they



LIMA BEANS WITHOUT POLES. Fig. 98.

are open. Along the north side and west end runs a shelf 2½ feet wide two feet above the floor, on ⅜-inch wire brackets, which are

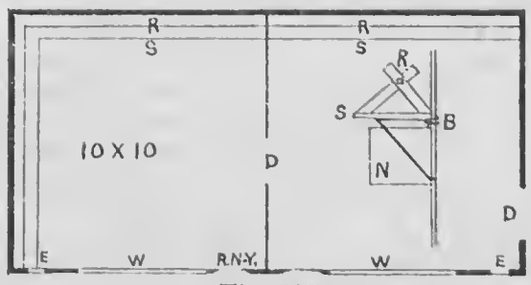


Fig. 107.

hooked into staples driven through the wall, and clinched on the outside. The roosts are round poles on wooden legs (saw-horse style), eight inches above the shelf. Under the shelf

(Continued on page 152.)

Miscellaneous Advertising.

PATENT
CORRUGATED
WIRE FABRIC,

Suitable for Fencing in many locations, and for Railings, Window Guards, Tree Guards, and other purposes.

It consists of vertical pickets or bars, made of corrugated galvanized steel rods, oval in section, secured by horizontal cables, each composed of two strands of galvanized steel wire.

As a fence it is cheap, strong, durable, and easily erected; it is as effective as a barbed fence in turning cattle, and there is no risk of injuring either the animal or the fence; it requires no longitudinal rail to support it, as it carries itself from post to post as well as a plain wire or barbed wire fence; it can be seen as plainly as a regular picket fence; it can readily be taken down, rolled up and moved from place to place.

the side is just large enough to permit the hens to pass their heads through. They cannot crawl in. The roof is high enough to allow them to hold up their heads to swallow. The floor being raised from the ground, they cannot scratch dirt into the pan.

What Others Say

THE KIEFFER AND LAWSON PEARS.—The Orchard and Garden has the following:

"The RURAL NEW-YORKER and other lesser lights which follow the lead of the former, have succeeded in making it quite fashionable to condemn the Lawson and Kieffer Pears. We cannot call this anything but prejudice in the leaders and ignorance in the followers. All the influence which the RURAL, the N. Y. Tribune and many famous horticulturists may bring to bear against these pears will not be sufficient to kill them. The general grower will not condemn a good fruit merely because it is not perfect, or because it does not succeed in every part of our country."

The R. N.-Y. has tried very hard not to be prejudiced in regard to either of the above pears. Had we been influenced by selfish motives of any kind, we should never have uttered a word against either.

BARNYARD MANURE AND FERTILIZERS.—The Mass. Ploughman reports Mr. J. J. H. Gregory as saying that he has good reasons for doubts whether fertilizers are best in all cases. We do not give enough stress to the mechanical effects of barnyard manure. It is a great thing to have land made light and warm in a cold Spring with barnyard manure. That is an advantage we get over commercial fertilizers, and it amounts to more than we generally think, but it is one which is worth studying. To get that advantage we want a manure which will stimulate the crop. We put on, say 25 cords of barnyard manure to an acre. That will be from 60 to 70 tons. Why? Because with it we can push along our cabbage crop early. That this vast application of manure has a prompt effect is largely due to the nitrates formed in it pushing forward the crop. These nitrates don't form unless there is a certain amount of heat. The higher the heat, the faster they form. In the Spring the ground is very cold. To get a small portion of nitrogen it takes a tremendous amount of barnyard manure. Stick a pin there. You can do better. You can get your nitrates better than in this way. In nitrate of soda we have the nitrates already formed. We can get them without this process of tremendous manuring, because in this nitrate of soda the nitrates are already formed. Then we save the necessity of depending on this tremendous manuring. We need but a portion of the barnyard manure, and by the use of nitrates get the same result of an early start, at only one-fourth the cost.

THE MODEL COW.—Prof. Wm. Brown, of the Ontario College, in his object teaching lecture at the Connecticut Farmers' meeting at Norwich, said he liked a flattish, oval horn better than a round one; but that he liked "no horn at all" better than either. He thinks horns are not wanted on cattle kept in domestication. They are of use only in fighting and are a nuisance. In considering the best form of cows, he said a cow's neck should not be heavy and masculine, but lady-like. The fore-quarters should be deep rather than wide. The neck should fall away from the shoulders forward—be what is called ewe-necked. The cow should have a large barrel, giving lots of room for food. A quiet eye shows a quiet disposition, and such a cow always shows a good return for the food. He prefers a thick skin with a mellow feeling beneath in preference to a thin one. Fine, thick, soft hair is to be preferred to coarse hair, and if it be inclined to curl, so much the better. The Professsor should have added a long, well-developed udder and large milk veins, and he would have fully completed the picture.

MILKALINE.—A substance known by this name is largely advertised in English papers as a substitute for milk in feeding young stock. It appears to be a chemical preparation, closely resembling the solids of milk, which is to be mixed with water. One hundred pounds, costing about $5, will, it is claimed, make 300 gallons of good calf-food. This would allow about six ounces to the gallon, and would cost less than half a cent per quart. The artificial milk used in Paris to support children, contained 87 parts of water, while this "milkaline" would contain only 80 parts. We have never had much faith in these prepared foods, yet it is evident that the common practice of killing calves in dairy herds because of the reported difficulty in raising them on skimmed milk might be improved upon. With eggs, hay tea, oat meal, beans and other foods, the skimmed milk can be fed to advantage.

MILK SECRETION.—The American Dairyman says it has generally been supposed that the cow secretes her milk during the day and has it ready for delivery at night. It has often been a surprise that a cow with a small udder should give more than one with a larger one. Prof. Ballantine says many animals have no milk reservoirs, the lactiferous duets being connected directly with the milk vescicles, so that no considerable amount of milk can be carried ready formed. Such, he says, is the case with the human female, and the larger portion of the milk must be secreted while the child is at the breast. This would appear to explain why a cow, suffering from fright, worry or overexertion, "holds up" her milk, the shock to which her system has been subjected rendering it impossible for her to give down and secrete her usual flow.

SPARKS AND THE LAND OFFICE.—Hon. E. Washburne, in his letter to the Chicago Tribune, fully indorses the action and rulings of Commissioner Sparks; of the latter he says: "They are substantially just in accordance with law." Of the past management of the General Land Office, he says:

The General Land Office, for the last fifteen or twenty years, has, according to my judgment, been the most corrupt department that ever existed in any government on the face of the earth. For years and years the land jobbers and the land grabbers seemed to have had full sway there, and it was quite time they were rooted out. And I am glad to find that an Illinois man like Mr. Sparks has had the courage to attack these stupendous abuses and to attempt to recover for the benefit of the people at large some portion of the public lands which had been obtained from the government by the railroad companies. I hope that his hands may be strengthened and that he will continue in the course which he has laid out for himself. Some say that a pressure has been made upon the President and upon the Secretary of the Interior, Mr. Lamar, and that it will be necessary for him to be removed It is impossible to believe that such can be the case; that an honest, faithful, and incorruptible public officer should be hounded out of his place by the men whose action he has exposed and who is making such laudable efforts, as I think he is, to get back for the government hundreds of millions of acres of public lands which have been literally filched from it by the land-grant railroads."

Language like the above says the Farmers' Review coming from such a source, and from one who has neither personal nor political relations with Commissioner Sparks,—for Mr. Washburn in his letter says "I have no acquaintance with Mr. Sparks and have never seen him, and politically we are as far apart as it is possible for two men to be,"—ought to go a long way in counteracting the clamor that has been raised against Commissioner Sparks's action.

REMEDY FOR LICE ON CATTLE.—Speaking of preparations for killing lice on cattle, Prof. A. J. Cook thinks a decoction of tobacco, upon the whole, gives the best satisfaction. This is easily made by turning hot water on any kind of tobacco. The cheap stems answer as well as any other kind. Were it not for the eggs, one application of this would always suffice. He has often found it unnecessary to use it more than once. The work of washing an animal is quickly and easily performed. Though he detests tobacco, he finds this use of it not very disagreeable.

HEREFORDS ON THE RANGES.—Hereford cattle appear to be great favorites in Montana. The Montana Stock Gazette says they are hardy, mature early and are long-lived. The flesh is superior, handsomely marbled, heavy in the prime parts, and they fatten to great weights. Their constitutional hardiness and resistance to cold are remarkable. Their massive strength, honesty and gentleness make them the best work oxen known, and the bulls are remarkable for their prepotency. High praise for a fine breed!.....

DISHONESTY IN NURSERYMEN.—A subscriber, Mr. R. Morrill, of Michigan, writes as follows: "We are repeatedly warned to let traveling tree peddlers alone, while the fact is the most dangerous men are supposed to be reliable, and they get the heavy orders from fruit growers; then, under cover of the substitution clause in their catalogues, they often put some worthless substitute on the buyer, or sell him something they do not know to be all right, and it often proves to be all wrong. Now such a deal I consider to be worse than robbery, as a robber would only get your money, while the dishonest nurseryman robs us of money, the use of our land and, most valuable of all, our time."....

BOILED DOWN AND SEASONED.

P. M. AUGUR thinks it harder to reform a whiskey guzzler than a serious case of the yellows.....

THE Iowa Dairy Journal, speaking of adulterations, tells the story of three flies that came upon a table bearing some sugar, some cream and some fly-poison. One attacked the sugar and at once died from the effects of the alum and nitric acid it contained. Another sampled the cream and died from contraction of the stomach caused by the lime water in the milk. The third, resolved to commit suicide, took to the plate of poison, but found it so badly adulterated that he only grew fat upon it.....

THE evils which arise from eating pork are not from the use, but the abuse of the food—so says Dr. Hoskins.....

THE Western Rural says that malaria, general debility, liver complaint, "bad blood" and dozens of other troubles can all grow out of one disease—bad kitchen. In 1880 these kitchens aided in the work of disposing of $15,000,000 worth of patent medicines.....

THE Farmers' Review says that more seed corn is being wintered in dry, warmed lofts, chambers and attics than ever before.....

STEPHEN POWERS does not like a hog, yet he believes him to be the best cultivator and fertilizer that a careless farmer can turn into the orchard. He dates the destruction of a splendid orchard from the day the hogs were excluded from it.....

PROF. CALDWELL says that succulent food increases the flow of milk, but does not necessarily increase the proportion of water in it. The flow is greatest in June, yet the milk is no poorer than at other times.....

IF you want to get the good-will of your hens, says the Prairie Farmer, feed them dry, *hot* corn at night. Heat the corn in an iron pan or kettle in the oven, and stir occasionally. No matter if it gets a little charred. It won't do any harm to give warm water either.....

THE Poultry Bulletin says: "Never use wood ashes for a dust bath. They will make the brightest plumage rusty. Put the dust box where the sun will shine on it longest.....

VICK'S Monthly gives a good colored plate of the white and pink varieties of the Ramanas Rose—Rosa rugosa.....

OUR lady friends must not forget to plant sweet peas. There are few flowers more suitable for bouquets. The odor is pleasant and they last a long time. A few will be found among the Garden Treasures of the RURAL'S Seed Distribution.....

INSTEAD of the Norway Spruce, plant the White Spruce.....

IN Michigan, the ladies help to make the Farmers' Institutes a great success. Not only do they take a prominent part in the discussions, but they provide such a bountiful supply of food that every farmer who attends is placed in the best of spirits.....

NEXT month as soon as the weather will permit, we may sow early turnips, peas, radishes, onions, beets, carrots and spinach. Potatoes may also be planted. In the hot-bed may be sown tomatoes, peppers, parsley, cabbage, carrots, celery, cauliflower, egg plants, lettuce, cucumbers and melons.....

AN Illinois breeder has been prosecuted for practicing dishorning on mature cattle. The case attracts considerable attention, and will doubtless result in giving the polled breeds an added "boom."..... .....

MORE working oxen and fewer trotting horses upon New England farms is the sensible suggestion of Dr. Loring.....

MR. J. J. H. GREGORY makes the statement that the corn plant has the power of getting its nitrogen from the air. We have therefore but to supply potash and phosphate to the soil. For three years, the experiment has been tried upon the poor-soil plots of the Rural Grounds. No matter how large the quantity of potash and phosphoric acid used, we *can not* get a good crop without nitrogen.....

AT a late meeting of New England farmers, as reported in the Massachusetts Ploughman, Mr. King said that he raised 750 bushels of onions on an acre of land by the use of 1,400 pounds of complete chemical fertilizers.....

HAVE you ever tried the Shell Flower or Molucca Balm, Moluccella lævis. The RURAL introduced it 10 years ago. It is a queer flower.....

IT is very easy to raise roses from seeds.....

A BED of pansies will give about as much pleasure as any bedding plant we know of. It is now time to sow the seeds. Any sunny window will answer.....

THE New Orleans Picayune says farmers are pouring into Western Texas so fast that ranchmen have just time to move their cattle out and prevent their tails from being cut off by the advancing hoe.....

DRY corn-cobs are excellent material to supply the smoke to cure hams for home consumption.....

THE Cultivator says that large apple dealers in Boston claim that good apples would not command over 75 cents per barrel had it not been for the export trade, unsatisfactory as the latter may have been to shippers. There always seems, however, to be a healthy demand for the choice lots of apples, whatever the year may bring forth with poorer qualities.

THE editor of the Southern Cultivator has had very fine success in raising potatoes that were heavily mulched with pine straw and leaves soon after planting, and not cultivated at all.

DR. HOSKINS says that the agricultural student, if faithful, will accumulate a vast amount of information of sterling value for use on the farm, but he cannot and does not expect to graduate a perfect master of his art. And why sneer at agricultural colleges for that?.....

HE alone succeeds who has his heart in the work. The man who simply works for money never half succeeds. He loses the best part of life. Yet the man who sees no money ahead in his business will always be looking for some other calling. It does not follow that one should work the heart at the expense of the head, however. Be just in all business, before you are generous.....

REMEMBER, says the Cultivator, that time will be precious after the plow starts again, and there will be no profit in stopping work to cut wood for the kitchen fire, or to mend up harnesses or carts.....

W. C. STEEL advises farmers to make a greater use of copper wire. It can be used to easily mend tools. A spool of it carried in the wagon will be of great assistance in case of an accident to a trace or other parts of the wagon or harness.....

NOT a week passes without news of the poisoning of a family by eating "Rough on Rats." This poison contains arsenic. Cats handle the rats far more roughly.....

A Western editor says he writes "we" because he wants to give his wife full credit for her part of the work. Sensible man!.....

THE Carp Journal reports losses from muskrats which appear to be particularly fond of carp.....

IN his "Book of the Pig," Mr. James Long says that sows which have farrowed should not, as is popularly supposed, be immediately fed on rich food given in large quantities, for few things are more calculated to do them harm.....

AS the young ones increase in size, common sense will dictate that the food should be augmented both in quantity and quality. Some kinds of food diminish the quantity of milk that the sow gives to her young, and others (especially changes) are liable to cause scours or diarrhœa in the litter; they should consequently be avoided. At the end of the first month, however well the sow may have been fed, it will be noticed that her family have considerably pulled down her condition, and that the little pigs will now require some food to themselves.....

AT the end of a month it is a good plan to commence to feed young pigs with a handful of wheat or peas, scattered among the straw in the sty, the mother also getting a little at feeding time. There are no foods as good as these, although oats are frequently and strongly recommended. If the quantity given is increased as the pigs grow, until weaning time, it will be found that they wean well, and continue growing as though they had not been deprived of their mother's milk.....

Everywhere.

RURAL SPECIAL REPORTS.

Colorado.

CAÑON CITY, Fremont Co., Feb. 9.—All around us we have heard of terrific storms and heavy snows, while here we have been almost free from both. We have abundance of coal right here, exhaustless supplies of iron and copper near at hand, and lead, silver and gold in this and adjoining counties. Our smelter here runs two furnaces day and night and keeps some thousands of tons of ore constantly on hand. The Arkansas River has an average fall of about 40 feet to the mile, affording almost unlimited water power, only a small fraction of which is as yet utilized. Much land is being brought under irrigation and fruit raising is a great success. Heavy losses of stock are reported from all directions; but as yet no reliable data can be procured as to the extent of these losses, partly on account of a lack of accurate information on the part of the stockmen, and partly because they are in no hurry for the public to know all the facts in the case. The price of butchers' stock will probably be extensively "bulled" on the strength of these losses.

L. J. T.

Dakota.

HAROLD, Hughes Co.—Crops were very good here last year, but we hope to do better this. Wheat is worth 50 to 60 cents; corn, 25 cents; oats, 25 cents; potatoes, 40 cents; eggs, 15 cents; butter, 15 cents; coal, $6 to $8. A great many farmers are using flax straw for fuel. This is done by means of a straw-burner, which is simply a sort of a box made of sheet-iron, in the shape of a wash boiler. This is filled with straw and the two front lids and cross-piece of the cook stove (very few farmers here use more than one stove as yet) being removed, it is turned over the fire-place, the lower drafts of the stove are shut up tightly, and the burner raised a little so as to admit of a draft at the top of the stove. This will make a good fire for an hour or more. It is a "big thing" for the farmers, as coal is very high, owing to the unreasonably high rates charged by the railroad companies, and flax straw is very plentiful and represents no value whatever. A certain agricultural paper, "published in the interests of the Dakota farmers," offers for the small sum of $1.00 to inform its subscribers how to make the above described straw burner. Very liberal, isn't it? It seems to me that a farm journal that would ask money of its patrons for such information, is published in the interest of its publishers rather than that of the farmers. What does the RURAL think about it? [We heartily agree with you.—EDS.] H. S. C.

Delaware.

DOVER, Kent Co.—January was rather a rough month, on the whole. Wheat looking well. Peach buds went into winter-quarters in good shape. Markets are about as follows: Wheat, 85 to 90 cents; corn, 40 cents; oats, 35 cents; potatoes, 50 cents; sweet, 50 to 60 cents; butter, 25 cents; eggs, 22 cents; turkeys, 11 cents; chickens, 9 cents; beef 8 to 10 cents. Stock wintering well; food plenty at fair prices. S. T. S.

RISING SUN, Kent Co., Feb. 15.—The thermometer ranged from zero to 12 degrees below on the 5th and 6th of this month, threatening and in many places injuring the peach crop for 1886. Many farmers in this county report the peach buds all killed every Winter, and yet we do not have an entire failure more than once in 10 years. By recent examinations, I find that the reports that all the peach buds are killed, are not correct in this immediate vicinity. Some orchards show 50 per cent. of the buds good, while others show from 10 to 50 per cent. good; but some are apparently all killed. From examinations made and consultations had with other farmers in this vicinity, I think it safe to say enough live peach buds are left to make a crop equal to that of 1885, and if the same be true of the whole Peninsula, there will be a crop of 3,000,000 baskets. Peach growing is the greatest industry of our State, and in many cases the dependence of our farmers. A good crop at good prices brings to this county alone more than half a million dollars. Many of the farms are from one-half to three-fourths under peach trees, containing from 1,000 to 30,000 trees each, thus setting all other crops in the background. C. G. B.

Florida.

MANATEE, Manatee Co.—I do not believe that orange culture in this State can ever prove a success, for the following reasons: 1, The continually reduced market will not compensate for the outlay of time, labor and money necessary to raise a grove and sustain it. 2. The trees are too subject to disease and insect depredations. 3. Heavy frosts, snow and ice set back—sometimes for several years—the larger trees, killing outright the smaller ones and destroying the fruit. J. F. B.

Indiana.

PENDLETON, Madison Co., Feb. 15.—Thirty to forty years ago this part of Indiana was unsurpassed as a fruit country. Apples, peaches and cherries were so abundant that the two former often rotted on the ground for want of a market at a remunerative price. Peaches refuse to grow here any longer. Apple orchards have died out until there is not half enough fruit raised for home consumption. Apples from Michigan and New York sell readily for $1 and upwards per bushel. Apple trees from home and distant nurseries, have been planted in great numbers every year, but insects, diseases or climate, or all combined, kill them before they bear fruit. Fortunately small fruits—grapes excepted—do well, and farmers and villagers are appreciating them more and more, and the supply will soon be ample. Last Summer strawberries and raspberries were plentiful at 10 cents a quart. S. W. H.

Michigan.

MAPLE, Ionia Co.—From 42 kernels of the Rural Union Corn I raised, the first year, two bushels of very nice grain. Last year I planted a quarter of an acre of sod; the cut-worms destroyed all the first planting except six plants. From the second planting, on June 15, I obtained 41 bushels of ears. The Blush Potato is tip-top—doesn't rot; all others rotted badly here. The Boss Melon is very early and the best market melon in this section. The Diehl-Mediterranean Wheat is very productive. I got eight pounds. From 50 seeds of the Thousand-fold Rye, sown October 26, I got 10 pounds. Garden Treasures splendid—some rare plants among them. H.

New York.

BURNHAMS, Chautauqua Co. — Stratagem Peas the finest I ever saw—pods larger than those of any other variety; all saved for seed. Flageolet Beans very nice. Tomatoes fine. An unruly cow liked the Johnson Grass so well that it didn't get a fair show. The ears on some of the 50 crosses of corn were as high as I could reach; while those on others were close to the ground. Some of the latter failed to mature, and some of it was quite early. The Garden Treasures were rightly named; they were perfectly charming—a delight to all flower lovers. A. W. W.

Pennsylvania.

MADISONVILLE, Lackawanna Co. — The Rural tomatoes were not as good as those it sent out in 1884,-or as some old sorts we had grown for several years. Beans excellent. Garden Treasures just splendid. I planted my potatoes partly on the RURAL plan, and though the weather was very dry they kept green all Summer, and I got about 200 bushels to the acre—the largest yield in the neighborhood. Crops generally light. This is a great place for small fruits. B. G. E.

SAEGERSTOWN, Crawford Co.—The RURAL seeds all did reasonably well. The corn did well, but some of it didn't ripen—most of it is too late for this section. The peas and beans did well. I shall save the former for seed; but I think we have better beans than the Flageolet. I got 10 pounds of rye from my small packet, and I have five pounds of the wheat. I value both highly, and sowed both, and they looked well when snow came. Snow abundant. Success to the RURAL! D. A. K.

Virginia.

MONTEITHVILLE, Stafford Co., February 9. The RURAL seeds did well except the corn. That did not grow uniformly, and we had only a few fine ears. The peas and beans were most excellent. Garden Treasures gave us a mound of beauties that delighted the family until frost. Last year was very unfavorable for all field crops except oats. These were uncommonly good. Wheat, corn and potatoes were very little over half an average crop. Fruits of all kinds were abundant. Prices are low except for potatoes, which are 75 cents per bushel. Wheat, 85 cents; corn, 42 cents; oats, 35 cents; beef cattle, three cents to 3½ cents; baled hay, $18 per ton. Winter has been severe—12° below zero in January, with ice eight inches thick. Snowed first of this month 36 hours without intermission, leaving snow two feet deep, with drifts five feet. Mercury fell to 5° below zero. Farmers here generally prepare for rough winter weather, but such a storm as the above has not occurred since 1857. All honor and success to the RURAL! It is beyond all praise. Every farmer that owns an acre of land ought to be a subscriber, and no family should be without it. Deducting the worth of seeds sent free, and, all things considered, I believe it to be the cheapest not to say the purest and most elevating in a moral sense, of all first-class papers in the land. We sometimes think this national journal ought to be called the RURAL AMERICAN. In nothing else could we wish for a change, or desire improvement.

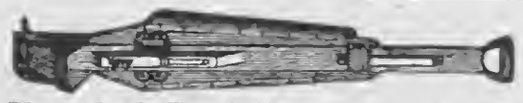
J. O. L.

Miscellaneous Advertising.

MATTHEWS' SEED DRILL.

Hand Cultivator, Wheel Hoe,
SINGLE OR COMBINED.
Admitted by leading Seedsmen and Market Gardeners everywhere to be the most perfect and reliable implements in use for planting and cultivating garden crops. *Beware of cheap Imitations!* Inquire for the genuine machines which are made only by
T. B. EVERETT & CO., Boston, Mass
Send for circulars, giving latest prices and improvements

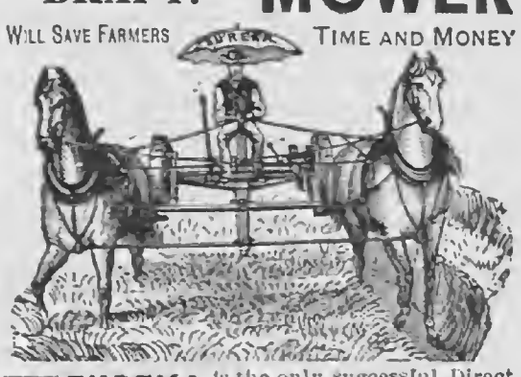
New Reversible Harrow.
A Perfect Smoothing and Scotch Harrow Combined.
Thoroughly Tested and Warranted.
Send for Illustrated Pamphlet to
THOMAS HARROW CO.,
Geneva, N. Y.



Macomber's Hand Planter, *for Corn, Beans, and Beet Seed.* The BEST in the world. Money refunded if it does not prove satisfactory, after a fair trial. Agents wanted. Send for circular and terms.
S. M. Macomber & Co., M'f'g's, Grand Isle Vt.

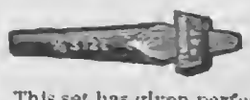
THE ROCHESTER
HAY and GRAIN ELEVATORS SLING and STACKER
BEATS THEM ALL.
Agents wanted. Send for circular. Mention this paper.
W. G. RICKER,
ROCHESTER, N. Y.

-THE-
Broad Cut Centre Draft. EUREKA MOWER
WILL SAVE FARMERS TIME AND MONEY



THE EUREKA is the only successful Direct Draft Mower manufactured. It will do at least one third more work than the side-cut machines with same power. As the cut is untrampled, hay will cure quicker and sell for more money. Don't fail to see the Eureka before buying. Send for new 1886 catalogue. Mention this paper.
EUREKA MOWER CO., Utica, N. Y.

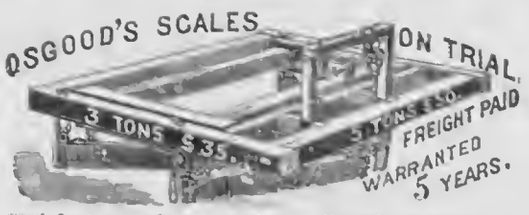
Buy the Best. **THE EUREKA**
Awarded **FIRST Premium and Gold Medal** at World's Fair New Orleans, over 12 leading Wind Mills. The **EUREKA**, after a trial lasting 4 mos. was pronounced the **best over all** and to-day stands at the **head of all competitors.** Sizes, 10 to 18 ft. diameter of wheel, either for Pumping or Power Mills. *Perfect in all parts and warranted.* Estimates on application. Also Mfrs. of the **Adams Direct Draft Barn Floor Horse Power.** *Live Agents Wanted.* Address Mfrs.,
SMITH & WOODWARD, Kalamazoo, Mich.



SAW SET
This set has given perfect satisfaction; is **durable, effective** and **cheap,** weighs less than 4 ozs., and is adapted to all varieties of cross-cut saws. Any man can perfectly set a saw in 3 mins. Also **CHAMPION GUAGE** for dressing raker teeth; warranted. Sample of each by mail on receipt of $1.00. Send for circular and prices to J. E. WHITING, MONTROSE, Pa.

Strowbridge Broadcast Sowers.

SOWS ALL GRAINS, Grass Seeds, Plaster, Salt, Ashes, Fertilizers, BETTER and FASTER than in any other way. SAVES SEED by sowing PERFECTLY EVEN. Readily attached to any wagon or cart. LASTS A LIFETIME. Sows 80 ACRES A DAY. Crop ONE-FOURTH LARGER THAN WHEN DRILLED! The only practical Broadcaster made. Not affected by wind. Fully warranted. Perfectly simple. Send at once for FREE illustrated Catalogue "S." (Mention this Paper). Address
STEPHEN FREEMAN & SONS
RACINE, WISCONSIN.



OSGOOD'S SCALES ON TRIAL
3 TONS $35. FREIGHT PAID
WARRANTED 5 YEARS.
Satisfactory references given. For Illustrated Book address **Osgood & Co.,** BINGHAMTON, N. Y.

TEN LBS LIFTS ONE TON. the BEST PRACTICAL Stump Puller made.
BENNETT'S IMPROVED STUMP PULLER
Received Centennial Medal.
Is now in use in Canada and nearly every part of the U. S.
LIFTS 20 TO 50 TONS.
Stands on runners, worked by two men. Prices, **$35** to **$70.** Circulars free. Manufactured by H. L. BENNETT, Westerville, Franklin Co., O.

THE OLD RELIABLE HALLADAY
STANDARD WIND MILL.
30 YEARS IN USE.

Guaranteed the Best Regulating, Safest in Storms, Most Powerful and Most Durable Wind Mill made. 17 Sizes, 1 to 40 Horse Power. Adopted by the U. S. Government and Leading Railroads.
Also the Celebrated
I X L FEED MILL,
Which can be run by any power and is cheap, effective and durable. Will grind any kind of small grain into feed at the rate of 6 to 25 bu. per hour, according to quality and size of mill used. Also, **I X L Corn Sheller, I X L Stalk Cutter, Horse Powers, Wood and Iron Pumps, Tanks, Noyes' Haying Tools,** etc. Send for Catalogue and Price List. Address
U. S. Wind Engine & Pump Co., Batavia, Ill.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention. Before asking a question, please see if it is not answered in our advertising columns. Ask only a few questions at one time. Put questions on a separate piece of paper.]

SWEENY IN A MARE.

M. C. G., Fredericksburg, Va.—My six-year-old mare became quite lame one night last Summer. I could discover no sign of injury. Now the top of the shoulder seems slightly flattened. She was turned out to grass for several months in Summer, and did not limp when taken off. I drove her twice to a sleigh, and now the lameness has returned. If it is sweeny, how should she be treated?

ANSWERED BY F. L. KILBORNE, B. V. S.

Stand directly in front of the animal and compare the two shoulders. If one shoulder is sweenied and the other sound, there will be a marked rolling, or bulging outward, of the point of the affected shoulder when the weight of the animal is thrown upon the lame side. For slight wasting of the muscle, as in this case, active friction over the wasted muscle with a wisp of hard twisted straw, a corn-cob, brick, or other hard substance for 15 or 20 minutes once or twice daily, may be all that is necessary. Failing in this, repeated an application of a mild blister of ammonia and oil. The most rapid method, however, of replacing the wasted muscle is by sending a current of electricity through the muscle for 15 or 20 minutes daily. Apply one electrode of an electric battery at the upper end of the wasting muscle, and the other electrode at the lower end. During any form of treatment, moderate daily exercise on level ground is very important as tending to stimulate the growth of the muscle. If the affected shoulder does not roll outward, the cause of the lameness must be looked for in the lower part of the limb and be treated accordingly. A slight wasting of the muscles of the shoulder is sometimes due to such lameness, and does not always indicate sweeny.

FEED FOR MILCH COWS.

E. G. B., Penn's Grove, N. J.—I am feeding my cows 20 pounds of dry, cut corn-stalks and six quarts of "cob meal" each per day. They are in fairly good stables and kept up most of the time, except on pleasant days, and yet they are falling off rapidly in milk; what is the cause?

ANS.—There are two reasons: the cows are insufficiently fed and the food contains too little nitrogenous food. If the cows are 1,000 or more pounds in weight they should have not less than 30 pounds of good clover hay per day, even when not giving milk, and if giving milk, an additional quantity. Of the 20 pounds of ordinary stalks not 10 pounds are really valuable food, and of the six quarts of meal at least one-half is cob. In both these foods the albuminoids do not constitute more than one part to every eight or more parts of carbohydrates; while the lowest profitable proportion should be one to four, and it would be better still if the proportion was much higher. The cows should have, in addition to the ration already given, at least four quarts of wheat bran and one-and-one-half quart of oil meal. The whole grain ration should be well mixed and the ration intended for the night feed be mixed with boiling water in the morning, and the same should be done at night for the next morning's feed. It would be much better if the cows had a liberal allowance of roots or silage each day. Also make the barns a little warmer and keep the cows there all the time, except when out to drink.

WORMS IN PIGS.

M. B., Anna, Ill.—What is a good remedy for worms in pigs?

ANS.—Pigs are greatly troubled by several sorts of worms. The round worm is usually the size of a small goose-quill, six or seven inches long, of a brownish color and somewhat corrugated. Probably the most effectual remedy is santonin—the active principle of a plant called worm-seed. It is in small white crystals and may be given in doses of one-third of a teaspoonful mornings and nights for three or four days, following with a brisk carthartic, such as calomel, in teaspoonful doses. Two other worms, one a white, slender pest, as large as a knitting needle and three inches long; and the other a little white wretch, three-quarters of an inch long, and shaped like a tad-pole, dwell in the lower bowels and larger intestines, and are sometimes seen coming from the anus. These may often be removed by giving, each morning for a week, one-and-one-half tablespoonful of Barbadoes aloes with a teaspoonful of copperas. If this fails after having been taken for four or five days, give an injection: tincture of assafœtida, one teaspoonful; salt, one teaspoonful; water, half a pint; mix together, warm slightly, and inject. A remedy much easier and generally effective is to mix wood ashes with soap-suds and feed once a week with slops.

DIARRHEA IN HENS.

N. H., Peterboro, N. H.—Can you give me a remedy for diarrhea in hens?

ANS.—We do not know the cause of the disease. It may be a symptom of cholera. In this case the dischage will be thin and frothy—greenish or like sulphur and water. Treatment for cholera is generally unsatisfactory. Remove the sick fowls from the others in any event. Ordinary diarrhea is not uncommon among fowls. It is not a dangerous disease in a mild form, but the danger lies in permitting it to become chronic, which will be the result if left to itself. The disease is caused generally by indigestion, resulting from unwholesome food, lack of gravel, or inability to exercise properly. All who have examined the digestive organs of a fowl know how necessary gravel is to the proper digestion of the food. Hens should always be allowed access to coarse sand or gravel. The diet should be changed. Cooked rice or stale bread with milk and seasoned with pepper is good, with plenty of burnt bone. Where hens can be "dosed" a pill as large as a pea made of equal parts of powdered chalk, rhubarb and cayenne pepper, with a little camphor, may be given daily. The "Douglass Mixture" is highly recommended by many. This is made by disolving one pound of copperas in two gallons of soft water, to which one ounce of oil of vitriol is added; this is placed in a jug and kept corked. The dose is one teaspoonful in a pint of drinking water. This medicine will be found valuable in many of the diseases to which chickens are liable.

COTTON-SEED FERTILIZER FOR POTATOES.

J. M., Selma, Ala.—1. Which is the better for growing Irish potatoes, on sandy land with a red clay subsoil, ashes from cotton-seed hulls, or cotton-seed meal, each costing $20 per ton at the mill? 2. How should I use them and hen manure to produce the best results? 3. Would you prefer all of each or a mixture of both with the ashes?

ANS.—1. Ashes from cotton-seed hulls, when pure, contain about 30 per cent. of potash and about seven per cent. of phosphoric acid, mostly in an available form, and valuing the potash at six cents per pound (it being mostly carbonate), and the phosphoric acid at about nine cents, it would be worth $48.30. Cotton-seed meal contains only 2.47 per cent. of phosphoric acid and 1.51 per cent. of potash; but it contains 7.25 per cent. of nitrogen, which, valuing the nitrogen at 17 cents and the phosphoric acid and potash as before, makes it worth $30.89 per ton, so it is easy to see which is the best to buy. 2. A mixture of cotton-seed-hull ashes with hen manure would be a capital potato fertilizer, although it would contain a surplus of potash. 3. We should prefer the ashes mixed with hen manure and soluble phosphate or very fine bone dust, although the cotton-seed meal is a good manure at the price; but it is too rich in nitrogen and too poor in potash and phosphoric acid for a potato manure.

ROUP IN POULTRY.

P. H., Helena, Dak.—One eye of a hen was afflicted with a red swelling; she died shortly afterwards. A small red lump is now growing between the eye and the bill of a turkey hen; is it the same trouble; and what is it?

ANS.—Roup in both cases. There are different forms of the disease, or rather different symptoms; but whatever the indications, the malady is caused by exposure to cold or damp weather. The swelling may be relieved by bathing the head in a solution made by dissolving a teaspoonful of boracic acid in half a glass of water. Bathe the head and eyes once a day, using a soft sponge, and making the solution warm. Keep the birds in a dry, warm place. Feed on nourishing food. A teaspoonful of the solution poured down the throat will be beneficial, as it will do no harm, and will destroy the disease which is really in the system. After bathing with the mixture, anoint with a few drops of glycerine.

SUBDUING PRAIRIE GRASS.

R. C., State Line, Ind.—I have about 10 acres of drained slough, completely covered with prairie grass. The sod is so tough that it is next to impossible to break the ground. Is there any crop that I can sow on the ground that will, in a year or two, kill the prairie grass?

ANS.—It must be a tough prairie sod a sharp steel sward plow will not turn. To subdue without breaking the sward, all that is necessary is to fence off the 10 acres so they can be pastured. Sow, during the Winter or early in the Spring, about twice the amount of Timothy, Blue Grass or clover used on plowed land, to let the cattle tramp the seed in. The tame grasses will not make much show the first season; but they will get a good catch the second, and have routed the wild grasses out the third. The waste from hay where stock is fed in considerable numbers, may be scattered on the prairie grass to assist in subduing it.

GRAFTING WAX, ETC.

O. S. C., Greenlawn, L. I., N. Y.—1. How shall I make a good grafting wax? 2. When should cherry cions be cut, and when set?

ANS.—1. Melt four pounds of resin, two pounds of tallow, and one pound of beeswax in an iron kettle, and when thoroughly melted stir it well and pour it into a tub of cold water, and as soon as it is cold enough to handle, pull and work until it becomes quite light-colored, like candy. It can be made harder or softer by using more or less tallow. 2. They should be cut any time between now and Spring, when not frozen. They should be set on the first warm day and before the buds start in the least.

"Inquirer," Fredonia, Wis.—I wish to make a fruit garden on new land, some heavy clay and some inclined to be sandy. A part received a heavy coat of stable manure last Summer and was thoroughly harrowed several times. It is on a river bank and I think of underdraining most of it. I am thinking of planting a part to raspberries and a part to strawberries next Spring. Should I wait another year, cultivating the ground to other crops, and under-draining it where necessary, and manuring it?

ANS.—Waiting until another year, as you represent it, would be the better way, we are confident.

RASPBERRIES AND BLACKBERRIES FOR N. S.

R. W. T., Halifax, N. S.—1. What are the best raspberry and blackberry for market in this section? 2. Will rasperries keep better if picked with the hulls on?

ANS.—1. The Winters of Nova Scotia are reported not to be so severe as to prohibit the cultivation of such varieties as the Cuthbert and Turner Raspberries, or any of the black-caps, of which Doolittle is as good as any. The Snyder and, perhaps, the Wilson Blackberries would probably prove successful. 2. It is not practicable to pick and market raspberries with the hulls attached.

TOP-DRESSING FOR MEADOW.

G. W. D., New Haven, Ct.—What is the best commercial fertilizer for top-dressing an upland meadow that has been seeded to Timothy two or three years? My land is rather heavy loam, with hard-pan two or more feet below the surface, and ashes appear to do no good while bone manure produces good results, but I have to draw it 10 miles.

ANS.—We should use boue flour, 400 pounds; wood ashes, 10 bushels, or in place of these, 200 pounds of muriate of potash, and 200 pounds of tankage or fish scrap per acre, scattered broadcast, and the surface well harrowed. All this early in Spring.

Miscellaneous.

H. N. C., Columbia, Dak.—1. Where can I get the best seed corn of the dent variety, suitable for Central Dakota? 2. Where can I procure seeds of the Angel of Midnight Corn? 3. Where can I get Manshury Barley true to name? 4. Is the wheat you are experimenting with, all winter varieties?

ANS—1. Write to Northrup & Braslin, Minneapolis, Minn., for the corn. 2. Of Joseph Breck & Sons, Boston, Mass. 3. Probably of any large seed dealer near you. If not, write to H. M. Jaques, Wright's Corners, N. Y. 4. Yes,—without an exception.

J. H. V., New York City.—What kind of commercial fertilizer would be best on a sandy kitchen and flower garden?

ANS.—Purchase the "complete manures for light soils" offered by fertilizer firms. Bone alone is, however, all that is needed on many such soils. Try, bone, potash, etc., on different plots.

E. E. F., Hampden, Me.—Where can I obtain the pure strain of the Rural New-Yorker Pens?

ANS.—Of the leading seedsmen, we think, or certainly of A. B. Cleveland, Cape Vincent, N. Y.

H. S. B., Catskill, N. Y.—We have repeatedly stated that all works printed by the Government can be obtained by application to the Representative in Congress for the applicant's District, or one of the Senators for his State. Prof. Riley's reports are printed by the Government.

T. W., Matta, Ohio.—A good paint for shingles is made by thinning Portland cement with skimmed milk (not soured) to the consistency of whitewash. It is also a good application to all out-buildings and fences. Objects coated with it have stood exposure to all sorts of weather for 20 years.

J. H. P., Gallatia, Ill.—Manshury is a Winter barley. It ought to be suitable to Southern Illinois and Missouri. A small work on tobacco culture and marketing is made up of 14 essays by practical growers. Price 25 cents; to be had through the American News Co., this city.

L. W., Malta, Ohio.—It is our impression that the flowers of the pyrethrum should be cut while in full bloom, then dried and powdered. The foliage is of no use as an insecticide.

J. H. G., Little Horse Creek, Wy. Ter.—A good work on the management of cattle is Allen's American Cattle, $2.50; to be had through the American News Company, this city.

E. H.—"Hooks" of several years standing can be cured by the treatment given in a late RURAL, if they can be cured at all.

F. S. W., (no address).—Yes; asparagus roots from a five-year-old bed will do for setting out a new bed.

E. B., Union, N. Y.—Yes; tobacco stems are good to plow under for strawberries, if given time to rot. Use as much as you can plow under.

J. R., Fayette Co., Pa., asks what kind of apples, sweet or sour, should be raised for hogs?

DISCUSSION.

C. H., CANESTOGA, PA.—In the RURAL of Feb. 13, it is stated that Prof. Burrill says that fruit is not in the least affected by pollen from another variety; and to this the RURAL appears to assent. A few years ago I had a top graft of the Reine Horteuse Cherry on a Mahaleb stem. After a few years' growth it was neglected, and the sprouts from the Mahaleb grew through the top of the Reine Hortense, and both fruited—result, the Hortense was about two-thirds of the usual size, and the fruit was nearly as bitter as the Mahaleb.

J. S. H., SACO, ME.—In a late RURAL, it was said that petroleum would preserve shingles. Here is an illustration of what another oil will do. A neighbor about 20 years ago shingled his house with No. 1 cedar shingles, which he had boiled in a kettle of hot linseed oil—he used about six gallons per thousand. They are in good condition now, and seem good for 10 to 20 years to come. During the same time my father's residence, about 50 feet away, has been shingled three times with the best cedar shingles.

D. F. G., OSCEOLA CO., Mich.—In answer to an inquiry in the F. C. of a late RURAL, it was said that from 2½ to 4 bushels of peas should be sown per acre. Well, I should like to see the crop from that quantity of seed growing and harvested. This is one of the best sections for raising peas I have ever seen, the crops running from 30 to 60 bushels per acre, and we sow, broadcast, from 1¼ to 1½ bushel per acre, and no more. If we sow more we get too many vines and a small crop of peas.

S. J., SOUTH BEND, Ind.—An inquirer asked about the Surprise Apple, in a late F. C. We have here an apple known by that name. It is medium-sized, colored outside like the Maiden's Blush, while the flesh is a dark-rose or purple to the core—not streaked with red, but a solid color like a beet.

J. J. C., MARIETTA, Ga.—In a late RURAL C. A. Green is discouraged about killing Canada Thistles. The right way to kill the pests is to plow early and deep, harrow, roll, and gang-plow so often that they cannot show their heads above ground from May until frost. Quack and Bermuda Grass can be got rid of in the same way. I speak from experience in Western New York as well as in this State.

R. N.-Y.—Canada Thistles are easy to kill. We never fail to "fix" them the first time we try, by plowing once, and afterwards thorough culture through the season.

Scrofula

Probably no form of disease is so generally distributed among our whole population as scrofula. Almost every individual has this latent poison coursing his veins. The terrible sufferings endured by those afflicted with scrofulous sores cannot be understood by others, and their gratitude on finding a remedy that cures them, astonishes a well person. The wonderful power of

Hood's Sarsaparilla

in eradicating every form of Scrofula has been so clearly and fully demonstrated that it leaves no doubt that it is the greatest medical discovery of this generation. It is made by C. I. HOOD & CO., Lowell, Mass., and is sold by all druggists.

100 Doses One Dollar

THE SCIENCE OF LIFE. ONLY $1.

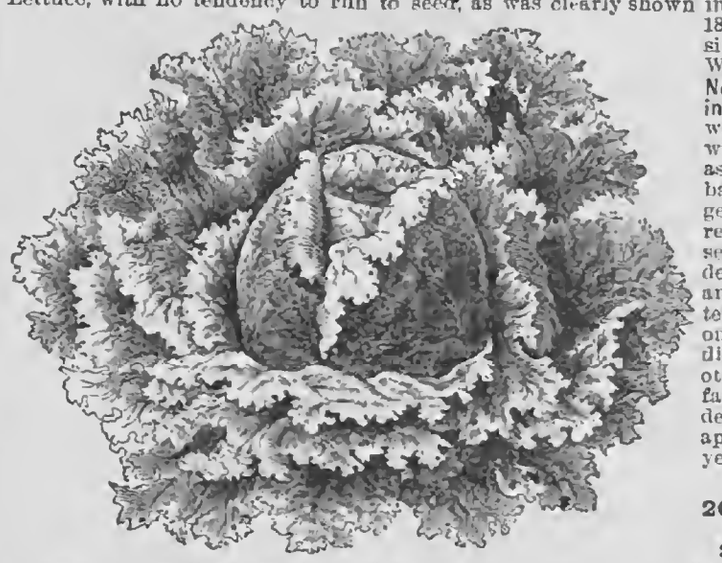
The Top-Over Corn.

We introduced this Great Novelty last season. The demand was so large we were soon obliged to refuse orders and return the money. Our stocks are now heavy and we propose to make this a grand benefit (note price). Therefore order early and secure enough for seed. We again offer the originator's crop grown exclusively for us and can be obtained only from us for the season of 1886. Prices: Sample Ears, postage prepaid, 12c. Sample packets, postage prepaid, 10c. One quart (add 25c for postage if by mail), 20c. By express: Four quarts, 50c. One peck, 75c. One bushel, $2.50. Five bushels, $2.25 per bushel. Ten bushels, $2 per bushel. Seed catalogue now ready. Sent free to any address. B. L. BRAGG & CO., Springfield, Mass.

"Henderson's New York" Lettuce.

In **Henderson's New York Lettuce** we have a variety that we believe a single season's trial will place in the same high rank that the Salamander and Black Seeded Simpson occupy, varieties both of which were introduced by us. **Henderson's New York** is a remarkable summer Lettuce, with no tendency to run to seed, as was clearly shown in our trial grounds during 1885. It is also unusual for size and solidity of head. We have seen plants of the New York Lettuce eighteen inches in diameter, which weighed nearly four pounds, with heads almost as solid as an Early Summer Cabbage, which, by the way, in general form it somewhat resembles. It blanches itself naturally, is crisp, tender, and of excellent flavor, and entirely free from bitterness. The color on the outside we consider to be distinct in shade from any other lettuce that we are familiar with, and may be described as a clear deep apple green, on the inside yellowish white.



By Mail for
20 cents per packet;
75 cents per ounce;
$2.50 per ¼ pound.

Our Catalogue for 1886, of 140 pages, containing colored plates, descriptions and illustrations of the NEWEST, BEST and RAREST **SEEDS** and **PLANTS**, will be mailed on receipt of 6 cents (in stamps) to cover postage.

MARVELOUS MUSKMELON;
THE BANANA CITRON

Certainly the largest and finest variety in the world, *Flesh crisp, sugary,* and **remarkably solid and luscious, far surpassing all others.** *The most profitable variety grown;* from its **novel shape attracting wide-spread attention,** and bringing high prices in market. **Sold last year for $1.00 each,** when other varieties *brought less than 25 cents a basket.* The outer color is a **rich, creamy yellow,** *rind remarkably thin,* and the flesh is **very thick,** and of a **bright salmon color.** Grows from **22 to 32 inches** in length, and weighs from **10 to 14 pounds. GENUINE SURE HEAD CABBAGE,** *the best market variety.* **Always sure to head.** One raised from this seed last year **weighed 64¾ pounds. MAMMOTH IRONCLAD WATERMELON,** *103 pounds last season.* Grows uniformly to a **larger size than any known variety.** Will keep perfectly for one month after picked. **Flesh luscious and remarkably solid.** *Thin* and very *strong* rind **ECLIPSE BEET,** a splendid new variety. **Early as the Egyptian,** and **superior** in quality to the **finest** globe varieties. **MAULE'S PERFECTION MUSK MELON,** *grand flavor;* flesh **so thick that there is scarcely room for the seeds;** the *greatest novelty.* **WONDERFUL Improved DUTCH RUNNER BEAN,** the *richest, sweetest,* and by far the *most productive pole bean in the world. Very early,* **bearing enormous, fat beans,** almost as heavy as Limas. When green the pods are *tender and sweet,* and can be eaten like a string variety. **IMPROVED HANSON LETTUCE,** *best in the world.* **Beautiful green,** with inner leaves white. Large head weighs three pounds. **Rich, nutty flavor.** The **CURIOUS TENNESSEE SWEET POTATO PUMPKIN, of delicious taste,** *pear-shaped, fine grained and hardy.* When cooked resembles sweet potatoes. *Flesh a thick, creamy white, and remarkably fine grained.* **EARLIEST ADVANCE TOMATO, 8 to 15 days earlier** than any *known variety. Beautiful in form and wonderful in productiveness.* Splendid shipper and exempt from rot. *Ripens all over at once, and never cracks.* Wonderfully smooth, extra early. **MILAN TURNIP,** *ten days earlier than any known variety.* **Beautiful bright purple top.** *Choicest quality,* pure white flesh, hard, solid, and fine grained. **IMPROVED GOLDEN CROOK-NECKED SQUASH,** finest Summer squash ever planted; our seed is wonderfully popular. **MONSTROUS ITALIAN ONION.**—Attracted by the **beautiful onions of enormous size and delicious flavor,** which were sold by Italians on the streets of our city, we have imported and carefully tested a strain of the seed. We last year grew onions weighing **3 to 4½ pounds,** with *snowy-white, tender flesh* of a delicate, mild, and rich flavor. Can be eaten raw like apples, and are as far ahead of our ordinary onions as the modern annual is of the "Love Apple" of our fathers.

OUR REMARKABLE OFFER To improve the gardens and make interesting the toil of every one having even a small plot of ground, we propose to place the above **12 packets of seeds** in a collection, and offer it in a manner and at a price which should induce every one to send for it. **THE OFFER:**—For **$1.00** we will send these **12 packets** of new seeds and our **monthly paper, The Farm and Garden,** the best garden, floral, and farm paper in **America, for 1 year, free by mail.** Every subscriber to our paper in time will get us more, and thus though twice the value is here given in seeds alone, we eventually make a profit. **REMITTANCES**—You may send **$1** in stamps or money registered, Bank Draft or Express Order, Money Order, Postal Note, at **our risk. Order NOW,** and receive seeds and paper by return mail. Address **CHILD BROS. & CO.,**
Publishers, 705 Filbert Street, Philadelphia, Penna.

OUR BERRY BASKETS AND CLIMAX

berry crate are the best made. Indorsed by all leading berry growers. Illus'ted Catalogue free.

DAYTON, O.

THE
RURAL NEW-YORKER.
A National Journal for Country and Suburban Homes.

Conducted by
E. S. CARMAN, Editor.
J. S. WOODWARD, Associate.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, New York.

SATURDAY, MARCH 6, 1886.

Subscribers of the RURAL *need never take the trouble to write us to "stop" the paper. It is invariably discontinued at the expiration of the subscription term, except by oversight, in which case it is our loss.*

SIR JOHN B. LAWES favors us with an article regarding the Composition of the Ash of the Potato, which we reserve for our next Potato Special, soon to appear.

IF the number on your address label is 1884, your subscription expires with this number; if 1885, next week; 1886, in two weeks, etc.

ROBERT DOUGLAS, the veteran nurseryman of Waukegan, Ills., writes, in answer to our question: "We cannot succeed with the American Chestnut here, for which reason we have never tried the Japan."

IN the course of a few weeks, we shall complete our account of the RURAL'S hybrid wheat and rye varieties, with illustrations. The concluding article will speak only of those plants which most resemble rye.

SIR J. B. LAWES says that the difference in the forms in which potash, phosphoric acid and nitrogen are met with, greatly affects their value. The present method of analyzing manures does not properly recognize these distinctions, and the valuations founded upon these analyses are altogether false and erroneous. Thus, it would appear, our farmers are placing quite too much confidence in the reports of the chemists of our agricultural experiment stations.

A FRIEND in Pennsylvania (post-mark and name illegible) advises us to be careful about commending the Japan Chestnut too highly. He has a number of trees seven years old, that have not yet fruited. The tallest is seven feet high and six inches in circumference—"a pretty little tree" he says. With him the trees are apt to grow too late in the Fall, so that the wood does not mature. We are anxious to give both sides as to the Japan Chestnut. In the above case, is our friend quite positive that his trees are not the Spanish Chestnut?

A COTTON-PICKING machine was tried at the Cotton Exchange last Tuesday, and gave great satisfaction. The annual cost of picking cotton is put at $40,000,000, or one-sixth of the value of the crop. Should the machine prove successful in field operations, it is thought that at least half this sum will be saved; and the more perfect it may be made, the greater will be the saving. It is now nearly three years since we first announced this invention; improvements have since been made in it; but it does not appear that it has ever been practically used in field work. It has taken years, however, to perfect some of our most valuable inventions.

AT Burlington, Vt., a company was organized and a factory built last Summer for the extraction of milk sugar from whey. Contracts have been made with farmers of the neighborhood to send their milk to cheese factories to supply the company with whey for five years. Prof. Sabin, of the State University of Vermont, is reported to be making contracts with Western farmers for larger supplies of whey than can be supplied by small New England factories. This is a more profitable use for whey than feeding it to hogs, and we rejoice at every discovery by which the value of any product of the farm is increased.

FIVE different breeds of poultry are illustrated on our first page. Which would you select? All have good points and would give satisfaction if carefully handled. Wyandottes and Plymouth Rocks unquestionably enjoy the benefit of the "boom" just now; but all the breeds have staunch defenders. It is safe enough to say that any of the groups shown in the picture, placed in the farm-yard and given a fair chance, would, in two years, completely change the color and character of any flock. All the farmer would be called upon to do would be to provide warm quarters, give plenty of feed, and industriously make "fried chicken" of all mongrel roosters. Is there any American farmer who cannot do that?

SPECIAL.

THOSE who, having applied for the RURAL'S present seed distribution prior to February 20th, have not yet received it (Canada subscribers excepted), will kindly notify us by postal.

STORRS, HARRISON & Co., of Painesville, O., write us that the Japan and Spanish Chestnut trees are so unlike, both in leaf and wood, that they can readily be distinguished by either. They use the American Chestnut to graft on. Why is the American preferred to the Japan for stocks? Mr. Harrison writes us that the shoots of the Spanish trees are thick and stubbed and the buds and leaves partake of the same characteristics. The shoots of the Japan are invariably smaller, and the leaves, though long, are not as broad or thick. Mr. H. has never, in an experience of 20 years, met with a Spanish Chestnut as sweet as the Japan, the skin under the shell being bitter and astringent. When the skin is removed, the meat is not sweet. While there is a trace of bitterness in the Japan eaten with the skin on, when the skin is removed the meat is nearly as sweet as that of the American and, Mr. Harrison concludes, "we believe with you that the Japan Chestnut is a grand, good thing." The upshot of this is that our friends, in ordering trees, must be careful to obtain the Japan. The Spanish, besides the inferiority of its nuts in quality, is not hardy in this climate.

OF how much value are the reports of analyses of chemical fertilizers made by Stations? It is a growing question and one which should be understood by farmers. The analyses determine the *strength* of a fertilizer—that is well known. But they do not determine the *value* of the strength. According to the present method, as we understand it, the Station analysis always tells us what it *may be* worth, but the actual value depends upon whether the ingredients used to make the the fertilizer are derived from one set of materials or another. To put it in a plain way: Here are two samples which analyze just alike and are so valued by the chemist. Nevertheless, the one may be worth, agriculturally, twice as much as the other. This being so, here is what we cannot understand: Why don't the fertilizers of fraudulent manufacturers analyze to show a far higher value than they do? Why don't they avail themselves of this tempting margin to counterfeit the first-class article more nearly? Ah, please, explain this.

THERE are greenhouses near New York, covering less than half an acre, that pay their owners far more profit than many a large farm. Single roses frequently sell for more than a farmer can get for a bushel of wheat. The florist works as hard at his business as the farmer does at his, but it is study and close observation instead of hard physical labor that enable him to make one square rod of land do the work of an acre under ordinary cultivation. It has been proved, time and again, of every business under the sun, that one man can do but a certain amount of work. The more he condenses and pushes that work, the greater the result will be. The more he scatters and spreads his work, the less will he accomplish. There are two ways of looking at the fact that a rose in New York brings as much as a bushel of wheat in Kansas. We may envy our more fortunate brother his location and knowledge, and write another chapter on our own "hard luck," or we may look about and see whether there is not a chance for us to condense our work. Are we not trying to farm too much land, to feed too much stock and make ourselves so busy that we have no time for the family? Think of this before you buy more land. An American farmer can be far more independent on a 40-acre farm than dozens of the little kings and princes of Europe.

NO DELAY!

LET it be remembered that the bill introduced into Congress by Senator James F. Wilson, of Iowa, doubles the present rate of postage on seeds, plants and all other fourth-class matter. The present rate is 16 cents per pound; the rate was eight cents a pound before 1872. In Canada, it is now only four cents a pound, and the United States' charges are only at that rate on all seeds, etc., mailed in Canada; so that the Government, even now, charges its own citizens four times as much for its postal facilities on this class of goods as it charges outsiders. In England, the rate is six cents per pound on packages not exceeding one pound, and lower rates on heavier packages. In other countries also, the charges are less than they are here. Cheap postage on this class of goods is everywhere else regarded as a public benefit. It is looked upon in the same light in this country by the people at large who have to pay for it. It is not a godsend to the express companies, however, and the attempt to increase the charges is made exclusively for the benefit of these extortioners, to enable them to increase the profits on their watered stock by fleecing the public. It is a petty business for a Senator of the United States, an aspirant for the Presidency, to become the mouthpiece, the willing tool of these corporations, to the injury of the public at large. We earnestly urge all our readers to write at once to the Senators from their respective States and the Representatives from their respective districts vigorously protesting against the proposed change, and urging that if any change is to be made, it should be to eight cents a pound, the rate in force here before 1872, or, better, to four cents a pound, the rate now in force in the Dominion. The farmers of the country have no lobby in Washington to look after their interests; the greater the need that they should frequently impress their wishes through the mail on their representatives in Congress. Don't delay; do so AT ONCE.

DRESSED-MEAT TRADE AND THE RAILROADS.

THE great Western railroad pool has decided that the consumers of the East must pay more for their meat, and the producers of the West get less for their cattle, and that the railroad companies and their friends must get all the profits from the oppression of both parties. Last year the dressed meat of over 1,000,000 cattle, shipped from Chicago in refrigerator cars, was consumed in the East. Since the commencement of the dressed beef trade on a large scale in 1873, there has been constant conflict between the shippers of dressed beef and those of live cattle, and the railroads have invariably favored the latter by discriminating against the former in freight rates. Instead of making equal charges for equal service rendered to both parties, they have constantly overcharged the dressed meat shippers, and their latest schedule, which is to go into force on March 1, virtually prohibits the shipments of dressed beef, according to those engaged in the business. Since 1878 the rates for dressed beef have been 50, then 60, then 75 per cent. more than for live stock, and the rate soon to be enforced will be 85 2-3 per cent. more. The expressed object of the companies in making this discrimination, is "to place the dressed beef and live stock shippers on an equal footing, so that a man who buys in the Eastern market dressed beef that is shipped from Chicago as such, and dressed beef that is derived from live stock which is shipped from the West and slaughtered in New York, will have to pay the same money per pound." Who gave the railroads the right of determining the price of meat in the East or of cattle the West? What right have they except to make equal charges for equal service? The truth of the matter is that the directors and their friends own or are heavily interested in stock-yards along the various routes and in slaughter-houses at the ends of the roads, as well as in stock cars, and while live cattle contribute heavily to the profits from all these, dressed meat whirls by them without paying a cent of toll. In the interests of the stockholders, and especially of the directors and their friends, the railroads are enforcing the odious claim of a right to charge "all the traffic will bear." The right to discriminate in this way will probably be contested in the Courts, and the claim to it will certainly strengthen the conviction in favor of the regulation of railroad traffic by the General Government.

BREVITIES.

WHAT is the best and cheapest flooring for stables?

MONEY sent in letters for subscriptions to the RURAL NEW-YORKER is at the sender's rist. Our terms are invariably $2.00 a year in advance.

Happy is the farmer who was able to plow last Fall and who has distributed the manure directly from the stable. The spring work will be shortened and eased.

A BUSHEL of corn and a bushel of wheat bring, in this market, $1.50. It is a very poor farmer who cannot turn this grain into eggs and make it bring five times as much.

THE brooder which was shown on page 55 is not public property. It is patented by Mr. Pressey, of Hammonton, N. J. This fact was omitted in the description which appeared at the time the cuts were printed.

CATALOGUE notices are continued this week on pages 157 and 158. The farmer's rest is drawing to a close, and we hope all our readers will prepare themselves in every available way to secure the best seeds at the most reasonable prices.

THE violent alternations of freezing and thawing have hereabouts injured the wheat and rye materially. The soil is water-soaked and bare. The season will prove a severe test as to the hardiness of the wheat and rye hybrids and the cross-bred wheats of the Rural Experiment Grounds, as the plants are nearly a foot apart, thus receiving little protection from each other.

THE construction of the Hennepin Canal will greatly cheapen the rates of transportation from the whole Northwest to the seaboard, by establishing a water-route competition with the great trunk railroads from the Mississippi to the Atlantic. Good authorities say the rates will be lowered one-half. We advocate lower rates of transportation everywhere, and to this end we rejoice at all competition with or between railroads. The Hennepin Canal should straightway be constructed.

SUCH words as these, from our long-time friend Edwin Nye, of Outagamie County, Wis., are at once cheering and stimulating:—

"I have been a subscriber to the RURAL NEW-YORKER for 30 years. I have lived on the same farm for all that time; and I believe that my farm and home, and its surroundings, show the results of the instruction which I have received from the RURAL. Its influence for good upon my seven children, born and raised upon the farm, is counted not among the least of its benefits."

COOMASSIE, Eurotas, Jersey Belle of Scituate, Bomba, Mary Anne of St. Lambert, Value 2d, Ida of St. Lambert, Jersey Queen, and other famous Jersey butter-makers are eclipsed by an Atlanta Jersey cow of pure Dauncey blood, a descendant of Rioter of Stoke Pogis, which has given 8,724 pounds of milk in six months, and last year made 900 pounds of butter! What were the names of the men who won glory by owning those other famous creatures? Hopkins is the man who shines in the effulgence radiating from the Georgia wonder. Some men are born great; others achieve greatness; others have greatness thrust upon them; while others buy it when it is young!

A FRIEND, A. C. Sabin, writes thus encouragingly from Mills County, Ia.:

"I want to say right here that your Potato Special is worth more to me than the year's subscription. I consider it one of the most valuable numbers I have received. I will do my best to help the RURAL, for I feel that in doing so I am doing my friends the best service I can do them. Times are very dull, and it is not an easy thing to persuade a person to pay $2 for a weekly paper, no matter how good it is. A great many prefer to pay 50 cents for a paper that has no individuality about it, and consists of clippings with no credit given, instead of original articles from parties of known reputation. Success to you in your efforts!"

WHY butter "does not come" under certain conditions, is a puzzle that has defied not only practical dairymen and "maids," but dairy experts as well. Has sufficient notice been taken of the effect, in this connection, of the lapse of a considerable period since the cows have dropped their calves? Prof. J. P. Sheldon, author of the best work published on dairy husbandry, and a high authority on dairy matters, attaches a good deal of importance to this point in his instructive article in this issue of the RURAL. The "unknown in dairying" still covers a great many points; and sometimes the best dairy experts and operators must alike agree with the rhymster:

"I thought I knew I knew it all;
But now I must confess
The more I know I know, I feel
I know I know the less!"

CONGRESSMEN from Louisiana will oppose the reduction in the tariff on sugar, and those from South Carolina will fight against lower duties on rice for the same reason that Congressmen from Pennsylvania would oppose a low tariff on coals, and those from Maine would fight against the free admission of lumber. After all, isn't the welfare of the country best secured and protected when each of its leading interests does battle in its behalf? In private life who, except a simpleton, would without a struggle permit the ruin of his own honest business for the benefit of any number of his neighbors? It will be a fortunate day for the Nation when the public business shall be conducted in accordance with the principles that secure success in private affairs. Every interest of any considerable importance fights fiercely in its own behalf before Congress except agriculture.

The Swineherd.

KENTUCKY BEAUTY 2,718.

THE sow shown at Fig. 105 is a thoroughbred Chester White. She is sired by Major 2,237 out of Moody's Beauty 2,340. She is considered a typical specimen of this popular breed. Mr. C. H. Warrington, who has made the breeding of Chester Whites a study, writes us as follows with reference to the history and characteristics of the breed:

"In 1818, Captain James Jeffries brought from England some swine which he called Bedfordshire, because they were from the herd of the Duke of Bedford; but in England they were known by the name of Woburn, after one of the country seats of the Duke. The imported stock were crossed on Chester County swine and produced the present very strong, hardy and valuable breed known the country over as Chester Whites. They fatten easily and quickly, are of rapid growth and reach a great size, some having dressed as high as 1,050 pounds. They are very potent in transmitting their characteristics, for when coupled with a black hog, their potency is shown by the fact that the progeny are nearly always entirely or partly white. The sows are prolific breeders, often having as many as 14 pigs at one litter. Some claim they are cholera-proof, but I believe this can be justly claimed for no hog or breed of hogs."

Miscellaneous.

CATALOGUES, ETC., RECEIVED.

THE MAPES' FORMULA AND PERUVIAN GUANO CO., 158 Front St., New York.—The catalogues, or treatises, issued by this firm are always both interesting and instructive, and all Rural friends should look them over and, in fact, study certain parts. Station analyses as is stated, do full justice, no doubt, in determining the *strength* of the samples of fertilizers analyzed, but here their discrimination ends. One firm may use bone; another may use South Carolina rock or phosphate of iron and alumina. But the analyses do not inform the farmer which is which — the analyses might be the same even though one of the articles were really worth but half as much as the other. Again, there is nothing in the analysis, as now made, to show whether nitrogen (the costliest of plant food) is derived from animal matter, nitrate of soda or sulphate of ammonia, or from such comparatively worthless stuff as leather, hair, horn or shoddy. Dr. Voelcker once remarked that he would prefer *one* per cent. of nitrogen in sulphate of ammonia, to *six* per cent. in powdered leather. Now, what the Mapes Co. claim is that their fertilizers are made from the very best known forms of plant-food, and from what we know of the firm, we believe their claims to be substantially correct. Send for the catalogue.

F. D. CRAIG, North Evanston, Cook Co., Ill.—Here is a treatise on incubators in general and the Craig Folding Incubator in particular, which our readers who delight in poultry may examine to their advantage. It is claimed that this machine is equally well suited to small and large enterprises, and that it combines, above other incubators, the essential qualities found in the most perfect imitation of the ways of the old hen. The prices range from $12 (100 eggs) upward. Aside from incubators and how to manage them, there is a deal of useful information in this little book, which will be mailed free to RURAL readers who apply to Mr. Craig.

FRED. W. KELSEY, 208 Broadway, N. Y.—A descriptive catalogue of fruit and ornamental trees, shrubs, roses, etc. The selection of varieties, as the catalogue states, embraces all the latest and most promising introductions, as well as the most popular and thoroughly proved older sorts.

Also an abridged catalogue of specialties and novelties, which is precisely what the amateur wants, who doesn't mind spending his money freely. Both sent to all applicants.

HARPERS' MAGAZINE FOR MARCH.—Harpers' Magazine for March is by far the best number of the year. The table of contents was given in a recent RURAL. This sterling magazine is constantly improving, and we have no hesitation in pronouncing it the best suited for family reading of any of its class. The paper entitled "The Home Acre" by E. P. Roe, will be read with interest by the thousands of city men who so earnestly desire to see more of country life. The paper, "Dogs and Their Management" is timely and valuable. The short description of the symptoms of hydrophobia ought to be printed on the back of every dog license. Farmers generally agree that a good dog is decidedly useful as a farm servant. The outcry raised in the press is directed against the ill-bred, sheep-killing mongrels. Many practical facts and hints on the management and training of dogs can be obtained from the excellent article in Harpers'.

FLEMING MANUFACTURING CO., Fort Wayne, Ind.—Pamphlet and circulars of the Boss Road Grader and Leveler. It is claimed that this is the cheapest and best road machine manufactured. It is for contractors and farmers. The points of superiority are (1) simplicity; (2) strength and durability; (3) having but two wheels it is easily operated in narrow places; (4) lightness of draft, the tongue being attached directly to the knife plank; (5) large wheels; (6) the knife is constructed of concave sections made of the best Bessemer steel, and may be taken off readily; (7) the weight of the machine and the operator may, if necessary, be thrown upon the knife plank. It is further claimed that two horses and one man may do as much work with the Boss as four horses and two men can do with ordinary machines. Many excellent testimonials can be presented. All interested should send for the documents, which will be mailed free

MACOMBER'S SEEDLING ANTWERP RASPBERRY. From Nature. Fig. 109.

(See p. 150.)

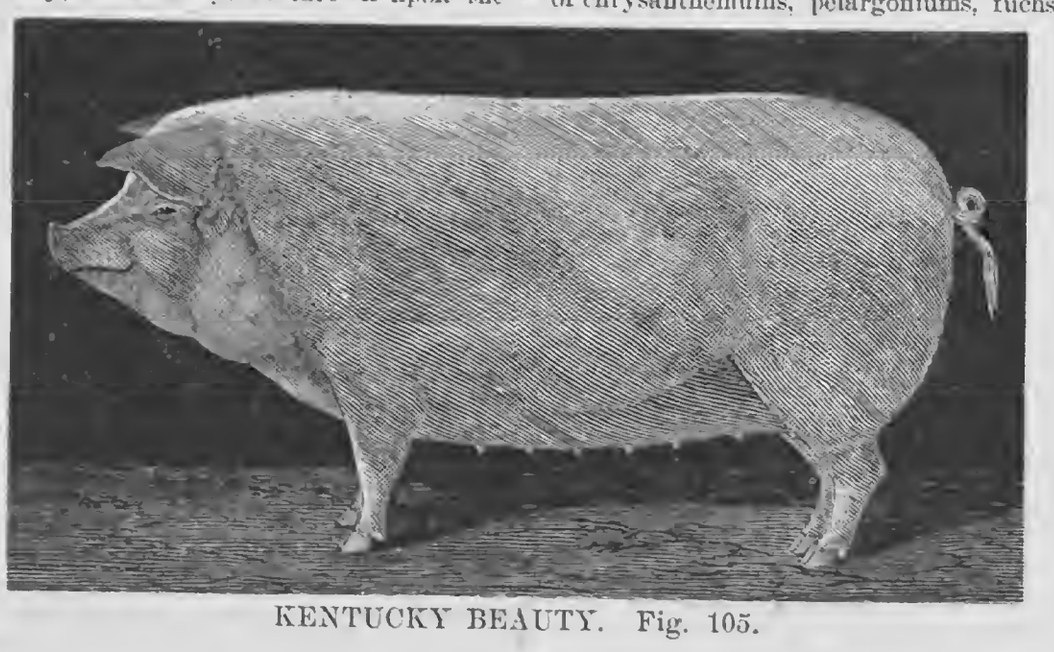
ELLWANGER & BARRY, Rochester, N. Y.—No. 1. A catalogue descriptive of fruits. A colored plate shows the Industry Gooseberry introduced by this firm. Plain suggestions are offered as to the preparation of the soil and of the trees to be planted, as to the planting, staking, mulching and after-culture. There is no list published more trustworthy than this.

No. 4. is a wholesale catalogue of grapes, small fruits, ornamental trees and shrubs, etc.

No. 5. is a descriptive catalogue of roses with careful cultural instructions. The lists are divided and arranged in a manner so simple that all may select discriminatingly.

No. 3. is a descriptive priced catalogue of strawberries, with directions as to planting and culture.

V. H. HALLOCK, SON & THORPE, East Hinsdale, Long Island, N. Y.—Home Adornment.—A select catalogue of what is needed. This seems to us one of the best treatises of the kind published anywhere, and we want all of our readers to examine it. Hallock & Co. know what they are talking about, and have their hearts in their business. The lists of chrysanthemums, pelargoniums, fuchsias, roses, lilies, etc., are judiciously selected, and the catalogue is full of such sterling floral gems as are well worthy of cultivation. Flower and vegetable seeds and the best of the small fruits are also offered.

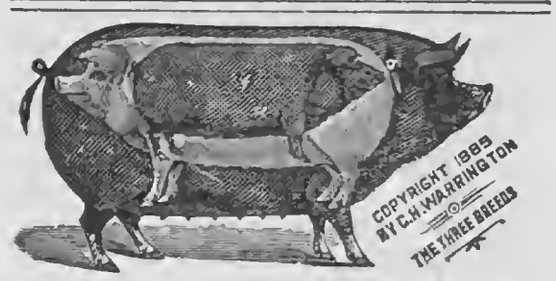


KENTUCKY BEAUTY. Fig. 105.

MAHER & GROSH, Toledo, Ohio.—Illustrated circulars of knives, razors and scissors of every description. This firm, everywhere favorably known, warrant every knife having their name stamped on the blade, to be *hand-forged* from razor steel, and they authorize all dealers to exchange *free* any knife

(*Continued on page* 158.)

Stock and Poultry.



RECORDED PRIZE SWINE.

(N. C. W. R.) Chester Whites, Choice Strains. Poland Chinas from fancy and costly blood. My own importation of Berkshires direct from England. Herd Book and unreg'd Jersey Cattle, Butter Record Stock. C. H. WARRINGTON, BREEDER, P. O. Box 36, West Chester, Chester Co., Pa.

Please write name and address plainly, and mention this Paper.

Pedigree and Full Guarantee. Send Stamp for Catalogue and come see me.

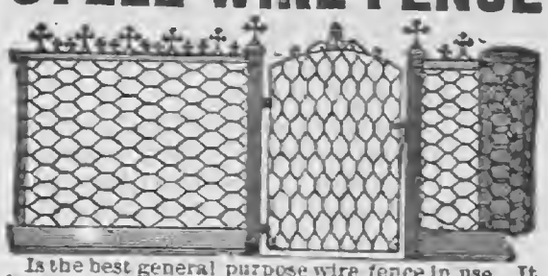
(Thymo-Cresol.)
NESS & CO., MANUFACTURERS.
Non-Poisonous. Safe in Coldest Weather.
Sure Cure for Scab, Mange, and all Skin Diseases. Stimulates growth of Wool. Kerry, Watson & Co., Montreal, Agents for Canada. For full particulars, address
T. W. LAWFORD & CO., Baltimore, Md.

Clydesdale and English Shire Horses.

The only stud in America containing the very best specimens of both breeds. Prize winners at Chicago Fair, the World's Fair at New Orleans, the Royal Society of England, etc. Large importation arrived August 12, and more to follow. Our buying facilities being unequalled, there is no such opportunity offered elsewhere, to procure first class animals of choicest breeding at very lowest prices. Every animal duly recorded and guaranteed. Terms to suit all customers. Catalogues on application.
GALBRAITH BROS., Janesville, Wis.

SEDGWICK STEEL WIRE FENCE



Is the best general purpose wire fence in use. It is a **strong net-work without barbs.** Don't injure stock. It will turn dogs, pigs, sheep and poultry, as well as horses and cattle. The best fence for Farms, Gardens, Stock Ranges and Railroads. Very neat, pretty styles for Lawns, Parks, School-lots and Cemeteries. Covered with rust-proof paint, or made of galvanized wire, as preferred. It will last a life-time. It is **better than boards or barbed wire** in every respect. The **Sedgwick Gates** made of wrought-iron pipe and steel wire, defy all competition in lightness, neatness, strength and durability. We make the best, cheapest and easiest working **all-iron automatic or self-opening gate,** and the **neatest cheap iron fences now made. The best Wire Stretchers, Cutting Pliers and Post Augers.** For prices and particulars ask Hardware Dealers, or address, mentioning paper.
SEDGWICK BROS., Richmond, Ind.
EDWARD SUTTON, Eastern Agent,
300 Market St., Philadelphia, Pa.

Just published, 12 Articles on
Practical Poultry Raising.
By FANNY FIELD,
The greatest of all American writers on Poultry for Market and Poultry for Profit. Tells how she cleared $449 on 100 Light Brahmas in one year; about a mechanic's wife who clears $300 annually on a village lot: refers to her 60 acre poultry farm on which she clears $1,500 annually. How to put up buildings, raise green food, etc. Tells about incubators, brooders, spring chickens, capons, and how to feed to get the most eggs. Price 25cts. Stamps taken. Address R. B. Mitchell, 69 Dearborn Street, Chicago.

PALISADE POULTRY YARDS.
C. S. COOPER,
Schraalenburgh, N. J.,
Breeder of Wyandottes and Plymouth Rocks. Four grand pens of each variety. Eggs from pens one and two, $3.00 for 13; $5.00 for 26. Eggs from pens three and four, of each variety, $2.00 for 13; $3.00 for 26.

N. T. LATTIN,
Originator and Breeder of
BLACK AND MOTTLED JAVA FOWLS.
GAINES, ORLEANS CO., N. Y.
Fowls, $5.00 each. Eggs, $3.00 per 15; $5.00 per 30.

HALF-WAY BROOK KENNELS
AND POULTRY YARDS,
Lock Box 150, GLENS FALLS, N. Y.
OUR SPECIALTIES.—St. Bernards, Eng. Mastiffs and Eng. Beagle Hounds. Imported Dogs in the Stud. Fees reasonable. Can furnish dogs of any of the popular breeds, at low figures, for quality of stock.
IN POULTRY.—We breed the best and most popular varieties of land and water fowls. Stock for sale at all times. Eggs in their season. Send stamp for circular.
COFFIN, ZIMMER & CO.

Wyandottes & Ply. Rocks.
Eggs from selected mature birds only. Circulars free.
T. WILTON HILL, Jamesburg, N. J.

PLYMOUTH ROCKS.
A large, hardy, prolific fowl, suited to the farmer and villager. Stock thoroughbred. Have won Two First Premiums this season.
Eggs, $2 per 13, packed for shipping.
A. C. KILMER, Cobleskill, N. Y.

(*Continued from page 157.*)

proving soft, or breaking from a flaw. A printed warrant is given with each knife sold. The market is at present flooded with cheap knives which are not, however, made *to cut*. We have used M. & G.'s knives of several kinds for years, and find them to be as represented. When needing a knife of any kind (from 25 cents upwards) we respectfully solicit our readers to send for the circular and try this firm.

JOSEPH BRECK & SONS.— A very large catalogue (146 pages) well illustrated with wood-cuts and many colored pictures. Breck & Sons are the originators of the Angel of Midnight Corn, and in the catalogue may be found to whom the premiums of $200 offered by them for the best yields have been awarded by the Massachusetts Horticultural Society. They are also the introducers of the now famous Pearl of Savoy Potato tested at the Rural Experiment Grounds three years ago. The catalogue is one of the best, and should be included among those examined by our readers. Nos. 51, 52 and 53 North Market St., Boston, Mass.

W. W. RAWSON & Co., 34 So. Market St., Boston, Mass.—We take pleasure in announcing that the above firm has made arrangements to continue the business formerly conducted by the well-known firm of B. K. Bliss & Sons of New York, having secured the services not only of Mr. Bliss senior, but also those of Mr. J. M. Gleason, who for 15 years was manager of the old seed house of R. H. Allen & Co., also of New York, and a member of the late firm of Everett & Gleason. The catalogue in which the above announcement is made is very large as to size, and quite original in its get-up, though we can not find space for a more particular notice this week. Our readers ought to send for it.

HALE BROS., South Glastonbury, Conn.—This is a catalogue of small fruits, and a stirring novelty is offered in the shape of the Earhart Everbearing Black-Cap Raspberry. We never like to speak too well of any new plant we have not tested. We might lead hundreds of readers astray, and thus do great harm. The claims made for this berry are simply astonishing, and we merely express the hope that half of them will be realized. We have talked with Mr. Hale about it, and he is himself timid about speaking of the berry, as its merits *seem* to justify. The catalogue will be sent free to our readers.

D. M. FERRY & Co., Detroit, Mich.—It will be remembered that on January 1 the immense warehouses of this well known and trust worthy seed house were destroyed by fire, together with probably the largest stock of assorted seeds ever gathered under one roof. We are glad to learn that the untiring energy of the firm has promptly placed it on its legs again, ready to fill all orders from all its old customers and from all new patrons who may feel disposed to encourage such spirit and energy. As all the books were saved from the fire, all orders received before the catastrophe will be faithfully filled.

H. J. BAKER & BRO., 215 Pearl, Street, N. Y.—This is the usual chemical fertilizer catalogue or treatise issued in the form of a pocket book with blank ruled pages for each month's memoranda. It is a very convenient affair. The book presents "Facts for Farmers," speaks of "Large Yields," "Complete Manures Made for Each Crop," etc. All kinds of chemicals are offered separately so as to enable the farmer to mix them as he chooses. This firm has a first-rate reputation and our readers need not hesitate to deal with it. All should send for and examine the book, mentioning the R. N.-Y.

INJURIOUS AND OTHER INSECTS OF NEW YORK.—The second annual report on this subject is sent out by the State Entomologist, Prof. J. A. Lintner—an exceedingly valuable pamphlet of 250 pages, profusely illustrated and carefully arranged. Every farmer in the State should possess a copy. It is impossible to do justice to the value of such a work in a simple notice. Every country boy and girl ought to be permitted to study entomology, and be provided with microscopes for the purpose. It is a good time of the year now to study out the best methods of preventing the depredations of injurious insects. They will be organized for battle a few months hence.

J. T. LOVETT, Little Silver, Monmouth Co., New Jersey.—A catalogue of small fruits, grapes, large fruits, nuts, etc. We find the Japan Chestnut announced in this. A colored plate is given of the Lawson (Comet) Pear, which, if intended to show the largest and most brilliantly colored pears that this variety bears, is not far astray. The Lawson is very early and very handsome. No one will object to such claims. The quality is fair for one of its season. That is precisely the view we take. There is another colored picture of the Golden Queen Raspberry. There is much of originality and enterprise shown in this catalogue.

ROBERT SCOTT & SON, cor. 19th and Catharine Streets, Philadelphia, Pa.—An illustrated catalogue of roses. Directions for rose growing, selection of varieties, enemies of the rose, aprotection and pruning are treated in a pretical way. Excellent lists are presented of Hybrid Perpetual, Ever-blooming, Hybrid Teas, Polyantha roses, and finally, a general collection. Collections are offered at low rates. All may be sent by mail. Catalogue free.

STANDARD ROOFING.—Circular from A. F. Swan, 43 Cortland Street, New York, describing the excellent roofings and roofing materials manufactured by him, with direction for applying the same. The circular also contains many letters from responsible parties and from all parts of the country, extolling the excellence of these roofing materials. Tarred felt is largely used for lining barn and poultry houses.

C. E. ALLEN, Brattleboro, Vt.—An illustrated catalogue of seeds, plants and small fruits. It is now "quite the thing" to add colored fly leaves for the illustration and description of new seeds and plants. The idea is a good one. Mention the R. N.-Y., and send for the catalogue.

J. A. FOOTE, Terre Haute, Ind.—A catalogue of farm, garden and flower seeds. A colored plate shows the Mammoth Long Rose Radish. Self-husking Corn, Mikado and Seeville's Hybrid Tomatoes, and the Volga Watermelon, are among the novelties. Mailed free to applicants.

R. D. HAWLEY & Co., 492 Main St., Hartford, Conn.—Illustrated catalogue of garden, field and grass seeds; agricultural and horticultural implements, etc. Free.

CHAS. C. MCCOLGAN & Co., 58 Light St., Baltimore, Md. An illustrated catalogue of seeds, plants, roses, etc., with many of the latest novelties. Free.

CHAS. T. STARR, Avondale, Chester Co, Pa.—Illustrated and descriptive price-list of flowering plants, bulbs, etc. Free.

E. D. PUTNEY, Brentwood, N. Y.—A select list of trees, fruits and flowers, and a treatise on their culture. Free.

Literary.

BOOKS RECEIVED.

THE CENTURY for March has for an opening paper, "Italy from a Tricycle," by Mr. and Mrs. Joseph Pennell. A novel pen and pictorial account of a trip from Florence to Rome in a manner of travel and description peculiarly their own. Mrs. Schuyler Van Rensselaer contributes a second paper on "City Dwellings." The accompanying engravings show for the most part interior views of some of the notable houses in Boston, New York and Washington. Mr. W. D. Howell's novel, "The Minister's Charge," is continued; also the fifth part of Mrs. Mary Hallock Foote's story of mining life. This month's war article is by Don Carlo Buell, called "Shiloh Reviewed." "The Strength and Weakness of Socialism," by Dr. Washington Gladden, is considered from the standpoint of social agitators, also from that of conservative reformers. "Topics of the Time" takes up two important subjects. In "Open Letters," Dr. Howard Crosby and Dr. A. A. Hodge contribute to the discussion of "Christian Union" or "Church Union."

ST. NICHOLAS.—One of the principal features of this number is the first nine of the "St. Nicholas Dog Stories." This series is to include interesting stories, sketches and anecdotes collected from various sources during the last five years, and will be published from time to time for the benefit of dog lovers. "Tit for Tat," by H. H. Henry Eckford's "Wonders of the Alphabet;" Horace E. Scudder's biographical serial, "George Washington;" Frank R. Stockton's "Personally Conducted," are some of the continued articles. There are several short stories, each fully and beautifully illustrated. Also Poems, Jack-in-the-Pulpit, Editorial Notes, etc.

Domestic Economy

CONDUCTED BY EMILY MAPLE.

ATTENTION is called to a series of articles upon California Housekeeping, by Mary Wager-Fisher, which will appear from time to time under this Department. The first of these interesting sketches appears below.

HOUSEKEEKING IN CALIFORNIA.

NO. I.

MARY WAGER-FISHER.

IN comparison with New York City, "boarding" is very reasonable in California towns, and restaurant life, particularly in San Francisco, is surprisingly cheap, though excellent. The usual price for board in a private family, with "a sunny bay window room," is $25 a month, everything in that way being rated by the month. This price is also general in Oakland, which lies across the Bay from San Francisco. But as "The Three Fishers" detest boarding-house life, and like the freedom of a home so far as we can secure it in our present migratory existence, we went house-hunting on the day following our arrival in Oakland, where we had decided to tarry for two or three months. We wanted a small, furnished cottage, with plenty of sun, first-class drainage, and ample room for the laddie's play ground. After a day's hunt, we found what we concluded would "do"—a furnished cottage of six rooms—kitchen, dining-room, parlor, and a bed-room on the first floor; up-stairs two large sleeping rooms and a nice bath. House needed paint, furniture very ordinary, but sufficient for respectability and comfort. The lady from whom we rented sub-let the house, the furniture alone being hers. She was a Boston woman, still young, and a woman of "faculty." Part of her family was in the East and part of it here. The house had a large, open, sunny backyard, and at one side was a vacant lot. The street and neighborhood were excellent. Our landlady said that in taking the house for herself she had counted on making her "fortune." She could have the use of the vacant lot, and in that she intended to keep chickens. The back yard she converted into a vegetable garden, where she planted everything that grows in a California garden. The grounds in front and at the side of the house she had laid out in walks and flower beds, and every flower she had planted with her own hands. There were great groups of Calla Lilies, in full bloom all Winter, roses, marguerites, asters, fuchsias, passion-vines, English ivy, abutilons 15 feet high, pelargoniums, carnations—among the best of bloomers—violets, primroses, sweet alyssum and many other plants, so that I had from the outset a flower garden ready-made, from which I kept three vases in our little parlor, with its sunny bay window, filled during our sojourn. There was a bed of parsley by the kitchen porch, and beets, turnips, carrots, and some parsnips still growing in the garden! also a pumpkin-vine that was in constant bloom until nipped by the frost in January. For the first few days I was considerably entertained in noting how the landlady's ingenuity—peculiar to "thrifty" people—had helped her to make the best of things. She had evidently furnished her house by picking up much of the furniture piece by piece at auction sales, and then remodeling it, covering the stuffed dining chairs with cretonne; making bureau and washstand tops tidy with white oil-cloth veined lightly with blue to resemble marble! neatly tacked on; concealing flaws in the walls with deft arrangement of Japanese and Chinese fans, and brightening up chairs with tidies.

In acceding to my requirement for table linen—which it is not usual to provide with a furnished house—she remarked that in her sister's house where she lived—and her sister lived very prettily—they only put a cloth on the table for dinner; that they used the white oil-cloth instead for breakfast and lunch; it was much more convenient and economical; that it cost 25 cents to have a cloth done up at the laundry! I observed that our dining table was furnished with the oil-cloth, which, like everything else, had a very clean and wholesome look, and I am quite sure that if I had to wash and iron my own table cloths, I should take very kindly to the oil-cloth substitute. It is certainly one of the ways in which economy of strength, time and money may be practiced without detriment to either health or manners. She had the same material, with ornamented edges, on the pantry shelves and on a window shelf, where she had potted plants. The kitchen was very light and sunny in the forenoon, and she had fitted it up so that it was a cheery room, and she evidently had spent much of her time in it. Over the lower window sashes—a single large pane of glass—she had tacked white Nottingham lace, and across the top, well up to the ceiling, she had frills of cretonne for lambrequins. Chromo-lithographs were on the wall, and some boxes in which she had things packed, were also covered with cretonne. She had painted the floor a pale, dull gray, the exact shade which never shows dust or mud tracts—a color, the ingredients of which ought to be known to every painter of kitchen and porch floors. In the middle of the floor was a square rug of tapestry nailed down. The wood-work of the entire house inside was "grained" to imitate ash or maple, and this, too, in the land of red-wood forests, where red-wood is used in building as commonly as white pine is in the East, and makes a beautiful finish when simply oiled. In the rear of the kitchen was an apartment for coal and wood, for the storing of fruit, vegetables, etc.

After everything had been arranged, and the landlady, Mrs. D. had come to put up some fresh curtains (and she was a very good carpenter as well, having her box of nails, her hammer and step-ladder), I asked her to name the annoyances I would have to encounter in living as a housekeeper in California. "Ants," she promptly responded, "I can't begin to tell you how we suffer from small black ants; they get into the pantry and invade every article of food that is not ant-proof. You can even find their routes of travel between houses. I think, however, I have extirpated them from this house; but I wont be sure. You know we try everything on them here, but the best plan after all is to place a piece of meat in their haunts, which will soon swarm with them, and then drop meat, ants and all into hot water. You will not be troubled with mice. You can get a woman I know to come in and wash and iron and clean up for a dollar and half a day; it is the usual charge. She may not do the washing very good unless you watch her."

"I'll not have her then," I promptly responded, "for I can't afford to watch any body. I'll send out the washing, and if I could send out the house, room by room, and have that swept and cleaned, it would be a capital arrangement; perhaps in the magnificent future that is so rapidly coming, houses will be built on such a plan and when a room needs to be rehabilitated, all one will have to do will be to detach it from the main structure, and roll it away—for it will be on wheels—to the house decorator, who will send it back as good as new." This small flight of fancy seemed to induce Mrs. D. to remark that she would in a few days send a man around to kalsomine the dining-room, a woman to clean the windows, and she would have the screen to the kitchen door hung. But of course they never came. I reduced the abundance of flies in the kitchen very speedily by means of the old-fashioned trap, a honeyed piece of bread, with a hole in the middle, set over a glass containing soap-suds. It was the first week in November and as no rain had fallen for months, everything was as dry as a bone, except when kept moist by the hose. The laddie anticipated great fun in watering the flower garden, but in a few days it began to rain, and for three weeks it rained most of the time, with intervals of absolutely cloudless days. Grass sprang up every where, on the hills in the distance, the rose bushes filled with buds, it was like the Spring of the year. On sunny days we went off on expeditions of sight-seeing, and on rainy days I tried to despatch my accumulated work, which I think it a good plan to keep below the level of one's head and ears."

MRS. HIGHTON'S DIARY.

ANNIE L. JACK.

I REMEMBER ONCE reading that "a wound to a man's vanity leaves a permanent scar," and the sentence flashed upon my mind to-day when in speaking to Edgar this morning of the gentlemen we met at a party, last night, I happened to remark, "You haven't so much ease of manner as Dick Egerton." "Check, you mean," said Edgar, quite cross-like, and he left the house without much ceremony or attention to me. I wish I hadn't said it; but I didn't think men so absurd that they couldn't hear another man praised for one good quality while perhaps they have a dozen equally good, though not the same. I thought when we were *one*, we could speak our thoughts to each other; but I am learning that we are two in that respect and I must be more guarded in what I say. It would be a comfort though if one could just think aloud even to one person, and know that he would not take amiss anything you might say. There's nobody but a mother that it is safe to do that with; she *understands*. All day I kept repeating the song,

"If I had known in the morning
How wearily all through the day
The words unkind, would trouble my mind
I said when you went away,
I had been more careful, darling,
Nor given you needless pain,
But we vex *our own*, with look and tone
We may never take back again."

But when Edgar came home to dinner he seemed to have forgotten all about it, and brought Mr. and Mrs. Bigelow, from Boston, without giving me a word of warning. I hurried to the door when the bell rang, intending to give him an affectionate greeting, and was met by the introduction to these strangers. I had heard of the lady, a relation of Edgar's, but I disliked her the first minute I looked at

Miscellaneous Advertising.

When Baby was sick, we gave her Castoria,
When she was a Child, she cried for Castoria,
When she became Miss, she clung to Castoria,
When she had Children, she gave them Castoria.

her. We sat down to dinner everything was neat and clean, but she left all her meat on the plate, and could not eat anything but bread and butter (I knew the butter was good for it was some of mother's, and she did condescend to praise it). I asked if she had a headache and tried to tempt her appetite, but could not induce her to taste any of the dessert except an orange, and she gave no explanation for her want of appetite. When they left, Edgar said, "My dear, why didn't you cook the turkey I sent home." "Oh, Edgar," I said, almost crying, "it didn't come till afternoon, and there was plenty of the cold beef for *us*. You didn't tell me you intended to bring any guests, and you know well that if I prepared a dinner for four every day half of it would be wasted, and you ought to tell me when you intend asking any one." "I expect my table to be ready whenever I choose to bring any one," he answered loftily; "but if you object, and cannot be prepared, I will not ask any one again." How inconsiderate men are! And how foolish to expect a woman to prepare for two or three guests every day, and then have to waste the food nine times out of every ten, besides the extra labor of preparing. And it is in this way misunderstandings often arise, and people become careless and indifferent because, in the first place, they do not see things in a proper light.

My girl has done very well so far, but she came to me to-day to say that her sister is sick and needs her—what shall I do if she leaves me? The very thought gives me a shiver of dismay.

SOMETHING TO BREAK THE MONOTONY OF HOUSEWORK.

If you are in want of a lamp mat, you can make one by taking a square of all-wool canvas and putting a row of cross-stitch embroidery around it about two inches from the edge, then ravel out the edge to form a fringe. Work some sort of figure in the four corners and then fold the corners to the middle and turn them back half way. Tack them and the border here and there with tiny bows of ribbon and place a piece of pasteboard covered with silesia in the middle to form a foundation on which to place the lamp.

An exceedingly pretty tidy may be made out of a yard of scrim or bolting cloth. After putting a two-inch hem around it finish the ends with a suitable lace and embroider two or three rows of daisies above the hem. Or you can put rows of ribbon across instead of the embroidery; in either case gather the tidy one quarter of a yard from the end and tie it with a ribbon to match or contrast prettily with the work at the ends. AUNT ADDIE.

DOMESTIC RECIPES.

MRS. RANSOM'S SPONGE CAKE.

Six eggs, one pint of flour, one-and-one-half teacupful of sugar, one-half teaspoonful of soda, one teaspoonful of cream-of-tartar. Dissolve soda in a spoonful of warm water, mix cream-of-tartar with the flour. Bake in a quick oven.

APPLE JELLY.

Two quarts of water to one dozen apples, pare and slice, then boil soft and strain through a flannel bag.

To one pint of juice add one pound of loaf sugar and the juice of one lemon. Boil 15 minutes, putting in the lemon peel and strain again.

NEW YEAR'S COOKIES.

Six cups of sugar, four of butter, two of milk, six eggs, one ounce caraway seed, one teaspoonful of soda. Flour to roll.

SODA CAKE.

Two cups of butter, four of sugar, one of sour cream, one-half cup of sweet milk, two teaspoonfuls of soda, one of cream-of-tartar; flavor with nutmeg or vanilla.

JOHNNY CAKE.

Two teacups of Indian meal, one of flour, one tablespoonful of molasses, two teacupfuls of buttermilk, a teaspoonful of soda, and salt to taste.

GINGER CAKE.

Three cups of molasses, one of butter, six teaspoonfuls of ginger, four of saleratus dissolved in a cup of warm water, one cup of sour milk or buttermilk. Add a piece of alum as large as a hickory nut, dissolved in hot water. AUNT RACHEL.

QUESTIONS ANSWERED.

MARION HARLAND'S CALENDAR.

Please let me know where I can get the above and oblige. H. B.

ANS.—It is not published this year. Charles Scribners' Sons were the publishers last year.

OIL STOVE.

In answer to several correspondents, we would say that the stove referred to by "Aunt Em" is the Florence Stove Lamp, sold by various dealers.

Debility

Languor, and Loss of Appetite, are cured by the use of Ayer's Sarsaparilla. It removes that terrible sense of *Constant Weariness*, from which so many suffer, gives tone and vigor to the stomach, and restores health and strength more surely and speedily than any other medicine.

Three years ago I suffered from Debility and Loss of Appetite, the result of Liver Disease. After having tried various remedies, and consulted several physicians, without benefit, I was induced to take Ayer's Sarsaparilla. The first bottle produced a marked change, and the second and third accomplished so much that I felt like a new man. I have, since that time, taken about one bottle every year, and had no recurrence of the trouble.—William E. Way, East Lempster, N. H.

Ayer's Sarsaparilla,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by all Druggists. Price $1; six bottles, $5.

ECLIPSE
POST HOLE DIGGER.
The **Greatest LABOR-SAVING** tool ever invented for digging holes in the ground. This machine works on a new principle, and is unlike anything in the market. It is neither an Auger nor a Plunger, but is driven in the ground with a driving rod, which works in a pipe similar to a telescope. **We claim** for this tool:
1st. That one man can dig from 40 to **three hundred** holes two feet in ordinary ground in one day.
2nd. That it will dig holes any **size** or **depth** required.
3d. That it will work successfully in **very hard** or **rough** ground where other diggers and augers will not work at all.
4th. You stand up straight while using it, consequently no back-breaking work is required.
It will pay you to send for descriptive circulars and prices to **COLE & FLEMING, Manufacturers,** Springfield, O.

You Can Dye ANYTHING ANY COLOR
With Diamond Dyes, for **10** cts. They never fail. 32 fast colors. They also make inks, color photo's, etc. Send for colored samples and Dye book. Gold, Silver, Copper and Bronze Paints for any use—only 10 cents a package. Druggists sell or we send post-paid.
Wells, Richardson & Co., Burlington, Vt.

ON 30 DAYS' TRIAL.

THIS NEW
ELASTIC TRUSS
Has a Pad different from all others, is cup shape, with Self-adjusting Ball in center, adapts itself to all positions of the body while the ball in the cup **presses back the intestines just as a person does with the finger.** With light pressure the Hernia is held securely day and night, and a radical cure certain. It is easy, durable and cheap. Sent by mail. Circulars free. EGGLESTON TRUSS CO., Chicago, Ill.

HAIR REMOVED
From any part of the body in FIVE MINUTES, without injury to the skin, by PILLAM'S DEPILATORY POWDER. Mailed (*securely sealed*) for $1.00. Sealed pamphlet FREE. Procurable of Druggists. ASK FOR IT. Don't be put off with something else. [illegible] Philada., Pa.

MARVELOUS PRICES!
BOOKS FOR THE MILLION
Complete Novels and Other Works, by Famous Authors, Almost Given Away.
The following books are published in neat pamphlet form, many of them **handsomely Illustrated,** and all are printed from **good type upon good paper.** They treat of a great variety of subjects, and we think no one can examine the list without finding therein many that he or she would like to possess. In cloth-bound form these books would cost **$1.00 each.** Each book is complete in itself.

1. **The Widow Bedott Papers.** This is the book over which your grandmothers laughed till they cried, and it is just as funny to-day as it ever was.
2. **Fancy Work for Home Adornment,** an entirely new work upon this subject, containing easy and practical instructions for making fancy baskets, wall pockets, brackets, needle work, embroidery, etc., etc., profusely and elegantly illustrated.
3. **Grimm's Fairy Stories for the Young.** The finest collection of fairy stories ever published. The children will be delighted with them.
4. **The Lady of the Lake.** By Sir Walter Scott. "The Lady of the Lake" is a romance in verse, and of all the works of Scott none is more beautiful than this.
5. **Manual of Etiquette** for Ladies and Gentlemen, a guide to politeness and good breeding, giving the rules of modern etiquette for all occasions.
6. **The Standard Letter Writer** for Ladies and Gentlemen, a complete guide to correspondence, giving plain directions for the composition of letters of every kind, with innumerable forms and examples.
7. **Winter Evening Recreations,** a large collection of Acting Charades, Tableaux, Games, Puzzles, etc., for social gatherings, private theatricals, and evenings at home; Illustrated.
8. **Dialogues, Recitations and Readings,** a large and choice collection for school exhibitions and public and private entertainments.
9. **Parlor Magic and Chemical Experiments,** a book which tells how to perform hundreds of amusing tricks in magic and instructive experiments with simple agents.
10. **The Home Cook Book and Family Physician,** containing hundreds of excellent cooking receipts and hints to housekeepers, also telling how to cure all common ailments by simple home remedy.
11. **Manners and Customs in Far Away Lands,** a very interesting and instructive book of travels, describing the peculiar life, habits, manners and customs of the people of foreign countries; Illustrated.
12. **Sixteen Complete Stories** by Popular Authors, embracing love, humorous and detective stories, stories of society life, of adventure, of railway life, etc., all very interesting.
13. **The Budget of Wit, Humor and Fun,** a large collection of the funny stories, sketches, anecdotes, poems, and jokes that have been written for some years; Illustrated.
14. **Useful Knowledge for the Million,** a handy book of useful information for all, upon many and various subjects; Illustrated.
15. **Called Back.** A Novel. By Hugh Conway, author of "Dark Days," etc.
16. **At the World's Mercy.** A Novel. By Florence Warden, author of "The House on the Marsh," etc.
17. **Mildred Trevanion.** A Novel. By "The Duchess," author of "Molly Bawn," etc.
18. **Dark Days.** A Novel. By Hugh Conway, author of "Called Back," etc.
19. **The Mystery of the Holly Tree.** A Novel. By the author of "Dora Thorne."
20. **Shadows on the Snow.** A Novel. By B. L. Farjeon, author of "Bread-and-Cheese-and-Kisses," etc.
21. **The Gray Woman.** A Novel. By Mrs. Gaskell author of "Mary Barton," etc.
22. **The Frozen Deep.** A Novel. By Wilkie Collins author of "The Woman in White," etc.
23. **Red Court Farm.** A Novel. By Mrs. Henry Wood, author of "East Lynne," etc.
24. **In Cupid's Net.** A Novel. By the Author of "Dora Thorne."
25. **Back to the Old Home.** A Novel. By Mary Cecil Hay, author of "Hidden Perils," etc.
26. **John Bowerbank's Wife.** A Novel. By Miss Mulock, author of "John Halifax, Gentleman," etc.
27. **Lady Gwendoline's Dream.** A Novel. By the author of "Dora Thorne," etc.
28. **Jasper Dane's Secret.** A Novel. By Miss M. E. Braddon, author of "Aurora Floyd," etc.
29. **Leoline.** A Novel. By Mary Cecil Hay, author of "Brenda Yorke," etc.
30. **Gabriel's Marriage.** A Novel. By Wilkie Collins, author of "No Name," etc.
31. **David Hunt.** A Novel. By Mrs. Ann S. Stephens, author of "Fashion and Famine," etc.
32. **Reaping the Whirlwind.** A Novel. By Mary Cecil Hay, author of "Old Middleton's Money," etc.
33. **Dudley Carleon.** A Novel. By Miss M. E. Braddon, author of "Lady Audley's Secret," etc.
34. **Esslemont** OR THE MYSTERY OF THE HEARTLAND. A Novel. By Ella W. Pierce, author of "The Birth Mark," etc.

NOTABLE AND SIGNIFICANT ITEMS
From the Forty-First Annual Report
OF THE
NEW YORK LIFE INSURANCE COMPANY.

A total income of over sixteen millions one hundred thousand dollars, and payments to policy-holders of nearly eight million dollars.

Interest income, over three million dollars, being about 5½ per cent. on average net assets, and nearly four hundred thousand dollars in excess of losses by death.

Market value of securities, over three million three hundred thousand dollars in excess of their cost.

Liabilities, both actual and contingent, provided for, and a Divisible Surplus by the Company's standard of over seven million dollars; Surplus by the State standard, over thirteen million dollars.

An increase of nearly two million dollars in income, over three millions in surplus, over seven millions in assets, and of over thirty millions of insurance in force, during 1885.

SUMMARY OF REPORT.

BUSINESS OF 1885.

Received in Premiums	$12,722,106.03
Received in Interest, Rents, etc.	3,399,069.71
Total Income	**$16,121,172.74**
Paid Death-claims	$2,999,109.64
" Endowments	741,764.17
" Annuities, Dividends, and for Policies purchased	3,940,999.64
Total Paid Policy-holders	**$7,681,873.75**
New Policies issued	18,509
New Insurance Written	$69,521,452.00

CONDITION, JAN. 1, 1886.

Cash Assets	**$66,864,321.32**
*Divisible Surplus, Co.'s Standard	$7,064,473.13

* Exclusive of the amount specially reserved as a contingent liability to Tontine Dividend Fund.
† Over and above a 4 per cent. reserve on existing policies of that class.

The Seven Advantages
OF THE
NEW YORK LIFE INSURANCE COMPANY'S
Nonforfeiting-Tontine Limited-Endowment Policy.

FIRST ADVANTAGE.—Insurance for a definite amount, or for an amount increasing with each premium paid, as desired.
SECOND ADVANTAGE.—A Definite Cash Endowment, and a Tontine Dividend, to Policies in force at the end of Endowment and Tontine periods, which periods correspond, and may be either Ten, Fifteen or Twenty Years.
THIRD ADVANTAGE.—Insurance for the full amount of the Policy, extended for as long a time as the value of the Policy will carry it, within the Endowment period, in case of discontinuance of payment of premiums after three years.
FOURTH ADVANTAGE.—A Grace of one month in the payment of premiums, during which time the policy-holder's security is unimpaired.
FIFTH ADVANTAGE.—Three valuable options, including cash value to policy holders who survive their Tontine and Endowment periods and keep their policies in force.
SIXTH ADVANTAGE.—Practical freedom of action with respect to occupation, residence and travel.
SEVENTH ADVANTAGE.—The payment of death-claims immediately upon the approval of the required proofs of death.

Do not insure until you have seen full particulars of this Policy. Do not fail to write the nearest Agent, The NEW-YORK LIFE INSURANCE COMPANY, 346 & 348 Broadway, New York City.

WILLIAM H. BEERS, President; HENRY TUCK, Vice President; ARCHIBALD H. WELCH, 2d Vice-President; RUFUS W. WEEKS, Actuary; THEODORE M. BANTA, Cashier; D. O'DELL, Supt. of Agencies; A. HUNTINGTON, M. D., Medical Director.

Waldo F. Brown, of Butler County, Ohio, in describing several experiments with reference to thorough pulverization of the soil, says: "The result of the experiment, thorough pulverization, and observation was that $1.00 of extra work per acre with good Pulverizers adds from 5 to 10 bushels per acre."

See advertisement of the "ACME" Pulverizing Harrow, Clod Crusher & Leveler on page 161.

A MAN AND WIFE (Scotch) want work on a farm. Thoroughly competent. Address KIRKLAND, Hamden, Del. Co., N. Y.

"Preston's Wyandotte Gazette."
Size 9 by 11. Finest 50-cent Poultry Book in the world. Contains a large chromo of Wyandottes and two other elegant chromos in six colors. Also a magnificent engraving of my new $500 Wyandotte House and a cut, and complete working plan of our two mammoth Incubator Buildings, each 120 feet long by 20 feet wide, and containing two large incubators with a capacity of 1,400 eggs, giving a correct idea of how we are making some quick and easy cash. Original cost of other engravings over $500. A complete guide on selecting, scouring and breeding Wyandottes, by B. N. Pierce, illustrated with his drawings of head, neck, wings, feathers, etc. Also all manner of brief, practical and valuable information. Large Wyandotte Chromos at 10 cents each. Circulars containing 17 illustrations free to all.

News of the Week.

HOME NEWS.

SATURDAY, Feb. 27, 1886.

THE Legislature of Indiana passed a law reducing the yearly rental of telephones to a maximum of $3 apiece. The company clapped on new charges (incidentals) and brought the matter before the courts. The State Supreme Court has just decided against it, and forbidden it to evade the law by making "extra" charges. Other States are expected to follow the example of Indiana in their dealings with the most rapacious, unscrupulous and extortionate monopoly in the Union.....The total amount to the credit of depositors in the Canadian Government savings banks on January 1, 1886, was $19,656,028—an increase of $2,188,496 since January 1, 1885.....It is likely that the treaty with the Sandwich Islands, which admits their sugar duty free, will be abrogated soon. Investigation proves that no one is benefited by it except Claus Spreckles and a few English and German capitalists in Hawaii, who have gone into sugar raising extensively and obtained their machinery and supplies from England and Germany.....The Knights of Labor are petitioning Congress to make liberal appropriations for public works, to give employment to the unemployed in a "time of depression.".....The Knights of Labor are supporting the strikers at the McCormick Reaper Works, Chicago. They will prevent shipments of goods from the works by rail or canal until the demand of the men for the discharge of non-union hands is complied with; and meanwhile the men (about 1,400) will be supported by contributions from all labor organizations, if it takes $1,000,000 and 12 months to secure the demanded concession. No violence is expected. .....Results due to the organization of labor are seen in the meeting of federated Western coal-miners at Columbus, Ohio; the success of the striking New York cigar-makers, and of the railroad hands in the Southwest, and, indeed, of labor strikers in many other parts of the country, as well as in the stubborn attitude of the striking coke-burners and the Western nail-makers, and also in the fact that most Eastern cotton mills will pay a 10 per cent. advance in wages in the Spring. .....The Educational Bill now before the Senate divides $75,000,000 between the various States and Territories in the next eight years, the amount received by each to be in proportion to the illiteracy of its inhabitants. The outlay is to be as follows: The first year, $7,000,000; the second year, $10,000,000; the third year, $15,000,000; the fourth year, $13,000,000; the fifth year, $11,000,000; the sixth year, $9,000,000; the seventh year, $7,000,000; and the eighth, $5,000,000. The object is to secure a Common School education for all children in the country, for the greater safety of the Republic. Each State must contribute from its own means as much as it gets every year from the General Government. The Southern States will get much the largest share in proportion to population..... It is likely that Congress will compel the land-grant railroads to maintain a telegraph service at reasonable rates, instead of making over their rights to the Western Union Telegraph Company, which makes extortionate local charges.....De Lesseps has arrived at Panama. M. Rousseau, special agent of the French Government, says one-sixth of the canal has been dug at an expense of $100,000,000. De Lesseps now asks for $120,000,000 to dig the other five-sixths and to cross the Chagres River—the most difficult part of the undertaking. Over 100,000 Frenchmen have invested in the speculation. The real cost must ultimately be enormous. To drop the thing now would be to have $100,000,000 lie useless in Panama mud, and to exasperate 100,000 Frenchmen and their kindred and friends against De Lesseps and the Government which authorized him to raise the money. The money is likely to remain in the mud, however....Geronimo refuses to surrender unconditionally to Gen. Crook, and went off, flying the white flag, with 95 "bucks."....A destructive fire in the business part of Wilmington, N. C., Sunday afternoon caused a loss of $500,000.....The five-foot gauge of almost every railroad south of the Ohio and Potomac Rivers, will be changed June 1, to correspond to the northern or standard gauge of four feet nine inches. Monday, May 31, and Tuesday, June 1, have been set apart for the work, which will extend over about 13,000 miles of railway..... .....While the New England fishermen are vigorously opposing a free fishery treaty with Canada, the Boston fish dealers are vigorously supporting it.....Mormon Cannon had no difficulty in securing bail for $45,000 at Salt Lake City, where he is to be tried for "unlawful cohabitation".....Congress has passed the bill appropriating $250,000 for a monument to Grant at Washington. No Congressional aid can now be expected for the monument in this city. The fund for this amounts only to $115,200..... ....The Government postal telegraph scheme is dead, the House Committee on post-offices having unanimously reported against it. .....Canada has appropriated $50,000 to support a marine patrol against the incursions of Yankee fishermen into Canadian waters. Trouble is anticipated..... ....The trouble between the Morgan Railroad and the Southern Pacific Railroad and their operatives have been settled. The men have made slight concessions in their demands, but have gained substantially what they asked. ....The Mallory line boycott still continues at Galveston.....The war against the Chinese continues systematically on the Pacific Coast. The plan is, first, to drive them from the country into the towns; then from the towns to the city of San Francisco. There the bitterness of the rest of the Coast against them is intensified, and when they are all driven into that "net," it is not at all unlikely that there will be a grand uprising of their foes, trouble certainly, massacre perhaps, and shipment to China very likely, unless the State and Federal forces intervene promptly and energetically.....

MESSRS. SMITHS, POWELL & LAMB, of Lakeside Stock Farm, Syracuse, N. Y., who own the largest herd of thoroughbred stock in the world, report that their dairyman, W. H. Wilson, Esq., finds Thatcher's Orange Butter Color the best he has ever used. Mfg. by H. D. Thatcher & Co., Potsdam, N. Y.—*Adv.*

H. J. BAKER & BRO., N. Y.

Gentlemen - I used your Potato Fertilizer this year on clayey loam soil, supplementing it with 5 cords of stable manure per acre, plowed under and putting your fertilizer in at the rate of 800 pounds per acre, in drills. The season was very favorable, and the yield of potatoes exceeded 350 bushels per acre. As for the quality, I have just been awarded six (6) first, and one (1) second premium at the Southington Fair, over 64 competitors. It is needless to add I am satisfied with the fertilizer.

R. J. BATES,

Sept. 30, 1885. West Cheshire, Conn.—*Adv.*

Crops & Markets.

SATURDAY, Feb. 27, 1886.

Hops, the "gamblers' crop," is a losing one this year. It costs from 14 cents to 15 cents a pound to raise them, and now prices here range from five to ten cents per pound. At this time last year, prices were from 14 cents to 17 cents per pound; in 1884 they were from 22 cents to 26 cents; in 1883, 95 cents to $1; and in 1882, from 25 cents to 27 cents. At other times in each year, prices were considerably higher. The high prices for the crop of 1882, which culminated at $1.25 per pound for choice hops, led a multitude of outsiders to engage in hop-raising, hence the present glut. California advanced from 7,000 bales in 1882 to 75,000 bales in 1884; New York from 100,000 in 1882 to over 150,000,000 in 1884. The increase was proportionate in the other great hop-growing States—Wisconsin, Michigan, Oregon and Vermont—and in Washington Territory the increase was greatest of all. Germany, Belgium, Australia and England all likewise added thousands of acres to their hop areas. Although prices were hardly remunerative last year, and are far "below cost" this year, growers cling to the business like topers to their beer. All see that a great curtailment of production is absolutely necessary to make the crop remunerative, and each wishes his neighbor would "plow up," and the reluctance of any to make a beginning of plowing up the whole or a great part of their hop yards, encourages the others to hold on, and little or nothing is done.

The supply of broom-corn in this country—and none is raised elsewhere for manufacturing purposes—is practically "cornered" just now by holders in Chicago, St. Louis and Nashville. The advance in the price of the stock has caused an advance of 50c. per dozen in the price of cheap and of $1 a dozen in that of first-quality brooms. It is estimated that there are 3,000 tons in Chicago, and from 2,000 to 3,000 tons in other places. A few weeks ago 400 tons were burned up and prices at once went up, too. The seven States producing the largest amount of broom-corn are, in their order: Illinois, Kansas, Missouri, New York, Nebraska, Ohio and Iowa. An average crop is not far from 15,000 tons.

Peanut planters in Lower Virginia are very despondent at the low prices of "goobers," which, they say, do not pay for the labor and expense of raising them and bringing them to market. Many this year will engage in tobacco growing.

Although two severe freezes had occurred in the winter wheat area since the opening of the year, yet down to last Friday very little damage had been done. On that day a very severe frost occurred in all the section after a spell of warm weather had melted the snow, and the ground was nearly everywhere frozen hard. For the next four or five weeks the condition of winter wheat will be the chief topic of interest in grain circles. There doesn't appear to be much frost in the ground, and farm work is likely to begin early. Already there is talk of spring seeding in Minnesota and Dakota, but little will be done there before early March.

In Liverpool wheat is ¾ of cent higher than a week ago. The decline in stocks of grain and flour in England between January 1, and February 13 was equivalent to 3,500,000 bushels of wheat; while there has been a total decline here, too, of 5,000,000 bushels, east of the Rockies; hence the advance in prices and increased orders for American wheat. In interior parts of Germany and France prices have also become stiffer. The opinion is growing stronger across the water, that prices for wheat have touched bottom, and must advance.

In home markets the great question has been: "Has Europe at last been forced to buy American wheat." Over 875,000 bushels are said to have been taken for exportation; but many question the fact. Prices went up early in the week, weakened later, and closed everywhere at an advance over last weak. This was highest at Chicago. Reports of damage to winter wheat by the present frigid spell are beginning to come in and tend to stiffen prices. This morning accounts of injury are gloomy from Kansas, and reports from several other States are also by no means bright. When the cold spell is succeeded by a thaw more will be known of the damage. In most places March is the hardest month on winter wheat. Indian corn has been irregular and lower on heavy receipts. No. 2 closed at 50¼c., against 54c., a week ago. Wheat flour is about 10c., higher per barrel, and production is increasing, but the market is duller at the advance. The market for oats has been steady at firm quotations, but inactive so far as the export trade is concerned. The visible supply of oats increased about 136,000 bushels last week.

In the Northwest the prices of wheat closed yesterday the same as a week ago, having fluctuated about 2c. per bushel during the week. The Minneapolis mills are running lively, having turned out 91,000 barrels of flour, and shipped 87,000,000, mostly for export at an advanced price. Receipts of wheat for the week at Minneapolis reached 575,000 bushels, and in spite of heavy grinding, the stock there and at St. Paul increased 20,000 bushels. The country elevators are reported to be drained to furnish this amount; but other reports say farmers are rapidly filling them again.

Last Saturday at New Orleans cotton reached its lowest point since the war, the lowest, in fact, for 38 years. The grade of middling dropped to 8 5-16. The lowest previous point on record was in 1878, when it dropped to 8¾.

The exports for the crop year are 280,000 bales short, owing to the great depression in trade in Europe; and the stocks at the various ports here are 200,000 bales larger and at the interior points 190,000 bales larger than a year ago, making about 1,500,000 bales held against 1,100,000 bales a year ago. Thus about $70,000,000 must be locked up in cotton, much of which has been loaned by banks, and a slight pressure to sell has caused the decline in price. Moreover, the last official report of the last crop shows that fears of a shortage were unfounded.

Wool prices are not as firm as they were, as takings are light, but prices are, as yet, unchanged. As stocks of common are very low, and the demand for fine fleeces is fair, it is believed that manufacturers will take liberally in the near future, thus promising a good spring trade.

Provisions have tended upward, but speculative influences have prevented any special display of strength. It is currently estimated that Chicago stocks of pork March 1 will show an increase of 25,000 barrels as compared with February 1. It is added that lard stocks will probably not increase, and that stocks of meats will be some 6,000,000 pounds larger than at the like date last year.

Rice is weak in the face of probable large supplies.

The following are the old and new rates on shipments of dressed meat and live stock from Chicago to New York:

	New rates. cents.	Old rates. cents.	Difference. cents.
Live cattle	35	25	10
Live sheep	45	25	20
Live hogs	30	30	....
Dressed beef	65	43½	21½
Dressed hogs	55	43½	11½
Dressed sheep	90	15	45

THOSE who have used the Boss ZINC and LEATHER COLLAR PADS and ANKLE BOOTS say they are the best and cheapest, because most durable. They will last a life-time. Sold by harness makers on 60 days' trial. DEXTER CURTIS, Madison, Wis.—*Adv.*

IF you grow Cauliflowers or Cabbages, send 20 cents in stamps to Francis Brill, Riverhead, Long Island, N. Y., and get his book with practical information in minute detail.—*Adv.*

"Brown's Bronchial Troches" are widely known as an admirable remedy for Bronchitis, Hoarseness, Coughs, and Throat troubles. *Sold in boxes.—Adv.*

MARKETS BY TELEGRAPH.

SATURDAY, February 27, 1885.

CHICAGO.—Compared with prices a week ago, "regular" wheat is 2⅛c. higher; No. 2 Chicago Spring, ½c. higher; Corn, ¼c. lower. Oats, ¼c. lower. Rye and barley unchanged. Pork, 35c. lower. Cattle, a trifle higher. Hogs, from 5c. to 10c. higher. Sheep, from 25c. to 75c. higher, according to the grade; but all are considerably higher.

WHEAT.—Sales ranged; February, 80⅝@81⅜c; March, 80¾@81¾c; May, 85⅞c@86⅜c.; No. 2 Spring, 80¾@82c; No. 3 Spring, at 71¼c. CORN.—Cash, 37⅛@37¾c; February, 37¼@37½c.; March, 37⅝@37½c; May, 40⅛@40⅞c. OATS—Dull sales ranged; Cash, at 30c; February, 29@29½c; March, 29@29⅜c.; May, 32⅛@32¾c. RYE—No. 2, 59c. BARLEY.—No 2, 60c. PORK.—Cash, $10 70@$10 75; February, $10 75@$10 95; March $10 75@@$10 95; May, at $10 85@$11 15. LARD.—Quiet and weak; sales ranged; Cash, at $5 95@$5 97½; March, at $5 97½@$6 00; May, $6 05@$6 07½. BULK MEATS.—Shoulders, at $3 95@$4 00; Short rib sides, $5 40@$5 45; Short Clear sides, $5 75@$5 85. "SMOKE Your MEAT"

With Krauser's Liquid Extract of Smoke.

It is a liquid; you wash it on; it will keep it in a well preserved condition and free from insects; it is much more pleasant to the taste than meat smoked in the old way; it is done in less time, no trouble, and less expense. There is no danger from fire or of being stolen, as you can hang it in a more secure place than a smokehouse. Send for circular.

For the Young.

A SHORT time ago I saw a cat that would jump through a hoop, play leap frog and perform a number of funny tricks. I think some of the Cousins will find lots of pleasure in training a cat. They will be proud enough to exhibit it. So I asked the Cousin who owns this trained cat to tell us how he went to work to teach it. I have no doubt we shall have hundreds of cats jumping about and performing all sorts of tricks before the Summer is over.

CAT TRAINING.

THE cat should be in good condition, well, sound of limb and not too fat; a cat that is too fat will not be able to jump. You want to teach her to know your voice; and to come at your call. Cruelty should never be used in training. Kindness alone will work with an animal. Before proceeding further I will describe my cat.

"Tom" is his name, he is exactly 13 inches high, 33½ inches from tip of his nose to tip of his tail, and weighs 13½ pounds. At times when he is not in condition he weighs on an average 14 pounds, and sometimes 14½ pounds. He can play leap-frog with anybody, play dead, will lie on his back, and one time he went to sleep on his back for 20 minutes. He can also jump through a hoop, and over your arm, will kiss you by a lap or two with his tongue on your face; but he is very partial with his kissing, as he bestows that favor only on the members of the family and a few of his most intimate cat friends. Cousins! will you believe it, Uncle Mark and Tom played leap-frog together.

To begin with, teach the cat at meal times. Place the meat and milk (fried liver and warm milk is the best food for a cat in training, on no account give any raw meat) on the floor in the usual place where the cat eats and forbid his touching it. If he goes to touch it hiss at him, and if he persists in touching it push him away, but do not strike or frighten him. This is enough training for beginning. Then after he has learned not to touch the food until you give permission, you can begin with some simple trick, such as jumping over your hand or a stick a few inches above the ground, But I must close now, and I will send some more facts some other time.

WILLARD SPRAGUE.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK: I forgot about the Club till I saw one of the RURALS yesterday. I have not been on the farm in over a year, so I have had no chance to read the RURALS. I have been in the store all this while. I am getting so I like it better than I ever did before. I go to school and attend to the store morning, noon and night. We are having quite a large school this Winter; we have a good teacher and about 35 scholars. We have a very good garden in the Spring. We planted potatoes, corn, beets, cabbage, radishes and peas. We had all the corn we wanted to eat, as we planted an early and a late kind.

Delaware Co., N. Y. HARRY K. LEWIS.

[We need some good merchants in the club. I hope you will surely make a good one. —U. M.]

DEAR UNCLE MARK: We all enjoy the Rural seeds very much. The flowers were lovely. The poppies were very nice. They were of different colors—pink, white, light red and dark red; also some were almost black, others were mixed purple and white. We have four very nice Catalpa trees raised from Rural seeds. This is the sixth year Papa has taken the RURAL. Papa says the Rural corn is too late for our climate. We have two cows, a calf, a horse and four pigs. Papa says this year I can raise some pop-corn and sell it and have the money for my own use. The snow is very deep. We have been having very cold weather. Whenever we have terrible storms here we always hear of worse storms in other parts of the country. My uncle, who has lived here 18 years, says there has not been any signs of a cyclone. I go half-a-mile to school. We live on the east coast of Lake Michigan, and about 90 miles from Milwaukee. This city is improving very fast. There are a number of saw mills and shingle mills. Salt was discovered last Summer at the depth of about 2,000 feet. One well is finished and barreling the salt at the rate of 350 barrels per day. There are three others in different stages of progression. Hoping that Uncle Mark will be pleased with my letter, I will close.

Your niece, EMMA F. THORN.

Luddington, Michigan.

DEAR UNCLE MARK: My name is Francis E. Gillice and I am eight years old, and my brother's name is James O. Gillice and he is six years old. We live ten miles from Clay Center (a town of 5,000 inhabitants). Our Papa has a farm of 160 acres, and three mules. Their names are Jin, Kit and Rip. We have one horse, his name is Napoleon. We have lots of chickens, and we are going to raise some more next Spring. Our Papa gave us some ground to plant last Spring and we planted some peanuts, but it was so dry that we did not get many. We had no rain from the 20th of May till the 20th of July and then from the first of August till nearly the last of September but very little, though they had plenty of rain about ten miles from here. We have been having a big snowstorm, the roads are all blocked up, but it is nice weather now. Yours truly,

Clay Center, Kansas. GILLICE BROS.

DEAR UNCLE MARK: I am a girl of 11 years old, so I would like to be mustered in with the rest of the Cousins. We went to school last Summer, and we expect to go this Summer. George, my oldest brother, killed two deer and two turkeys. During that cold spell we had it four degrees below zero, but now we have nice weather. Most all the land here is prairie. I can make hair-flowers. I tried to make feather-flowers, but I can't yet, but as I am young yet, I guess I can learn. If you ever come in this part of the country, you must come here and see what nice biscuit I can make. I do very near all the cooking and washing. I have one quilt pieced and am piecing another one. I do all the milking. We raised a good many peanuts last year. We are going to plant a good many this year. When we first came down here the wolves would howl. We haven't heard any of them for a long time. The country is settling up very fast. We live seven miles from the railroad. Pa has a good many flowers in his green-house. I had a few flowers last year but the chickens scratched them all up before any of them bloomed.

Stuttgart, Ark. MARY ELIZABETH PRACOP.

[What a little worker you are! I am so fond of good biscuits that I would willingly travel quite a distance to get some. I am glad you never invited the wolves in to supper. I don't like such visitors.—U. M.]

CONSUMPTIVES NEED NEVER DESPAIR.

There Is a Cure at Hand.

PRETTY bold words! Yet warranted by facts. You naturally ask, "What is this cure?" The answer is CANNABIS SATIVA, the great East India Consumption Cure.

"And, pray, what is that?" you ask. There are two ways of telling you. One is by using great big scientific words, which not one in a thousand can understand. The other is by plain, straightforward speech, which no one can mistake. Our judgment is that the latter will be best.

Cannabis Sativa is not a human invention. God made it. When nature afflicts she seems cruel. But she is really kind, because she gives a remedy for every ill. The great thing is to get at it. Now, we have but lately gotten at Cannabis Sativa. It isn't a bit new. It came from the East Indies—the cradle of the human race. It has been used there for thousands of years.

We can do better with it than those old-world folks. We can extract, compound and preserve it better. We can prepare it by a formula of our own so that it will surely reach the seat of consumption and all those diseases for which it is a specific. We give it directive force and energy in the system—make it a remedy. That is our secret, and in this respect only it is new.

"Why and how does it cure consumption?" A grave question. Consumption is not a disease in itself. It is only a result of other diseases. Given, loss of appetite, stomach failure, liver congestion, constipated bowels, diarrhœa, weakness, nightsweats, nervous prostration, chills and fever—what have you got? Nothing but a set of diseases which breed consumption. They are sure forerunners of it—symptoms as the doctors say. The cough isn't consumption. It only tells you that part or all of the other diseases are becoming localized in the lungs.

The specific virtue of Cannabis Sativa is just here. It is the natural corrective of these very diseases or conditions which lead to and foster consumption. It cures the dread disease by curing its causes. And this is the treatment of modern science. Doctors—we mean the good ones—have all come to this.

Under treatment for consumption with Cannabis Sativa the provoking disease begins to back out, one by one. The stomach function is resumed; the liver begins to work; appetite returns; night-sweats cease; the blood circulates freely and purely; the cough diminishes; the man feels a man again. Only this kind of a cure is rational and sure. The entire secret is in this little nut-shell. The Cannabis Sativa Remedy cures consumption by breaking up and scattering the consumptive condition in the system.

A word of verification from others. Dr. J. G. Horton, of Whitesville, Alleghany County, N. Y., says of a patient, Mr. F. J. Baker: "Have practiced medicine for thirty years and acknowledge I never saw a more marked effect from any medicine than from this remedy—Cannabis Sativa. I am sure Mr. Baker would have been in his grave by this time but for your East India remedy. He had a very bad cough, profuse expectorations, haggard countenance, no appetite—in fact did not think he could live more than a few weeks. He can now walk three or four miles; has good appetite, and is in every respect greatly improved.

John M. Fisher, of Downes, McLean County, Ill., says: "I suffered for 18 months with cough, blood-spitting, difficult breathing, pain in lungs, palpitation, want of appetite, loss of sleep, and break-up of entire system. All remedies failed and the doctors gave me up. I lost hope, but finally tried Cannabis Sativa. Believe I am entirely well. Have not been so well in five years."

Mrs. M. McDowel, writing from Delvalle, Texas, says: "Had consumption for two years. Have taken Cannabis Sativa for some time and am now well. It is a blessing to the suffering."

Mrs. M. E. Collins, writes from Caldwell, Sumner County, Kan.: "Had enlarged liver; terrible cough; hemorrhage of lungs; pain in side, and constipation. Doctors said I must go to California in order to live. Heard of Cannabis Sativa through Rev. Mr. Morrin. Began to treat myself with it. Am now free from cough and all distressing symptoms. Walk half a mile to church and feel as well as I ever did."

D. O. Folsom, of Almont, Mich., was lifted from a consumptive's death-bed by Cannabis Sativa, and writes thankfully to say that "he is now in good health, weighs 180 pounds, and considers the Cannabis Sativa Remedy superior to all other consumption cures."

The Cannabis Sativa Remedy does its work quietly and naturally. There is nothing startling or miraculous about its cures; yet some of them are so remarkable, so unexpected, so contrary to the despondent opinions of patients and their doctors, that they seem almost in the nature of miracles. Thus, Charles F. Lottinville, postmaster and druggist, of Papineau, Ill., a man who knows all about medicines, and who had excellent opportunity to judge of his brother's case, writes: "My brother had been under the treatment of four different physicians, all of whom had given him up. His legs, arms and hands were swollen and paralyzed. He coughed and raised continually could not rest a minute in bed and had not had a wink of sound sleep in six months. His mental condition was as bad as his physical. for a wife and large family depended on him for support. He made his will and arranged his affairs in anticipation of speedy death. Your Cannabis Sativa Remedy was brought to his notice. As a last resort, and like a drowning man catching at a straw, he let me order a package. It now seems *as if a miracle had been wrought in his favor, and humanly speaking it was one.* He is now up and doing work about the house and barn. He has recovered his former weight and looks better than he has for the past three years. Since his cure I have ordered the Remedy for many persons, with good results."

Notice, if you please, the high character of all those who testify to the merits of the Cannabis Sativa Remedy. They are people who understand their cases and are careful of what they say. Druggists and doctors speak as positively as anybody else.

Consumption takes on a more decided form, and is harder to handle in the higher latitudes where the climate is severe. Yet, even there the Cannabis Sativa Remedy controls and cures it as easily as in Southern climes. Mrs. J. C. Callard, of 58 Oxford Street, Toronto, writes: "Six months ago my throat and lungs were so bad I could not speak above a whisper and my limbs were swollen. I used the Cannabis Sativa Remedy, but did not need to use the last package you sent me. I now feel perfectly well and am a wonder to myself. I talk and sing as before, and pray that God may bless you, for you restored me to health."

John Dier, Jr., of Westport, Ont., writes: "My son was given up by three doctors. He was reduced from 150 to 124 pounds. I spent hundreds of dollars for doctors before I got your receipt. I could see a change in three days after beginning your Remedy. After using five packages he is stronger than ever before. In this place his recovery is regarded as a miracle."

Not only that, but it cures are real and permanent. There was Robert A. Hamilton, a humberman, living near Peterboro, Ont. He contracted cold in the pineries and got as far as Peterboro, where he went to bed with inflamed and abscessed lungs and lingered for seven months under the care of four physicians, who at last gave him up to die. He was taken on his bed to his home, a distance of 15 miles, and there had the attention of three physicians, who also gave him up. The abscessed lung discharged fearfully. He made his will and waited for death. Contrary to all advice he resolved to try the Cannabis Sativa Remedy as a last resort. He writes: "Began to use it in February, 1876. By May, after using three or four packages, I was able to get out of bed alone for the first time in three years and three months. In seven months after leaving my bed I was smart, healthy and without pain, ache or any symptoms of disease. Have since been able to make a good living. Last Fall I cradled and drew in grain." For the last seven years Mr. Hamilton has not known a sick-day. The cure was permanent. He had previously spent $1,400 for treatment. The Cannabis Sativa cost him $20.

G. M. Luther, Justice of the Peace, of Clarkton, Mo., suffered with consumption for two years. He had a cough, hemorrhages, wasting; had tried everything, even travel, and was at last given up by his physicians. As a forlorn hope, he tried Cannabis Sativa. To his surprise he improved, got well, and after waiting till fully assured that his cure was permanent, he wrote: "Hemorrhages all gone and lungs sound. Can do as much hard work as any man in my neighborhood. Weigh 168 pounds—as much as I ever did. Had spent $300 for medical aid. Twenty dollars' worth of your remedy made me a sound man. Mr. Luther writes again in 1885 to say that he has not had a day's sickness since his cure in 1882.

These are only a few of many similar testimonials to the curative properties of Cannabis Sativa, the great East India Consumption Cure. And yet, a few years ago it was almost unknown in this country. Its use was begun in the narrow circle of a regular physician's practice, and thus far its introduction to the public has been mainly through those who have been cured themselves and voluntarily recommended it to others.

I now propose to give wider publicity to its virtues, since they have been so fully proved, and to this end have prepared a pamphlet whose contents are of special interest to all sufferers from consumption, cough, catarrh, asthma add kidney diseases. It will be mailed free on application. Address W. A. NOYES, 149 Powers Block, Rochester, N. Y.

PERSONALS.

QUEEN VICTORIA, as she appeared when opening Parliament recently, is described as "dumpy of form and vinegary of face."

WHITTIER says that yellow is his favorite color, because he can always distinguish it, while the red apples and green leaves on a tree all look alike to him, as far as color is concerned.

GENERAL HANCOCK, it is said, leaves no estate. He was a generous liver and a benevolent man, and lived up to his salary. A fund being raised for his wife already amounts to about $35,000.

IT is asserted that all the money Charles Stewart Parnell has been able to raise has been given to the cause he represents, and that the estates he is reputed to own have long since been mortgaged in the same interest to their full value.

THOMAS A. EDISON is thought to have cleared two millions out of his electric inventions. He has purchased a rural residence for $400,000 cash, for his new bride. In appearance he is a clean-shaven man, youthful in face, and nearly deaf.

"JEFF" DAVIS is now in fairly good health and lives at Beauvoir, which place only furnishes vegetables and fruit for home consumption, and has rather a dilapidated appearance. He is described as a tall, slender, erect man, white-haired, walking with a cane, but having no indication of decay or senility.

MRS. JAY GOULD is rather short in stature, though plump and comely. Her face denotes intelligence, and was doubtless very pretty when she was young. She is thoroughly domestic in her tastes, and has devoted her time to her home and children. She spends two hours a day with her three small boys, and carefully inspects all the books they read.

POTATOES WITH THE MAPES MANURES.

Not a Single Hollow or Decayed Potato—315 Bushels per Acre—No Stable Manure used—Only the Mapes.

JOSIAH HAWKINS, the well-known Seed-Grower, Southport, Conn., December 28d, 1885, reports:
Crop—Potatoes, "Dakota Red." Soil—Light, thin and gravelly. Time of Planting—April 25th.
Fertilizer applied—1,200 lbs. of Mapes Potato Manure per acre, sown broadcast and bushed in at time of planting. No other manure nor fertilizer used.
Cultivation—Hoed once and plowed three times.
Yield—Dug them the middle of September, they yielded 445 bushels of very large, handsome potatoes per acre.
Quality—Not a single hollow or decayed one. Quality and looks much like the "Early Rose," when they were first introduced. I am selling all the time for seed. Old farmers say they never saw such fine potatoes. I have 2,500 bushels of them. The quality of potatoes is of the greatest importance with me—and I generally grow eighteen acres.
Remarks—Last year, 1884, the yield of potatoes of the common varieties, upon the same ground with stable manure, was 115 bushels per acre. I have used many of the fertilizers offered for sale, and have found that it pays me well to use your fertilizers, and so say my neighbors. I have seen the analyses of your fertilizers repeatedly by our own and other State Boards (Experiment Stations) and I am fully convinced that all who want reliable, lasting fertilizers should have the Mapes. Your Corn and other Fertilizers have given great satisfaction.

BURPEE'S NEW SEEDS FOR 1886

RARE NOVELTIES IN CHOICE VEGETABLES

In the past ten years we have introduced more **successful novelties of real value** in Vegetable Seeds, than any other Seedsmen in America. This is explained by the fact that we make the *most thorough and exhaustive trials* of all varieties. By competitive trials, year after year, we detect any imposition of old sorts under new names. We are also enabled to discard all varieties of little account, and to work up, by critical selection, those that promise to be of value. Below we describe briefly our *LEADING NOVELTIES AND SPECIALTIES* for **1886,** all of which we can recommend as **THE VERY BEST** of their class, and **SURE TO GIVE SATISFACTION to the most critical Gardeners.** The varieties marked with a star (★) are introduced by us for the first time this year, and *cannot be obtained from any other Seedsmen.* The stock of Seed is limited, and we prefer to sell direct to planters, who will give us the credit of introducing these **RARE & VALUABLE NOVELTIES.**

NEW GIANT PERA CUCUMBER.
One-third Natural Size.

★ **NEW GIANT PERA CUCUMBER.**—Imported 3 years ago from Peru, and grown by us each year since, this is *undoubtedly the finest cucumber for table use ever introduced.* As shown in the illustration, the cucumbers grow straight and smooth, from *18 to 22 inches long,* by *3¼ to 4½ inches in diameter.* We have grown them to weigh **over 6 pounds** each. The flesh is entirely white, very clear, *peculiarly crisp, tender and brittle,* with *very few seeds.* No other variety grows so large or handsome while none other has so delicious a flavor. The Giant Pera is most prolific, the cucumbers set early, near the hill, and very close together. Per pkt. 15 cents; 4 pkts. for 50 cents.

★ **THE TURNER HYBRID TOMATO.**—Entirely distinct from all known varieties in foliage. It is **enormously productive,** the fruit is *extra large* in size and *remarkably solid.* The average weight of the tomatoes is 12 to 18 ounces, but many specimens reach 22 to 24 ounces. They ripen up evenly, of a deep brilliant red, and are entirely free from core. They make *the handsomest sliced tomatoes,* and are *unequaled in fine flavor.* Per pkt. 20 cts.; 3 pkts. for 50 cts.

★ **THE TOMHANNOCK LETTUCE.**—A very distinct novelty; forms a beautiful plant, ten to twelve inches high by nine to ten inches across; the outer leaves are handsomely wrinkled with edges of a glossy reddish bronze. The inner leaves are almost white, wonderfully crisp, and pleasant to the taste, *surpassing in tenderness* all other known varieties. It grows quickly; is ready to cut early, and *remains for weeks* of the finest quality. Pkt. 15 cts; 4 pkts. for 50 cts.

★ **EMERALD GEM MELON.**—*Extra early, very prolific* and *decidedly the sweetest of all melons.* Entirely unlike any other melon—see colored plate in our catalogue. Skin smooth of a deep emerald-green color. The flesh is of a suffused salmon, *sweet* and *luscious* beyond description. Per pkt, 25 cents; 5 pkts. for $1.00.

NEW MAMMOTH POMPEII ONION.—Last year several onions were grown to weigh **over 3 lbs. each,** and one onion attained the enormous weight of **5 lbs. 1 oz.**—the largest on record. We offer $5.00 cash for the two largest onions raised this year. The skin is very thin, of a beautiful reddish-brown; the flesh is pure white, fine grained, mild and pleasant. Per pkt. 15 cts.; oz. 35 cts.; ¼ lb. $1.00; per lb. $3.50.

GOLDEN QUEEN TOMATO.—The tomatoes are of good size, handsome, round shape, very smooth, and ripen up evenly. They mature early and are very productive; excellent for slicing, the handsome yellow slices making a beautiful contrast with red tomatoes. Per packet 10 cents; ounce 40 cents.

★ **BURPEE'S SWEET CORN.**—A large, sweet, new main-crop variety. It matures two to three weeks earlier than Stowell's Evergreen. The ears are fully as large, grain as deep and quality much superior. It is *sweeter* and *finer flavored* than any other variety; the kernels have a very thin skin and remain soft and milky even when old. Very productive. Per packet 10 cts.; per pint 45 cents, postpaid.

★ **EARLIEST CARMINE RADISH.**—The newest and best of all the extra early radishes; olive-shaped, with smooth skin of rich carmine. The foliage is *extremely small.* It takes only 20 to 22 days to form. Per pkt. 10c.; oz. 20c.; ¼ lb. 60c.; per lb. $2.00.

★ **WAX DATE DWARF BEAN.**—Our field of this superb new bean appeared like *one mass of gold,* the rich, long, golden yellow pods being produced so profusely. The pods matured *earlier* and were ready to market before any others. The pods are 6 to 6½ inches in length, full and fleshy. Per pkt. 15 cents; pint 60 cents.

★ **LAXTON'S EVOLUTION PEA.**—The vines are of strong growth, 3 to 3½ feet high, and *bear continuously* an abundant crop of magnificent large pods, each containing 8 to 12 twelve wrinkled peas of remarkable size and unusually rich and sugary flavor. It has been appropriately called **"The Everlasting Bearer,"** as from a single sowing it continues to bear as long as 3 months. We have had many letters in praise of its *great productiveness, the extra large size of pods* and the *delicious quality* of the peas. Per large pkt. 20 cts.; 3 pkts. for 50 cts.; pt. 60 cts.; per qt. $1.00, postpaid.

★ **GOLDEN WAX FLAGEOLET POLE BEAN.**—The pods are 7½ to 8 inches long; rich golden-yellow; fleshy; *entirely free from strings* and of superb quality. The vines, while still young, produce the long, handsome pods, in great abundance *earlier* than any other pole bean and *continue* to grow and *bear profusely* the *entire season.* Per pkt. 20 cts.; 3 pkts. for 50 cts., postpaid.

BURPEE'S SHORT-STEM DRUMHEAD CABBAGE.—Decidedly the best of all Drumhead Cabbages. It has a very short stem and the heads are *very hard, solid,* and attain 20 or 30 lbs. weight. Per pkt. 10 cts.; oz. 35 cts.; per lb. $3.50.

BURPEE'S MAMMOTH IRONCLAD WATERMELON.—Named and introduced by us. Of *extra large size,* oblong shape; striped. The flesh, very solid, dainty red, of rich, sugary flavor. The ripe melons will keep in fine condition for one month. Per packet 10 cts; ounce 15 cts.; ¼ pound 40 cts.; per pound $1.25.

MAMMOTH SILVER KING ONION.—This famous Onion, first introduced by us in 1884, *grows larger than any other variety in cultivation,* excepting only the New Mammoth Pompeii. Our two prize onions the past season reached the enormous weight of **4 3-4 lbs.** and **4 lbs. 2 oz.**—see reports in our catalogue and also cash prizes for 1886. Per pkt, 10c.; oz. 35c.; ¼ oz. 60c.; ¼ lb. $1.00; per lb. $3.50.

GOLDEN SELF-BLANCHING CELERY.—Decidedly *the best celery in cultivation.* Of compact growth, solid, crisp, brittle and of delicious flavor. Requires no banking up. Per pkt. 15 cts.; oz. 40 cts.; ¼ lb. $1.25; per lb. $4.50.

THE CORY CORN.—This new Sweet Corn from Rhode Island is *five to ten days earlier than any other variety.* The ears are large and handsome, sweet and of fine quality. Per packet 15 cts; pint 35 cts.; quart 60 cts., postpaid.

BURPEE'S RUBY KING PEPPER.—The best mild red pepper; fruits very large, thick, of a beautiful ruby-red. Per pkt. 10 cts; oz. 35 cts.

QUEEN'S GOLDEN POP-CORN.—Ahead of all others in yield, size and color—being of a delicate golden yellow. Above all is its exceeding tenderness when popped. Per pkt. 10 cts.; pint 40 cts., postpaid.

GOLDEN HONEY WATERMELON.—The flesh is a rich, golden-yellow color, sweet and rich flavor, even to the rind—a novel attraction on the dinner-table—of good size, round shape, with striped skin. Per packet 10 cts.

☞ We will send any of the above new and choice seeds **by mail, postpaid,** upon receipt of price in stamps.

SPECIAL OFFER.

Purchasers may select one packet each of **any five varieties for 60 cents, or any ten varieties for $1.00, or we will send the entire assortment for $1.70 (85 2c. stamps). Make your own selection** from this advertisement, send P. O. Order, Postal note or registered letter and you will receive the seeds, post-paid, by return mail. We accept **POSTAGE STAMPS the same as Cash. We guarantee entire satisfaction to every purchaser. BURPEE'S SEEDS** have a National reputation and are **warranted first-class** in every respect. The uniform success of our Novelties the past ten years is ample guarantee that we do not recommend new varieties beyond their **real merits.** Wide awake, progressive planters are always eager to try **Novelties of positive value,** and we are sure that none will be disappointed in any of the above. We have an established trade with more than one hundred thousand of the best planters and market gardeners in America which does not depend upon newspaper advertising. We place this advertisement thus prominently before the public in order that thousands of new customers may also have an opportunity to test **Burpee's Novelties. ORDER NOW OR PRESERVE THIS ADVERTISEMENT, AS IT POSITIVELY WILL NOT APPEAR AGAIN IN THIS PAPER.** ☞ If you have not already received a copy, ask for **BURPEE'S FARM ANNUAL** for **1886,** a handsome book of 128 pages, hundreds of illustrations, two colored plates and *honest descriptions* of all the **BEST** Garden, Farm and Flower Seeds, Bulbs, Plants, Thoroughbred Stock and Fancy Poultry. **OUR SEED WAREHOUSE,** the largest in Philadelphia, is located at **Nos. 475 and 477 North Fifth Street,** and **Nos. 476 and 478 York Ave.,** but all letters reach us safely if addressed **W. ATLEE BURPEE & CO., PHILADELPHIA, PA.**

N. B. **A COMPLETE VEGETABLE GARDEN FOR $1.00.** In connection with this advertisement we would call attention to **Burpee's Special Dollar Collection for 1886 of 30 packets Choice Vegetable Seeds.** Some years ago we originated the system of offering a collection of the best Garden Seeds at a price very much below the usual retail rates. We do this for the express purpose of inducing new customers to try our seeds, knowing that they will then become regular patrons. We give below a list of the seeds contained in **Burpee's Dollar Collection for 1886,** and we are sure that in no other way can so complete a vegetable garden be had for the money. **New Giant Pera Cucumber.** Now introduced for the first time. *See illustration.* **Jersey Wakefield Cabbage. Burpee's Sure-head Cabbage.** Celebrated as *all head* and always *sure to head.* **Burpee's Cuban Queen Watermelon.** Our own original strain, from which the prize melon, weighing 111 pounds, was raised. **Dewing's Improved Blood Beet. Yellow Danvers Onion. Burpee's Netted Gem Melon.** The best early, green-fleshed melon; very sweet. **White Pineapple Squash.** Of fine quality, summer and winter. **Burpee's Cardinal Tomato.** Far superior to Favorite. **French Breakfast Radish. Burpee's Superb Heat-Resisting Lettuce.** Of upright growth. **Hollow Crown Parsnip. Green Prolific Cucumber. Burpee's Improved Long Orange Carrot. Red Top White Globe Turnip. Wonder of France Bean. Champion of England Pea. Amber Cream Sweet Corn. Large Red Globe Onion. Imperial Dwarf Large-Ribbed Celery. Long Smooth Blood Beet. German Filderkraut Cabbage. Golden Globe Summer Radish. Burpee's New Silver Ball Lettuce.** Beautiful silvery white, rich and tender. **Hubbard Squash. Yellow Giant Rocca Onion. Extra Early Munich Turnip. Essex Hybrid Tomato. Long White Salsify. Montreal Green Nutmeg Melon.**—This, the largest of all Musk Melons, was first introduced by us and it was from our seed that the 39 1-2 pound melon was raised. **All the above are full, regular-sized packets, with illustrations of the vegetables and directions for cultivation printed on each.**

FOR ONE DOLLAR we will send the above splendid collection of **new and choice vegetable seeds,** postpaid, to any address, or **three complete collections,** ordered at one time, for **$2.50.** This is the most liberal offer ever made. **Order early!** Make up a Club.

IMPORTANT! To all who order any seeds from this advertisement to the value of $1.00 or more and *name this paper* we will send *free* a 25-cent packet of 100 seeds of the *superb large flowering* **New Imperial German Pansies,** fifty beautiful colors mixed. ☞ We will send one packet each of all the seeds named in this entire advertisement (in all fifty packets) postpaid by mail to any address for $2.50. Please show this advertisement to your friends and get them to order with you. When ordering ask for **Burpee's Farm Annual for 1886.** Address all orders to

W. ATLEE BURPEE & CO., PHILADELPHIA, PENNA.

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XLV. No. 1885. NEW YORK, MARCH 13, 1886. PRICE FIVE CENTS. $2.00 PER YEAR.

Entered according to Act of Congress, in the year 1886, by the Rural New-Yorker in the office of the Librarian of Congress at Washington.

Horseman.

ENGLISH SHIRE STALLION.

THE stallion Garfit, shown at Fig. 110, is a fine young specimen of the Shire horse, a breed highly distinguished in England for its many excellent qualities; but about which, until quite lately, very little was known to the general public in this country. Recently, however, several large importations of choice specimens have been made, and a stud-book of Shire horses has been started to co-operate with that of England in keeping the breed pure. In view of the many merits of these horses, of their high standing in their original home, and of the enterprise and judgment of the men who are importing them, it is not at all unlikely that Shire horses will, ere long, take rank in this country with the Normans and Clydesdales.

Garfit is a bright bay with three white legs and a blaze on the face. He was foaled in 1882, and bred by John Garfit, a well known breeder of Nottinghamshire, England. He was imported in March 1885 by Messrs Galbraith Bros., Janesville, Wis. At present, at the age of 3½ years, he weighs 1,900 pounds, and when mature will probably turn the scales at 2,050 pounds in good working condition. He is a finely proportioned, symmetrical, animal with fine bone and hair, and promises to be a success in the show ring and the stud. His sire was Don Carlos (2416) a Shire horse well known in England, whose pedigree traces back through the best strains of Shire blood, to the famous Bassingham Brown horse foaled about the year 1790. His dam is by Lincolnshire Lad (1196), famous as the sire of many noted brood mares.

ENGLISH SHIRE STALLION, "GARFIT," 3093. Fig. 110.

Sheep Husbandry.

Notes from the Rural's W. N. Y. Farm

LAMB RAISING AND FEEDING LAMBS.

HOW OFTEN TO FEED

is a question greatly perplexing to the novice, and not fully considered by the majority of feeders. While it is a good feeder of mature sheep who adds 20 per cent. to their weight, and this mostly in fat, it is a very poor lamb feeder who does not add 50 per cent. to their weight, and this largely in muscle, and no one must expect rapid increase of carcass without a corresponding consumption of food; nor is it possible to crowd a sufficient quantity of food into the stomach at one or two feeds without overloading it, and producing indigestion. It is an old proverb that "Lambs eat always," and its truth can be easily attested by watching a bunch running at pasture; no matter how good the feed, they never cease eating except for a few hours in the extreme heat of the day, or when the flies are very annoying.

It is no wonder that lambs fed, as is the too prevalent custom, with hay once, or, at most, twice a day, and a run at the straw-stack for the rest, instead of gaining all Winter, come through "spring-poor" and many fail to come through at all. There is no stock on the farm that should be so generously fed as the lambs, even when only intended for stores, and doubly so when it is desired to render them fit for the market. Another point not to be forgotten is that lambs are very cleanly in their habits and we must follow the rule of feeding a

LITTLE AND OFTEN,

if we would have them eat the largest proportion of what we give them. If the fodder is thrown upon the ground, and they run over it but once or twice, they will not eat more of it, even though suffering from hunger. The same is true when it is put in large quantities into their racks, and they have "nosed" it over and breathed into it for a short time. The better way then is to put only such an amount of fodder into their racks at once as they will eat in a short time, and feed the oftener, and at each time of feeding the racks and troughs should be thoroughly cleaned.

FEED A VARIETY.

Lambs will be found to be quite "human" in their tastes. They love a variety, and not only do they love it, but it is very necessary for their most profitable growth. The various kinds of forage and grains used should be selected with a view to supplying the elements of growth, and beyond this they should be varied so as to keep the lambs always with a keen appetite, ready to eat quickly whatever is given them. This is best accomplished, not by mixing the different kinds of forage together, but by feeding each at a separate time, and also by varying somewhat from day to day; and in the grain even, it will pay to add occasionally a new ingredient, or to give a feed of some other grain.

SHEARING PAID HIM.

Our good friend Green, of Western New York, writes us: "I had my barns filled with feeding lambs that were uneasy, constantly rubbing and biting themselves so much that I feared they had the scab. But as they were in warm quarters, I mustered courage to follow your advice in shearing them. In taking off their fleeces, I took off all the ticks, and having thus removed the cause, the rubbing and biting ceased. Never before have my lambs done so well. Hereafter I will not question what you say." We hope no one will for a moment think that any parts of these notes are mere theory or are written for effect. They are only a plain recital of what we do and the manner in which we treat our stock, and which, all things considered, we believe to be the best.

SHEEP TICKS.

Another friend, J. T. Baynes, of Tioga Co., Pa., wishes to know what to do with a lot of ewes which are to drop lambs about April 6th, as it will then be too cold to shear them. We have tried many remedies for sheep ticks, but have never found one more effectual or easier to apply than the following:—Mix crude petroleum or, in absence of that, kerosene, with lard, lard oil or, better still, with the grease fried out of pork, in the proportion of two parts of kerosene to three parts of the other grease. Whatever is used, have the mixture as hot as it can be without burning the sheep. This should be applied to the animal by having one person part the wool along the back and sides of the neck and another pour in the mixture from the spout of an old-fashioned lamp filler. It is also advisable to occasionally give the sheep sulphur mixed with their salt, one pound to six of salt.

SHOULD BREEDING EWES BE HOUSED

constantly, or allowed to run at large in the fields, having a warm, close barn, nights? asks the same friend. It is far better to let them run out constantly, having only an open shed for protection against rains, than to put them into warm quarters a part of the time and turn them out-of-doors the remainder. Sheep have close, warm fleeces, which enable them to withstand dry cold very well; but these they must wear constantly, and housing them warmly a part of the time, and turning them out the rest is much like a man's wearing a heavy over-coat in the house, and going out into the cold without change or additional clothing—he would be sure to have a constant cold, and so will the sheep. It is also better to have them out constantly than in ill-ventilated barns; but when they can be confined in roomy, well-ventilated quarters, we should certainly advise it, as it will save much feed and be conducive to the health both of mothers and offspring. This we say after much experience of the different methods.

HOUSING ALL STOCK PAYS.

We have, this Winter, in one barn, 30 cows that are turned out twice each day so that the stables may be cleaned and they can get water. In another barn we have 26 cows that never go out, being watered inside. They are all well cared for, and have all of the hay, roots, rich foods and straw they care to eat. While those that never go out will drink about the same amount of water each day, those turned out to drink will, on very cold days, not drink scarcely any, and then the next day will drink till they "are ready to burst." The result is that the cows constantly housed give the most milk, which makes the most butter, and they are looking the best and taking on flesh most rapidly. Surely there is much yet to be learnt in the care of stock.

THERE are many useful things for the lawn and garden that may be made in the Winter; and among them what I propose to call summer and winter tubs, as they may be used as ornamental objects on the lawn or in the door-yard in both seasons. I intend these directions for those who, for any reason whatever, do not find it convenient to use the expensive terra-cotta vase. There are very few who can not afford to purchase a few oak butter firkins, which can be easily converted into effective rustic tubs for plants of various kinds. These tubs can usually be bought at almost any country store at a merely nominal price.

* * *

The first thing to do is to get rid of the grease, which is easily done by the use of pot-ash and hot water. Next, something must be done to make the tub durable. The tub itself will last many years, but the wooden hoops will rot, and the tub will then tumble to pieces. Something, therefore must be added to take the place of the wooden hoops. Iron hoops may he used: but it is cheaper and about as good to use No. 6 or 8 galvanized wire. Bore a couple of gimlet holes an inch or so from the top, and an inch apart. One hole should be a trifle lower that the other, to allow the ends of the wire to pass each other. Bend an inch of the end of the wire at a right angle; put the bent end into the left-hand hole, run the wire around the tub, and cut it off at the proper length, allowing for the bend at the end. Pull the wires up tight, and mark the place for the bend. This end of the wire, after being bent, is put into the right-hand hole, and hammered home. Even up the wire all around the tub, and drive a few small nails under it to keep it from slipping down. Put another wire near the bottom, and, if necessary, one in the middle also. It will not be necessary to remove the wooden hoops. Next bore half a dozen inch holes in the bottom, and the tub will be ready for use.

* * *

The tub may be painted almost any color but red, if wished; but I give them a rustic finish which I like much better than paint. I sometimes use bark to cover the sides, but small sticks of red cedar please me better, and are more lasting. The cedar sticks are nailed on vertically. For a finish I usually nail a band of fir cones around the top and bottom. The tubs, when in use, should be raised above the ground, on a flat stone or a rustic stand, or the stump of a tree; in short, wherever they will look well.

* * *

The tubs should be filled with soil suited to the plants to be grown in them. For zonal pelargoniums, petunias, verbenas, coleus, lysimachia (Moneywort) and similar plants, it should be a rich garden soil. For succulent plants, such as sedums, sempervivums, portulacas, etc., a light, sandy soil, without manure, is best. To prevent the soil from becoming soddened during long and heavy rains, about three inches of drainage should be placed in the bottom of the tub. Broken charcoal, potsherds, or small stones will answer the purpose.

* * *

Sedums and sempervivums are hardy, and may be left out all Winter; and this is why I call the tubs winter tubs. There are several of them just under the window where I am writing. They look so cheery during the dreariest days of Winter, that I should feel sad without them. The sedum, when fully established, will droop a foot or more over the side of the tub, producing a charming effect when the ground is covered with snow. The sedum may be cut into pieces from half to an inch long, and dibbled in two or three inches apart all over the surface. It will soon root and cover the ground. The proper sedums for tubs for winter effect are S. acre and S. acre variegatum, the latter having a golden hue when making its new growth. Any of the hardy sempervivums are suitable, such as S. hirtum (soboliferum), S. tectorum, S. arachnoideum, S. Californicum, etc., the last named one of the most beautiful of all. The sempervivums may be placed from six to twelve inches apart, according to the number you have on hand. In a few years they will be piled on each other in a solid mass, which should not be broken up. The sedums and sempervivums are very pretty when in flower, and are interesting at all times.

* * *

Lysimachia nummularia (Moneywort) is also hardy, but dies to the ground during Winter. It is a pretty plant for a tub, however, and is showy when in flower, while its long, pendent shoots form a graceful drapery for the tub. Short slips will grow readily. L. nummularia aurea, with golden-yellow foliage, is very handsome; but not quite so hardy as the plain form.

* * *

A lady friend lately asked me, "Why don't my Oxalis lasiandra grow?" The answer I gave her may be useful to others. It seems she bought the bulbs last Fall, planted them immediately, and has ever since been trying to get them to grow in her little green-house. Oxalis lasiandra is a summer-blooming species. The bulbs should be kept dry during the Winter, and planted in the Spring, either in the border or in pots.

* * *

I have a number of times been on the point of saying that the Stag's Horn Fern (Platycerium alcicorne) is a very desirable plant for the sitting-room as well as for the green-house. It receives its specific name from the resemblance of its fertile fronds to the horns of a stag, and the resemblance is striking enough to justify the name. It may be grown in a pot, on a piece of cork, on a short length of log, and is very effective grown on the dead trunk of some of the tree ferns.

* * *

When grown in a pot, use a large one, and fill up with potsherds or moderate-sized pieces of charcoal, and sprinkle in some leaf mold as the filling up goes on. The filling should be carried to the rim of the pot, and then rounded off, the top being a couple of inches above the rim. On the top place a thin layer of sphagnum; or, if you have no sphagnum, use leaf mold. Then place the plant on the top, and secure it there by fine copper or brass wire. When it becomes established it will hold itself in place. The only care it needs is an occasional spinkling of water. If leaf mold should not be conveniently at hand, any ordinary soil may be used.

* * *

When grown on a cork, it should be a large piece, not less than 18 by 24 inches, if you would have a fine specimen. Cover it with about an inch of sphagnum, which may be kept in place by copper wire and nails. Place the plant in the middle and secure it there by wire. It must by syringed occasionally, and must receive some attention in this respect till it has begun to grow. After a while it will almost take care of itself. Put a couple of brass screw eyes in the upper edge of the cork; through these run a wire, and you can hang the cork up in any convenient place. For years I had a Stag's Horn Fern thus mounted hung up in the dining-room by the window, where it was much admired.

* * *

The same directions will answer for mounting on a log. For the trunk of a tree fern, the sphagnum may be dispensed with in a green-house or a conservatory; but it is better to use the sphagnum in all cases where the plant is intended for the sitting-room. The plants may be put out-of-doors in Summer in almost any shady place.

* * *

There are several other species of Platycerium, some of them more desirable than P. alcicorne; but they are by no means common yet, or easy to get. I may mention the Elk's Horn Fern (P. grande), which has very large and broad fronds, and is a finer plant than P. alcicorne. P. Æthiopicum has still larger fronds, but it is very rare. I know of only two collections in which it is found. When I first saw it I suggested the common name of Moose Horn Fern; a name that would occur to most persons on seeing it for the first time. P. Wallichii is now getting to be common, and is a very fine species, the infertile fronds being very prettily lobed. This might be named from the horns of the caribou, though it would not be so telling as the others. I could go on and write pages about these grotesque and interesting ferns, but I seem to be at the end of my string. HORTICOLA.

NOTES AND COMMENTS.

I CAN indorse all that "Horticola" has said in praise of Allamanda Hendersonii; but I like A. nerifolia far better. This grows more readily to a bush shape and with a little care and attention fine specimens can be obtained. The flowers, which are of a yellow color, are much smaller than those of the other variety; but more freely produced. With me the plant is never out of bloom, Summer or Winter. It is an excellent pot plant, if properly treated and cared for. It does best when grown in a rich, turfy loam, and after it has attained the desired size, if it is not desirable to repot it, water it copiously with liquid manure water two or three times a week. Indeed both young and old plants are benefited by the application. Not only are the flowers much larger, but they are more freely produced.

The Ruellia macrantha is another good old plant that is again deservedly attracting considerable attention. It flowers in the greatest profusion during December and January. The flowers, which are of a bright rose color with lilac trimmings, are borne in pairs from the axils of the leaves. It does well when given a light, sunny situation and an average temperature of 55 degrees. Propagation is effected by cuttings, and if young plants are obtained early in the Spring and grown on in a deep, well enriched border during the Summer, good flowering specimens will be readily obtained.

The Asparagus Vine—Asparagus tenuissimus—is a very valuable and interesting climbing vine for the window garden, or conservatory, as a little neglect or ill-treatment will cause it no serious injury. Its fine, dark-green, filmy foliage far surpasses in beauty any fern, and, besides, it is of more rapid growth, and far more easily raised. The foliage stands without wilting for a long time after it is cut, and this is a great point in its favor. It is easily cultivated and will soon become a general favorite.

The Spotted Calla—Richardia alba maculata—is very beautiful for cultivation in the mixed border during the Summer. The leaves, which are precisely like those of our well-known calla in shape and color, are beautifully spotted with white, but the flowers are much smaller. They are pure white with a black center. It can be grown in any soil and can be treated precisely as a Gladiolus, that is, planted out in May, and taken up in Fall and stored in sand in a dry, frost-proof cellar, or in any situation where over 45 degrees can be maintained. CHAS. E. PARNELL.

Queens, L. I.

Dairy Husbandry.

IMITATION DAIRY PRODUCTS.

PROFESSOR G. E. MORROW.

Late change of sentiment with regard to bogus dairy products; conflicting assertions; at the Chicago dairy show the Illinois State Board of Agriculture helped the makers to puff their goods, and will do so again; need of moderation; disregard of the interests of dairymen; bogus dairy products to be classed with other substitutes and adulterations.

THE manufacture and sale of imitation butter products—butterine, oleomargarine, etc.—are undoubtedly increasing in this country. Doubtless there has been much exaggeration in statements concerning the extent of the manufacture and use, but there can be no doubt of the fact that very large quantities are made and eaten.

Within a year or two there has been a marked change of sentiment concerning these products. There is a clearer apprehension by dairymen of the injury to their business, and a more general recognition by the public that large quantities are being used. But comparatively a small number now believe it practicable to secure prohibition of their manufacture by legal enactments. Probably a still smaller number favor attempts to secure this in good degree by indirect means—as imposing a tax so great as to make it impossible to manufacture and sell the imitations at the prices at which butter can be profitably sold. Probably the large majority of dairymen now believe that the most that can be done by legislation is to attempt to compel the sale of all imitations or substitutes for butter under properly descriptive names. It seems clearly true that the mass of the intelligent public believe this should be done, and do not believe that more than this ought to be attempted.

Recently there has been a marked increase of statements concerning the claimed terribly filthy unwholesome or positively dangerous nature of these products. There has also been an equally marked increase of statements of an exactly contrary nature, and the evidence is strong that there are now many more persons who believe that butterine, oleomargarine, etc., may be and often are so manufactured as to be entirely unobjectionable. It certainly is true that the evidence from scientists is overwhelmingly on this side.

The whole question is being much more generally discussed than at any former time. Dairymen and dealers in dairy products are more interested and more active than before. There is, however, much lack of agreement as to the most effective line of argument, or concerning the best mode of preventing the fraudulent sale.

The above statements fairly present the chief features of the present situation, as I understand the case. The history of the connection of the Illinois State Board of Agriculture with the exhibition of these products seems to me a good illustration of the correctness of my view of the general situation. This Board is composed of gentlemen above the average in intelligence and enterprise; most of them I personally know to be reputable men and honestly interested in the advancement of agriculture. At the last Fat Stock and Dairy Show the admission of oleomargarine and butterine to the Dairy Department was denied; but their admission to a separate room was somewhat reluctantly granted. This action brought much very severe criticism from dairymen and dealers. The subject was prominently discussed in the press with the net result of largely increasing the number of visitors to the exhibit of these products, and of securing a visit by a part of the Board and a number of influential men to a leading manufactory of these imitations, and of convincing a good percentage of the visitors to both exhibit and factory that much of what was said against the productions was untrue and that all any one had a right to ask was that they be sold without fraud and deception. At a recent meeting of the Board it was decided, after full discussion, to admit these products to the next Fat Stock and Dairy Show under condition of being accompanied by sworn statements as to composition.

It seems to me evident that the wiser course now for all friends of the dairy is to drop all extravagance of statement and intemperate abuse of either men or their products; to abandon all hopeless, doubtful or extreme measures for relief; to make comparatively little in arguments for the general public or for legislative bodies, of the fact that the competition is pressing heavily on dairymen; to do all that is possible to relieve the dairy interest of any suspicion of aiding any approach to fraud; and then to unite with all citizens interested in honesty and justice and opposed to fraud and adulteration, in an effort to secure such legislation, National and State, as shall compel the sale of these and all other articles designed for food under their proper names and descriptions. I can see no good which can come from rehearsing the processes or compounds which have been prepared or patented for making these products, or of repeating the charges of horrible filthiness of manufacture, or of the danger to health from the use of these products—if it be designed to make people believe these things are true of most of the products now manufactured. All these stories can be told of genuine dairy products. Methods of making or preserving butter and cheese have been proposed or patented which would make them injurious to health. Countless articles and addresses have been filled with ridicule or denunciation of the filthy habits of some who make dairy products. Men have been poisoned by cheese. No reasonable man thinks these things sufficient reason for denouncing butter and cheese as unfit for use.

One effect produced, to some extent, is to cause a lessened use of butter. Another is to cause investigation of the question and sometimes a higher opinion of the articles complained of. It is not entirely consistent to extol the care and cleanliness with which beef and pork are handled by some of the great slaughtering establishments; to indignantly resent any insinuations that our meats are not of the highest class, and then to denounce the methods at the same establishments as horribly filthy. In conversation with intelligent men, not interested except as consumers, I find the opinion generally expressed that, so far as cleanliness and care in manufacture are concerned, they will place the imitation on a par with the genuine when they wish to buy in the open market.

I doubt if the question whether the interests of dairymen are being injured will have any appreciable effect on the opinions of the general public or on the final action of legislatures. If there should seem to be any room to suspect that any line of action was demanded chiefly for the benefit of the dairymen, the effect, so far as there was any, might be unfavorable.

There can be no doubt as to the justice and reasonableness of the claim that the aid of the law should be had in preventing the sale of these products for what they are not, and in compelling them to stand or fall on their own merits or demerits. I believe this can be more efficiently done by legislation looking to the prevention or punishment of adulteration, frauds and deceit in the sale of food products in general, rather than by specific enactment and machinery for their enforcement aimed at these products alone.

University, Champaign, Ills.

The Poultry Yard.

PROFITS FROM POULTRY IN WINTER.

A LARGE majority of those farmers who keep small flocks of, say, from 30 to 60 fowls, fail to receive anything from them during the Winter, in return for the cost of keeping, so that the eggs obtained in Spring and Summer must pay the expense of wintering the flock. Now, as one dozen fresh eggs in Winter are, on an average, worth two in Summer, and some young fowls will lay equally well during the warm weather after having been persuaded into laying during the Win-

ter, it is evident that if this can be accomplished with a reasonable outlay of labor, it will have been profitably expended. As I have been successful for several Winters in doing this in a climate where the mercury frequently falls to 20 degrees below zero, and this too without any superior facilities as to warmth of building, perhaps my method of management as to care, feeding, etc., may interest some RURAL readers.

Let no one think that without extra care hens can be expected to lay during Winter, for such a person is sure to be disappointed; but as with most farmers the Winter is a season of comparative leisure, this extra care can be usually given without inconvenience. The boys and girls can often be interested in this work by giving them a share in the profits. Hot food in some form every day is of prime importance. I have frequently given, twice a day, for several days in succession, hot pudding as thick and dry as it can be stirred, made of corn meal and wheat shorts or middlings mixed without any whole grain, with excellent results. I depend largely on the above mixture as a main feed for fowls, varying it by giving frequent feedings of oats, buckwheat, wheat, corn, etc.; in fact, anything for variety. Two or three times at least each week during Winter, give a feeding of some kind of green feed, which may consist of cabbage leaves, turnips, carrots, potatoes, apples, etc., chopped fine. Give also occasionally scraps of meat or something of that nature. Furnish constant supplies of clean, fresh gravel—an essential to health. Give plenty of shell-forming material, which may be pounded bones, clam or oyster shells, etc. Provide good dust baths. Use lime and sulphur freely about the hen-house, applying kerosene often to the perches. Give daily fresh water slightly warmed, and if you are not rewarded by a good supply of eggs during the Winter, I should advise you to change your breed of fowls. E. J. BROWNELL.

Delaware Co., N. Y.

Horticultural.

CUCUMBERS FOR PICKLES.

IN a late RURAL it was stated that the Tailby Cucumber (grown for pickles) is not a productive variety; while Gregory, in his catalogue, says it is enormously productive. Last season we grew 25 acres of cucumbers for pickles, and the coming season we expect to put in as many more, and as our stock is sold "by count," we wish to get the greatest number of thousands per acre, and at the same time combine firmness, freedom from seeds and large size, especially in length. We have never tried Tailby's, but have grown Long Green, White Spine, Green Prolific, Boston Pickling and Early Frame. The factories here pick out Long Green every time, as it is much larger and firmer than the other sorts; they prefer White Spine next; but neither is profitable to the grower. The Long Green is anything but productive. Boston Pickling and Green Prolific, both very productive, are not very desirable, as they are stubby and pot bellied, unless picked when quite small, and factories do not want small cucumbers. A cucumber as productive as the two latter kinds and as firm as the Long Green would be a godsend. Does the Tailby supply the desideratum?

[We tried the Tailby when first introduced. It is about perfect in every way as a cucumber, but it was not a *prolific* variety as grown at the Rural Grounds.—EDS.]

A HARDY BLACKBERRY.

IN 1852, when I was a gay sailor boy of 16, and spent the Summer in the arctic regions, I was on shore a number of times and found a very nice creeping blackberry ripe in August to the south of Behring's Straits, in the neighborhood of the bay where the old English ship Plover wintered in 1852 and 1853. The grass was six or eight inches high in a perfect mat, and the vines grew over the top of the grass. I well recollect with what avidity I hunted for the berries after discovering them. The vines would stand our Winters; but would they bear the heat of our Summers? Who will be the first to get and test them?

Pomological.

TWO FINE PEARS.

ABOUT a month since, we received from Messrs. Ellwanger & Barry, of Rochester, N. Y., specimens of the pears which are illustrated in this issue. Duhamel du Monceau (see Fig. 101, with cross-section at Fig. 102, p. 168) is described in their catalogue, under "Pears of Recent Introduction," as being large, long-pyriform; skin rather tough, nearly covered with brownish russet; flesh melting, juicy, with the flavor of a Winter Nelis. It is a delicious pear. The tree is but a moderate grower. The pear is in use from November until January. Our own notes, taken at the date of its reception, describe it as of fine flavor, melting, juicy, very rich and excellent, very little russeted, with a fine red cheek on the sunny side. It is not only an extremely handsome pear, but its goodness is fully equal to its beauty. John J. Thomas describes this pear as "large, long-pyriform, light yellow, partly russeted, flesh melting, juicy, excellent. Early Winter. French."

President Mas (see Fig. 103, with cross-section at Fig. 104, p. 168) is described as a large, obovate-pyriform pear. The skin is yellow; flesh melting, juicy, slightly vinous. It is a handsome pear of fine quality—December to January. A moderate grower. The specimen sent us was over-ripe, so that we could not properly judge of its quality. Charles Downing calls it a Belgian variety. He describes it as follows: Fruit large, oblong, obovate, obtuse pyriform. Skin greenish-yellow, with some patches and traces of russet. Flesh yellowish-white, fine, juicy, melting, buttery, sweet. December, January."

What Others Say

MORE DRESSED BEEF.—The telegraph tells us that the Marquis de Mores and the Northern Pacific Refrigerator Car Company have sold all their plant on the line of the Northern Pacific Railroad to the Northwest Dressed Beef Company of this city. The capital of the company is $2,000,000. The Marquis de Mores will remain in the West as vice-president and general manager, and the company will operate the large plant on the Northern Pacific and open in New York 100 retail butcher shops. Oliver Summer Teall, the president of the company, is also president of the National Consumers' Meat Company, the Western Dressed Beef Company, the Southwest Dressed Beef Company, and vice-president of the Lyons & Campbell Ranch and Cattle Company, which owns a ranch of over 2,000,000 acres and a large herd of cattle. The National Company owns and is operating 12 retail shops in Baltimore. The Western Company is shipping dressed beef from Kansas City, and building there a plant capable of killing 600 beeves a day. The Southwest Company is duplicating the Kansas City plant in Silver City, New Mexico. The companies will own the slaughtering and refrigerating establishments in the West, the cars used in transportation, and the retail shops in the East.

TEMPERANCE FIGURES.—A good temperance lecture is contained in the figures recently printed by the Milling World. The total corn crop of this country for 1884 was about 2,000,000,000 bushels. Of this, but 18,927,082 bushels, or less than one per cent. were used for distillation. Calling the grain worth $9,000,000, when turned into spirits, it entails an expenditure of $900,000,000. A bushel of corn costs 30 cents and is turned into 17 quarts of intoxicating drink. The distillers receive 40 cents a gallon for converting it into whiskey. It thus represents the original 30 cents and $1.70 for the distiller, making its value at this stage $2. Then the government tax of 90 cents a gallon adds $3.85 to the value, swelling it to $5.85. By the time it has reached the retailers it has been "reduced" in strength and increased in quantity by the admixture of water and some more harmful substances, so that its measure has at least been doubled and the corn, when it begins to drop into the drinkers' glasses on the bar, represents about 8½ gallons of drink. Allowing 60 drinks to the gallon, the official bar average, the bushel of corn will furnish 270 drinks, which, at an average of 15 cents to the drink, will take $40.50 from the pockets of the consumers. This, added to the $5.85 put into the corn up to the time of reaching the jobbers, making a total of $46.35. Substract the 30 cents, which the farmer received for the corn, and the balance, $46.05, will show the amazing profits made by those who do not till the soil to grow the corn, but who multiply infinitely by scientific means the mischievous powers of the grain, and who from this hurtful multiplication reap easy, large and reliable profits. The original price of the bushel of corn is contained 155 times in the ultimate receipts from it. In this way the enormous wasting power of alcoholic drink can be easily understood. Political reformers and statisticians who talk so learnedly about "hard times" appear to

Purify the Blood.

We do not claim that Hood's Sarsaparilla is the only medicine deserving public confidence, but we believe that to purify the blood, to restore and renovate the whole system, it is absolutely unequalled. The influence of the blood upon the health cannot be over-estimated. If it becomes contaminated, the train of consequences by which the health is undermined is immeasurable. Loss of Appetite, Low Spirits, Headache, Dyspepsia, Debility, Nervousness and other "little (?) ailments" are the premonitions of more serious and often fatal results. Try

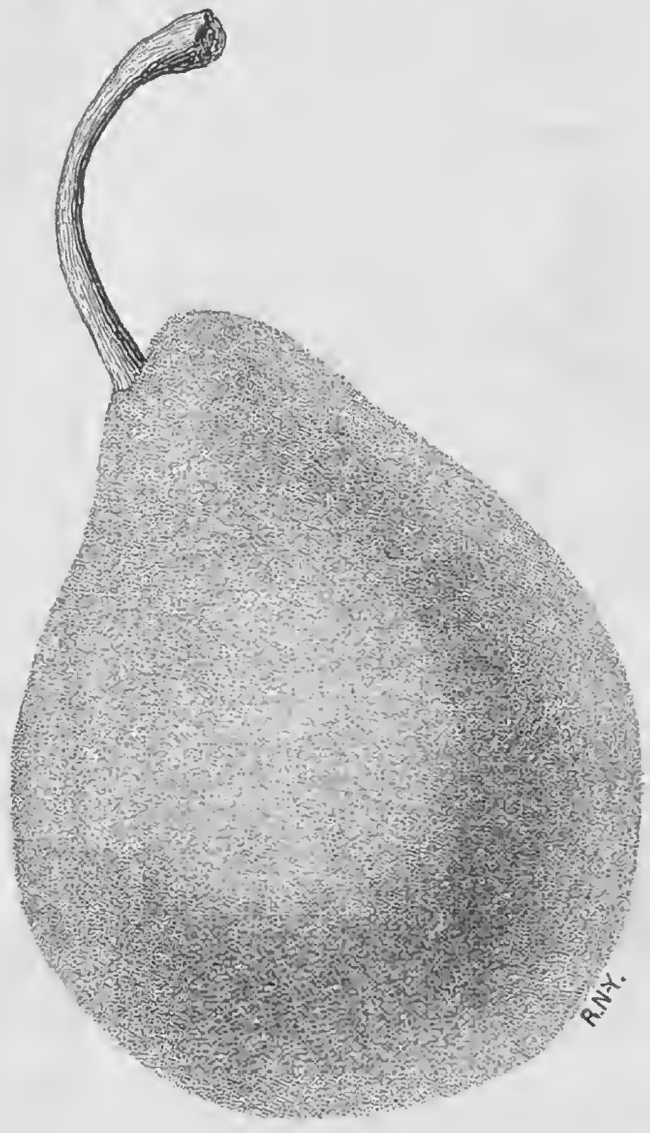
have skipped such calculations as the above. It may not be out of place to state that in 1880 there were 99,997 insane persons, 76,891 idiots, 88,665 paupers, 59,255 prisoners, or 316,812 persons, everyone of whom can trace a portion at least of his trouble to liquor.

ANTI-OLEO LEGISLATION IN ENGLAND.—A bill to prevent the sale of fraudulent butter has been drafted in England. The word "butter" is defined as an article made from the milk of the cow alone. The bill provides that all compounds of butter and fat, or of various fats without butter, or of any substances of a fatty, greasy, or oleaginous nature, and intended to be sold for human consumption, shall be called by names clearly and entirely distinguished from the word "butter," and from any compound modification or derivation of that word, and no adjectival or explanatory word shall be coupled with the word "butter." All manufactories of fatty substances are to be registered. Any such establishment carried on without such register must pay a penalty for each day so conducted. All imitation butters are to be colored some other color than yellow or orange. It is to be hoped that some of these laws will prove sound. This law seems to go at the matter in the right way.

WHAT'S IN AN EGG?—The American Cultivator, speaking of the difference in quality of different eggs, says: "The white of a Leghorn egg is like milk or lime-water, while that of a Brahma has substance, is gelatinous in appearance and will hold together if lifted a few inches." The Poultry Keeper says that a perfectly developed chick will grow from the 'milk or lime-water.' Young Leghorns and Brahmas have been weighed in lots of ten, as soon as hatched, and the difference in weight is so slight as to be unworthy of notice, which proves that there is as much nutrition in the Leghorn egg as in the Brahma. The elements are there—nature places them there—and if the eggs were as represented above, but few of them would hatch, and we can best know what is in an egg by that which comes out of it.



DUHAMEL DU MONCEAU PEAR. From Nature. Fig. 101.

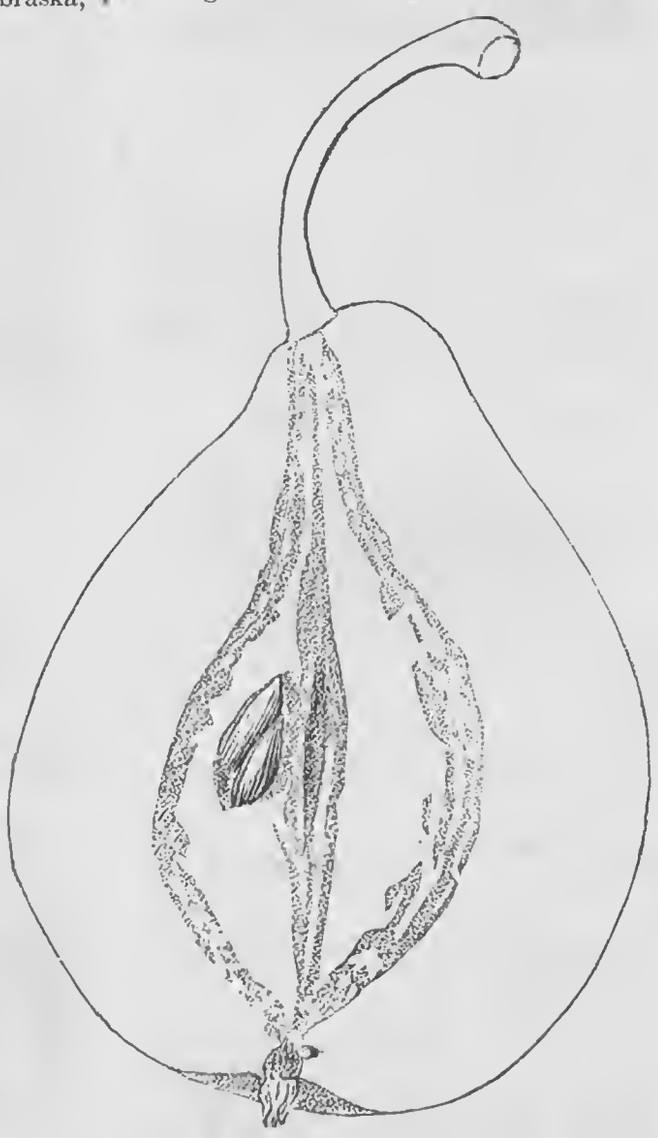
SAMPLES.

WHAT is said to be the largest barn in the world is situated at Papillion, Nebraska, covers five acres, cost $125,000 and shelters 3,750 head of cattle. It is the intention of the owner to enlarge its capacity so as to protect 8,000. The immense structure is used for the purpose of fattening cattle after they have been three or four years on the ranges. The great barn has a complete system of water works, and is thoroughly washed twice every day. The cattle are fed upon cooked meal—one man feeds the whole herd. All he has to do is to turn a large faucet and let the feed run to them

A CHAUTAUQUA COUNTY, N. Y., cheese-maker went to Buffalo the other day and brought home a fine imported Swiss cheese. All praised it but his wife, who, after the praise had ceased, said she had found her husband's private mark on the cheese. He had paid 33 cents a pound for the very cheese that he had made and sold for six cents.....

STATISTICS show that about 50 per cent. of the deaths in cities last year were those of children under five years of age; and also that the glass manufacturers turned out 10,000,000 nursing-bottles in the same time.....

IT is a disgrace to a great State, says the Philadelphia Press, to insist that experimental farms must be run for a profit. This "penny-wise-and-pound-foolish" policy has been tried at many agricultural colleges, with the result of clearing the colleges both of students and influence.....



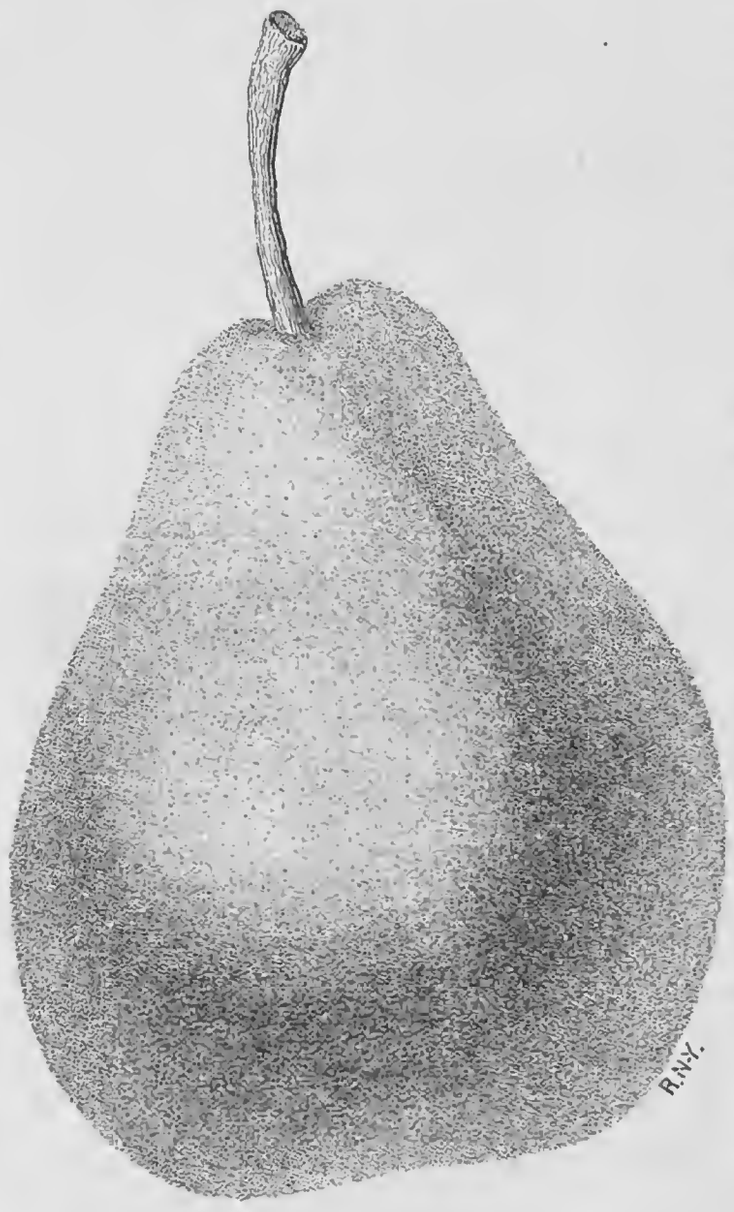
DUHAMEL DU MONCEAU PEAR. Cross Section. Fig. 102.

Various,

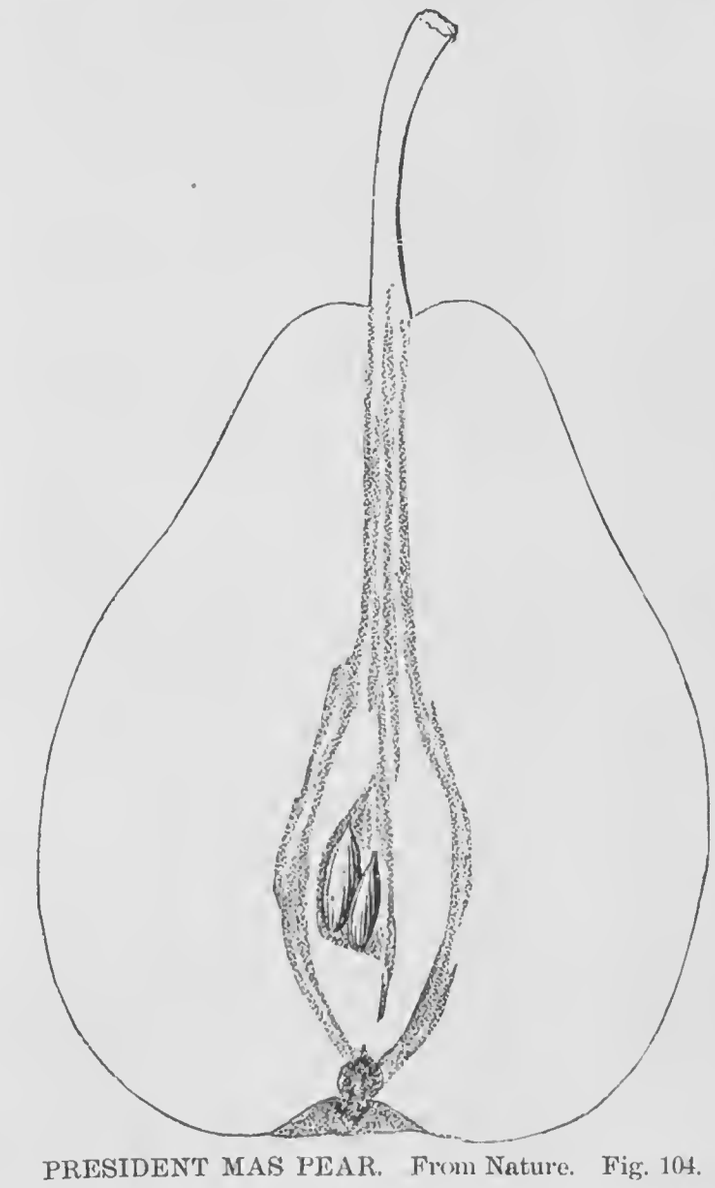
COMMISSIONER SPARKS AND THE LAND LAWS.

THOSE who are loudest in their charges and most virulent in their attacks on Commissioner Sparks and his rulings in land cases, belong to the press or the attorney and land agent species. The Commissioner's rulings are interfering very much with the land agents' business, hence their outcry, and the same remark applies to the gentlemen of the press who find their advertisements growing small by degrees and beautifully less. Every one, on proving up, must advertize his intention of so doing for five consecutive weeks in a county paper. This is the most lucrative part of the business of such papers, as it brings ready cash, the loss of which must cripple their financial resources very much. But one may very properly ask, is the land business to be run for the benefit of these men? I say emphatically no. Until of late, the national land business seemed to be run to support a horde of hungry attorneys and land agents all over this Territory. All men over 21, engaged in the various towns, either as clerks, bookkeepers or tradesmen, have filed either a homestead or pre-emption claim over some land near them, and although the nature of their employment prevents them from fulfilling the law in any measure, still they go before the Court and swear that they have done so, and get a patent for the land. One special government agent reports one district where over 4,000 homestead entries had been made a few years ago, and now there are only about 100 settlers to be found. The Homestead Act distinctly says a man must live on his land continuously and cultivate it for five years before he receives his patent; but anyone who had money could prove up on it after six months' residence, and get his patent. This opened the door to rich men for all sorts of jobbery and seriously interfered with the rights and interests of honest settlers, to whom only the law intended to give 160 acres. Commissioner Sparks will not allow the conversion of a "homestead" into a "pre-emption."

The Pre-emption Act requires six months' residence, the erection of a house and the cultivation of the land. Thousands of acres were taken up under the act, a small box shanty was erected, in which the entrymen would sleep two or three times during the six months, and hire five to ten acres of breaking. Then, with the help of the men who were hired, at a high price, to do the breaking, they would go to court and perjure themselves to obtain a patent for the land.



PRESIDENT MAS PEAR. From Nature. Fig. 103.



PRESIDENT MAS PEAR. From Nature. Fig. 104.

Now these lands will lie dormant until the efforts of the hard-working settlers around them shall raise their value to ten or twelve dollars an acre, when the holders will sell out.

A tree claim can be held by any one over 21, and requires no residence; hence such claims are held by people all over the Western country, mostly for speculation. They can be held at very little expense for three years, during which time the holders try to sell them. If that cannot be done, they transfer them to some other names, and then they are allowed to run three years longer before the trees are to be planted. If they are sold, they are usually made into "homesteads," or "pre-emptions," and so timber culture, so far as the act is concerned, is a huge failure. Quite a common saying is "Trees don't do any good anyhow in Dakota," but the few claims planted to trees are a complete refutation of that statement. Com. Sparks simply tells people they must abide by the law instead of the fraudulent custom of the past. After many inquiries all around here, even amongst those who think it the right thing to abuse him, I have not been able to find a single case where anything contrary to the spirit or the letter of the law has been enforced. Neither have I seen a *bona-fide* case of injustice reported in the press, nor can it be done. Instead of all this abuse, he ought to have the thanks of the American people for the manly stand he is making against the wholesale stealing of Uncle Sam's lands for so many years. The day is not far distant when all the public lands will be exhausted, and what are we to do with our surplus population and our ever fresh immigrants?

T. MACALPINE.

Raymond, Dakota.

Everywhere.

RURAL SPECIAL REPORTS.

Canada.

KENT Co., Ont.—Of the Rural Corn I saved all the yellow ears for seed. Four ears were early enough for second planting. Peas good. Beans very productive. Garden Treasures not as nice as those of former years. J. H.

KEYSER, Ont.—A very fine Winter. Wheat has been well protected by the snow—it had only a medium top. My Diehl-Mediterranean stood the Winter a great deal better than Martin's Amber or Democrat, and was ripe much earlier. The Rural New-Yorker Pea is grand for one so early. Carter's Stratagem are fine—immense pods well filled. The Prince of Wales looks as if it would make a good field pea. Flageolet Beans poor. Corn all too late. Tomatoes did well. Garden Treasures were treasures indeed. The Blush Potatoes are the best keeping potatoes I have—very few rotten; other varieties from one-half to three-fourths rotten, when dug and still rotting. N. D.

Colorado.

FT. COLLINS, Larimer Co., Feb. 15.—Wheat yielded only about two-thirds of an average crop—about 15 bushels per acre. Corn more than an average—from 30 to 40 bushels. The Rural corn too late; peas very fine, and the beans yielded over two quarts. Did not think much of the tomatoes. Wheat is worth only $1.10 per cwt.; corn, 75 cents per cwt.; potatoes, $1 per cwt.; hogs, $3.50 per 100 pounds alive, and cattle, $3. Almost all of the farmers are going into the stock business, sowing a part of their land with Alfalfa and feeding it out to their cattle in the Winter. Alfalfa does well here. I cut a piece four times last year, and got nine loads per acre during the season. We have had a very warm Winter so far, not more than two weeks of cold weather all put together, and not more than three inches of snow at one time. The cattle on the range are doing well. Success to the RURAL! E. H.

Dakota.

MANDAN, Morton Co.—Both kinds of the RURAL peas were the very best I ever saw. G. W. G.

Delaware.

DOVER, Kent Co., Feb. 23.—The year commenced warm and pleasant: on Jan. 2 plowing was being done; then the weather became cold, changeable and very disagreeable. February came in cold and blustering. On the 4th snow fell two feet deep, drifting badly and rendering the roads for several days impassable. On the 6th the mercury went down to 11 below zero—coldest weather for 20 years. On the 11th six inches of rain fell, taking off the snow and causing floods that did immense damage. We fear that the peach buds are

nearly all killed. When the mercury gets below zero it is rough on them. Wheat is looking fine. Stock is wintering in good condition. Working horses from $20 to $150; cows, $20 to $70; wheat, 80 to 90 cents; corn, 38 to 40 cents; oats, 35; potatoes, 50 cents per bushel; clover seed, 10 to 12 cents per pound; beef, 8 to 16 cents; butter, 25 cents; eggs 25 cents, and other produce in proportion.

S. F. S.

Illinois.

GEORGETOWN, Vermillion Co., Feb. 22.—Wheat looks pretty well—better than expected. Only enough for seed and bread raised here last year. Prices for wheat about 80 cents per bushel. Corn was a good crop, selling for 27 cents; hay about two-thirds of a crop, selling at $15. Times very close. At least three-fourths of the hogs died last Fall from swine plague. Every known remedy was tried without success. W. P R.

Kansas.

FAIRMOUNT, Leavenworth Co., Feb. 16.—We have had some very cold weather this Winter; the "oldest inhabitant" never saw it colder. However, the cold spells do not last as long as further north. I plowed as late as December 31st, and now the frost is nearly out of the ground so that we can plow. Winter wheat was pretty well covered with snow, that is, for this latitude, until the last ten days, and up to that time was all right. But now the snow is all gone, and continued freezing and thawing, as we are now having, are liable to injure it. Considerable old wheat (crop of '84) is still in the hands of farmers, and a great deal has become musty and will bring only 40 cents per bushel, for distilling purposes. Wheat suitable for milling purposes is worth 85 cents. Corn was a fair crop and some is yet in the field—worth 32 cents. But little attention is paid to potatoes, except near the cities, some farmers buying for their own use. A neighbor who is farming 320 acres buys his potatoes, and now when there is none to spare they are worth 75 cents per bushel. Peach buds are killed. A neighbor reports at least one-half of his apple trees standing on a northern slope winter-killed. The dairy interest receives but little attention here, and slaughter-house hog and bull butter reigns supreme. J. M.

PARSONS, Labette Co., Feb. 19.—The temperature of January was 11 88-100 degrees lower than the average of the preceding 19 years; so far this month the weather is seasonable. Snow has disappeared and the frost in some places is out of the ground. Half crops of most grains, low prices of stock and hog cholora make farmers poor. No losses from blizzards. The monster trunk roads are stretching out their feeders all through the State and the eagerness of townships and cities in voting bonds is alarming. We shall have to support the roads when built. J. B.

Kentucky.

PEMBROKE, Christian Co.—Marion County, Ky., raises leaf and burley tobacco, the prices for which range from 10 to 20 cents per pound. Southern Kentucky grows a large, dark kind known as regie, which is purchased mostly for foreign markets, where the Government monopolizes its manufacture and fixes the price of the product. This sort is raised mostly by negroes and does not, therefore, get the attention bestowed on that in the northern part of the State. The crop, therefore, is generally light in weight and inferior in quality. Creameries are springing up all over Kentucky and Tennessee. The Jersey craze of some years ago brought many fine animals into the State and these have, to a great extent, graded up our native stock; but the establishment of creameries has given a great boom to Holland cattle, which are in greatest favor at present. Several two-year-old registered heifers sold last Spring for $300 apiece, and calves brought $100 each. Farmers have begun to build fine stables, well equipped with all conveniencies for fine stock. Great advance in dairying is expected from the present attention to the business. Great improvements are also being made in home architecture and adornment. Even in Kentucky an anti-whiskey agitation is growing; for with whiskey it is found that our taxes are increasing, crime is becoming rampant, our prisons are overcrowded, our asylums multiplying, our courts always behindhand with their dockets, and idleness, vice and misery increasing. "GARDENER."

Michigan.

DOWAGIAC, Cass Co.—The Rural corn did not ripen. Beans and peas nice. Our corn crop was damaged more or less by frost. Fall late and wet. Some corn still in the field.

A. F. J.

HUBBARDSTON, Ionia Co.—Some of the Rural cross-bred corn was quite early. Tomato vines abundant; fruit scarce. Bad weather rusted the beans. Peas very fine. I have four acres of Fultzo-Clawson Wheat grown from the Rural seed sent two years ago; one acre of Surprise Wheat and a small plot of Diehl-Mediterranean. All are fine sorts, especially the last. Rural Blush Potato a fine yielder and free from rot. It is quite red inside, however, which is objectionable in a table potato. G. A. S.

MANESTIQUE, Schoolcraft Co.—The northern part of this State is nearly "new" land, a fine clay loam, very rich. Nearly all the "new" farms are homesteads. Most of them are now assuming a home-like appearance. The fine, hard-wood timber from thousands of acres will be burnt in log heaps, as there is no other way to dispose of it. T. C.

THREE RIVERS, St. Joseph Co., Feb. 22.—Wheat hasn't a good color for this time of the year. Snow on the ground nearly all Winter, and hardly any frost in it now. Wheat is worth 85 cents to 90 cents per bushel; hay, $8 to $12 per ton; wood, $3.50 to $4.00 per cord; oats, 25 cents; corn in the ear, 30 cents; butter, 14 cents; eggs, 16 cents; onions, 50 cents to 75 cents; peppermint, $3.90; dressed pork, $4; dressed beef, $5. J. H. S.

WEBBERVILLE, Ingham Co.—The Rural Tomatoes were not half as good as those sent out in '84—those others were splendid. The peas were all taken by the hens. We have peas of the previous distribution, however, and are very well satisfied. The other seeds we have kept for the new place on to which we have just moved. The weather now is very changeable and very hard on the wheat. D. C.

Minnesota.

NEW YORK MILLS, Otter Tail Co.—The Flageolet Beans came up finely; but a frost about June 15 killed every one. The Stratagem and Prince of Wales Peas were also somewhat injured, but recovered—very large and fine-looking. Corn too late. Garden Treasures fine. W. B. M.

Nebraska.

CRETE, Saline Co., Feb. 17.—Of 15 varieties of potatoes the Rural Blush and White Elephant are the best. The Rural peas did well. Weather warm; snow going off very fast. Lots of corn to be picked yet. Corn 18 cents; wheat, 45 cents to 65 cents; rye, 35 cents; potatoes 30 to 40 cents. E. MCI.

New Hampshire.

ASKWORTH, Sullivan Co.—The Rural corn matured sufficiently for seed—season short. Tomatoes very fine, but late; vines five feet high. Peas very fair. Garden Treasures very fine, ornamental and attractive.

J. S. G.

New Jersey.

MAINE AVENUE, Cumberland Co., Feb. 20.—Weather is warm and spring-like. The Rural seeds all did well, except the Johnson Grass and Garden Treasures, which did not come up well. Don't think much of the Flageolet Bean—too small. The Prince of Wales Pea did well and the Stratagem was just splendid. The Thousand-fold Rye did extra well; also the wheat. The corn was not very good. The Shoe-Peg Corn is away ahead of anything I have had yet. D. L.

Ohio.

FRANKLIN, Warren Co.—Rural Peas excellent and very prolific. Tomatoes very nice. Beans also very prolific, but of inferior quality, the pods being very woody. The Garden Treasures did very well. D. L. C.

Texas.

SHERMAN, Grayson Co., Feb. 24.—Farmers have nearly finished sowing oats. A large area will be planted to corn. Early sown fall wheat looks well; late sown nearly all killed out. Live stock not so well off as usual. We should have less but better stock, and better means of transportation. J. H. McG.

Oregon.

EAGLE POINT, Jackson Co., Feb. 18.—Winter very mild; no snow and only two weeks of freezing weather—24 degrees above zero was the coldest. The Diehl-Mediterranean Wheat and the Thousand-fold Rye did very well, and the cross-bred corn reasonably so. The peas were the finest I ever raised. The beans did poorly. The Garden Treasures were fine. I am much pleased with the Rural Union Corn. L. R.

ALTHOUSE, Josephine Co.—I like the B-B. Centenial Wheat better than any variety I have ever tried. It makes fine flour. Animals are very fond of it and eat the straw greedily. The Rural Blush I consider the best potato I have. The corn didn't ripen. Market Garden Pea fine. The Diehl-Mediterranean Wheat and Thousand-fold Rye were cut to the ground by a heavy snow storm; a second growth produced three pounds of each sort. Fruit scarce and dear. Flour $20 per ton; butter, 30 cents; beef, 10 cents; pork, 10 cents; mutton, eight cents; potatoes, 1½ cent per pound. Producers complain of low

(*Continued from page* 169.)

prices, while buyers say they are paying too much. L. E. M.

SPRINGFIELD, Linn Co., Feb. 14.—No frosts sufficient to kill tomato vines till January 5. On Christmas Day "volunteer" new potatoes were gathered. The volunteer crop of beans was a foot high, and tobacco still in bloom. We have had not more than 1½ inch of snow and that only for a couple of days. Now peaches are just beginning to show color of bloom. Early gardens are being planted, and fruit trees set out. Of prunes we are planting the Silver, Italian, German and Petite; of plums, Columbia; of peaches, Bradshaw and Washingon. J. S. C.

Pennsylvania.

HOPE CHURCH, Allegany Co.—Some of the 50 crosses of corn ripened as early as September 10; some wasn't ripe when frost came. The Rural Union Corn of '84 was very good. The Diehl-Mediterranean Wheat is the best and most prolific kind I have. White Elephant Potato an enormous yielder. RURAL'S Blush good; but straggles too much in the hill. Thousand-fold Rye excellent. Prince of Wales and Stratagem Peas the largest and most productive I ever saw. Garden Treasures splendid. Prices: wheat, $1; oats, 40 cents; corn, 60 cents; potatoes, 70 cents; apples, 60 cents; hay, $20; butter, 35 cents. Long life to the RURAL! A. S. I.

Vermont.

BAKERSFIELD, Franklin Co., Feb. 23.—Winter very cold. January 12 mercury 30° below zero. Not much snow. Farmers busy getting ready to make maple sugar—all expect a larger yield. Old sugar plentiful at six to seven cents; eggs, 18; new butter, 25 cents; corn meal, $23 per ton. W. O. S,

Virginia.

BIG SPRING, MONTGOMERY Co.—White Elephant Potato very fine; Blush, a No. 1 grower and yielder; both these RURAL presents have paid well. Corn no good. Wheat nearly all winter-killed. Garden Treasures fine.

G. W. B.

West Virginia.

LOOK-OUT, Fayette Co.—We are having a very severe Winter. The Diehl-Mediterranean Wheat was so badly winter-killed that I got only about a quart. Sowed in Fall, it is looking well. The Thousand-fold Rye yielded excellently. Beans very productive. Tomatoes did well; but were much inferior to those sent out in 1884. Prices: corn, 75 cents; wheat, $1; oats, 50 cents; potatoes, 60 cents; butter, 20 cents; eggs, 20 cents; green apples, from 50 cents to $1. J. C. S.

Wisconsin.

WILD ROSE, Waushara Co.—Of the mixed corn some yellow flint and yellow dent ripened nicely, but the white kind was all too late. The peas are the earliest we have. Flageolet Beans early and very prolific—quality middling. Hens didn't give the Diehl-Mediterranean Wheat a fair show. The Marlboro Raspberries that survived did splendidly. Stratagem Peas did well; Prince of Wales not so well—hens again. L. A. L.

Wyoming Territory.

FAIRBANK, Larimie Co.—Cross-bred corn tall, but too late. Stratagem and Prince of Wales Peas the best yielders I know. Tomatoes didn't get ripe. Beans not adapted to this climate. All sorts of garden truck and small grains do well here. Watermelons do extra well; I sold $90 worth from a quarter of an acre. Corn is worth 3¼ cents per pound; oats, 3½ cents; potatoes, 2½ cents; white beans, five cents; flour, $3.75 per 100 pounds; hay, $8 per ton; butter, 50 cents per pounds; eggs, 50 per dozen. Fort Laramie is our only market though I live 20 miles west of it. W. S.

THE FARMER'S CLUB

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention. Before asking a question, please see if it is not answered in our advertising columns. Ask only a few questions at one time. Put questions on a separate piece of paper.]

AN AILING HORSE.

F. M. S., Fredonia, N. Y.—1. A six-year-old high-spirited horse, broken when four years old, fretted and sweated excessively when at work the first year, and though receiving better feed and care than the other horses, he ran down considerably before Winter. On his back, shoulders and rump there appeared small pimples and in wet or cold weather he took cold very easily, and sometimes ran at the nose, the discharge being sometimes clear and sometimes of a milky color, and occasionally there was a slight rattling in his throat. At times his urine was quite thick and yellow. Nearly all the pimples disappeared last Spring, though he did not gain much in flesh. Occasionally during the Winter I gave him doses of condition powder made of equal parts of ginger, sulphur, black antimony and saltpeter. Last year the symptoms and condition were the same, but not so bad. 1. Were the powders good for him? 2. What ails him? 3. What is a remedy? 4. What causes him to take his weight of one foot as he walks along the road, as though he had stepped on something that had caused him pain?

ANSWERED BY F. L. KILBORNE, B. V. S.

1. Quite likely the animal might have derived some benefit from the powders if you had given them regularly for a length of time. But little or no benefit could be expected from an occasional powder. The black antimony might well have been omitted. Its action is so injurious and oftentimes so violent that we cannot recommend its use. 2. The symptoms would indicate disorder of some internal organs, as the liver, bowels, or both. A microscopic examination of the scales sent shows them to be nothing more than an excessive collection of dandruff, largely due to a want of thoroughness in grooming. 3. Give five or six drams of Barbadoes aloes to unload the bowels, and then, twice daily, as powders, one-half ounce each of powdered gentian, ginger, and sodium bi-carbonate, and two ounces of Glauber salts. Continue the powder for several weeks, omitting the salts if at any time the bowels become too laxative. The skin must be kept clean and free from the dandruff pimples by thorough daily grooming with a new curry-comb or wire-card, if necessary. A daily allowance of beets or potatoes with linseed-cake or oil-meal will be beneficial. Whenever the discharge appears at the nose, give a hot bran mash every evening until it ceases. The stable should be kept dry and clean and be well ventilated, and the animal allowed daily exercise, either moderate work or a run in a small yard. 4. If it occurs only when walking, it is probably due to carelessness on the part of the animal, and can sometimes be stopped by calling his attention to it with a slight stroke of the whip, which will tend to make him more careful.

SCALE OF POINTS OF SHORT-HORNS.

J. A. R., Pleasant Hill, Mo.—The "scale of points" of Short-horns is as follows:

Rump—level, with good length and breadth	6
Thigh and twist—full and well down	5
Hips—broad, level, and well covered	5
Flanks—well let down and full	3
Loin—broad, level and meaty	8
Ribs—fleshy and broadly sprung	7
Crops and chine—well filled, meaty, and no depression	7
Heart-girth—full and large	7
Shoulders—smooth and well covered	5
Brisket—well let down and forward, with little or no dewlap; broad between fore legs	3
Neck—clean and tapering	2
Horns—medium size, clean, tapering and well formed	1
Ears—medium size, fine and lively	1
Eyes—mild, but full and bright	2
Head—clean and fine; masculine in bull	2
Bones and legs—fine and shapely; medium length	6
Tail—well set on, tapering and fine	2
Hair—abundant and mossy	3
Handling—mellow, neither soft nor unyielding	5
Skin—fine, elastic, loose and medium thickness	2
Upper line—level and straight	4
Lower line—low down and even from brisket to twist	3
Weight for age of bull, on basis of 1000 pounds at 12 months, 1,400 pounds at 24 months, 1,800 pounds at 36 months, 2,100 pounds at 42 months. Of female, on a basis of 850 pounds at 12 months, 1,100 pounds at 24 months, 1,400 pounds 36 months, 1,600 pounds at 42 months	5
Symmetry, smoothness, style and general attractiveness	5
Total	100

A CONFIRMED HALTER-PULLER.

W. O., Proclorville, Mo.—While breaking my nine-year-old horse, seven years ago, she contracted a habit of breaking her halter, and ever since she has been a persistent halter-puller. She shows great nervousness on the approach of anybody with a bridle, and firmly resists hitching her to any vehicle, trembling as she plants her feet out and leans back; but as soon as she is hitched she starts and works well. How should she be treated?

ANSWERED BY F. L. KILBORNE, B. V. S.

The difficulty is evidently nothing more than an acquired habit, the result of faulty management of an animal that is probably naturally quite nervous. As a "halter-breaker" the animal should have been dealt with while the habit was being formed, when it would have been a very simple matter to have broken her. If the horse is nervous, the first requisite is that at all times he be treated with kindness and firmness. To correct the habit of pulling, procure a strong strip, 1¼ or 1½ inch wide and 12 or 15 feet long according to size of the animal (the exact length can be easily ascertained by a piece of twine), surcingle-webbing will answer the same purpose if strong. The strip is to be placed on the animal as follow: Put the middle of the strap under the tail and cross the ends immediately above the tail upon his hips; carry the ends forward, one on each side, and buckle in front of the chest. Place a common surcingle around the body, just back of the shoulders, but *outside* of the strap on each side to hold in position. Now, when you wish to hitch the horse, pass the tie strap of the halter through the ring in the manger or post and carry it back and fasten to the strap in front of check, and then let the animal pull. He will soon find that he is pulling to no purpose and a few lessons usually succeed in affecting a cure. An excellent tie for a horse in the harness is a strong rope that passes around the animal's neck, the free end through the ring in the bit and then carried to the post. Except in extreme cases, there is no danger of the animal injuring himself by choking when tied by this method.

CONDITION POWDER FOR A HORSE.

H. C. M., Fitchville, Ohio.—The best general recipe for condition powders for a horse that we can give is the following: 1. A good, clean, comfortable, well-ventilated stable. 2. Suitable food in abundance, but not in excess. 3. Thorough daily grooming. 4. Work moderately or even hard when necessary if properly cared for. When not at work allow a little exercise if possible. Further than this we cannot recommend any condition powder without knowing the special case to be treated. It is too much like many of our patent nostrums that are specifics—for everything good, and good for nothing. A recipe that would be suitable for one animal might be entirely unsuited to the needs of another. In order to recommend a condition powder that will meet the requirements of the case, it is necessary that one should have a careful description of the present condition of the animal; appearance of skin and hair, condition of bowels, kidneys, etc., together with the probable cause of the difficulty.

CUBIC FEET IN A TON OF HAY.

H. G. W., Richmond, Ind.—No one can tell how many cubic feet in a ton of hay in a mow without seeing the hay and knowing something as to how much it has been pressed. Fine Blue Grass (Poa compressa) cut ripe and well pressed in the mow, will make a ton for 300 feet; while coarse clover cut when nearly ripe, would take as much as 750 feet. Timothy and other grasses mixed, cut moderately green, so as to pack closely, and well pressed in the mow, will make a ton of 375 to 450 feet; but if coarser, and allowed to get ripe with the same amount of pressure, from 525 to 650 feet would be required.

REMEDY FOR INSECTS IN STORED GRAIN.

W. L. A., Flushing, L. I.—What is the insect on the inclosed samples of corn, and how can it be destroyed?

ANS.—It is the very common and widespread Silvanus surinamensis. This beetle is found all over the world and everywhere has the habit of feeding on stored grain, and other stored products. The best way to destroy it will be, when it occurs in numbers, to place the grain *en masse* in a tight bin, and place an open saucer of bisulphide of carbon on top of it. The bisulphide volatilizes readily and the vapor, being heavier than air, will sink down through the mass of grain and kill every insect. This remedy has been very satisfactorily tried for all sorts of insects injurious to stored grain, and is the most thorough one known.

Miscellaneous.

S. S. C., Norfolk, Neb.—1 can get livery stable manure for hauling the distance of one mile; can get bones for from nothing to one-quarter cent per pound. Which would be the cheaper for small fruit and market gardening. Would have to get a mill to grind the bones. What is hen manure worth per barrel under these circumstances? Would lime be a good addition to the compost heap?

ANS.—Use the stable manure by all means. Lime should never be used in a compost heap unless the latter contains an abundance of vegetable matter or it is covered with loam or muck to absorb the ammonia. Into the compost heap put plenty of the bones, first broken quite fine with an old ax or sledge. They will decay rapidly and be a valuable addition. Hen manure is worth about 30 cents per barrel when stable manure has to be hauled the above distance.

J. E. O., Port Jefferson, L. I., N. Y.—1. Will beet seeds germinate when two or three years old? 2. Which is the better tool in potato cultivation—a one-horse walking or a two-horse riding cultivator? 3. Which is preferable in a riding cultivator, four or six teeth?

ANS.—1. If well kept, yes, even when six years old. It should be kept in a cool, dry place. 2. Much depends upon the size of the field. The riding does its work rapidly; but it requires much room at the margins of the field for turning. Whichever is used it should not run deep. 3. We prefer the three teeth.

L. C., Aurora Spring, Mo.—In 1865 I purchased a truss in New York made of malleable iron with a spring to hold the pads in place: is there such a company now in New York or is there a better truss made?

ANS.—Trusses made in this way are barbarous. The elastic trusses have superseded them. The New York Elastic Truss Co., 744 Broadway, N. Y., make a truss worth a thousands of such as you describe.

E. W. R., Erie, State not given.—Is the Imperial Barley the same as the Manshury or if different; does it yield more?

ANS.—It is not at all like the Manshury; nor in our experience has it yielded nearly as well.

W. D., Wayne, Mich.—There are several "good onions." The Queen is a white onion of small size, but very early. For a main crop onion the Large Red Globe, Yellow Danvers and White Globe are as good as any. For a market red, the Red Wethersfield is about the best. The price is about one dollar a pound, except for the Queen, which is about three dollars, being somewhat new. The seed needed for an acre is about five pounds.

J. P. S., Sattersonville, Ia.—Most large seed dealers sell the Manshury Barley. If there is any doubt as to the genuineness of the seed, the real sort can be obtained from A. L. Jaques, Wright's Corners, N. Y.

G. I. L., West Plains, Mo.—The small Canada June field pea is usually sown for early and the Black-eyed Marrow-fat for late. The seed can be obtained of any large seed house.

J. M., Leavenworth, Kans.—Root-grafting of apple trees is certainly no new thing, and the trees are no stronger or more borer-proof than others.

E. B. T., Newport, Vt.—Both the Aspinwall and True's Potato Planters are recommended by users. We have personally never tried either.

R. E. Y., Macedonea, O.—A good hand corn-planter, which also sows fertilizers, is made by the Spangler M'f'g Co., York, Pa.

J. W. T., Topeka, Kans.—Scotch collie dogs can be had of W. Atlee Burpee & Co., Philadelphia, Pa.

DISCUSSION.

A. D. C., TICONDEROGA, N. Y.—The F. C. in a late RURAL, spoke as if it didn't believe in the existence of wolf-teeth in a young horse, or in the good effect of removing them. Now, my experience supports both points denied. The wolf-teeth are small tusk-shaped teeth, one on each side of the upper jaw immediately forward of the molars. They have two roots—one about three-eighths of an inch long, taken from a four-year-old mare last Spring, was the largest I have seen. I am opposed to the barbarity of roughly knocking them out; but I keep an old pair of forceps for that purpose, and whenever I observe a slight discharge from the eyes or a felon started, I examine the teeth, and extract the wolf-teeth if I find any, and after this has been done and hair oil has been applied to the eyes, a cure is effected in a short time. I have never known a single instance where this treatment hasn't given instant relief, and my experience is the same as that of many others in this neighborhood.

R. N.-Y.—So far from denying the existence of what are known as wolf-teeth in horses, we acknowledge that they are natural to all horses, the germs existing at birth, and the teeth generally making their appearance from the first to the fifth year and falling out naturally soon afterwards—generally before the eighth year. We do say, however, (and in this opinion we are supported by the veterinary profession) that they have very little influence on the condition of the eyes. The worst that can be said of these superfluous teeth is that they sometimes lacerate the tongue, and therefore there is no harm in removing them, provided this is done in a humane way. When the eye becomes inflammed from other causes, and these teeth are removed roughly, the gums are bruised, causing considerable local inflammation, which, acting as a counter-irritant, attracts the inflammation from the eye, just as a blister might have done if applied at some other place, and straightway the belief is confirmed that "wolf-teeth" were the cause of the trouble.

Grind your own Bone,
Meal, Oyster Shells, GRAHAM Flour and Corn in the $3 HAND MILL (F. Wilson's Patent), 100 per cent. more made in keeping poultry. Also POWER MILLS and FARM FEED MILLS. Circulars and Testimonials sent on application. WILSON BROS., Easton, Pa.

ECLIPSE POST HOLE DIGGER.
The Greatest LABOR-SAVING tool ever invented for digging holes in the ground. This machine works on a new principle, and is unlike anything in the market. It is neither an Auger nor a Plunger, but is driven in the ground with a driving rod, which works in a pipe similar to a telescope. We claim for this tool:
1st. That one man can dig from 40 to three hundred holes two feet in ordinary ground in one day.
2nd. That it will dig holes any size or depth required.
3d. That it will work successfully in very hard or rough ground where other diggers and augers will not work at all.
4th. You stand up straight while using it, consequently no back-breaking work is required.
It will pay you to send for descriptive circulars and prices to COLE & FLEMING, Manufacturers, Springfield, O.

"THE BOSS" ROAD MACHINE.

The next (second) Potato Special of the R. N.-Y. will be dated March 27th.

In reply to several requests that we give instructions about hot-beds and cold-frames, we would respectfully direct attention to the catalogues which we have been at pains to announce in these columns. Many of them give very full instructions, and it seems a waste of space that we should repeat them from year to year.

When we talk of the value of muck, what do we mean? Some muck may contain only one-half of one per cent. of ammonia; other sorts may contain as high as four per cent. There is muck and muck—one may be worthless, another of great value. We had better find out by analysis how much ammonia muck contains before we conclude to draw it a long distance.

A man in Michigan is selling lots of Prickly Comfrey to certain farmers. Do Rural readers need to be informed that though the plant is hardy; though it will yield heavily, and may be cut twice in good soil; though according to analyses it is nutritious——stock will not eat it unless starved? We have raised Comfrey for ten years and have yet to find an animal that cares for it.

The volume of the American Pomological Society, session of 1885, has been received. We never look at these invaluable works without a feeling that every American citizen should feel a sense of indebtedness to the good men who have made the Society what it is. We wish it might be in the hands of all our readers, and we shall endeavor to quote from it freely for their benefit.

Pres. T. T. Lyon writes us that he planted a couple of trees of the Japan Chestnut, one year from the bud, one of which died outright during the succeeding Summer, and the other made a moderate growth but died back to the stock during the second Summer, leaving him in doubt whether to charge the loss to injury in handling and transportation or to inability to withstand the Michigan Winter.

The power of the "boycott" is acknowledged. To "boycott" a thing is to let it entirely alone—to simply ignore it. The world would be much better off if farmers would apply this principle more judiciously. Poor tools, poor seeds, scrub stock and scrub methods of farming should be boycotted. In making up the list don't forget the representative who votes to help cover your bread with "bogus" butter.

The best way to secure a continuous supply of sweet corn until frost is, according to our experience, to plant early, medium and late kinds all at once—say in early May. Select, for instance, the Cory, Pee and Kay, Moore's Concord, Stowell's Evergreen and, finally, the Black Mexican and Egyptian. These will keep up the succession until mid-August. For a supply after this, we prefer to plant the Evergreen, Egyptian or Spanish about the 1st of June, rather than the earliest kinds later. After eating these late varieties, it is hard to return to the earliest, which are always of inferior quality.

We are opposed to the cheap packages of seeds which many seedsmen are now offering. These collections are advertised as $2.50 or $2.00 worth of seeds for $1.00, etc. So long as purchasers will buy such seeds, just so long they will offer inducements to seedsmen to sell an inferior article. A well-known seedsman said to the writer a few days ago that it was a matter of sincere regret to him and to all seedsmen who value their reputation, that there is a growing tendency to ensnare the purchaser by these "taking" offers. Seedsmen must live, and this cheap competition must be met. And the only way to meet it is by putting up seeds of inferior quality. There is no trusty seedsman who can afford to sell two dollars' worth of seeds for 50 cents.

It is hard to understand why the Liquidambar is not more of a favorite as an ornamental tree. It grows wild in most parts of our country, and though seeming to prefer swampy places, it thrives fully as well in dry, upland situations. It is a little difficult to transplant and should be severely cut back when removed. It assumes a pyramidal form of beautiful symmetry, and its star-like, deep green leaves colored more richly than those of any other tree in the Autumn. This feature should insure it a place upon the lawn even to the neglect of the best of the maples. Its corrugated bark giving the oddest appearance to the stems which are furrowed with it in the most irregular manner, is itself an interesting feature of the Liquidambar.

Let us suggest to our many lady readers who have raised the older kinds of geraniums for years and years, that they go over the lists in some of our catalogues that make such plants specialties, and select a dozen of what, by description, seem to be the newest and best of the pelargoniums (as they should be called) of the present day. The improvement in this flower, as beautiful for the garden as for the window or greenhouse, is really remarkable. A stock thus procured could be multiplied indefinitely for the benefit of one's poorer neighbors. Or—what would prove a fascinating employment—the flowers could be crossed in the house next Winter, and in this way crossbred seedlings could be raised. It is very easy to cross pelargoniums, because the anthers and pistils are rarely, if ever, mature at the same time.

Last Tuesday, the House Committee on Post Offices and Post Roads, which has before it a bill similar to that introduced by Senator Wilson, of Iowa, to increase the rate of postage upon fourth-class matter from one to two cents per ounce, voted unanimously to recommend the rejection of the bill, "as such an increase of postage would be manifestly in the interest of express companies, and in conflict with the interests of the people." "Level-headed" committee that! Even if the Senate should pass Wilson's "monopoly bill," it could not now pass the House, as that body seldom, if ever, passes a measure unanimously opposed by the committee in charge of such legislation. No harm in making "assurance doubly sure," however, by letting Congressmen know, through the mail, the opinions of their constituents on the matter.

What may be called the emigration season is rapidly drawing near. Thousands of young men have doubtless made up their minds to leave the old home and seek their fortunes in some newer country. Pride, poverty and love of adventure all tend to push them away from home and friends. Don't be in too much of a hurry to go, young man! The change you propose is a serious thing. Don't think all the good places will be taken up if you do not rush away at once. There are plenty of places left where good solid happiness can be obtained. The supply of such places is inexhaustible. We believe there is such a place right on the old farm that seems to you so poor and mean. See what you can do at home before you give it up. Some spots of this country are more productive than others, but, counting in health, markets, old associations and independence, there will be little difference in happiness to those who live upon them.

F. S. Phœnix, of Bloomington, Ill., writes us that he has two-year-old seedling Japan Chestnuts, also some older trees some of which were grown by budding upon the American Chestnut. The nuts planted grew readily. He finds that the trees do not prove hardy. "They kill back," he says, "annually, and five and seven-year-old trees are mere shrubs." He thinks, however, that the care bestowed on such trees by amateurs would insure bearing trees even in his climate. To his taste the nuts are quite as good as the American Chestnuts.

Is the climate of Bloomington, Ill., more severe than that of Painesville, Ohio, or Rochester, N. Y.? Mr. Phœnix adds that he was greatly disappointed to see the beautiful Prunus Pissardii—strong three-year trees—killed to the ground last (1885) Winter. He mentions this as it contradicts repeated assertions in the R. N.-Y. We are right sorry to hear it, and hope Mr. P.'s case is exceptional.

Although the estimates of the value of various fertilizers in the reports of the different Experiment Stations which analyze fertilizers sold in their respective States, are liable to be misleading; still there is no doubt whatever that such checks upon unscrupulous manufacturers are of no small benefit to the farming community. In the Cotton States the improvement in fertilizers due to this agency has long been acknowledged, and in the Nothern States where such Stations have been established, such as Massachusetts, Connecticut, New Jersey, Pennsylvania and Ohio, the results have been highly advantageous. Mr. Wallace Tappan has introduced in the New York Legislature a bill for the establishment of a similar Station in this State. It is based on the laws of Massachusetts, Connecticut, New Jersey and Pennsylvania, with such improvements as are suggested by experience in other States. Such a Station under the direction of an energetic, thoroughly competent director would save to the farmers of the Empire State, many times its cost every year, and the bill establishing it should be passed.

SPECIAL.

Those who, having applied for the Rural's present seed distribution prior to March 1, have not yet received it (Canada subscribers excepted), will kindly notify us by postal.

"BOYCOTTING' COTTON."

"Boycott Cotton" was the general sentiment at the Inter-State Agricultural Convention held the other day at Memphis, Tennessee. Last Saturday (Feb. 27), cotton in the New York market was 8¼ cents, a lower figure than at any time since 1852. This extreme depression is attributed chiefly to the manipulation of speculators. These have already fixed, so far as they can, the price for the next crop before the seed is in the ground or the plows have started. Cotton futures for December 1886 and January 1887 are now quoted in this market at from 8.90 cents to 8.75 cents. This means not more than 8¾ cents a pound in New York, and 8⅝ cents in the principal Southern shipping ports, and not over 7⅞ cents for the planter, who must pay freight, insurance and commission charges, which generally average from three-fourths of a cent to a cent per pound. A planter can not possibly make a bare living by selling cotton at this figure. Instead of getting out of debt to his commission merchant, he must sink deeper and deeper into his power, until, like so many other Southern plantations, his place passes, before long, into the possession of his creditor. The only remedy lies in diversified husbandry, and this the Convention earnestly urged upon the people of the "cotton belt." "Plant less cotton, and more grain and grasses. Raise hogs and hominy: let cotton be a surplus crop," is excellent advice. Instead of producing 6,500,000 bales of cotton, make only 4,500,000, and thus get long prices for the staple and be independent of speculating sharks who keep their victims in debt and misery. Every planter sees the wisdom of such a course, and wishes that his neighbors would follow it; but although it has been adopted to some extent of late years in many parts of the South, the movement has been slow and tentative. If the present great depression in cotton shall hasten and extend it, it will prove a "blessing in disguise." More economical methods in growing and handling cotton should also be employed. In all other lines of production the greatest economies are being introduced; why should cotton be an exception? An appeal was made by the convention for legislation against speculation in the staple; but although much has justly been said against buying and selling for future delivery, dealing in "futures" has certainly checked extreme fluctuations in the prices of cotton. The ups and downs now in the cotton market are trifling compared with those before the introduction of the telegraph and "futures."

BREVITIES.

A very expensive mode of riding—on a hobby.

Regarding the Rural's advice as to the Champion Quince, Mr. Kerr, of Maryland, will have a qualifying word to say in next week's R. N.-Y.

The Rural's Fertilizer Number is worth more than a year's subscription to any progressive farmer. J. D. MILLER.
Elmira, N. Y.

If the dairymen of the country ask the State and National Legislatures for nothing in particular, as Professor Morrow advises elsewhere in this issue, they are pretty sure to get it

Senator Wilson's bill raising the postage on fourth-class matter meets with an overwhelming opposition from all classes that sell or buy seeds or plants.

The idea of measuring the milk product of a cow in pounds and ounces instead of in quarts and gallons is good. When we can quote eggs by the pound we shall feel ourselves two steps in advance.

You promised yourself last Summer, when the fried pork began to taste so flat, that you would never let another Summer go without plenty of fruit. What is your promise worth? We are watching you to find out.

Senator Wilson thinks it may be advisable to make an exception in favor of seeds, plants, etc., in the bill which proposes to increase the postage on fourth-class matter. He solicits any suggestions from seedsmen and nurserymen.

The R. N.-Y., having tried about every other breed, proposes this Spring to make a start with Langshans. Our experience with the Plymouth Rock, and later with the Wyandotte, has certainly had its due effect in popularizing those fine breeds.

A good Canadian friend writes as follows about the present postal law of Canada, which places the rate of postage on fourth-class matter at four cents a pound: "It is a grand law for the people, and about the only grumbling we hear is from the *dear* express companies!"

A neighboring farmer has two wells, one close to the barnyard, the other close to the dwelling, 200 yards away. The latter is used by the family, except during long periods of dry weather, when the other is freely used. A number of cases of dysentery have occurred in the family.

The best way we have found to start celery seeds is to sow them in mellow, rich soil. Cover the drills with planks (hemlock), raising them above the soil an inch. These planks serve to retain the moisture so that watering is unnecessary. As soon as the seeds sprout, gradually remove the planks.

Bills prohibiting the sale or gift of cigarettes to boys under 18 years of age have again been brought before various State legislatures. It is surprising what strength is developed in favor of such measures; almost any man, though he be a confirmed smoker himself, would gladly have the "weed" kept away from his son.

Last year Congress tried to get on the soft side of editors by reducing the postage on newspapers to one cent a pound, besides carrying them free in the counties in which they are published. To carry newspapers for the publishers for one cent a pound and demand two cents an ounce for small parcels carried for the people—what an exhibition of consistency!

I enjoy the critical notes in the R. N.-Y. very much. By-the-way, the Rural is the best agricultural paper I get, all things considered. The one point that raises it in my favor is its independence in regard to new things. I detest a newspaper that will "slabber" for money. CHAS. W. GARFIELD.
Grand Rapid, Mich.

Why is it that the average yield of wheat on the long-used soil of the United Kingdom last year amounted to 31 bushels per acre; while the average yield on the comparatively new soil of this country was only 10¼ bushels? If prices, as seems likely, are to be lower here in future, won't it be necessary to force the soil to yield larger crops, or to abandon wheat raising altogether, as a source of loss instead of profit?

New England farmers are talking up the creamery system of dairying. We think they will favor it. Good creamery butter is uniform in quality and can be sold to best advantage. An organization of farmers will be far more powerful and conduct business better than a large number of single butter-makers. "Bogus" butter has fastened itself upon our markets. It will do no good to deny it. To fight it successfully, the butter trade must be revolutionized. The great mass of intelligent people who provide the butter market will never come to look upon oleomargarine with favor. They will simply change their methods of buying and go where care and honesty can be assured them. A good creamery with a retail city branch, will be the ideal butter establishment of the future. The new system can be made a great success in New England. With respect to distance to be traveled, similarity of pasturage and feed and good roads, that section will have greatly the advantage of the West, where the new system has been remarkably successful.

SAMPLES.

Our advertisement in a late Rural New-Yorker has paid us the best of any advertisement we ever sent out. CHAS. A. GREEN.
Clifton, N. Y.

We are receiving a large number of replies to our advertisement in the Rural—many more than we have ever received before. We are selling a large number of planters, some days the orders amount to over 100. We received an order from one man in Kentucky, who bought one on the strength of a remark he saw in the Rural New-Yorker. He was very much pleased with the implement, and thought the Rural the best paper in the country. About right.
Grand Isle, Vt. S. M. MACOMBER & CO.

Indust'l Societies.

CORNELL FARMERS' INSTITUTE.

(RURAL SPECIAL REPORT.)

Attendance good; commercial fertilizers; potash in potash salts; South Carolina rock; salt; special fertilizers; improvement in farming imperative; manure from rich feeding stuffs; "close" feeding of stock.

In holding this Institute Cornell University has taken a step worthy of high commendation. The meeting was called to order at 11 A.M., and Prof. Roberts was elected President and Maj. H. E. Alvord, of Houghton Farm, Secretary. The balance of the forenoon was spent in registering names and in making the members acquainted with each other. President Adams expressed his great pleasure in meeting the members and requested them to make themselves at home.

In the afternoon, a paper from Mr. A. Campbell, of Owego, was read; subject, Commercial Fertilizers. Continual cropping and cattle feeding have removed from the soil so much of the mineral matter used in successful plant growth that crops are no longer profitable, and in many cases the forage plants are so deficient in mineral elements that the animals fed thereon fail to thrive, while in some cases they even die. He has had the most satisfactory results from the use of kainit; a field almost barren, by the use of 400 pounds per acre each year had kept two sheep per acre, and the land had increased so much in fertility that last year it produced 30 bushels of wheat per acre. There is no such thing as exhausting land if annually manured with kainit, or other potash salts and phosphate of lime, and animals pastured on land so manured are not liable to abortion.

Prof. Caldwell said potash in kainit costs about six cents per pound; in sulphate about seven cents, and in muriate about 4¼ cents. He would not advise the use of sulphate(?) on tobacco or sugar beets. Muriate(?) he thought the best form of potash for general application.

Mr. J. S. Woodward said that near the large places where potash salts are sold by wholesale, the difference in the percentage of potash does not make so much difference to the purchaser; but where the fertilizers are to be transported long distances by rail, the high-grade salts are always the most desirable form in which to buy potash. In kainit we get only 250 pounds per ton; in sulphate about 500 pounds, while in muriate we get 1,000 pounds or more, so we should always buy the high-grade fertilizers of all kinds.

Maj. Alvord once thought kainit the most desirable form of potash salts; he now thinks differently. It contains too large a proportion of common salt and magnesia. The only place he would now use kainit is in the stables to be scattered as an absorbent.

Prof. Caldwell does not believe the action of the soil sufficient to dissolve the phosphoric acid in South Carolina rock, no matter how finely it may be ground, but we really need more careful experiments to determine its solubility. When dissolved, he thought its phosphoric acid just as valuable as that from any other source. Maj. Alvord had seen no good effects from the use of S. C. rock, even when in the form of "floats."

Prof. Roberts had applied to 100 rods of land, four loads of barn manure worth $4; to another plot of equal size $4 worth of chemical fertilizers; with one crop the fertilizer was ahead. Timothy hay the past Summer was of best color and gave the best yield with barn manure.

F. D. Curtis thought much of the effects of all manures depends upon the season; if very dry, but little good results, and barn manures sometimes are an actual damage to the crop by absorbing and retaining the moisture.

Mr. Allis had observed some very marked results from the use of salt on crops; it nearly doubled a bean crop.

Prof. Caldwell thought the result due to the solvent effect of the salt and not to any manurial value in it; it has a tendency to make soils more solid and retentive of moisture.

In an essay on commercial fertilizers, Prof. Caldwell said there are many sources from which we could obtain the elements most extensively taken from the soil by crops; and each year these are becoming more plentiful and cheaper. Where nitrogen once cost 28 or 30 cents per pound, it can now be had at 16 or 18 cents. We need more experimenting, more science on the farm. There is room for very many more agricultural colleges and more experiment stations. The great State of New York should at least have as many of the latter as some of the smaller States of Europe, which with a territory not much larger than some of our counties, have four or five of these institutions. He does not believe in the principle of special fertilizers. Different dealers offer different compounds for the same crop, and the same compound for different soils. Not all soils are deficient in the same elements, and more depends on the soil than on the crop to be grown.

Maj. Alvord said we need a little more definite knowledge of what is meant by commercial fertilizers. There is too much guess-work as to what they contain and what we get when purchasing them. He favors the purchase of phosphate of lime, potash and nitrogen in separate forms, and then experimenting to see which our soils need, and then the manufacture of our own compounds.

J. S. Woodward, in a talk on "Brains and Manure on the Farm," said the soils of New York were once rich; that they are now poor all concede. That we cannot subsist raising 10 to 12 bushels of wheat per acre, is too evident. We must either do better or sell out to those who can, and go West. The difference between the magnificent crops of our fathers and the meager crops grown by us is due solely to the exhaustion of the soil. There is only one means of restoring its fertility—"manure." By manure he meant any thing contributing to the growth of plants. He is an advocate of commercial fertilizers, and fully believes that by judicious selection and use, they can be made to pay. But when a ton is purchased, or when a load of barn manure is bought, the cost must be obtained before we can count any profit from their use. And right here is where the application of brains is needed on the farm. By their use it is possible to arrest the rich feeding stuffs that are being sent through the State from the West, and to combine them with the half-fattened animals in such a way as to make profit and give us all the rich manure we care to use, and such manure is a "complete fertilizer." When we purchase a ton of cotton-seed meal and feed it to stock, we should remember that, if properly saved and returned to the soil, the nitrogen, the phosphoric acid and the potash contained in the manure therefrom, would be worth, at the prices given, at least $30 per ton. A ton of linseed meal would give manure worth $17.50; a ton of bran, $13; a ton of clover hay, over $9. It must be a poor feeder indeed who cannot, if he adds one-half of these values to the value of the animals sold, show a profit in feeding; while a very good feeder, who makes great use of his "brains" in the operations, can show a nice profit, besides having all the manure at no cost. To accomplish this very desirable result, we must keep the stock in warm barns and under the most favorable conditions. He is in favor of close feeding and no exercise. J. S. W.

(To be continued.)

Miscellaneous.

CATALOGUES, ETC., RECEIVED.

The Vermont Farm Machine Co., Bellows Falls, Vermont.—Catalogues illustrating and describing the various implements manufactured by this reliable firm. The celebrated Cooley Creamers, the Davis Swing Churn, the Eureka Butter Worker and other excellent dairy implements are fully shown. Every wide-awake dairyman should examine this catalogue. In the fight against "bogus" butter he will need to make use of the facts contained therein. He who seeks to make "gilt-edged" butter must acquaint himself with every detail of the business. It has been proved from carefully prepared figures that in 1884 creamery butter sold both in Boston and New York, for five cents per pound more than the best dairy butter. The prices were averaged for each month in the year. The Pneumatic Fruit Drier and other implements for paring, coring and slicing fruits have received the highest commendations from practical fruit growers. The information contained in this pamphlet will be of interest to any man who owns even a single fruit tree.

The Spangler Manufacturing Company, York, Pa.—The first catalogue issued by this house is given up to a concise description of the corn planter, lime spreader, grain drill and other agricultural implements which they manufacture. A well arranged and valuable pamphlet. The Spangler Corn Planter is furnished with a fertilizer distributor which is said to work admirably. Lack of space forbids our giving an extended description of this implement. It must be seen to be appreciated. It is the fashion in these days to devote a considerable portion of the various advertising pamphlets to what may be called the literature of the subject advertised. This pamphlet proves no exception to this rule. Among other excellent articles we notice one on "Lime in Agriculture," taken from the Fertilizer Number of the Rural. Send for the pamphlet. It is well worth reading.

W. W. Rawson & Co., 34 South Market Street, Boston, Mass.—Mr. Rawson is said to be the largest producer of vegetables in New England, owning 40 acres, leasing 60, and having 10 acres under glass. The catalogue is one of the costliest and most comprehensive we have seen and has been arranged by a master hand and an experienced head. It is filled with illustrations worthy of the name. Many novelties are offered: the Bird Cantaloupe, Rawson's Clipper, claimed to be earlier than any other pea; Cory Corn, etc. The catalogue offers Bliss's Abundance and Everbearing Peas, the Rural New-Yorker Thoroughbred Flint—by far the best corn for ensilage purposes; Manshury Barley, about which we have had a number of inquiries. The flower novelties are many and attractive. The catalogue should be in the hands of all our readers.

Report of the National Swine Breeders' Association, from the Secretary, Phil. M. Springer of Springfield, Ill.—One of the most valuable pamphlets on hogs and hog products that we have seen. Every farmer in America ought to read the papers on Sanitary Reform, Swine Diseases, and Foreign Restrictions. The papers by Phil. M. Springer and N. L. Bonham on The Berkshire Hog—His Mission in America, and The Evolution of the Poland-China Hog, are generally looked upon as standard histories. In the discussions which followed the reading of these papers we find some of the most practical suggestions regarding the feeding and handling of hogs.

Sardy's Concentrated Plant Food.—A circular from A. L. Sardy, 10 Burling Slip, New York, containing a short lecture on Simple Chemistry for Practical Farmers, and many other facts of interest to those who use commercial fertilizers. Some excellent letters are printed from well-known and reliable farmers as to the value of this plant food The price of this fertilizer is $28.00 per ton. and the freight is paid to your nearest railroad station.

The Thermostatic Incubator.—Circular from E. S. Renwick, 19 Park Place, New York. This circular of 20 pages, discusses the scientific points involved in artificial incubation and presents numberless letters from those who have used the Thermostatic Incubator with success. We saw it in operation at the late poultry show. It appeared to give good satisfaction.

State Almanacs from Wells, Richardson & Co., Burlington, Vt.—These are arranged for each State in the Union, giving agricultural statistics and historical facts, as well as much other interesting information. One is sent to all who apply. If it is sent wherever the well-known butter color goes, the country will be well covered.

New Victor Feed Cutter, Champion Vegetable Cutter and Champion Double Spring-tooth Riding Harrow.—Circular from John R. Whittemore, Chicopee Falls, Mass., describing the above tools. These implements are cheap and durable. The use of feed and vegetable cutters is on the increase.

Catalogue of Holstein Cattle at Woodlawn Stock Farm, from G. W. Thompson & Son, Stelton, N. J.—It is not expected that members of this herd will become phenomenal or "bonanza" stock; but that they will prove deep milkers and good serviceable cattle seems evident.

Lewis Roesch, Fredonia, N. Y.—Descriptive catalogue of grape-vines, small fruits, etc. Colored plates of the Niagara and Empire State Grapes. Hints as to success in grape and small fruit growing. The Rural wants grape-vines and small fruits about the homes of all its subscribers. Free.

Poudrette, or Night Soil.—Circular from G. S. Pickering, 135 Fifth St., Troy, N. Y., in which night soil is described as "the cheapest and best fertilizer in the world." To learn the arguments and figures advanced in support of this theory, send for the circular.

George S. Josselyn, Fredonia, N. Y.—Descriptive list of American grape-vines, small fruit plants, etc. Mr. J. is the introducer of Fay's Prolific Currant—probably the best variety in cultivation. Free.

Buchan's "Silver Fleece Dip."—Pamphlet from the Carbolic Soap Co., 83 John St., New York, giving facts as to the symptoms, history and treatment of scab in sheep. Well printed and illustrated.

Burning Brands and Steel Stamps.—Those desiring any information in regard to any articles in this line should send to J. E. Mathewson, 274 Main St., Springfield, Mass., for circular.

E. B. Underhill, Poughkeepsie, N. Y. Berry-Leaf and Price-list.—A circular of small fruits, with a beautiful colored picture of the Empire State Grape.

Ellis Bros., Keene, N. H.—Pelargoniums, carnations, roses, etc; flower and vegetable seeds; eggs of Wyandotte, Leghorn and Langshan fowls. Free.

Stock and Poultry.

N. T. LATTIN,
Originator and Breeder of

For Women.

CONDUCTED BY MISS RAY CLARK.

THE EDITOR'S GIRL.

Spoken at the banquet of the Delta Tau Delta Fraternity.

HERBERT W. COLLINGWOOD.

You know the old fellow who, long ago, said,
After painfully thinking and rubbing his head,
That with one simple lever he'd make the world jump
From its place—into space—with a terrible thump.
If he had but a log and a good place to stand,
He could move the great world by one touch of his hand.
The old fellow's lever was easily found,
But the log and the place to stand never came round;
And the people laughed loud at the dreaming old man,
They called him a lunatic - sneered at his plan.
Yet we - foolish quill-drivers—know he was right;
The world *can* be swayed from the dark to the light.
The Press is *our* lever, far down in the heart
Of the people it reaches and holds for its part.
The Press is the lever, yet where does it rest?
The noble old Roman or Greek at his best
Was forced to give up on his log long ago;
Yet we have discovered it—listen! I'll show
The lever swings on as the busy years whirl,
And it rests in the hands—of the Editor's Girl!

The Editor's Girl? What, that small party there
With a square inch of forehead down under her hair?
With a fist like a snowball—a mouth like a rose,
With a smile that would thaw out your heart though it froze?
Admit it—be honest, my brothers, to-day—
We *are* brothers—I'll not give your secret away.
Own it up, has the little girl not made your life
Far better and purer and held you from strife?
Don't you know how you stood—may be years ago,
How you wanted to stay and yet wanted to go?
While the little girl looked up at you with a smile
And a queer sort of look in her eyes all the while:
Till you found that you *couldn't* stay longer aloof,
And you reached for her mouth—and, in fact, you "took proof?"
Now honestly—didn't you after that night,
Think of her every time when you sat down to write
Your wild editorials?—how they did shine
Touched up by friend Cupid, that fellow divine.
She would smile up at you from the bottle of ink,
While you sat there patiently trying to think.
You knew that your paper would always be read
By at least one subscriber whose dear little head
Would treasure the good and forget all the ill,
And think you a wonderful personage still.
And under your coat there, you carried a charm
That would make Trouble shake in its boots in alarm.
I know what it was—it was only a curl
From the head of the Editor's dear little Girl.

You smile at me now, and you say that these joys
Are all very well for a great crowd of boys;
But that when a man's beard and his head have turned gray,
The romance and poetry all fly away.
Now, if it be true, that the heart will grow cold,
Let us solemnly swear that we'll never grow old.
Say, tell me, you bald-headed men over there—
You studious fellows with more brain than hair—
You men who stand looking down through the dim years,
All filled up with pleasures and trials and tears—
Does the little girl really grow *old* with each year?
Is she ever less fair, is she ever less dear
Than she was when she looked in your face long ago
With the look in her eyes that sent fire through you so?
When she spoke the three words that have made up your life,
That have kept you from sorrow and held you through strife?
Would you not give as much—come, be honest to-night—
For one curl from her head though it be streaked with white?
Do her cheeks really fade as the busy years whirl?
Is she *ever* aught else but the Editor's Girl?

Think over your life; all the joys you have had;
All the beautiful memories tender and sad,
That come as the starlight breaks through the dark pine,
That twine round your heart as the soft tendrils twine.
Ah—the lip may well tremble—the eye may well fill
With tears—not unmanly is that tender thrill,
As you think of the anguish that wrung through her life
When the little child dropped from the world's busy strife.
Ah, the brave little woman—her lips wore a smile
Though you knew that her poor heart was breaking the while.
Ah, how small will *our* portion of fame be, my friends,
When the mighty bookkeeper shall foot up both ends
Of the ledger; our portion will be indeed small;
Yet she—little woman—would give us her all.

Do your troubles not bring you still closer together,
No matter how gloomy, how stormy life's weather?
Does she not still to you her best influence give?
Do you not know her better each day that you live?
Does she lead you in truth such a wonderful dance;
And *is* it all poetry, hosh and romance?
You've been over the road—*you* know what you're about;
We simple, young fellows would gladly find out.
For we have a notion—no doubt its all wrong;
No doubt down in practice its not worth a song—
That a man may mount high to the temple of Fame—
The honor, the love of the world he may claim.
Yet back of it all, unobserved and unknown,
A woman is silently building his throne.
She is patiently, lovingly working the while
With a woman's unreasoning love and a smile,
And as long as the years dance their magical whirl,
We will praise her for ever—The Editor's Girl.

THEN AND NOW.

In nothing have our ways changed more in 40 years than in our ways of traveling. Now when we wish to make a journey of a few hundred miles, we consult the railway time-table, look up our most direct route, and at the appointed time make our appearance at the depot, grumble if the train is five minutes behind time, hurry on board, and with a scream and a jerk off we go at the rate of 30 or 40 miles an hour.

Not so the staid old farmer two score years ago prepared to make a filial visit to his old father and mother, who lived a couple of hundred miles east of himself, among the Highlands of the Hudson. Days were given to the preparation of victuals for the use of his party on their trip which was to be made by private conveyance—a two-seated spring wagon, which he surveys with becoming pride in its neat and stylish appearance.

Early in the morning of the day appointed for the journey, a remarkably safe team was brought to the door, and the good man and his wife take the front seat, while two children too wild to be left at home, triumphantly clamber into the back seat, while the elder sister takes a seat between them to maintain something like order, a rather difficult operation where a boy of six and a lively girl of ten are concerned. Looks of lively pleasure are cast by them at the box containing the biscuit, pies, doughnuts and apples, as well as the other good things, waiting for their hungry lunch hour, and altogether the world seems to them just at that time to be overfull of enjoyment.

A last caution is given to those to be left in charge of the domestic affairs at home, and the party set out on what is to be to them a memorable journey.

This trip holds for every one of the party more enjoyment than many now in this faster age would gain from a trip to the Old World. On they go day after day, up hill and down, across the sandy pine plains and through toll gates built on the paved turn-pike; between long rows of Lombardy poplars, stopping at wayside inns, patronized by very many similar traveling parties, until the noble Hudson is reached, and to the young people what seemed like a wonderful invention, were ferried in a boat across the river, without getting out of their own wagon. They then pursued their journey over the more mountainous region beyond, often walking up hills which it seemed unsafe to ride up, without falling out behind, until at last they arrived at sunset one evening at the door of the grandparents, where such a welcome awaited them as only such relatives can give to the long absent loved ones. Then what joyful days of visiting uncles, aunts and cousins of the children; brothers, sisters and old acquaintances of the parents; a visit to the old farm where he had been brought up by the father who thought he did not remember that the rocks were so very large, and so near together as they seemed now; what unlimited spoiling of the grandchildren came in as a matter of course, before the time arrived for them to start for home once more by a more circuitous route, to visit by the way other relatives seldom seen; and what a long, delightful trip it seemed to all, and when home is reached once more, the cares of life are resumed, and seem to press less heavily than before; and to those children ever after that pleasant journey to their grandparents, seemed like a dream of paradise.

SOLITUDE SWEETENED.

CLOVER LEAF AND OPENWORK LACE.

Cast on 33 stitches and knit across plain.

12th row. Thread over twice, seam two together, 15 plain, thread over twice, seam two together, nine plain, thread over twice, seam two together, three plain. E. M. N.

PERSONAL ADORNMENT vs. UNTIDINESS.

All mechanics, either builders of syntax or constructors of edifices, know that we must first lay a firm foundation. Let us come to the point and form the foundation for this topic—order and cleanliness in its strictest, strongest terms. We must first learn to be clean and neat in all things. Then comes Heaven's first law, which you all know is order. I wonder if every mother feels the great importance of teaching her child to be orderly. It would not only save her many steps, but she should think of the future, when her child had arrived at womanhood. What kind of a housekeeper will she make? Some children are born with order stamped in their nature; others, alas! with disorder. I must confess I was one of the latter. For a few years I was a source of great trial to my mother, who is extremely particular and orderly. It was more forgetfulness on my part, but I was very apt to leave my books, after studying, on the table instead of putting them in my book-bag. Not only this, but a hundred other things, which kept the room in constant disorder. When my mother remonstrated with me my only answer was: "O, mamma, I'm so sorry, but I forgot." Such terrifying spectacles was held before me of girls who had grown to be women, and were slovenly and untidy, that it frightened me out of my forgetful, heedless ways and compelled me to remember. My mother would not allow any one of the household to put things in their places after I had disturbed them, but would have me replace them myself. For a time I was continually being called here and there to straighten whatever I had disarranged, and as you may suppose, picking up after oneself was not a very agreeable task, and soon became a weary one.

I gradually improved and eventually became tidy and orderly, thanks to my mother's careful training of a habit which would have caused me a world of trouble throughout my life. Any lady who is a neat tidy housekeeper cannot be neglectful of her own personal appearance. When we see a woman about her work with her hair uncombed and having on a soiled dress, "it is a marked evidence of a slack housekeeper." But what is our opinion, if her hair is brushed, and her dress, though old and worn, is clean and neatly mended? How many young ladies with pretty faces delight in making a trim, showy appearance on the street to please the public eye, who, when at home, are directly opposite? Is it not of more consequence to look well before the home-circle of father and brothers, or husband and little ones? Does it not endear the husband to his home to be met at the door after his day's toil by a wife dressed in a pretty, calico dress, and clean white apron, having a smile and kind word of welcome?

I have heard of persons washing dishes on the table cloth, and with an embroidered white apron on, and of its being as clean and white afterwards as before; the table-cloth not having suffered either. We saw once, a lady of French birth and parentage, doing the week's washing for herself and husband, with linen cuffs on. But of course these are extreme cases, and there is a happy medium within the reach of every housekeeper, and while such cases are on record, as a lazy, slovenly woman blacking a stove while having on a satin dress, and going to evening prayer meeting wearing the same dress; and in direct opposition to this, the two just mentioned, there are many which could be related, of beautiful, orderly, quiet, homes, where love and obedience control, and where each strives to out-do the other in kind acts and words, and where the mother is always suitably attired, whether for morning, afternoon or evening, and where one is conscious of no great amount of labor required to produce this. May such homes and such mothers be multiplied a thousand fold throughout our land! W. N.

Domestic Economy

CONDUCTED BY EMILY MAPLE.

BREAKFAST PLATES WITH SOMETHING ON THEM!

A DELIGHTFUL REPAST IN WHICH DAINTY RELISHES FIGURE.

"And then to breakfast with
What appetite you have."

Breakfast parties are very fashionable, being less informal and expensive than dinner parties, and generally just as satisfactory to guests. Macaulay said, "Dinner parties are mere formalities: you ask a man to breakfast because you want to see *him*." In England they are greatly in favor among the *literati*.

The following modest breakfast *menu* has been prepared for the Rural readers by special request.

Broiled Salmon.
Kidney Toast. Potato Croquettes.
Tomato Omelet.
Rice Waffles.
Fried Bananas.

Have one or more half-inch slices cut from the thick part of the fish; wipe dry; dredge lightly with flour, and broil over a clear fire. When done, put little lumps of fresh butter over them, and serve very hot.

If a sauce is desired (and it is always a good addition), there can be nothing better than that simplest of sauces, Maitre d'Hotel butter; mix a spoonful of butter with a teaspoonful of lemon-juice, a little chopped parsley, and pepper and salt: spread this over any broiled fish, and set in a hot oven for a moment. A little drawn butter with the addition of a few capers, is also a nice fish sauce.

Kidney toast is a very delightful breakfast dish. Chop very fine four veal kidneys with half a pound of calf's liver; season with salt and pepper. Toss them into a frying-pan with a little butter previously made hot, until cooked but not overdone; have ready some hot squares of buttered toast; take the kidney from the fire and stir in the beaten yelk of one egg, and half a teaspoonful of lemon-juice; spread the mixture on the toast and serve at once. With stewed tomatoes and hot corn muffins this makes a very nice family breakfast.

For the potato croquettes, put in a mixing bowl one large cupful of mashed potatoes, a little nutmeg, and Cayenne pepper and the beaten yelk of one egg. Beat this with a fork until light and smooth, roll into little pear shaped cones, egg and bread-crumb them and fry in boiling fat. When anything is to be fried by immersion, always test the fat by throwing in a bit of bread: if it takes on a brown color at once the fat is hot enough, and your croquettes will be crisp outside and dry and light inside.

Directions for making tomato omelet were given in the Rural of February 27.

Make the rice waffles exactly after the following recipe, and eat with butter and honey or silver drips.

Take one cup of boiled rice and mash smoothly, moistening it gradually with a cup of water; stir in one-third of a cake of compressed yeast that has been dissolved in luke-warm water, and two cups of flour. Add enough water to make a batter rather stiffer than for cake. All the water used must be luke-warm and the batter be perfectly free from lumps. Let it stand in a warm place for three hours; add three beaten eggs, a teaspoonful of salt, and a very little sugar, and bake in waffle-irons. These waffles are quite possible at a company breakfast which is served at any hour from nine to twelve, but cannot very well be managed for the ordinary family breakfast, as they call for very early rising on the part of the cook, but they are good at lunch or supper, or as a dessert.

Cut sound bananas in three slices lengthwise, and *saute* in a little hot butter. If the latter is as hot as it should be, they will take on a delicate brown quickly, and will make a very dainty ending to a dainty breakfast.

PALMETTO.

KITCHEN TALKS.

ANNIE L. JACK.

"I have been greatly interested in the subject of frying," I said to the girls, when they

Miscellaneous Advertising.

When Baby was sick, we gave her Castoria,
When she was a Child, she cried for Castoria,
When she became Miss, she clung to Castoria,
When she had Children, she gave them Castoria,

told me that the soapstone griddle was getting rough and uneven for our buckwheat cakes.

"Frying," said one, "Oh! that would never do." I went to the rack where the papers are kept, and selected one with the remark:

"We have as high an authority as Miss Parloa in this matter, for she says: 'Since many people fry much of their food, information as to the best methods of frying seems desirable. The first thing to be considered is the fat. If expense did not stand in the way, olive oil would be the best liquid to use. Any pure, clear fat that is free from strong odor will do.' Her method of cleaning the fat from impurities is simple, but thorough. She tells us to put it on the stove in a frying-pan as soon as possible after skimming it from gravies, etc., and heat it slowly; when melted set it where it will bubble, and when all motion ceases, the sediment will have fallen to the bottom of the pan and the fat will be clarified. In frying doughnuts, she tells us that they require a heat of 350 degrees, and it is indicated by a smoke in the center of the fat. If a piece of stale bread dropped in requires one minute be become brown, it is of the right temperature for frying articles that require three or four minutes for cooking. Fried potatoes need 10 minutes' cooking and a temperature of 370 degrees; they should stand in ice-water before cooking, and be dried in a clean cloth quickly before putting them into the grease, as the least particle of water sends out little sparkles of grease over stove and fingers, and these are very trying to the cook. The smoke and the bread tests are quite reliable as to the readiness of the fat for the food.'"

Miss Parloa speaks of the "frying basket," and I think we must procure one for the Amateur Cook. It is made of fine wire, and the articles to be cooked are placed in it, and lowered gently into the fat. When they are cooked, it is lifted out, and the fat is allowed to drip on to a plate. Food cooked in this way will not have any of the clinging grease that weak stomachs refuse, and I should think pork rolled in flour and cooked in such a manner, would lose much of its objectionable quality. If the melted fat is strained through a piece of cheese cloth, it can be used over again for many things. Of course, one must use her own judgment in this matter.

"It is a case of Mahomet and the mountain," said the Epicure, "if folks will not give up frying, we must try to make frying less injurious."

"But that does not help my griddle," said the cook, and so as we survey its indentations, and find our pancakes do not have such an even surface: we send this question to the wise RURAL, which among its stores of wisdom may know how to improve a soapstone griddle.

A FLAT-IRON PAPER WEIGHT.

THIS is quite an amusing novelty and can be made of any old flat-iron, even if too much worn or rusted to be of further use for its original purpose. It is set up as shown at Fig. 111. Around its rim is first glued a strip of cotton cloth, and this should be thickly sprinkled with sachet powder. The face of the iron is covered with plush, which should be drawn smoothly over the edges and be glued to the iron in the groves near the back surface. If neatly done, it will lie smoothly and there will be no wrinkles. The back-side should then be covered with plush of a different color, which may be nicely stitched to the front covering, close by the edge made fast to the iron. Two little pockets for holding postage stamps may be stitched side by side near the lower edge of the face, as shown in the cut. A minature thermometer may be fastened near the point of the face and the space on each side of this and between it and the pockets may be filled in with any suitable design painted or embroidered upon the plush. The handle should be neatly painted in black, and ornamented with gold or bronze to suit the taste. It won't cost much and is tasty and handy.

Fig. 111.

UNCLE J.

MANTEL LAMBREQUINS; CURTAINS.

THERE is nothing new in the idea of a mantel lambrequin, but every one does not know how cheaply and effectively an unsightly mantel may be draped. I do not speak so much of old-fashioned wooden mantels, for to my mind no wooden structure can be as cheerless and uninviting as the ordinary marble mantle, which is suggestive only of graveyards.

To hide from view such an affair, take a strip of dark olive or cardinal felt half a yard longer and a quarter of a yard wider than your mantel-shelf. Cut it in points on the lower edge. Cut some material of contrasting color in diamond-shape pieces, and fit them in the felt in such a way that they will come between the points of the long strip. Feather-stitch these around, and tip each point with a tassel. If you have bits of velvet or silk of different colors, such as old-gold, cardinal, dark and pale blue, and black, they may be arranged alternately with good effect, and crewels may be used instead of embroidery silks. A very pretty and inexpensive lambrequin was made of dark-cardinal plush (cotton flannel), with the points in old-gold, and the embroidery in blues and black. A breadth of an old woolen dress, washed and dyed at home with Diamond Dyes, could be used, but it should be lined with something stiff. Old muslin starched would do, but the ends that hung over would require to be lined with the same material as the outside.

The writer was admiring at a friend's house a very rich-looking pair of window curtains. They were of dark red with a deep border of old-gold prettily embroidered. There was one wide curtain at each of the two windows suspended by the usual rod and rings. They were made from two old dresses—one, a pale blue much soiled, had been dyed red; the other, a child's white nun's veiling, was dyed old-gold. The border at the top, bottom, and sides, was made long enough to make the curtains of the right width and length. It was put on with fancy stitches in crewels, using cardinal for the old-gold border, and old-gold for the center, and the work was done so neatly that the curtain needed no lining. Many different designs were outlined on the border and put in with the etching stitch in different colored silks and crewels, a great deal of black being used and producing a most effective whole. MRS. M. A. FOSTER.

TIDIES.

Pretty tidies are made of white swiss or any kind of fine white goods. They simply require to be hemmed, and a design in silk worked in the center in outline stitch. There is a kind of silk for embroidery especially adapted for wash goods, that will not fade or run when washed. The newest shape in tidies is the "scarf." They are suitable only for the backs of easy stuffed chairs, should be a trifle longer than the chair is wide, and gathered up in the middle and fastened with a pretty bow of ribbon. In this case the design should be on the ends, which may be either hemmed or trimmed with lace. ALICE.

CRAZY-QUILT PORTIERES.

Now that the rage for crazy-quilts has somewhat abated, ladies may find their crazy embroidery a drug on their hands. It is very handsome and effective, however, in many kinds of decoration. A wide strip on the top or bottom or both, is very elegant for portieres. Used in this way, a piece of stuff that would otherwise be too small, can be helped out by the addition of the strip. It makes a pretty chair covering, alone or combined with some plain material, and if the materials and work are handsome it makes a rich and Japanese-looking border for a window curtain. A plain cotton plush table cover may be embellished with squares of any size, appliqu'd on. It is also pretty for edging the ends of the plush "scarf tidies" that are now so fashionable. NELLIE.

DOMESTIC RECIPES.

FRIED POTATOES.

TRY this for a most delicious lunch or supper dish. Chop very fine some raw potatoes that have been peeled and washed; add half the quantity of cold boiled fowl; they should both be chopped as fine as grains of rice, and dredge a *very* little flour over them with a pinch of fine salt: put a tablespoonful of butter in the frying-pan, and when it is hot put in the mixture and stir constantly with a wooden spatula until they are fried to a nice golden color. Send to table at once on a hot plate. This may be varied by using cold boiled ham or tongue in place of the chicken, omitting the salt. MOLLIE.

SWEET POTATO CAKES.

A VERY nice dish for lunch or tea is this: Sweet potatoes are often poor and watery at this season, and this is, perhaps, the most edible way of preparing them. Boil them, remove the skins, mash fine with some butter, and form into little round cakes. Fry brown in a little hot butter or dripping. R. B.

HOW TO BROIL MEAT.

IN broiling all meats it is essential that the surface should not be cut or broken any more than is positively necessary. The meat should be exposed to a clear, quick fire, close enough to sear the surface without burning, in order to confine all its juices. If cooked slowly over a poor fire, or seasoned before it is cooked, it will be comparatively dry and tasteless.

To cook a beefsteak nicely, see that the bars of the gridiron are smooth, grease them slightly, turn it frequently so that it cannot burn, until it is done to your liking. In order to ascertain this do not cut it, but press the tips of the fingers upon it; if it springs up again after the pressure, it is rare, but if it remains heavy and solid, it is well-done. Spread over it a tablespoonful of butter that has been rubbed together with a teaspoonful of minced parsley and a little lemon juice; season with salt and pepper and set in an oven for one minute. M. J. A.

BRUSH AND COMB FREE!

This handsome Brush and Comb Set, which is very imperfectly shown in our small illustration, consists of a fine Electric Wire Hair Brush, 8½ inches long, with nickel rim and polished hard wood handle, its wire bristles drawn through a flexible rubber base, thus giving it great elasticity and strength; also a good Dressing Comb, 6½ inches long, of real horn, with coarse and fine teeth and with a decorated tube back, which ornaments and protects it. Each set is packed in a strong, substantial box. This is a very neat and desirable Toilet Set, and is fully *guaranteed for quality and durability.* We publish **The Cricket on the Hearth**, a large 16-page, 64-column Illustrated Literary and Family paper, filled with the choicest reading matter for the family circle, and being desirous of increasing its already large circulation to 100,000, we now make the following *wonderfully liberal offer: Upon receipt of only* **Thirty Cents**, *we will send* **The Cricket on the Hearth** *for* **Three Months**, *and to every subscriber we will also send, Free and post-paid, the handsome* **Brush and Comb Set** *above described.* Remember, this Toilet Set costs you nothing; it is given *free* as a premium with our paper. This is a rare opportunity to obtain a set of very useful toilet articles *free*, and all who see this offer should take advantage of it. *We guarantee double value of money sent.* Five subscriptions and five Brush and Comb Sets will be sent for $1.25. As to our reliability, we refer to any publisher in N. Y. Address,

*Exclusive of the amount specially reserved as a contingent liability to Tontine Dividend Fund.
†Over and above a 4 per cent. reserve on existing policies of that class.

The Seven Advantages
OF THE
NEW YORK LIFE INSURANCE COMPANY'S
Nonforfeiting-Tontine Limited-Endowment Policy.

FIRST ADVANTAGE.—Insurance for a definite amount, or for an amount increasing with each premium paid, as desired.
SECOND ADVANTAGE.—A Definite Cash Endowment, and a Tontine Dividend, to Policies in force at the end of Endowment and Tontine periods, which periods correspond, and may be either Ten, Fifteen or Twenty Years.
THIRD ADVANTAGE.—Insurance for the full amount of the Policy, extended for as long a time as the value of the Policy will carry it, within the Endowment period, in case of discontinuance of payment of premiums after three years.
FOURTH ADVANTAGE.—A Grace of one month in the payment of premiums, during which time the policy-holder's security is unimpaired.
FIFTH ADVANTAGE.—Three valuable options, including cash value to policy holders who survive their Tontine and Endowment periods and keep their policies in force.
SIXTH ADVANTAGE.—Practical freedom of action with respect to occupation, residence and travel.
SEVENTH ADVANTAGE.—The payment of death-claims immediately upon the approval of the required proofs of death.

Do not insure until you have seen full particulars of this Policy. Do not fail to write the nearest Agent, The NEW-YORK LIFE INSURANCE COMPANY, 346 & 348 Broadway, New York City.

IT IS A FACT

THAT THE
COOLEY CREAMERS
Are used by more fine butter makers and stock breeders than any other apparatus, because they have proved to make the **largest quantity** and **best quality** of butter with **least labor** and **expense.** They surpass everything in the Cream Gathering System. Patrons realize from 3¼ to 4½ cents per quart for milk. Send for Circulars giving facts and references sustaining these claims. *Davis Swing Churns and Improved Eureka Butter Workers.*

Vermont Farm Machine Co., Bellows Falls, Vt.

PERFECTION IN BUTTER MAKING.

THE **O. K.** OUTFIT EXCELS THEM ALL.

O. K. CREAMERY
Has the largest cooling surface, takes less cooling material, less labor, and gives best results. All cream raised between milkings ☞ Skimming glass whole depth of can, **showing condition of milk** without touching creamery.

O. K. CHURN Has improvements over the best. Easy to clean, **easy to operate.** Made of White Oak. **Cover Castings will not break.**

O. K. BUTTER WORKER Made on scientific principles. Adjustable bed. Preserves the grain of the butter. Solid wood roller. THE MOST PERFECT Butter Worker ever put on the market.

JOHN S. CARTER, Sole Manufacturer, SYRACUSE, N. Y.

News of the Week.

HOME NEWS.

SATURDAY, March 6, 1886.

Since the collapse of the transcontinental pool, a fortnight ago, the various Pacific railroads have been cutting freight and passenger rates briskly west of the Mississippi; the connecting lines east of the river have as yet taken no part in the struggle. The "pool" paid the Pacific Mail Steamship Company $85,000 a month for not cutting rates, and as this subsidy has stopped, the company has bought two new steamers and will have a weekly service from New York to San Francisco *via* Panama. It is thought peace will soon be declared, but the former extortionate rates can hardly be restored.....The Grant Monument Fund is still only $115,891,00. The Hancock widow fund now amounts to $35,950..... ....In view of the recent decision restricting telephone charges in Indiana to $3 a month for the use of each telephone, the telephone monopoly has determined not to let out any more telephones in the State. A bill has been introduced in the New York Legislature limiting charges to $5 a month per telephone..... A Tennessee court in which six murderers had just escaped conviction, has closed its labors by sending a hungry woman to prison for two years for stealing a quart of buttermilk..... ....The Republicans in the Senate want the $75,000,000 appropriated by the Education Bill, to be paid to each State and Territory which have separate schools for white and colored children, in proportion to the number of white and colored children in each according to the census of 1880, and not in proportion to the number of each color attending the schools. Without this proviso, it is thought the white schools of the South would get a disproportionately large share..... Last Tuesday delegates (324) from all the divisions of the Pennsylvania Railroad and its connections unanimously refused to agree to the "relief scheme" proposed by the road. The company required the men to abandon all other organizations and to surrender their rights against the company in case of injuries. The Baltimore & Ohio fund of a like kind now amounts to over $6,000,000, mainly collected from the men, and under one rule and another forfeited by them. The philanthropic scheme will probably be dropped: otherwise the men will strike...A big strike began Tuesday on the Southern Pacific Railroad and is likely to extend to the whole Gould system.... An excellent special committee has been appointed by the House to investigate the ownership of the Pan-Electric telephone stock..... There is to be a big Congressional fight over Eads' Atlantic and Pacific Ship Railway, which seeks to make this country liable for $37,000,000 "for the benefit of a private corporation located and to be operated exclusively in a foreign country."..... Canadian manufacturers are urging the Goverment to increase the duties on foreign goods, pork among them.....Sir John Macdonald says that, outside of compensation for losses in the late rebellion in the Northwest, the expenditure in the field and for transport services was nearly $4,000,000. The population of the Northwest Territory is: Whites, 23,344; Indians, 20,170; and half breeds, 4,848—a total of 48,362. He attributes the whole trouble to Riel's blandishments and misrepresentations. Latest reports say there will be no Indian troubles in the Northwest this year..... .....The Canadian Maratime Provinces are loudly dissatified at the Governor-General's speech which intimated that the Government did not expect a renewal of the fishery clauses of the late reciprocal treaty with this country. They insist on the exclusion of American fishermen (by force, if needed) from Canadian waters to compel the free admission of Canadian fish into the United States in return for permission to our fishermen to fish in such waters.....Virulent attacks are being made in the Dominion Parliament at Ottowa on the Government for hanging Riel. It is said the Government secretly favors the attacks, as it wishes a vote on its course in that matter.....The half-breeds of the Northwest have thanked the Government for recent aid for the distressed, and the proposed admission of representatives from that section into both Houses of Parliament.. .....The Supreme Court of New Jersey, has ordered the railroads passing through the State to pay to the State $300,000, the amount of the tax levied on all railroad property. This will meet all current obligations, and prevent State bankruptcy.....The public debt was reduced $2,902,153.41 in the month of February.....In Salt Lake City five Mormons were sentenced Mouday to six months' imprisonment for unlawful cohabitation. Several were convicted and will be sentenced at a future day.....It is charged that laborers on the Panama Canal are dying at the rate of 40 daily and 14,600 yearly..... ....A comet discovered by a Parisian astronomer last December will be visible in this country to the naked eye in the middle of April, and on May 2 will be *only* 12,000,000 miles away, and shortly after sunset will be as brilliant as the great comet of 1881..... The McCormick Reaper Works at Chicago have resumed work without discriminating between union and non-union hands. The union men still keep out, but the goods have not been boycotted yet; works running with about 800 hands—half the usual number..... ....The Champion Reaper Works of Springfield, Ohio, have discharged all the Knights of Labor in their employment (upwards of 300), "in order to avoid strikes, dictation and coercion." Over 100 fellow-workmen at once joined the "lock-outs." There are 3,000 Knights of Labor in the town and many belonging to affiliated labor organizations, and trouble is feared.....Nearly 100 out of the 400 employés of the Empire Mower and Reaper Works, of Akron, Ohio, have struck for an increase of 15 per cent. on the $2.70 a day they are now getting. Trouble referred to the National Board of the Knights of Labor.....Mrs. Grant has received $200,000 as her share of the profits on the sales already made of the first volume of Grant's Memoirs. The sale of the second volume, which will be ready next month, is just the same, insuring her an equal sum. There will also be a fine profit on the work sold in other countries, and the copyright has 16 years to run in this country yet, and the sales must be large every year..... ....James C. Matthews, colored Democrat of Albany, N. Y., has been nominated by the President as Recorder of Deeds at Washington, to succeed Fred. Douglass asked to resign. The place is worth between $8,000 and $10,000 a year.....The Senate Committee on Military Affairs has indorsed the Fitz John Porter bill as an act of justice. It is pretty sure to pass the Senate now; but by a proportionately much smaller majority than it got in the House the other day..... The anti-Chinese war still coutinues on the Pacific slope. Some 1,400 Celestials started for home on one steamer the other day. San Francisco is crowded with those driven out of Oregon and Washington Territory. The "Six Companies" are sending great numbers into Arizona and New Mexico, where white men are organizing to expel them. They are also reported to be swarming into Texas and Louisiana, and, indeed, into the Southwest generally. Large numbers are coming east, also. The Chinese claim $175,700 for losses at Rock Spring, Wy., last Fall. Pres. Cleveland has sent a special message to Congress recommending friendly legislation to indemnify them for their grievances there and elsewhere. China paid this country $735,000 for injuries to American citizens at Canton 30 years ago, and after the payment of all losses, over one-third of the sum remained in the United States Treasury. Great excitement is reported among the Chinese around Canton on account of the late outbreaks here, and retaliation on Americans in China is threatened..... ....Last Wednesday, the drivers and conductors on one of the street car lines in this city struck for higher wages and shorter hours. The car companies have been making from 12 to 30 per cent. per annum on their capital, a large share of which is "water," so that the interest on the actual capital has ranged from 16 to 40 per cent per annum. The men worked from 14 to 18 hours a day and got from $1 75 to $2.25 a day wages—but fines and missing trips, for which no pay was allowed, cut their average wages down about one-third. Having families to support as a rule, they could barely live in a city where living is comparatively high. The chief owner of the line refused the demand, and next day, the strike was extended to a number of lines he owns in Brooklyn. Rumor having spread that the other lines were going to help him, every line in the city was "tied up" yesterday morning. By 2 P. M. the demands of the men were granted in all chief points, while minor points were left for arbitration. The State law insists that railroad corporations cannot refuse or neglect to perform those public duties on account of a controversy with their employés about the expense of performing their duties, and the State Railroad Commissioners warned them that they were liable to forfeit their charters if they didn't run the cars.

MESSRS. BLINTZ BROS., Denmark, N. Y., who milk 60 cows say: March 3, '85: "That they have tried four of the leading butter colors, for two years past have been using Thatcher's and consider it superior to them all." Manf. by H. D. Thatcher & Co., Potsdam, N. Y.—*Adv.*

AGRICULTURAL NEWS.

SATURDAY, March 6, 1886.

The Associated Chambers of Agriculture of Great Britain on Tuesday adopted a resolution favoring the imposition of import duties on foreign grain.....Last Tuesday the House Committee on Public Lands took a test vote on the proposal to repeal the Pre-emption and Timber Culture Laws. The result was decidedly in favor of the repeal..... .....Holland threatens to raise the duty on American petroleum in retaliation for our duty on Sumatra tobacco, by which Pennsylvania, Connecticut, Maryland Wisconsin and Ohio are the chief beneficiaries.....The House Committee of Agriculture has reported favorably a bill requiring our Consuls abroad to send to the Commissioner of Agriculture reports of agricultural experiments in their respective districts, and also statistics beneficial for our farmers...As usual in Winter, exports of live cattle to Great Britain are light. Last week only 362 were taken from Boston.....The oleomargarine interest has a powerful lobby in Washington, and it is steadily increasing..... .....A bill has been introduced in the United States Senate providing for the inspection of meats for exportation, and authorizing the President to retaliate whenever our products are unjustly discriminated against in foreign countries.... A hog killed at Rhinebeck, on the Hudson, Thursday, dressed 888½ pounds..... The American Veterinary College of this city "turned out" 28 veterinarians last Monday. The medical colleges here turn out hundreds of doctors every year.....No fewer than 23 mills are at work bleaching barley in Wisconsin, nearly all in the neighborhood of Milwaukee. The fumes of sulphur remove the dark stain of low-grade grain, making it a bright straw color, and increasing its market value. Detection, it is said, is difficult, if not impossible. The State laws impose a penalty of $50 for each offense but as most of the product is shipped out of the State no one has hitherto thought it worth while to prosecute. The Milwaukee brewers are now aroused, however.....

THOSE who have used the BOSS ZINC and LEATHER COLLAR PADS and ANKLE BOOTS say they are the best and cheapest, because most durable. They will last a life-time. Sold by harness makers on 60 days' trial. DEXTER CURTIS, Madison, Wis.—*Adv.*

Crops & Markets.

SATURDAY, March 6, 1886.

Except from some parts of Ohio, Indiana and Michigan there are really no bad reports of injury to winter wheat; the condition of the grain in the winter wheat area, including Tennessee and Kentucky, is decidedly better than a year ago. Now, however, the ground is generally bare, and the danger line will not be passed before April 1. There are no indications of a very large yield; but a prospect of a fair average crop. Early seeding probable in Nebraska, Minnesota and Dakota; considerable snow still, however, in Wisconsin, Northern Michigan and Northern Minnesota. According to the "Weather Bureau," the snow covering at the end of February was from one to five inches in New England, from half an inch to six inches in the lower lake region, from two to fourteen inches in the upper lake region, a little less in the upper Mississippi Valley, from half an inch to five inches in the Missouri Valley, and in the northern Rocky Mountain slope from one-fifth of an inch to five inches. California wheat is in all conditions—some just seeded; some two feet high and sending out heads which will be ripe in June—prospect encouraging. Reports from Kansas say the condition of wheat is almost universally poor. "The corn area will exceed any previous record." In Nebraska corn left in the fields is much better than expected—will be all in soon. Corn cribbed on the ground will require some time to dry enough to grade. What little winter wheat has been sown "is in excellent condition."

A knowledge of the area planted to winter wheat is of importance to raisers of spring wheat, so that they may the better decide how much ground to give the crop. The best extended report hitherto made is that just published by the Cincinnati Price Current. The report covers only eight of the States, but, according to the report of the Department of Agriculture, these eight had, last year, 12,226,731 acres under wheat, against 9,925,189 acres in the rest of the country. These returns indicate that the area by States, compared with a year ago, is about as follows: Ohio 100, Indiana 100, Illinois 90, Missouri 90, Kansas 95, Michigan 100, Kentucky 100, Tennessee 90—indicating a general average of about 96½ per cent. From all we have seen on the subject, our impression is that the area now in winter wheat is about the same as that *harvested* last year. Quite a considerable area was sown, however, which was plowed up, or on which the stand was so light that it wasn't considered worth while to harvest it. The Price Current's estimate of the condition of the crop in the above States agrees pretty closely with our own estimate given above for the entire country. As compared with a strictly good condition, it thinks the present stand is 93 per cent. in Ohio, 94 in Indiana and Missouri, 91 in Illinois, 92 in Kansas (other reports are not so favorable here), 95 in Michigan, 93 in Kentucky and 95 in Tennessee.

This country, last year, produced 12,000,000 bushels of flax-seed on 1,200,000 acres, an average of 10 bushels an acre—value $13,500,000. All the fiber is wasted, for as present handled there isn't strength enough in it. Last year we imported $1,867,639 worth of flax and $12,160,000 worth of goods made of flax. The raising of hemp is rapidly declining. In 1860 the production was 74,493 tons; in 1870, 12,746; in 1880, 5,025, and last year, less than 6,000 tons Cause, substitution of jute for bagging, and of manila, sisal and jute for cordage, yarns, etc. Importations of substitutes last year were valued at $11,531,994. The Flax and Hemp Spinners' and Growers' Association, which met the other day at St. Louis, vigorously opposed any reduction of duties on foreign flax, hemp, or substitutes therefor.

There appears to be a combined movement on the part of cheese factories in this State and Canada to defer opening until about May 10, to keep down the make of fodder cheese, so as to keep up prices of the stock on hand. During the past Winter cheese has paid well in comparison with other farm products, and it is thought that if the customary amount of fodder cheese is made, foreigners will be able to force down quotations not only for the stock on hand at the time, but for that made afterwards. The trade appears to favor a light make previous to grass cheese. What should be done with the milk, say, from April 1 to May 10? If made into butter the quality must be poor, and the price is likely to be less than that for cheese. High prices for cheese early in the season tend to lessen consumption for quite a long spell afterwards, and is there not a danger that an increased make in Great Britain and Holland will block our foreign markets afterwards?

Dairy products are lower in consequence of poor export demand for cheese and fuller receipts of new-milk butter.

Exports of wheat continue somewhat heavier than of late, and prevent any material fall in prices. The decline in the visible supply was only between 600,000 and 700,000 bushels—one of 1,000,000 bushels was expected. The visible supply of corn has increased 2,530,000 bushels, and prices have been lower, partly on account of heavy receipts and partly because of the collapse of an attempted February "corner" in Chicago. Oats have been stiff, though the visible supply has increased 246,000 bushels.

The cut rates on the transcontinental lines (there are four all-rail and two part rail and part water) have caused heavy shipments east from San Francisco. Davenport, Ia., telegraphs that California oranges are driving others out of the market. Cotton here has gone up quite lively during the week. On Thursday there was an advance of $1 a bale in the course of the day. The Standard Oil Co. is reported to have put up the market to get rid of large stocks on hand; after it had unloaded, prices fell again.

Hops still continue a drug—very little demand for any except the best, which bring 10 to 14 cents per pound. Pacific slope hops much neglected. Receipts here from Sept. 1, to Feb. 26, 113,138 bales; exports in same period 50,900 bales. Brewers generally have as much as they have room for, many being stocked up till next December. Dealers, too, are heavily stocked, but most of them will have to buy more to fill contracts. The stock in growers' hands is quite large; but there is little prospect of change in prices for the next two months at any rate. The area and prospect for next crop, which will be known in late May or early June, will influence prices; but even with a poor crop next year, prices will hardly go above 25 cents to 30 cents a pound.

The winter pork-packing season closed on March 1, and next week will show a general summing up of the results and forecasts for the future.

A Sore Throat or Cough, if suffered to progress, often results in an incurable throat or lung trouble. *"Brown's Bronchial Troches"* give instant relief.—*Adv*

MARKETS BY TELEGRAPH.

SATURDAY, March 6, 1885.

CHICAGO.—Compared with prices a week ago, "regular" wheat is 1⅞c. lower; No. 2

Chicago Spring, steady; Corn, ¼c. lower. Oats, ⅛c. lower. Rye and barley unchanged. Pork, 60c. lower. Cattle, stockers and feeders, 10c. higher; "bulk" 15c. higher. Hogs, 10c. lower all around. Sheep, "Natives" and Texans, 50c. higher; Western and lambs unchanged.

WHEAT.—Steady. Sales ranged; March, at 79⅜@79¾c; May, 81¼c@84⅛c.; June, 85¼@86⅜c; No. 2 Spring, at 79¾@82c; No. 3 Spring, at 70@73c. CORN.—Easy. Cash, 31@31½c; March, 36¼@37c; May, 39¾@40c. OATS—Firm; sales ranged; Cash, at 29@29¼c; March, at 28⅞@29c.; May, 32¼@32¾c. RYE—No. 2, 59c. BARLEY—No 2, quoted at 60c. PORK.—Cash, quoted at $10 10@$10 15; March at $10 10@$10 12½; May, at $10 17½@$10 35. LARD.—Quiet and easier; sales ranged; Cash, at $5 90@$5 92½; March, at $5 90@$5 92½; May, $5 97½@$6 02½. BULKMEATS.—Shoulders, $3 90@$4 00; Short rib sides, at $5 30; Short Clear sides, at $5 60@$5 65. I WILL INSURE YOUR HOGS!
DR. JOS. HAAS'
HOG AND POULTRY REMEDY

[None Genuine without this Trade Mark.]
Is the only Practical Preventive of the so-called Swine Plague.
It has never been surpassed as an increaser of pork and general system tonic. Aiding digestion, stimulating the biliary organs, preventing torpor and engorgement of the liver, and regulating the bowels, it removes and prevents the formation of disease germs, and preserves to the well bred hog his natural constitution. Where it has been fed to such animals in the prescribed quantities, and other directions faithfully observed, it has proved a thorough preventive against swine disease.
AS AN EVIDENCE OF FAITH
in my remedy I make the following offer:
1. I will insure herds of swine of not less than one hundred in number against disease, at a small fee per head, provided they are fed my remedy under my direction, and prove upon examination prior to contract that they are in a healthy condition, and are neither in-bred, close-bred nor the progeny of such.
1. I will forfeit $100.00 to any breeder whose offer to examine for insurance I decline, provided he forwards remittance to cover my expenses to and from location of hogs, or I fail to prove to the satisfaction of any disinterested party, that failure to respond to invitation is caused by prior engagement or by matters of at least equal importance.
2. I will forfeit $500.00 if I decline upon examination to insure such herds, if my judgment as to their condition of health is overborne by the result of an examination made by at least two properly qualified and graduated veterinary surgeons.
Facts are Better than Assertions.
Please read the following testimony:
GIBSONTON P. O., PA., Feb. 2, 1885.
Dr. Jos. Haas—Dear Sir: About a year ago our herd here numbered about 2,700 head. Disease broke out, and no remedy we had would arrest the trouble. Our losses were heavy and we had to give up feeding entirely for about two months. We then heard of your remedy and bought a trial lot, and began feeding again. We have used it constantly ever since. We have since April last received about 5,000 head of hogs into our herd and have not had a single death from swine disease. This is our experience. Our opinion is that the remedy has prevented disease, and we would not think of being without it. As an aid in fattening pork, we believe it to be good. On this point, however, we have not made an actual test, *as we would not risk feeding a pen of hogs without the Remedy.*
Yours very truly, WHITE & CO.
[N. B.—White & Co., since writing the above letter, have purchased $450 worth of the remedy.]
The remedy can be procured of all Druggists, or from my laboratory. Prices, $2.50, $1.25 and 50 cts. per package. 25 lb. cans, $12.50.

For the Young.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK: I am a little girl seven years old. I would like to join the club. I like to read the Cousin's letters. I have three sisters younger than I am. We have four horses, four hogs, a cow and calf. I have never been further East than Illinois. I never saw apples growing, nor nuts on trees. Susie wants to join too, but she cannot write. Yours truly,

Hackett, Dakota. RACHEL STOWELL.

[It is pretty hard for us to think of one who has never seen an apple on the tree. I hope they will be able to raise apples in Dakota some day. Susie must join the club too.

—UNCLE MARK.]

DEAR UNCLE MARK: I like the RURAL, for it tries to help the farmer boys, and I think they need to be encouraged, for some of them have hard times. Their fathers don't take as much interest in teaching them and giving them a good education as their city cousins have; but I would not trade places with them, for we can be the most independent of the two. We have health and strength that most of the city boys don't, and can work our way through and be self-made men, and that is something to be proud of, I think. Don't you, Uncle Mark? FRED CORELL.

Chautauqua Co., N. Y.

[Yes, indeed I do. I mean that farmer boys shall have every chance they will improve. I should be sorry to see my stout and healthy boys come to the city to grow pale and weak. Stay on the farm, boys. We will make farm life what it ought to be. Don't run away from it now because it don't suit you. Cowards run away, but brave people stand their ground.—U. M.]

DEAR UNCLE MARK: I would like to join the Y. H. C. I am a boy 13 years old. We live on a farm one mile north of North Greenfield, Mo. We have set out a young orchard. I help on the farm. I have one hog and two pigs. I have caught 47 rabbits and five quails. I did not kill the quails. Pa said that they were too pretty to kill. J. WALTER ADAMS.

[And I am glad he said so. I wish more people would come to the same way of thinking.—U. M.]

AT HOME ON THE DELAWARE.

Burlington, N. J., is the city of cosey homes and streets lined with shade trees. Its Delaware front is like a park. Back among its lawns nestle the most popular schools in the country.

Taking advantage of an off-day your correspondent ran up to this beautiful town to see the sights and breathe a little fresh air. Dropping into the busy law office of Mr. H. S. Prickett, one of Burlington's real live men, conversation naturally turned on the health of his family, and especially on that of his mother, Mrs. H. C. Prickett, who had been miraculously spared to them about three years ago. I became deeply interested in her wonderful recovery, and asked to see her that I might hear from her own lips the details of her suffering and relief.

Her home was but a step away at No. 17 Broad Street. I was ushered in and introduced to a matronly lady of sixty-five, who was presiding at a sewing machine in her comfortable sitting-room, and who proved to be as bright and vivacious as a maiden of sixteen.

"It was the winter of 1883," she said, "when I took a violent cold, which settled on my lungs and resulted in an unmistakable case of pulmonary consumption."

"Pardon me, Mrs. Prickett," I said; "but will you describe to me your exact symptoms? Your case is very interesting, and that is my excuse for being particular."

"Well, I had oppressive weakness in my lungs and severe pain. My cough was violent and constant, and I raised great quantities of thick pus. I wasted to a skeleton; had no appetite; suffered from fever and exhaustive night-sweats. Took my bed, on which I lay, gradually dying, for weeks. By May of that year all hope was gone. I had no longer strength to raise the phlegm from my lungs. My family were gathered to witness my death, which, the doctor said, might occur at any moment. How and why it came about I don't know, but I rallied somewhat and——"

"Did you get up and about?"

"Oh, no! except to be propped up in bed or carried to and from a pillowed chair. I had seen an account of the Cannabis Sativa remedy and had cut it out of the paper. I handed it to my son one day and said: 'I will try one more remedy; there may be time yet.' He took the slip, and in a day or two after handed me the medicine. I began to take it at once. The effect was perfectly surprising."

"Which one of your symptoms yielded first?"

"I could feel it taking hold of my system generally in less than a week. I got stronger all through. My appetite came back, and that was great encouragement. I got to walking from my chair to my bed; then about the room, and inside of the first week astonished them all by going down stairs."

"How about the local trouble in the lungs?"

"The cough became easier and less frequent every day and the expectorations diminished. The pain left my lungs, also the sense of weakness. I picked up in flesh, resumed my duties, and could run my machine by the hour. There is no trouble now with my lungs and I have no cough, except a slight one in the top of my throat when I take cold. My cure is all the more wonderful because my mother died of consumption and so did one of my daughters.

"No; when I take cold now—and I do not take it readily—it does not go to my lungs. It only troubles my throat and sometimes takes the form of remittent fever. I had such an attack this winter, but now am over it and at work, as you see."

"Are you convinced that the Cannabis Sativa saved your life?"

"As firmly convineed as that I am alive. But for it I would not be here to-day and well of my lung troubles. It has surprising curative powers in such diseases, and I have spoken of it to several people whom I thought might be benefited by it."

The good lady gave her convictions in a spirited manner, and, by way of emphasis, threw a little more speed, as I thought, into the sewing-machine.

"Yes," said she finally, amid the music of the machine; "yes; it saved me, and nothing else did. Its merits ought to be known everywhere."

Thanking her for her kindness I bade goodbye, and left that cosey home on the Delaware with the happy and thrice clinched conviction that but for a piece of good fortune in striking the Cannabis Sativa remedy in the nick of time its busy and genial mistress would not be there to bless it.

Remarkable as Mrs. Prickett's cure was it is only one of a thousand. Mrs. Dr. J. L. Adams writes from Breckenridge, Stephens County, Texas, to say that her rapid failure with a terrible cough and every symptom of confirmed consumption was arrested and her health entirely restored by the use of Cannabis Sativa. Now trained doctors don't often use my remedies, but their own, till the very last minute, and don't often say much about them when they do. But Mrs. Dr. Adams speaks very emphatically and unqualifiedly, and moreover says she was alarmed for herself because all of her family were dying of consumption.

To the same effect is the testimony of Dr. R. H. Baylor, of Pleasant Ridge, Princess Anne County, Va. He had exhausted his medical skill on his wife, who, he says, "had a very bad cough, difficult breathing, profuse expectorations, no appetite, and became very weak and emaciated. He had given up all hopes of her recovery." "But," he continued, "your Cannabis Sativa—(he seems to have tried it as a last resort)—has greatly relieved her distressing symptoms and she has improved in flesh. I will push the remedy. All its ingredients are good for diseases of the lungs, and I have no hesitation in saying it will do good."

And Dr. Pickett, of Macon, Mo., adds his testimony by saying: "I am well pleased with the results obtained by using your Cannabis Sativa. I think it a valuable remedy."

But the testimony furnished voluntarily by the medical fraternity would not be complete without that of Dr. J. G. Horton, of Whitesville, Alleghany County, N. Y. He sent for a package of the Cannabis Sativa to try upon a patient, Mr. F. J. Baker, who was bedfast with consumption, and whom, he was satisfied, could not live more than a few weeks. After watching the effects closely the doctor writes: "I have been a practising physician for thirty years, and have to acknowledge that I have never seen a more marked effect from any medicine than this on Mr. Baker. I am sure he would have been in his grave before this time had it not been for your East India remedy. His cough and expectorations have stopped; his appetite and strength have come back; he can walk three or four miles and do light work about the farm. His gain has been constant from the first dose, and he is better than he has been at any time within two years."

If you wish to know any more of Cannabis Sativa, the great East India Consumption Cure, and what it has done for others, send for a little book which I mail free to all applicants. It contains much information of value to any who may be suffering from consumption, catarrh, asthma or any similar difficulty. Address W. A. NOYES, 149 Power's Block, Rochester, N. Y.

Rawson's Clipper. Without exception the earliest variety introduced. We defy competition in earliness, productiveness, and quality. Trial pkt., 15c.; 1-2 pint, 30c.; pint, 55c.; qt., $1.00. By mail.
Bliss's American Wonder. Best early wrinkled variety. A world-wide favorite. Very dwarf.
Bliss's Abundance. Best second early. 120 pods counted on a single plant. Splendid quality.
Bliss's Ever-Bearing. Perpetual bearer. Very best late Peas 11o 1 1-2 inches in circumference. 100 pods counted on a single vine. The large silver medal of the Mass Hort. Society was awarded the Abundance and Ever-Bearing in 1884. Price of the three foregoing: pkt., 10c.; pint, 40c.; qt, 65c. By mail.
N.B.—These four varieties will give peas until frost, and will require no bushing.

Rawson's Handbook for the Farm and Garden. Finely illustrated; colored plates; giving list of all leading novelties in vegetable and flower seeds. It tells what, when, and how to plant. Mailed free to former customers of B. K. Bliss & Sons of New York, and Everett & Gleason of Boston; to all others, 6 cents in stamps.

PERCEVAL LOWELL, GEN. PASS. AGT., CHICAGO.

PERSONALS.

MR. BLAINE'S two eldest daughters have become Roman Catholics. The first, who married Col. Coppinger, was baptized shortly after her marriage, and the second, Miss Margaret, has followed suit.

THE wife of Senator Joseph R. Hawley, of Connecticut, a niece of Rev. H. W. Beecher, died of pneumonia at Washington last Wednesday. Throughout her husband's entire public career she has been his private secretary and political adviser—an admirable woman and wife.

BRIG.-GEN. ALFRED H. TERRY was nominated Major-General *vice* General Hancock, last Wednesday, much to the disappointment of the friends of General Howard, whose commission antidated Terry's. Another vacancy will occur on the 16th of this month by the retirement of Gen. Pope for age; but even if Howard gets that, Terry has been passed over his head, and stands before him in possible command of the army.

PLINY MARTINDALE, of Kirtland, Onio, is a well-to-do, but apparently very lazy, heartless farmer. He had 300 sheep when Winter set in, and plenty of grain and fodder, but the other day an agent for the Humane Society found 71 of the sheep dead, 40 being piled in the basement of one barn and 23 in another, and others scattered about the place. They had all starved to death.

Miscellaneous Advertising

GOLD MINES

are very uncertain property; for every paying mine a hundred exist that do not pay. But if you write to Hallet & Co., Portland, Maine, you will receive, free, full particularls about their new business, and learn how some have made over $50 in a single day at it. You can live at home, and earn from $5 $25 and upwards per day. Both sexes; all ages. Capital not required; you are started free. Send along your address, and all will be proved to you.

GREAT SUCCESS TO OUR NEW DEPARTURE IN THE SEED TRADE

SEEDS AT YOUR DOOR AT WHOLESALE PRICES.

In order to sell our seed crop—1885—direct to the planter, we make the following PROPOSITION: For 60 CENTS in postage stamps or money, we will send by mail post-paid, 19 PACKETS each, of the following new and improved seeds:—Bastian's Early Blood Turnip Beet, the earliest and best for table use. "BEST OF ALL" BEANS, most remarkable snap bean in the world. Pods as tender and buttery in winter as in summer. Hawaii Sugar Corn from the Sandwich Islands; the sweetest sugar corn that grows. Early Etampes Cabbage, best and earliest of all early varieties. Sure Head Cabbage, best winter cabbage in cultivation. Wilson's Early Green Cluster Cucumber, good for early cucumbers or pickles. Golden Self-Blanching Celery, needs no banking up; excellent quality; keeps all winter. Perpetual Lettuce, tender and crisp all summer. Pride of Georgia Watermelon, none sweeter or better. THE SPANISH NECTAR a new muskmelon from the south of Spain. First premium at Penna. State Fair. Pronounced the best-flavored muskmelon in the world. New Red Rocca Onion from Italy. Grows large onions from seed first year. Tennessee Sweet Potato Pumpkin, none better for pies or custards. Abbott's Improved Sugar Parsnip. Ruby King Pepper, the largest and finest sweet pepper ever seen. Improved Long Scarlet Radish, best for early use. Half-long Strasburg Radish, good for spring or summer. New Brazilian Sugar Squash, sweetest and best-flavored, for summer or winter. Livingston's Favorite Tomato, large, smooth as an apple; productive; solid. Early White Egg Turnip, sweetest and best for table use. In all 19 PACKETS for 60 CENTS; TWO COLLECTIONS for $1.10; FOUR for $2.00. ANOTHER PROPOSITION To adorn your homes and make life pleasant, as we grow flower seeds by the pound, budded and by the acre, to give our lady friends the benefit of the wholesale trade, we will send by mail 13 PACKETS one each, of the following, for 30 CENTS Asters, fine, double, mixed. Balsams, extra large, double, mixed. Chrysanthemum (Paris Daisy), very fine. Mignonette, sweet scented. Double Rose-flowered Portulacca, nearly all double and all bright colors. Pansies, finest strain. Petunias, large-flowering; Phlox Drummondii, all bright colors. Verbenas, ten beautiful colors. Zinnias, large, double, bright colors. One fine Ornamental Grass. One splendid Climbing Plant. One beautiful Everlasting Flower. In all, 13 PACKETS for 30 CTS.; TWO COLLECTIONS for 50 CTS. *Directions for cultivating on each packet.* ONE COLLECTION OF FLOWER SEEDS AND ONE OF VEGETABLE SEEDS FOR 80 CENTS, OR TWO OF EACH, FOR $1.50. Our Beautiful Illustrated Catalogue accompanies each order. No changes. Address SAMUEL WILSON SEED GROWER, MECHANICSVILLE, BUCKS COUNTY, PENNSYLVANIA.

PETER HENDERSON & CO. 35 & 37 Cortlandt St., NEW YORK.

FAIR AND SQUARE DEALING.

Believing that if a man has dealt squarely with his fellowmen his patrons are his best advertisers, I invite all to make inquiry of the character of my seeds among over a million of Farmers, Gardeners and Planters who have used them during the past thirty years. Raising a large portion of the seed sold, (few seedsmen raise the seed they sell) I was the first seedsman in the United States to warrant (as per catalogue) their purity and freshness. My new Vegetable and Flower Seed Catalogue for 1886 will be sent FREE to all who write for it. Among an immense variety, my friends will find in it (and in none other) a new drumhead Cabbage, just about as early as Henderson's, but nearly twice as large! James J. H. Gregory, Marblehead, Mass.

THE STORRS & HARRISON CO., PAINESVILLE, LAKE CO., OHIO.

Connecticut Agricultural Experiment Station.

Extracts from Annual Report by the Director, Prof. S. W. Johnson, on Fertilizers during past year, 1885.

Prof. S. W. JOHNSON states on page 61:

"In 1885, the average selling price of Ammoniated Superphosphates and Guanos (55 samples was $37.60, the average valuation $30.47, and the difference $7.13—an advance of 23.40 per cent. on the valuation and on the retail cost of the fertilizing elements in the raw materials."

"In the case of the Special (Crop) Fertilizers (26 samples) the average cost was $44.80, the average valuation $38.70, and the difference $6.10, or less than 16 per cent. advance on valuation."

SPECIAL CROP MANURES for 1885 *again found to supply plant-food AT LESS cost and to be cheaper to the farmer than the Superphosphates, Guanos, or "Fish and Potash," or any other fertilizer.*

	Average Cost.	Valuation.	Difference.	Percentage over cost.
Superphosphates, Guanos, "Fish and Potash," etc. (55 samples),	$37.60	30.47	7.13	23.40
Special Crop Manures (26 samples),	44.80	38.70	6.10	15 76
Fish and Potash (9 samples)	37.70	26.64	10.06	35.50
Bone and Potash (3 samples),	35.67	25.06	10.61	42.30
Mapes' Special Crop Manures (5 samples),	$48 60	$46.06	$2.54	5.50 per cent.

These five samples of the Mapes Special Crop Manures also comprise ALL that are reported upon by the Station during the past year. They are *all found* as heretofore to be *fully up to guaranteed strength.*

The above ARE STUBBORN FACTS and are not open to criticism on score of being selections of HIGH VALUATIONS FOR ONE and LOW VALUATIONS FOR ANOTHER MANUFACTURER, nor are they AVERAGED from valuations of years ago when valuations were high. They represent the station analyses of the PAST YEAR, 1885.

The Mapes Special Crop Manures again found to supply plant-food at the least cost. They are found to be the CHEAPEST of all the Fertilizers Sold.

The Mapes Company give a DOUBLE GUARANTEE with their Complete and Special Crop Manures.

FIRST.—That they are fully up in composition to their published Analytical standard.

SECOND.—That they contain no S. C. Rock, Phosphates of Iron or Alumina, or any inferior substitutes for Bone—no cheap, inferior substitutes for Sulphate of Ammonia, Nitrate of Soda, or Blood, such as Powdered Leather, Shoddy, Horn, Hair, or other insoluble animal or vegetable matter—no marl or inferior make-weights.

HOLSTEIN-FRIESIAN CATTLE!

ALL AGES AND BOTH SEXES. HOME-BRED AND IMPORTED.

Cows and Heifers Bred to best Netherland and Aaggie Bulls.

The average Records of a Herd are the true test of its merit.

The following Milk and Butter Records have all been made by animals now in our Herd:

MILK RECORDS.

Five Cows have averaged over 19,000 lbs. in a year. Ten Cows have averaged over 18,000 lbs. in a year. Three Cows have averaged over 20,000 lbs. in a year.

We know of about 30 Cows that have made yearly records exceeding 16,000 lbs., and 14 of them are now in our Herd and have averaged over 17,500 lbs

Twenty-five have averaged over 16,000 lbs. in a year. Sixty-three, the entire number in the Herd that have made yearly records, including fourteen 3-year olds and twenty-one 2-year olds, have averaged 12,785 lbs. 5 ozs. in a year

BUTTER RECORDS.

Five Cows have averaged 20 lbs. 7 ozs. in a week. Nine Cows have averaged 19 lbs. 5½ oz. in a week. Fifteen Cows have averaged 17 lbs. 6 ozs. in a week. Six 3-year olds have averaged 14 lbs. 3 ozs. in a week. Eleven 2-year olds (the entire number tested) have averaged 13 lbs. 2 ozs. in a week. Six 2-year olds have averaged 12 lbs. 14½ ozs. in a week. Fifteen 2 year olds (entire number tested) have averaged 10 lbs. 8 3-10 ozs. in a week. The entire original imported Netherland Family of six cows (two being but three years old) have averaged 17⅜ lbs. in a week. This is the Herd from which to get foundation stock. Prices low for quality of Stock.

SMITHS, POWELL & LAMB,

LAKESIDE STOCK FARM, SYRACUSE, N. Y.

FRENCH COACH HORSES.

"Superbe," winner First Prize, Antwerp, 1885.

This race of handsome, high-stepping carriage horses, whose fine style, grand action, beauty and power have attracted the attention of all people who have visited Europe, will hereafter find a place at Oaklawn Farm, among the Percherons for which it has so long been famous. The Coach horse of France has been developed under Government patronage, and for every animal of this breed now owned at Oaklawn we have the Government certificate of breeding.

WEAK, NERVOUS AND DEBILITATED MEN

and Women seeking health, strength and energy, should avoid Drugs, Secret Medicines, etc., and send for "The Review," or "Health and Strength Regained," a large Illustrated Journal, published entirely for their benefit.

COPIES FREE.

It treats on health, hygiene, physical culture, and medical subjects, and is a complete encyclopedia of information for suffering humanity afflicted with long-standing, chronic, nervous, exhausting and painful diseases. Every subject that bears on health and human happiness receives attention in its pages; and the many questions asked by ailing persons and invalids who have despaired of a cure are answered, and valuable information is volunteered to all who are in need of medical advice. No similar work has ever been published. Every sick or ailing person should have it.

YOUNG AND MIDDLE AGED MEN, and others who suffer from nervous and physical debility, exhausted vitality, premature decline, etc., are especially benefited by consulting its contents. Everything such sufferers wish to know is fully given in its pages. If in need of medical aid or counsel, read it before "doctoring" or investing in medicines or appliances of any description, and you will save time, money and disappointment. If using medicine or medical treatment of any kind, read it and learn the better way.

THE REVIEW exposes the frauds practiced by quacks and medical imposters who profess to "practice medicine," and points out the only safe, simple and effective road to health, vigor and bodily energy.

Electric Belts and all curative appliances are treated upon; all about them—which are genuine, which are bogus. Belts on thirty days trial (?) and other fallacies reviewed. Thousands of dollars saved nervous-debility sufferers and others by the advice given. THE REVIEW is now in its ninth year of publication. Complete specimen copies mailed FREE for 5 cents in stamps to pay postage. Address, naming this paper,

THE RURAL'S RYE-WHEAT HYBRIDS.

THOSE PLANTS MOST RESEMBLING RYE.

THEIR HISTORY NOW COMPLETE UP TO THE PRESENT TIME.

WE have now to complete our history of the rye-wheat hybrids, which, four years ago, gave us the material for its first chapter. Our readers must bear in mind that the Armstrong was selected as the mother plant—mother, as we say, because its flowers received the rye pollen (the male principle), and were thus induced to bear the seed or *fruit*, as the grain (caryopsis) of the cereals is properly called. The flowers of wheat, if left to themselves, are close or self-fertilizing. It will be seen, upon examination, that when the anthers appear outside of the envelops (palets), and the wheat is *said* to be in bloom, the kernel is already partly formed and that the flower is, therefore, really beyond its bloom. If before the anthers can shed their pollen upon the stigmas (the top of the pistil or female organ) the anthers (or male organs) are removed and the introduction of any pollen from other flowers is prevented by tying the head in tissue paper, it is evident that kernels cannot form. If the paper be removed, the flowers opened and the rye pollen be thrown upon the stigmas and the paper replaced, if kernels should then form, it is evident that the rye pollen would be the father or male parent of the grain thus formed; in other words, a hybrid between rye and wheat would be produced. This is what was done, except that the tissue paper was removed and replaced each day for three days for the application of rye pollen. The result, as we have stated, was 10 grains so small and imperfect that it was feared they would not germinate. Only one, however, failed, and though the nine plants made little growth during the Fall, they wintered safely. Eight of them resembled wheat in all respects, though each plant differed somewhat from the others in leaf, stem and hight.

The ninth plant resembled rye in the color of its leaves, and later, it was seen that the culms just beneath the heads were *downy*, as in rye. The heads, 14 in number, at first resembled No 5 in the illustration, but later assumed the shrunken appearance of No. 3. Upon examination it was found that in all the 14 heads there were but 17 grains, only three or four of which were large or plump enough to give any hope of germinative power. Each grain, however, was planted with all possible care 10 inches from its neighbor, and, much to the writer's surprise, 14 of the 17 sprouted and grew. The plants, however, were nar-

THE RURAL'S RYE-WHEAT HYBRIDS. From Nature. Fig. 113.

row-leaved and seemingly feeble, so that it was deemed well to give them a careful mulching late in the Fall which perhaps assisted in carrying them safely through the Winter. Our engravings, 1, 2, 3, 4, 5, and 6, Fig 112, are faithful portraits showing the variations in the heads of the different plants. The plant which bore the first head in the engraving (1) was short and feeble, while many of the florets and several entire spikelets were sterile. The plant which bore the third head (3) was also feeble in growth and also partly sterile. The others, but especially Nos. 2 and 5, were remarkably vigorous, with strong stems and many heads. A peculiarity of the plant No. 5, was that the culms and heads continued green until after our latest wheats had matured, and it became necessary to cut them or run the risk of their destruction by blackbirds and sparrows. Nos. 4 and 6 ripened with the earliest wheats. No. 7 shows a section of the straw of the strongest plants.

Rejecting all inferior heads, enough grain was saved from the best to plant a plot of about one-thirtieth of an acre, that is, single kernels in the intersections of ten-inch squares. As shown in the engraving, all the culms (or straws) for an inch or so beneath the heads were covered with a hairy pubescence which always exists in rye culms, but never, so far as the writer is aware, in those of wheat.

Finally, to conclude this account, and record it up to the present time, we have to speak of our success in producing hybrids which by parentage are three-quarters rye, illustrations of which are shown at 8 and 9, Fig. 113. The first cross was effected by using rye pollen upon a head of those of our first hybrids which resembled wheat more than rye. A single plant was the outcome, which bore 22 heads, No. 9 showing it when first cut, No. 8 when thoroughly dry. These 22 heads bore but *three* kernels, which were planted last September. All sprouted, and two of the plants are still alive. Another cross was effected the past Summer, again using rye pollen, but this time upon a head of one of the hybrids most resembling rye. Seventeen kernels formed (also by parentage three-fourths rye), which were planted in September. Most of them sprouted, made a feeble growth during the Fall, and are now passing through the most trying Winter upon fall grain ever known in this part of the country. Two weeks ago when the frost was out of the water-laden soil, the thermometer suddenly sank to several degrees below zero. Then came a warm spell and another equally violent alternation occurred. For the past three days the wind has blown a gale, while even the surface soil scarcely thaws at midday. As to the prospective value of these hybrids, why speculate? It is better not to indulge the fancy which—especially the originator's fancy—is liable to cut up the cruellest pranks. We have given their history. Those of our readers who are interested in the matter may now follow their future developments, knowing all there is to be known about them.

Dairy Husbandry.

"TESTS OF DAIRY COWS."

E. A. POWELL.

A tardy but powerful refutation; no one cow a fair representative of 10,000*; conditions of a fair test; misrepresentations in the Canadian report; a "lanky, leggy," unacclimated heifer, not a fair representative of the Holstein-Friesian breed; comparison of her performances with those of other two-year-olds; an "unregistered," overgrown, Jersey (?) "pet" cow not a fair representative of the Jersey breed; comparison of her performances with those of three-year-old Holstein-Friesians; the latter's superiority for cheese; conclusions.*

My attention has been several times called to an article written by Valancy E. Fuller, of Ontario, Canada, under the above heading, which appeared in the RURAL NEW-YORKER of Oct. 17th last. This article purported to show the comparative merits of the Jerseys, the Ayrshires and the Holsteins for the dairy. The tables contained therein are said to have been complied from the "Advance Reports" of Prof. Wm. Brown, of the Ont. Exp. Farm. I do not wonder Mr. Fuller, one of the leading Jersey breeders of the country, should seize upon this report and take steps to publish it in every agricultural paper throughout the country. It was a golden opportunity for the Jersey breeders, provided they could convince the dairymen of the country that the tests were impartial and that the cows selected for the trial fairly represented the various breeds—that each cow was an average of the breed to which she belonged. I wish, however, even at this late date, to correct some erroneous impressions that may have been created in the minds of those not familiar with the actual facts. I do not wish to question Prof. Brown's good intentions or the accuracy of all his calculations, but either through lack of knowledge of the Holstein-Friesian breed, or from some other cause, he started on a false basis, by taking as a representative of this breed a heifer of the very poorest class, inferior in size, in appearance, and in quality of milk for both butter and cheese.

A single moment's reflection will convince any intelligent breeder that no one cow fairly represents any breed numbering tens of thousands of cows any more than a handful of sand can represent a sea-shore, and especially when that one is a poor insignificant heifer. As well might Prof. Brown, from the analysis of a handful of soil from some solitary sandhill, write a treatise on the agricultural possibilities of the Dominion. Had he given the various dairy breeds a fair, impartial trial, by having a competent committee, interested equally in all breeds, select, at least half a dozen good representative cows of each, have them given the same care and kind of food for a year previous to, as well as during the time of trial (for it is now an admitted fact, proven by actual experiment, that previous condition and food have almost as much to do with the product of the cow as her present ration), he would have done a work of incalculable value to the whole dairy world. As it is, his report is misleading, conveying an erroneous impression, and is a great damage to the dairy interests, not of the Dominion only, but of the whole country. Any misleading tests are decidedly worse than none.

I wish here to say that Prof. Brown doubtless was prompted by the best of motives, a desire to give the people of the Dominion an equivalent for their outlay in maintaining an experimental station; but he was too hasty and made his report without the proper material to make it from. Let us review some of the statements therein.

The Holstein is given in the report as "Verapina," three years old, weight 895 pounds, dropped first calf in January, 1885. Prof. Brown describes her as "lanky and leggy." Nothing is said of her breeding. No herd-book number or date of importation is given, but by reference to the H. H. B., I find the heifer to be "Verasina," 10450, Vol. 9, born March 15th, 1883, imported May, 1884, and she must therefore have come out of quarantine the August before she dropped her calf in January. This record and the name are confirmed by Prof. Brown in reply to a letter from me asking him for the dates of birth and importation, with herd-book number of heifer.

It will thus be seen that this representative Holstein-Friesian was only one year old past—a yearling—only 22 months old when she dropped her calf, and that she commenced her record at 22½ months, instead of being three years old, as stated in no less than six different places in Prof. Brown's report, and confirmed by Mr. Fuller's letter. She dropped her calf in January, before being acclimated and before she became accustomed to the severe Winters of Ontario or to the feed and water in use there. All importers know full well the bad effect of such changes, not only in quantity but in quality of milk. Many good cows are almost worthless the first season after importation. "Verasina" may, therefore, yet prove to be a good cow.

Why this heifer's name should have been misspelled, why her H. H. B. No., the date of importation and the fact that she was not acclimated, were all witheld in the report, and, above all, why she should be called a three-year-old cow when in fact she was but 22½ months, why a "leggy and lank" little unacclimated heifer should be selected by such an institution as the Experimental Farm of Ontario to represent the Holstein-Friesian breed in such an important trial, are matters beyond my comprehension.

We will compare this heifer with the average of some of the largest herds of the same breed in the country, in order to see if she is a fair representative. In doing so, I will be pardoned for referring to a herd in which I am interested. I am compelled to do this, as I have the necessary data at hand from only this herd and that of Messrs. Yeomans & Sons.

For the present milking year, now nearly closed, the Lakeside herd had in milk for five months (the length of time which the report in question covers), in all, 57 head of two-year-old heifers. Their records were carefully kept by weighing each milking. The entire lot averaged, for five months, 5,575 pounds. For the previous year there were, in all, in the same herd, of the same age, milked through the season 26 head. The entire lot averaged, for five months, a little over 5,350 pounds, and for the year 10,810 pounds, although a few did not complete the year. Fifteen of the number averaged 12,-307½ pounds. In 1882, Messrs. Yeomans & Sons reported 14 heifers two years old (their entire herd of that age) which averaged for the year 11,118 pounds three ounces. I have not their exact records for five months, but they must have averaged fully as much as the Lakeside herd for this season (5,575 pounds) and probably more if a large majority of them dropped their calves in the Spring and thus had the benefit of fresh feed. Here we had 97 two-year-olds, all recorded Holstein-Friesians, embracing the milking cows for two consecutive years in the Lakeside herd, and the entire number for one year in the Yeomans herd, which nearly all dropped their calves at from 22 to 28 months of age, and the entire lot averaged for five months 5,515 pounds.

"Verasina" gave for the same time, according to Prof. Brown's report, 3,239 pounds, showing a balance of 2,286 pounds for five months in favor of each of the 97 head. "Verasina" weighed, at 25½ months, 895 pounds. At the same age all the heifers at Lakeside referred to above, averaged over 1,050 pounds, and those in the Yeomans herd, I judge, were fully as heavy, showing this representative cow to be 155 pounds under weight, even as a two-year-old, instead of three years, as stated in the report.

In butter I cannot give a comparison with the whole herds, as only part have been tested. In the Lakeside herd 17 two-year-olds averaged for a week 10 pounds eight ounces. Messrs. Yeomans, in their report on butter tests, give nine two-year-olds which average 12 pounds 13⅛ ounces per week, so that 26 heifers averaged 11 pounds seven ounces. "Verasina" made in 151 days 108 pounds, showing an average of five pounds per week, or considerably less than half the average of the 26. Of course, "Verasina" here had the disadvantage of the longer trial, but it is probably safe to conclude that if the test of the 26 head had been continued for the same time, they would, on an average, have nearly, if not fully, doubled her record.

This will be enough to show the character of this "representative" Holstein-Friesian as compared with some of the entire large herds of the same breed. It shows her to be 155 pounds under weight, her milk for five months to have been 2,286 pounds below the average, and her butter about one-half below.

Let us now turn our attention to the Jersey. Prof. Brown in his report describes her as follows: "Beauty o' the Mill may be described as a Jersey that pokes her nose into everybody's pocket—an uneducated pet. With such a disposition we have had much pleasure in handling this cow. Cream-colored, even, roomy, a fine skin, but with little milk mirror and medium udder." Three years old, weight May 1st, 835 pounds, which shows that she was above the average of her breed in size, and the Professor's description shows that she was of just the type and disposition to insure the largest results. The report shows just what we could expect from such an animal viz.: that her combined milk, butter and cheese product for the five months is far above the average of her breed. In fact, it is far above that of any entire herd of Jerseys of a dozen heifers of the same age we have ever seen published. It should be borne in mind that this heifer was fully acclimated, accustomed to severe Winters and the feed of Canada. A few more singular facts regarding her are worthy of note. She is given in the report as a Jersey three years old; but the date of birth and herd-book number are not given. To get more definite information regarding this cow, I went to the office of Mr. Hand, the Secretary of the A. J. C. C., and to my surprise learned that no such cow was on record. I then wrote to Prof. Brown, who kindly replied that she was dropped in 1882 and was NOT recorded. I was not a little surprised that an unregistered animal should be taken as a representative Jersey, especially by such a breeder as Valancy E. Fuller. The question naturally arises: Is she a grade and does this fact account for her large flow of milk and the fact that her milk is much superior for cheese to that of any registered Jersey of which we have yet seen an account?

In order that a fair estimate of the two breeds, the Jersey and Holstein-Friesian, for the dairy may be found, we will compare the product of this heifer with that of entire herds of the same age. In the Lakeside herd of Holstein-Friesians, this last season, 24 three-year-olds, the entire number in milk for the time, gave, by actual weight in five months, an average of 6,114 pounds for each cow, while this Jersey gave 2,944 pounds, leaving a balance of milk in favor of the black-and-white cows of 3170 pounds per cow in five months, or, in other words, the Holstein-Friesians each gave 226 pounds more than double the amount given by the Jersey.

Our tests for butter do not comprise the whole herds, but I will make as fair a comparison as the data at command will admit. In the Lakeside herd 13 heifers three years old have been tested, and they averaged 13 pounds six ounces per week. Messrs. Yeomans & Sons, in their recent butter reports, mention four three-year-olds each of which averaged 17 pounds six ounces per week. It will thus be seen that 17 three-year-olds averaged, for a week, 14 pounds five ounces. In all the butter tests in both the Yeomans and Lakeside herds, the butter was worked dry and weighed before salting.

This Jersey made an average, for the five months, of a little over 11 pounds per week, a difference of two pounds 12 ounces per week in favor of the spotted cows. This I will frankly say is hardly fair for the Jersey on account of her longer test, but it will convey a good idea of the merits of each, and will satisfy anyone that these 17 Holstein-Friesians far excel her for butter.

I will make a few comparisons by taking, as a basis, the number of pounds of milk for a pound of butter, and as the following tests were made when the cows were in full flow and fresh, I think the fairness of the comparison will be conceded, for I believe it is an admitted fact that as the time after calving lengthens and the flow diminishes, the milk becomes richer, taking a less amount for a pound of butter.

The following table will show the result of the tests of seven heifers in the Lakeside herd—four three-year-olds and three two-years. It gives the amount of butter made by each in a week's test, the average weight of milk required for a pound of butter, the amount of milk given by each for five months, and on this basis the amount of butter each would have made in that time:

NAME.	Herd Book No.	Age at Time of Test.	Butter per Week. lb.	oz.	Lbs. of Milk to make 1lbs. of Butter.	Lbs. Milk Given in 5 Months.	Lbs. Butter in 5 Months. at same Rate.
Neth. Belle..	1876	3	16.7		22.34	7191	321
N. Countess.	2634	3	15.15		20.89	5724	274

A. Sarah 2d.	7142	2	12.1	½	24.41	6301	258
Seven, equal.....							2029
Average for five months.....							289
Jersey for five months.....							248
Balance in favor of Holsteins.....							41

I have dropped th fractions.

The "funny" part of this whole affair, the one which make all dairymen smile, is the claim that the Jersey leads all other breeds for cheese. This is the first instance on record that has come to my knowledge, where such a claim has ever been made. One of the prominent Jersey breeders of the country recently remarked to a large gathering of dairymen that "the superiority of the Holsteins for cheese was conceded by everybody excepting Valancy E. Fuller." Nearly all former tests have shown the Jersey milk while superior for butter to be inferior for cheese. It should be borne in mind that to obtain the results for cheese which are apparent in the report and in Mr. Fuller's letter, the same "lanky and leggy" little unacclimated 22½ months heifer had to be pitted against older native competitors.

I cannot give results in cheese production from personal experience, for I have no tests, but will take Prof. Brown's own figures, as used by Mr. Fuller, and concede, for the time being, that the Holstein-Friesian heifer would represent the breed in quality of milk for cheese (a statement that no intelligent breeder will believe to be a fact), and what is the result? It shows that it required 8.95 pounds of the heifer's milk for a pound of cheese. The 24 three-year-olds referred to above averaged, for the first five months 6,114 pounds of milk, and hence would have made 684 pounds of cheese, while the Jersey of the same age made 456 pounds, leaving, in favor of the Holstein-Friesian a balance of 228 pounds per cow or, in other words, they excelled her for cheese by just 50 per cent. The fact that Holland is the greatest cheese country of the world, making more cheese not only in proportion to the area of the country but in proportion to the number of cows, should be satisfactory proof of the superiority of her cows for that purpose.

A comparative test made by J. E. Grant, the owner of several large cheese factories in Illinois (who did not own any Holstein-Friesian cattle), with the milk from a herd of 50 pure-bred Holstein-Friesian cows, in comparison with the milk of the other herds, brought to his factory, showed that the Holstein-Friesian made 6¼ per cent. more cheese from the same amount of milk. He declares the test to have been a fair one, the conditions being similar in all respects. What are the conclusions to be drawn from the above facts?

1st. The Holstein-Friesian gave over 107 per cent. more milk.

2nd. The Holstein-Friesian made 16½ per cent. more butter.

3rd. The Holstein-Friesian made 50 per cent. more cheese.

If we call the average milk of the Holstein-Friesians equal to that of the Jersey for cheese (and I verily believe it to be better) they would have made 107 per cent. more cheese. From the above I feel fully justified in quoting Mr. Fuller's conclusions: "It seems, therefore, that there is little doubt as to which is the best all-round cow."

As to the test made at the exhibition at London and Toronto, I will only say that so much depends upon the condition of the cow, the amount and quality of her previous rations, her care and treatment, the length of time in milk, when due again, the distance shipped, whether fully acclimated or not, etc., etc., that such tests have no practical value as an evidence of the actual merits of the cows tested, and I will spare my readers a useless discussion regarding them. I will simply add that these tests were made by "the same experts" as those given in the report referred to above.

Syracuse, N. Y.

A GROUP OF HOLSTEIN-FRIESIANS.

THE fine group of Holstein-Friesian cattle shown at Fig. 119, (p. 189) belonging to the herd of James Neilson, of Woodlawn Farm, New Brunswick, New Jersey, coutains Rip Van Winkle, Billy Boelyn, Aaggie and Empire strains, together with much superior blood imported by the owner. The Holland herd has been bred since 1877 with a view of getting the best stock for the supply of milk for the city of New Brunswick. The original Woodlawn Farm herd was bred from Shorthorns imported more than 50 years ago by the father of the present owner.

In the accompanying illustration, Fig. 119, made from photographs, the splendid bull, Clarion (H. H. B. 870), the head of the herd, is shown in the center. His sire was Billy Boelyn 189; dam Clythe 549. He weighs 2,300 pounds, and is very vigorous in constitution. He has an excellent escutcheon and combines the milk and beef points to a remarkable degree. On the right is the cow Gorter 662, imported in 1878 from North Holland by her present owner. She won several prizes abroad, and has here a milk record of 84 pounds in one day and 14,449½ pounds in one year. On the left hand is the cow Mooike 4th, No. 2,984, which has a three-year-old milk record of 10,227 pounds in one year. The handsome form common to the Mooike family is well exemplified by her.

Of the other cows in this fine herd Stapel 4th has a milk record of 70½ pounds in one day and 1,750 pounds in a month, commencing when two years and 10 months old. Mooike 689, imported, gave 72 pounds of milk in one day, and one of her daughters, Mooike 3d, made 19 pounds five ounces of butter in seven days, 7½ months after calving, her milk testing 28 per cent. of cream, 12½ pounds of milk making a pound of butter.

The blood of Rip Van Winkle H. H. B. 35, the sire of Echo 121, with a milk record of 23,775½ pounds in a year, the greatest ever made, was introduced into the herd through the Iris family.

The imported cow Ekster has a milk record of 68 pounds in one day and 12,806½ pounds in a year.

The bulls in this herd are also descendants of famous milkers. Copia's Empire 3559, one of the stock bulls, is a son of Empire 588; he out of Empress 589, who has a milk record of 108 pounds in one day, and 19,714½ pounds in one year; while Copia's Empire's dam, Copia 1067, gave 8381 pounds in 283 days, when a three-year-old, and 79 pounds in one day as a five-year-old.

The imported cow Zwortkop took the sweepstakes prize, as the best cow for the dairy, at the International Dairy Fair, held in New York some years since, in competition with some of the finest herds of the various breeds.

Arboricultural.

THE JAPAN CHESTNUT.

Experience notes from one of the first to raise and graft them in America; hardiness; the best way to secure varieties.

IN planting any kind of fruit seed, we know that the result is always attended with uncertainty as to the quality of the fruit. The Japan Chestnut is no exception. The trees I have were from seed sent to a well known seed firm in New York, a case having been sent in an invoice of lilies. The major part of them were sent to a fruit stand. A few were taken by one of the proprietors and planted, and from them I received the grafts from which mine were grown. They were root-grafted on our native stock, and when three years old had some fruit. At four years one bore over a quart of the most beautiful chestnuts I ever saw, of a deep chestnut color, with dark lines running from the base to the point, making a beautiful contrast of color. The fruit of all partook of this character. But there was a very marked difference in the size of the burs and nuts. While some burs were very large with from three to five nuts, and early, others were very small and seldom had over one, never more than two nuts. Of course, the early and large ones are the most valuable. Some were ripe as early as Sept. 25; others were at least four weeks later.

As to hardiness, I think from my observation that they will not stand much below 15° below zero, or at least they have not with me. During the Winter of 1884–5 some were slightly hurt and one was entirely killed. Some had not sustained the slightest injury. It may be that extreme cold will not so much affect them as the peculiar conditions during the Winter spoken of, as I think more plants suffered in this section than I ever knew to have suffered in any former Winter. The true way to introduce the Japan will be either to import reliable stock, or else to grow them from seed and then, after fruiting, select the early and large-fruited trees and graft from them. They are a little shy to unite, sometimes growing two or three years and then blowing off. I tried budding, but failed, as the operation, I think, was performed too late.

Pomological.

MEECH'S PROLIFIC QUINCE.

A LETTER FROM MESSRS. HANCE & BORDEN.

WHY are you not willing to deal fairly with contributors? You are doing Mr. Meech an injustice and through him are injuring us. You seem to have a particular spite against the "Meech's Prolific Quince," and show a disposition to say everything possible detrimental to Mr. Meech's and our interests in connection with it; at the same time you are just as determined to give us no opportunity to deny what you say. You print a note in your February number in effect that all the communications you receive are of the same tenor, viz., that Mr. Meech had no right to give this quince his name.

Now some time ago you published an editorial bearing upon this same point, making assertions and insinuations, and calling upon Mr. Meech to answer, refute and explain if he could. Mr. Meech sent you a reply in detail, that, to an unbiased mind, would have been a satisfactory explanation and refutation; and would have lifted us from the position of impostors, to which your remarks have tended to lower us. You were in duty bound, according to what we are told by newspaper men is journalistic etiquette, to publish Mr. Meech's reply; and yet by your silence you refuse to do so. We are taking up the cudgels in Mr. Meech's behalf simply because what harms him injures us in this connection. We don't ask for assistance, but we do cry for justice, and if you are still determined to carry out your policy of saying what you please detrimental to our interests respecting this quince, and of printing innendoes and of asking questions with a covert meaning (for so your remarks have impressed us), and then refusing to publish the replies, thereby allowing your readers to infer that the questions are unanswerable; or, in other words, if you are not going to publish Mr. Meech's reply to your editorial above referred to, we shall have the editorial and reply published in some paper with a circulation equal to that of your own, if we have to pay for it as an advertisement. We don't mean this as a threat; but we are bound in justice to ourselves to make such a request, and we are further bound by the same law to place ourselves in a proper light before the public. HANCE & BORDEN.

REMARKS.—How are we doing Mr. Meech an injustice? Evidently, if at all, by an expression of the opinion that he should not append his name to a quince which he neither originated nor introduced, but is now merely popularizing. We have never uttered one word against the quince, knowing nothing against it. Hance & Borden are again wrong when they say we refused to print Mr. Meech's letter. The letter appeared in the R. N.-Y. of Feb. 8, with the omission only of such irrelevant parts as appeared to be simply a bold effort to obtain advertising without paying for it; and we may be pardoned for saying that the above letter strikes us as of the same character. Hance & Borden have no right to use such words as "inuendo," "covert meaning," "insinuation," in connection with the RURAL NEW-YORKER. We do not know Mr. Meech; we do not know Hance & Borden, but if we did and they were among our best advertising patrons, we should still feel that it was our duty to speak our mind to the public.

Miscellaneous Advertising.

That Tired Feeling

The warm weather has a debilitating effect, especially upon those who are within doors most of the time. The peculiar, yet common, complaint known as "that tired feeling," is the result. This feeling can be entirely overcome by taking Hood's Sarsaparilla, which gives new life and strength to all the functions of the body.

"I could not sleep; had no appetite. I took Hood's Sarsaparilla and soon began to sleep soundly; could get up without that tired and languid feeling; and my appetite improved." R. A. SANFORD, Kent, Ohio.

Hood's Sarsaparilla

Sold by all druggists. $1; six for $5. Made only by C. I. HOOD & CO., Lowell, Mass.

100 Doses One Dollar

The Best SIDE HILL PLOW in the Market

WARRANTED TO DO AS GOOD WORK AS ANY PLOW IN THE MARKET.

PATENT

CORRUGATED WIRE FABRIC,

Suitable for Fencing in many locations, and for Railings, Window Guards, Tree Guards, and other purposes.

It consists of vertical pickets or bars, made of corrugated galvanized steel rods, oval in section, secured by horizontal cables, each composed of two strands of galvanized steel wire.

As a fence it is cheap, strong, durable, and easily erected; it is as effective as a barbed fence in turning cattle, and there is no risk of injuring either the animal or the fence; it requires no longitudinal rail to support it, as it carries itself from post to post as well as a plain wire or barbed wire fence; it can be seen as plainly as a regular picket fence; it can readily be taken down, rolled up and moved from place to place.

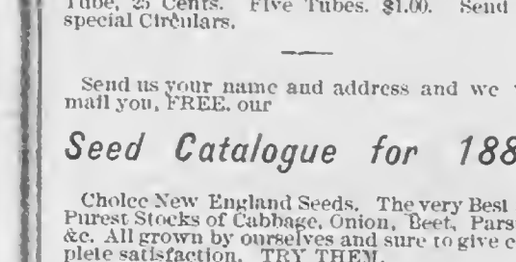
THE SPANGLER

Corn Planter, Single Row and Broadcast Fertilizer Distributor, Vegetable Seeder, Lime Spreader and Grain Drill.



The Spangler Corn Planter can drop fertilizers with corn, or mix with soil before covering. The dropping of the corn is fully exposed to the operator, and can drop it in hill or drill. **The Spangler Vegetable Seeder** can sow any seed large or small, put in the fertilizer, cover and roll it, all at one operation. **The Spangler Potato Fertilizer Distributor** distributes fertilizers six inches wide in potato rows with cultivator tooth attached to mix with soil; shovels can be lowered or raised. **The Spangler Lime Spreader** will spread unslaked lime from 20 to 60 bushels per acre. **The Spangler Broadcast Distributor** will sow ashes, plaster and all kinds of fertilizers from 200 to 1000 pounds per acre with perfect regularity. **The Spangler Grain Drill** gives full view of the discharge of grain and fertilizer, and is made with or without seed regulator.

The merits of the **Spangler Fertilizer Feed** are attested also by their most successful use by A. B. Farquhar on his Pennsylvania Drill, Keystone Cultivator under conditional license from J. W. Spangler which expires January 1st 1887, and on Bench's Cultivator. **Galvanized** feeds are furnished when desired. For further information send for illustrated catalogue.

THE SPANGLER MANUFACTURING CO.,

(Successor to J. W. Spangler & Bro.) York, Pa.

THE COLD WATER DIP!

(Thymo-Cresol.)

NESS & CO., MANUFACTURERS.

Non-Poisonous. Safe in Coldest Weather.

Sure Cure for Scab, Mange, and all Skin Diseases. Stimulates growth of Wool. Kerry, Watson & Co., Montreal, Agents for Canada. For full particulars, address

"SMOKE Your MEAT"

With Krauser's Liquid Extract of Smoke.

It is a liquid; you wash it on; it will keep it in a well preserved condition and free from insects; it is much more pleasant to the taste than meat smoked in the old way; it is done in less time, no trouble, and less expense. There is no danger from fire or of being stolen, as you can hang it in a more secure place than a smokehouse. Send for circular.

E. KRAUSER & BRO., Prop's and M'f's, DRUGGISTS, Milton, Pa.

A ROYAL GIFT.

Every person sending us **25cts.** for a 3 mos. subscription to the **ILLUSTRATED COMPANION** will receive as an **ABSOLUTE FREE GIFT** this **ELEGANT PARISIAN DIAMOND RING** represented by the annexed illustration. This ring is of a new and very beautiful pattern guaranteed to be **Solid Rolled Gold Plate** and will wear well. The Stone with which it is set is very clear, brilliant and sparkling. This Ring is of such value that any lady possessing it will be the envy of all her friends as it is to all appearances a very valuable article. Send a slip of paper the size of the Ring you wish. The **ILLUSTRATED COMPANION** is a mammoth **64 column 16 page** paper finely illustrated by full page engravings of artistic merit and contains Stories Sketches, Poetry, Anecdotes, Wit and Humor, and in fact all that goes to make up a complete family publication. Wherever it is once taken it is universally popular as our renewals show. **We know you will like it.** The regular price is **$1.00** per year. The above described **Parisian Diamond Ring** in a fine **Velvet Lined Case,** and the **ILLUSTRATED COMPANION** for three months for **25 cts.** is too liberal an offer to be passed by. Full **satisfaction guaranteed.** This is a **special offer** so **WRITE TO DAY,** as this will not appear again

E. F. NASON, Publisher, 120 Fulton St. N.Y.

(*Continued on page* 183.)

regardless of their interests. We publish Hance & Borden's letter, not as an act of justice,—since we have not spoken against the quince, which we now know for the first they offer for sale—but to show that the R. N.-Y. is willing to print an unjustifiable attack upon its honor, which we doubt if any reputable journal would publish even as an advertisement, rather than to give them the chance of distorting a refusal to do so into an act of self-protection or of attributing it to some low, selfish motive. E. S. C.

THE CHAMPION QUINCE.

IN the RURAL of Feb. 27th, under the head of Brevities, the entire family of RURAL readers are unconditionally advised as follows: "Don't buy the Champion Quince. It is later than the Orange or Rea's Mammoth and in no respect better," etc., etc. To this advice, I desire to file positive objections, and for the very reason for which the RURAL condemns this variety. The Orange and Rea's Mammoth ripen too early here; that is, they ripen and require attention at the same time when the good housewives are taxed to the full extent of their strength and ability in preserving and canning peaches, plums, etc., while the Champion—finer and larger than either of the others named, here at least—is later enough in season to afford opportunity to get through with the other fruits, and leisurely proceed with the quinces. I say "leisurely" because if not ready to use the fruit for a month after gathering, it makes no difference, as it keeps in splendid condition for a longer time than that, if picked in peach baskets and placed under cover in an airy situation.

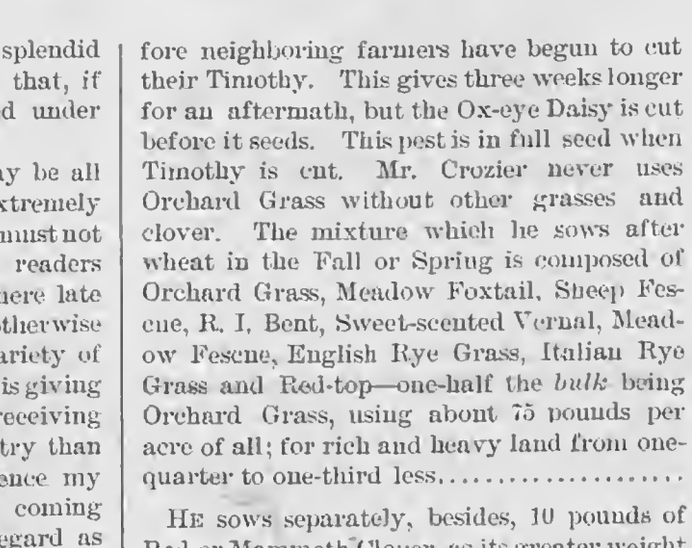
Now, while the RURAL'S advice may be all right for New Jersey and other extremely progressive fruit growing sections, it must not be forgotten that the RURAL has readers where Summers are longer, and where late ripening is not fatal to the value of otherwise valuable fruits. There is no new variety of fruit of any kind that I know of that is giving more satisfaction to the planter, and receiving more unqualified praise in this country than this self-same Champion Quince; hence my astonishment at the above advice, coming from a paper that, as a rule, I regard as conservative and sound, progressive and vigilant in its opinions and general work pertaining to the interests of its fruit-growing readers. I sincerely believe that it aims to give the unvarnished truth to its readers on all subjects; that it desires the general good of all; and in this belief the above exceptions are taken to its advice.

Caroline, Md. J. W. KERR.

[Thanks.—EDS.]

EXCELSIOR APPLES.

THE Excelsior Apple (Fig. 114, with a cross-section at Fig. 115) was originated by Mr. P. M. Gideon, of Excelsior, Minn. It is pippin-shaped, considerably ribbed, ground color light yellow, nearly covered in the sun with a bright carmine red, somewhat striped, with many deep greenish dots. Stem an inch long, and quite thick in a small, very shallow cavity. Calix small, very close, in a broad, corrugated, very shallow basin; core large for the size of the fruit, well filled with small plump seeds. Flesh fine-grained, nearly white, juicy, quite acid, tender, pleasant. A good cooking apple. Eaten September 16, 1883.



EXCELSIOR APPLE. From Nature. Fig. 114.

SEEDLING CRAB APPLE.

THE seedling crab apple shown at Fig. 116, with a cross-section at Fig. 117, also owes its origin to Mr. Gideon. It is a little irregular in shape, and slightly flattened, ground color greenish, nearly covered with a grayish red, and beautifully streaked, with deep crimson specks in the sun. Stem only half an inch long, rather stout, in a small, irregular, rather shallow cavity. Calyx large, closed in a broad, very shallow, irregular basin. Core large, full of large seeds. Flesh white with a slight tinge of yellow; very firm, juicy, acid, fine-grained. A good cooking apple. Eaten September 16; not quite in prime eating order. A fine crab in appearance. More crab apples of prime quality suitable for a wide range of country would be desirable for canning purposes.

What Others Say.

MR. CROZIER states in his book, jointly written by himself and Mr. Peter Henderson, that the base grass, as it may be called, for the hay crop in our Northern States, is Timothy, but he believes that Orchard Grass is much better fitted to be the leading kind in the mixture, whether for pasture or hay. It is more permanent, he says, and can be cut at least two weeks before Timothy.....

HIS crop is cut and in the barn 20 days before neighboring farmers have begun to cut their Timothy. This gives three weeks longer for an aftermath, but the Ox-eye Daisy is cut before it seeds. This pest is in full seed when Timothy is cut. Mr. Crozier never uses Orchard Grass without other grasses and clover. The mixture which he sows after wheat in the Fall or Spring is composed of Orchard Grass, Meadow Foxtail, Sheep Fescue, R. I. Bent, Sweet-scented Vernal, Meadow Fescue, English Rye Grass, Italian Rye Grass and Red-top—one-half the *bulk* being Orchard Grass, using about 75 pounds per acre of all; for rich and heavy land from one-quarter to one-third less.....

HE sows separately, besides, 10 pounds of Red or Mammoth Clover, as its greater weight makes it impossible to keep the seeds properly mixed.....

MR. BARRY is quoted by the N. Y. Tribune as saying that a spendthrift never squandered a patrimony with more reckless improvidence than our people have shown in havocking the grand forests that almost covered our country within the memory of many yet living.....

ONE spout to a maple tree is a great deal better than two.....

PROF. BEAL states, in the same journal (N. Y. Tribune), that Johnson Grass promises nothing for the North, though it lives over Winter to a greater or less extent and produces seed in Michigan.....

"WE can never be too careful what the seed our hands shall sow;
Love for love is sure to ripen, hate from hate is sure to grow.
Seed of good or ill we scatter heedlessly along our way,
But a glad or grievous fruitage waits us at the harvest day."

PUT not your trust in peaches, says Mr. E. B. Underhill. Plant pears for your heirs; comfort yourself with apples, but let Florida grow your oranges, and Delaware your peaches.....

MR. UNDERHILL says, and we are not surprised at it, that the May King Strawberry is making a reputation as a market strawberry for first early. See RURAL reports of last year. Bubach's No. 5 is praised as the "coming berry," if that reputation don't kill it on the start. Mr. Underhill speaks of the James Vick as the most unsatisfactory berry he ever had.....

MR. MEEHAN mentions that we should now bring the dahlias forward. Cut off the "stringy" roots and put them in pots or boxes and place them in a warm situation. When they sprout, divide the sprouts, giving a piece of root to each, and then pot separately.....

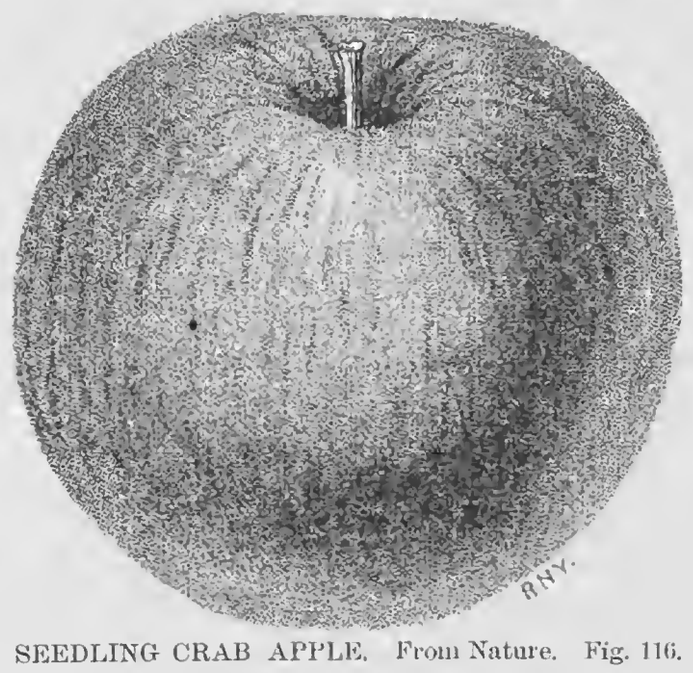
MR. MEEHAN further remarks that the best of grapes may be had by any system of pruning that will induce strong shoots to push where they are most desired.....

WHO has the Japan Chestnut? Thus far we know of the following: Storrs & Harrison Co., Painesville, O.; Ellwanger & Barry, Rochester, N. Y.; Luther Burbank, Santa Rosa, Cal.; J. T. Lovett, Little Silver, N. J.; F. S. Phœnix, Bloomington, Ill. We shall be glad to add the names of any other reputable nurserymen.....

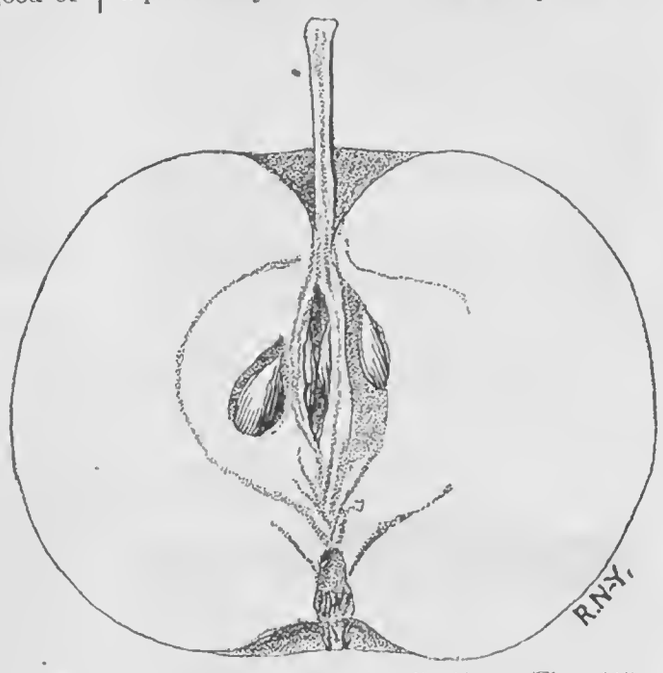
PROF. BURRILL (University of Illinois) says that the Snyder Blackberry, previously perfectly hardy, was so badly killed last Winter that the bushes were cut to the ground. The Turner Raspberry bore a full crop. Prof. B. agrees with the R. N.-Y. that the strawberry is not influenced in shape, color or quality by the variety which furnishes the pollen.....

PROF. MORROW, of the same university, speaks favorably of the Tower Pulverizer and Corn Cultivator; also of the Strowbridge Broadcast Seeder.....

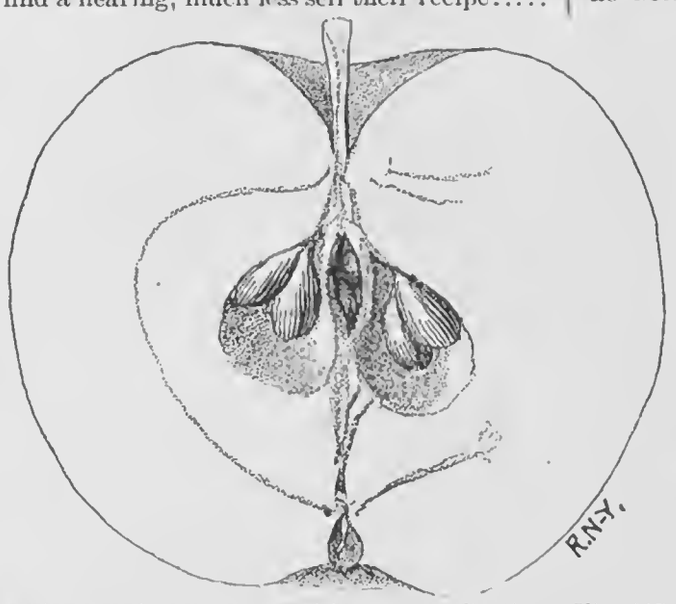
THE N. E. Homestead says that traveling agents are going among the farmers of Maine and Massachusetts, offering for $5 recipes for fertilizers worth $50 a ton, that can be made for $10. It is strange that such men can even find a hearing, much less sell their recipe.....



SEEDLING CRAB APPLE. From Nature. Fig. 116.



EXCELSIOR APPLE. Cross Section. Fig. 115.



SEEDLING CRAB APPLE. Cross Section. Fig. 117.

A CATTLE-RAISER from Mexico said, at the late meeting of the Am. Ag. Asso'n, that the method of dishorning young cattle practiced there is to saw off the horn down to the hair when the calf is three months old and the horns are about an inch in length. A hot iron is then applied to the surfaces, which are finally moistened with lime water as thick as cream.....

MR. T. D. CURTIS thought it better to slit the skin over the nub before the horn pushes through, and then with a chisel pry off the button.....

PROF. BURRILL says that we must choose for orchards lower sites or such soils as are least affected by droughts. This is to avoid the summer check of trees, causing premature ripening of the tissues, putting them in the condition to start into spring-like activity when the autumn rains occur.....

A DISGRACE and a national shame; an industry that thrives in spite of barbarity; a cruelty that in most other countries would be dealt with by rigorous laws. Thus a writer in the Rural World justly characterizes the present system of cattle ranching on the Western Plains.....

HARRIS recommends dried muck for bedding pigs.....

THE Early Ohio is unquestionably one of earliest of potatoes. At the Rural Grounds it is as early as any we have tried; but do not forget that it succeeds well in some places—poorly in others.....

DR. A. C. CARROLL, of the State Board of Health, says (*via* N. Y. Tribune) that it has long been a matter of common experience that low fevers and various forms of "filth diseases" are apt to prevail in the neighborhood of old burying-grounds when population gathers around them.....

THE chrysanthemum is the people's flower, appealing to the heart and not bearing heavily on the purse, says Mr. John Thorpe.....

OUR seed corn has been kept in a dry, warm place, and we know that every kernel is alive and sound.

DOES it pay to test seeds before planting them, whenever we have the least suspicion they may be injured in any way?.....

A WRITER in the New England Homestead finds the Essex to be the earliest potato as tried with the Pearl of Savoy, Clark's No. 1, Rosy Morn, Early Maine and Bliss's Triumph. We have not found Rosy Morn or Triumph to be as early as Beauty of Hebron. He condemns Dakota Red. The Belle grows too large. He finds Wall's Orange good for spring use.....

FOR family use, try the Drumhead Savoy Cabbage. The heads are never so solid as those of the other cabbages, but the quality is richer and sweeter.....

FOR main crop peas, sow Prince of Wales (tall), Telephone (tall), Stratagem (two feet). For earliest, there is very little difference between the "First and Best" varieties offered by leading seedsmen. All need brushing, as they grow three feet in hight. For dwarfs, the American Wonder and Abundance are excellent.....

THE RURAL is much in favor of transplanting trees in the early Spring as the soil will permit, rather than to delay until the danger from injury by drought becomes greater. We have transplanted evergreens when, owing to ice, the roots were badly mutilated, yet all lived. Others transplanted later, died.....

IF you have hardy vines to order, do not forget the Coral Clematis, Clematis coccinea..

THE Eclipse Beet, announced in every catalogue, is said by our contributor H. H., to be no better in quality than the Egyptian, of which it is a variety, and than which it is but a trifle earlier.....

MAJOR ALVORD says that silage, and especially good corn silage, when compared with dry corn fodder or with other feeding stuffs, produces results so satisfactory as to surprise the chemist, and which chemistry can not explain.....

MR. P. BARRY says that the English Walnut is fruiting in and near Rochester.....

MR. STILES, the observant agricultural editor of the Philadelphia Press, puts the thing forcibly when he says that a State agricultural college farm should never pay in dollars and cents. It should not enter the field in competition with any other farm, and the products should not be found for sale in the market. It is a place for the growth of ideas, the development of principles and the establishment of law. Does the chemical laboratory of the college pay its way in the manufactory of drugs or the entomological department help to fill the State Treasury by selling bugs.....

THE catalogue of V. H. Hallock, Son & Thorpe has it "geraniums, *properly* pelargoniums." This is a move in the right direction. Finally we can drop the name geranium except to donate the hardy plants by that name.....

IF you have canna roots to buy, don't forget Canna Ehemanni. Its peculiar magenta color, its large flowers and many spikes, together with the vigorous habit of the plant and its large, banana-like leaves, will please..

AND let us again call the attention of our readers to the two prettiest ornamental grasses in the world—the Zebra-striped Eula

lia and the Variegated Eulalia—Eulalia Japonica zebrina and variegata. Both are hardy.....

Sow seeds of chrysanthemums and coleus; of pansies and verbenas; of pinks and petunias.....

DON'T forget that "scours" in calves can be, for the most part, prevented by regular feeding and warm, dry quarters. Don't forget, also, that the disease is oftenest brought on by a failure to observe these rules.....

PHIL. M. SPRINGER says that a bushel of corn, as usually fed to common hogs, will produce from five to seven pounds of pork. In Central Illinois, where the hogs are more or less crossed with the Berkshire or other improved breeds, 8½ to 10 pounds of pork to the bushel of corn is considered a fair estimate. This shows what improvement in breeding will accomplish.....

THE Industrialist says that a dozen eggs will bring more in Kansas than a bushel of corn.....

E. P. ROE says that a home can be created in rented dwellings, but a home for which we have the deed, a cottage surrounded by trees, flowers and gardens, is the refuge which best satisfies the heart.....

F. D. CURTIS says there is too much breeding from unsound mares. Out West the best mares are used to breed from and the practice pays.....

EVERY farmer's wife, says Mrs. A. G. Chandler, knows how hard it is to get the husband to spade up the garden. The best way to overcome this difficulty is to move the garden operations out into the potato patch. Plant the vegetables there, in rows, where they can be cultivated by horse power. By putting the garden out there, cleaner culture will be insured.....

AT a New Hampshire farmers' meeting one speaker said he lost lambs enough in one Winter, trying to learn how to feed cotton-seed meal, to pay his hired help. He thought root feeding the most expensive way of *watering* sheep he had ever tried.....

THE notion common among farmers in some sections that all plants which are to grow upward—like corn or wheat—must in order to prosper, have their seeds put in when the moon is waxing; while all that grow downward—like beets and parsnips—must have the seeds put down in the waning of the moon, has, according to Prof. C. A. Young, never been verified by science, though it has tried to do so.

FRIEND J. J. H. Gregory estimates the value of hen manure at about 12 cents a year per bird.

Everywhere.

RURAL SPECIAL REPORTS.

Alabama.

GRAND BAY, Mobile Co., March 2.—The cold snap of January killed most of the cane stubble and froze out a good many potato banks and also lots of cane seed or seed cane. I have for several years planted more sorghum than tropical cane, as I find I can make as much and as good sirup with less fertilizer, in shorter time, save the fodder, and the value of the seed is equal to the corn that could be raised on the same land under the same circumstances. Spring is fairly open and planting of all kinds is going forward. Plum and peach trees in full bloom and pear trees not much behind. Plenty of green strawberries, the size of a pea, in the field, and if we have no set-back there will be plenty for market in three to four weeks. C. C. W.

Canada.

SOUTH RIVER, Ontario.—The D. M. Wheat rusted badly. The Thousand-fold Rye did well. The peas were all good; the Stratagem and Prince of Wales bore fine showy pods; but for general usefulness, I prefer Horsford's M. G.; it is a large cropper; the pods are well filled, and it is of good quality. But little difference between the Rural New-Yorker and other early sorts; perhaps it may be a little earlier. R. C.

Dakota.

REE HEIGHT, Hand Co., March 6.—I harvested a bushel of Rural corn ears. The dent sort didn't mature. The ground squirrels liked the peas so well that they left not one. The beans did well. Garden Treasures very fine. N. R. P.

Illinois.

DONNELLSON, Montgomery Co.—Wheat and grasses are in the best condition for years at this season. Cattle and sheep generally look well. Hogs scarce and in good shape. Horses suffering greatly from distemper, though as yet there have been few deaths. A. W. H.

LEAP RIVER, Ogle Co., Feb. 26.—Weather and wind extremely changeable. Farmers are holding their grain for higher prices. Corn is now worth 28 to 30 cents; oats, 25 to 27 cents; hogs, $3.50 to $4 per 100 pounds; stock hogs about all sold. Cattle wintering in good shape. Plenty of hay and straw to last till grass comes. Orchards were killed last Winter by the cold. D. E. K.

STRASBURGH, Shelby Co., Feb. 24.—Spring of 1885 late and unfavorable for Rural seeds, hence Stratagem and Prince of Wales Peas failed. Flageolet Beans did well, considering the chances against them from the weather and insects. The tomatoes were nice, especially the King Humbert. Of the Garden Treasures the poppies alone came up well. The corn all came up and varied immensely. I have saved a few ears for seed. Our general crop of corn was, most of it, light, and some rotted. Hay crop good. Potatoes an average yield, but of poor quality. No wheat for sale here. Oats, 23 cents; potatoes, 50 cents; corn, 25 to 26 cents; hay, $8 per ton. Fall sown wheat has been hurt a good deal by freezing and thawing. H. R.

Iowa.

GLENWOOD, Mills Co., Feb. 28.—February very fine; snow nearly all gone. No frost in the ground; ground well filled with moisture; and whenever this is the case in Spring we are almost certain of good crops. A. C. S.

Maryland.

CECIL Co., March 5.—Very cold, windy weather during the past week. Wheat was looking very well before the last freeze; but it does not look so well now as I expected. Corn did not come to perfection at all. The prices of grain are very low. J. A. W.

Michigan.

SMITH CREEK, St. Clair Co., March 2.—Port Huron markets report potatoes 15 to 20 cents per bushel; butter, 12 to 14 cents; eggs, 10 to 11 cents; wheat, 95 cents for No. 1 white; oats, 36 to 38 cents per bushel, choice barley, $1 to $1.10; clover seed, $4 to $5. We have the Concord and wild grapes and Iron-clad and Crescent Strawberries. We are great hands for fruit. C. J. P.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention. Before asking a question, please see if it is not answered in our advertising columns. Ask only a few questions at one time. Put questions on a separate piece of paper.]

BROOM CORN.

C. C. L., Coopersville, Mich.—Broom corn grows readily wherever Indian corn grows. At present prices, its production should be profitable. The seven States producing the largest amount are, in their order: Illinois, Kansas, Missouri, New York, Nebraska, Ohio and Iowa. It is planted in drills on rich land, the richer the better, and 3½ feet apart. When first up it is "scraped;" that is, the dirt is scraped away from each side of the drill, exterminating the weeds. It is then cultivated with the same tools and manner as ordinary corn. It comes up quite feebly and grows slowly at first, but when a few inches high, it takes a start and grows very rapidly. When "brushed" out and the seed has passed the blossom, it is "broken;" that is, the stalks are bent over just below the first joint. If this were not done, the "brush" would be bent down on all sides by the weight of the seed and thus become crooked and worthless. When "broken" the brush hangs straight and so ripens. It is sometimes "tabled;" that is, the stalks of adjoining rows are broken in opposite directions and low enough so that the heads lap over and lie one upon another. When the seed is nearly ripe, but before the brush has turned brown, it is "cut." In doing this the stalks are cut an inch or so above the first joint and the head and stalk are slipped out of the sheath. It is then drawn to barns or sheds, which are fitted up with scaffolds from bottom to top. On these the corn is spread to "cure." When properly dried, it is thrashed by being held upon swiftly revolving cylinders having long, slim spikes or teeth, which strip off the seeds and leave the brush ready to sort and bale when it is fit for market. The thrashing, sorting and packing can be done at any time during Winter. 2. The seed is capital for hens, and if well cleaned, is very nearly as good as oats for any stock; for cattle, hogs and horses it is best when ground.

ARTICHOKES.

E. J. J., Richmond, Ind.—1. How much seed for an acre of artichokes to be fed to stock? 2. Where can the seed be obtained? 3. Are the stalks of any use? 4. When are they dug, and how stored and kept? 5. Can they be dug clean, so that they will not be plowed up like some troublesome weeds? 6. Do they do best in a rich soil?

ANS.—Jerusalem Artichokes are not produced from seed; but from tubers. The amount of these required per acre is about the same as of potatoes, six to seven bushels, the tubers being cut to pieces of three to four eyes. 2. The seed may be ordered of any seedsman advertising in the RURAL. In country papers seed is often offered at from 50 cents to $1.00 a bushel. 3. Cattle will eat the stalks when they are still green, but since cutting them in that state prevents the formation of any but small tubers, it won't pay. Sheep, horses and mules, in the order named, will eat the stalks after the foliage has turned black following a severe frost. 4. The tubers should not be dug until early in November, because the plant does not bloom till October and the tubers are nothing more than rudimentary until after the blossoming and fall of the flowers. But the best way to handle artichokes for stock, is to suffer them to lie in the ground and dig to feed as wanted, till frost stops the work, and then resume in the Spring, when the frost is leaving. The trouble about artichokes is the difficulty of keeping them. If they are dug and put in a dry place, they shrink and shrivel up as soon as a peeled potato, and the feeding of them is quite dangerous, producing bloating. If they are put away in bulk, if the temperature is not kept down to 40° or below, they sprout, heat and rot. The explanation of all this is, that artichokes contain just about those amounts of starch, albumen and phosphates which produce active fermentations in the quickest way, and in that respect resemble green sweet corn when cut from the cob. 5. No; not very well: nor can two full crops be grown on the same land, without liberal manuring. But as a weed, artichokes are not worse than Pigeon Grass, Crab Grass, Rag Weed, Wild Smart Weed and a dozen others. Any cultivation that will dispose of the latter will be quite effectual with the former. 6. Yes; artichokes, like all crops, do better on rich soil than on poor. They are, however, like rye, rather a poor-land than a rich-land crop; that is, both have the capacity of taking up from sandy soils and those of granite origin, food enough to perfect them, where most other crops would fail. But in planting on very rich soils care must be taken to give the plant room, because the yield of tubers is in direct ratio with the amount of the development of branches and leaves. When too close, the plants run up tall, like timber in dense woods without side limbs, and the tubers are few; when abundant space is given, the side branches strike out, are covered with leaves and the yield is large. Therefore one piece in a hill and the hills 3½ feet apart is not too thin seeding for such very rich land.

HARDY SHRUBS.

D. S., Manchester, N. S.—1. What shrubs, flowers, and ornamental trees would be hardy here—latitude 45 degrees 30 seconds north? 2. What hardy shrubs can be raised from seeds? 3. Would Prunus Pisardii be hardy here? 4. Would the American Ivy injure a wooden building? 5. Has the High Bush or Tree Cranberry been cultivated in the United States.

ANS.—1. We should try the Lilacs, Forsythia, Great-panicled Hydrangea, Spiræas in variety, Stuartia, Philadelphus, Japan Quince in different colors, Pavia macrostachya, Liburnums plicatum and lantanoides, Deutzias, Purple Hazel and Purple Barberry. 2. Almost all kinds, Lilacs, Deutzias, Weigelas, Philadelphus, Japan Quinces, Pavia, Barberry grow very readily from seeds. Please examine the catalogues we announce for the seeds. Prunus Pisardii would not probably stand your climate. You can not get seeds as yet. 4. Yes, more or less. 5. Yes.

TURNIPS AS SOIL EXHAUSTERS.

J. B. Downs, Pa.—A good crop of turnips, 800 bushels, weighing 48,000 pounds, would remove from the soil about 5,332 pounds of dry matter of which 643 pounds would be albuminoids or flesh and milk-forming substances and 4,322 pounds carbohydrates or fat and heat producers, such as sugar, starch, etc. Of these, about 86 pounds would be nitrogen. This crop would also contain about 336 pounds of ashes, of which 144 pounds would be potash, 48 pounds phosphoric acid. The rest of the dry matter is largely carbon, a thing easily replaced. This crop of turnips would remove about the same amount of nitrogen as 2¼ tons of clover hay, and as much potash and phosphoric acid as four tons, so that it is quite exhaustive, particularly so of potash and phosphoric acid.

COTTON-SEED MEAL AND MALT SPROUTS FOR MILCH COWS.

A. B. S., Oakford, Pa.—1. Cotton-seed meal is a perfectly safe and a good food for milch cows, except that, when fed to cows kept for butter-making, it is apt to give the butter an oily taste. 2. It should be fed in connection with corn-meal, Timothy hay, corn fodder, straw, barley meal, wheat middlings and bran. It is a very highly nitrogenous food, and also contains from 8 to 15 per cent. of free oil, and one quart is as much as any animal should have at once. 3. Malt sprouts (the germs or radicles of the grain when barley is being sprouted, and which break off when the sprouted grain is dried and handled) are also a very highly nitrogenous food, and though they contain very little free oil, they should also be mixed with the same foods as for cotton-seed meal—those with an excess of the carbohydrates or fat-formers.

SOME TREES HARDY IN DAKOTA.

D. B. C., Lincoln Co., Dak.—1. In Lincoln County, Dakota, the Yellow Transparent, Duchess, Wolf River and Wealthy Apples will be safe to plant of the sorts common in our nurseries; varieties of the grade of hardiness of Walbridge, Gros Pomier, Plumb's Cider and Fameuse will be apt to fail when of bearing size, as they have done in North Iowa. 2. The Red Cedar of the Platte River, the Silver Spruce of Colorado and the Austrian Pine will do well in your section when they attain depth of root. They should be planted in cultivated ground. In the sod they will fail before they attain depth of root. The upright form of Scotch Pine (Pinus Rigensis) is now obtainable and should succeed perfectly with you even on high prairies.

BONE-DUST AND ASHES.

D. C. M., Shelburne Falls, Mass.—If bone flour is "as fine as wheaten flour, and free from shavings," it should benefit next Summer's strawberry crop, "if applied early in Spring with ashes;" but a better way would have been to have mixed the two in casks or boxes with a layer of ashes at the bottom, four inches thick, then bone dust two inches; then ashes four inches, and so on, with four inches of ashes on the top, and the whole kept moist for several weeks before the time for application. Then the dust would be found well decomposed and in good condition for plant food.

COARSE AND FINE BRAN.

E. H. S., Orangeville, Pa.—1. What is the difference between the coarse and fine bran where both are made by the roller process? 2. Which is the better for cows and which for beef cattle, to be mixed with clear corn meal?

ANS.—1. The coarse is the larger particles of the covering of the kernel and the "chit" or germ rolled out flat and thin. The fine is the sifting out of this, and contains more of the starchy portions of the grain. 2. There is no doubt for either of these uses the coarser is the better, as it contains more of the albuminous matter, and that is just what the corn meal lacks.

BUCKWHEAT FOR FEED.

A. M. T., Farmington, W. Va.—For stock feeding buckwheat as compared with corn, according to Wolff's German tables, is worth, per hundred pounds, 77 cents against $1.11 for corn. This is, we think too large a difference, for, according to Prof. Jenkins's American tables and figuring on the German valuations of the food elements, they would stand per 100 pounds: buckwheat, $1.06; corn, $1.24½; which is probably near their comparative value. 2. To a limited extent buckwheat is good for egg production; but it should be fed with other grain.

USES OF SAWDUST.

T. U. C., Middlesex, Pa.—When hard-wood sawdust rots down, it makes a valuable manure for any purpose. It is also good to use on clay land, both for its manurial and mechanical effect. It makes a splendid mulch for an orchard, only there is danger that it may become so infested with worms as to injure the roots of the trees. If an application of ashes or lime is made every two or three years right on top of the mulch, there will be no danger of this.

LAND OFFICES IN DAKOTA, ETC.

W. J. P., Kensington, Ont., Canada.—1. We cannot recommend any particular part of Dakota for settlement, there are so many excellent locations in the Territory, and so much depends on the character of the settler and on many other points on which we are entirely ignorant. The best way is to investigate on the spot, leaving your family behind until you have a place for them. 2. The United States charge no duty on the effects of immigrants from Canada, including animals for working and breeding purposes. 3. Application for Government lands should be made to the Registers of the different land offices. Last year the names and locations of these officers were as follows: William Letcher, Mitchell, Dakota; M. W. Sheafe, Watertown; H. Austin, Fargo; G. A. Wetter, Yaukton; J. A. Rea, Bismarck; J. P. Luse, Deadwood; S. W. Duncombe, Aberdeen; D. C. Tiffany, Grand Forks, and G. B. Armstrong, Huron. Doubtless nearly all the same Registers are still in office. In any case a letter addressed simply to the Register of the Land Office at any of the above places would reach the right party.

Miscellaneous.

J. B. B., Monroe, N. Y.—Rossie paint is a red oxide of iron which comes from the the mines of Rossie, St. Lawrence Co., N. Y. It is about 75 per cent. iron rust. It is ground very fine, gives a dark-red color and adheres very firmly to wood, tin or iron. It makes a very pleasing color and will last two or three times as long as Venetian red. The nearest hardware or paint store should have it. If not, write the Rossie Paint Co., Ogdensburg, N. Y.

E. C. B., Wilmington, Vt.—It is our impression that the Primate Apple is hardy enough for Vermont; but the American Pomological Society does not "star" it there, and we can find no report of its doing well there, though it receives one star in New Hampshire, Maine and even in Nova Scotia—considerably further north. 2. Pears grafted on apple stock will not do well. 3. If tender varieties of apples are grafted on hardier stocks, we doubt if the stock would affect the hardiness of the graft.

E. S., Highland, N. C.—Certainly; you can train the main cane of a grape-vine up the posts of a veranda for a distance of 12 feet, and then run the fruiting arms along under the eaves. The distance of the fruit from the roots seems to make very little difference in the productiveness of the grape-vine. The main point is to keep the bearing canes as nearly on a level as possible, as the tendency of the sap in a grape-vine is strongly to the topmost canes.

S. W. H., Honeoye Falls, N. Y.—1. Cheat or chess has very little value as feeding stuff. 2. No; it will not pay to grind it to be mixed with corn meal for horses and cattle, and unless it is ground, it gets into the manure and thus becomes scattered over the fields. About the best use to make of it is to burn it. You are then sure it will not grow.

R. M., Newark, N. J.—Farmers may peddle their own produce in this city without taking out a license; but they cannot stand within 300 yards of the regular markets without payment of a small fee.

E. E., Rockwood, Tenn.—The goat belongs to the genus capra; the sheep to the genus ovis; both belong to the sub-family ovinæ. Animals of different varieties cross, and their progeny is fertile; animals of different species also frequently cross, but the progeny is not fertile as a rule. Animals of different genera do not cross.

E. A., Alexandria, Ohio.—For a wind-break of evergreens where the Winter of 1884 killed one-fifth of "a good growth" of Norway Spruce, we would prefer the Austrian or White Pine to the Norway.

A. N. V., Frankfort, Kans.—All the creamers advertised in the RURAL are good. Write to those advertising each kind for descriptive circulars, and judge of the special advantages claimed for each.

A. J. C., Mitchel Val., Cal.—Harrow teeth that are lose in the dry wood, become firmly fixed when the wood is wet, because the moisture causes the wood to swell and close up round the teeth.

R. C. D., Loveland, Ohio.—The Woodason Bellows, costing from $1.50 to $2, are what we use for spraying the houses with kerosene. See seedsmen's catalogues advertised.

T. R. W., Otter Creek P.O., Pa.—Muriate of potash will probably give you the potash at a cheaper rate than any other thing you can use in place of wood ashes.

R. M., Raleigh, N. C.—A deed of real estate in North Carolina must be recorded within two years, or it will be good for nothing.

DISCUSSION.

G. W., SOUTH ALABAMA, N. Y.—In the RURAL of February 20, a correspondent asks whether RURAL subscribers have ever seen chestnut trees growing on limestone land. We are on a ledge of limestone and flint that passes through Livingston, Genesee and Niagara Counties. The timber on it is mostly oak and chestnut, and in many places chestnut grows on quarries of blue limestone.

F. S. N., VINELAND, N. J.—A good deal of praise has been bestowed on the Early Harvest Blackberry. Now I have grubbed out all I had of them, because they bore very imperfect fruit. What berries we did get were a week ahead of the Wilson, but small and very few of them filled out. They seemed to set all right; but only three or four of the drupes would fill out, while the rest would remain green, hard knots. Were they really Early Harvest?

R. N.-Y.—We should say not. Our berries are exceptionally uniform and perfect.

J. B. C., NORTH PEMBROKE, N. Y.—In a late RURAL, J. W. K., Denton, Md., asks whether any one has ever seen chestnut trees growing naturally on limestone land. I have seen them growing naturally on such land together with oak and hickory, where there was no slate within five miles. They can be seen now in the western part of this county.

G. E. S., OLD MISSION, Mich.—In a late RURAL farmers were advised not to let professional tree trimmers into the orchards. One writer called them "tree butchers." Now I am a professional tree trimmer, and I understand my business, which is a necessary and honorable one; and if the RURAL doesn't stop injuring it, it will have to pay damages.

R. N.-Y.—The RURAL would truly regret having, even inadvertently, injured any "necessary and honorable" business; but, bless you, it has become so callous to threats from humbugs and worse, that all threats of punishment for having expressed an honest opinion itself, or for having allowed another to do so through its columns, have lost all terror for it. No "necessary or honorable" business has anything to fear from it; and it fears nothing from any other sort of business.

S. W., NIAGARA, N. Y.—In answer to an inquiry in a late RURAL, it was said that the Manshury is a winter barley. This is evidently a slip. I have grown it continuously for the past five years, and it is certainly a spring variety. I shall sow 60 acres this Spring.

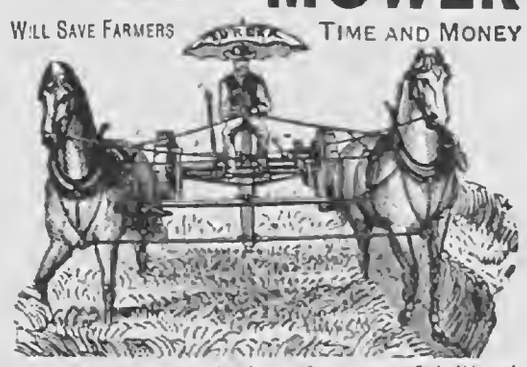
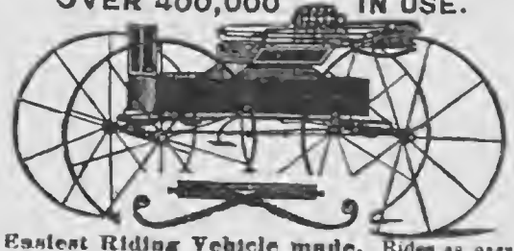
THE DANA
CENTRIFUGAL-GOVERNOR
WINDMILL
Is the best working and most powerful Wind-Engine in the world, because it is the only one which unites the most perfect form of windwheel with the most perfect method of regulation. Geared Mills a specialty.
For Descriptive Circulars apply to
THE DANA WINDMILL CO.,
FAIRHAVEN, MASS., U. S. A.

—THE—
Broad Cut Centre Draft. EUREKA MOWER
WILL SAVE FARMERS TIME AND MONEY



THE EUREKA is the only successful Direct Draft Mower manufactured. It will do at least, one third more work than the side-cut machines with same power. As the cut grass is untrampled, hay will cure quicker, and sell for more money. Don't fail to see the Eureka before buying. Send for new 1886 catalogue. Mention this paper.
EUREKA MOWER CO., Utica, N. Y.

TIMKEN SPRING VEHICLES.
OVER 400,000 IN USE.



Easiest Riding Vehicle made. Rides as easy with one person as two. The Springs lengthen and shorten according to the weight they carry. Equally well adapted to rough country roads and fine drives of cities. Manufactured and sold by all leading Carriage Builders and Dealers.

BRICK AND TILE MACHINERY
AND
CLAY CRUSHERS.
BEST IN THE WORLD

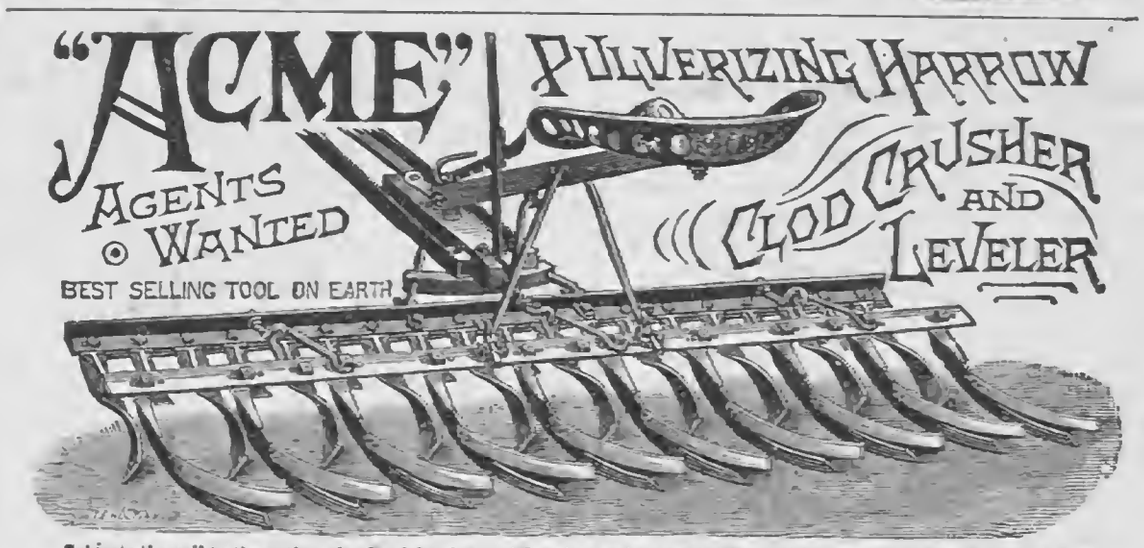
"ACME" PULVERIZING HARROW CLOD CRUSHER AND LEVELER
AGENTS WANTED
BEST SELLING TOOL ON EARTH



Subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting, Lifting, Turning Process of Double Gangs of Cast Steel Coulters. Immense cutting power. Crushing, Leveling and Pulverizing performed at the same time. Entire absence of Spikes or Spring Teeth avoids pulling up rubbish. Only Harrow that cuts over the entire surface of the ground. Sizes, 3 to 15 ft. wide. With and without Sulky attachment. We deliver free at Distributing Depots.

FAIR PLAY. **DO NOT BE DECEIVED.** Don't let dealers palm off a base imitation or some inferior tool under the assurance that it is better. SATISFY YOURSELF BY ORDERING AN "ACME" ON TRIAL. We will send a **double gang** Acme to any responsible farmer in the United States; if it does not suit, he may send it back, we paying return freight. We don't ask pay until tried on his own farm.

Send for pamphlet containing thousands of testimonials from 48 States and Territories.

Branch Office, HARRISBURG, PENN. **NASH & BRO.,** Manufactory and Principal Office, MILLINGTON, NEW JERSEY.

N. B.—"TILLAGE IS MANURE" and other essays sent free to parties who NAME THIS PAPER.

THE
RURAL NEW-YORKER.
A National Journal for Country and Suburban Homes.

Conducted by
E. S. CARMAN, Editor.
J. S. WOODWARD, Associate.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, New York.

SATURDAY, MARCH 20, 1886.

WE have many interesting contributions as to the Japan Chestnut, which we shall publish as fast as space can be found.

IF the number on your address label is 1886, your subscription expires with this number; if 1887, next week; 1888, in two weeks, etc.

WE have received a number of complaints that the Nature's Incubator, manufactured in Quincy, Illinois, is a worthless affair. We are investigating these charges, and, in the mean time, our friends may accept the above as a caution.

A FRIEND from Alexandria, Dakota, who does not sign his name (we would thank him to forward it), says that he planted both the Cory and Marblehead sweet corn last year, and found the claim in favor of the earliness of the Cory not well sustained. He thinks the Cory a strain of the Marblehead, which, we believe, is admitted by the introducers.

DURING the past week Catawba Grapes of the best quality have been selling at the retail fruit stands for 20 cents the pound, nominally five-pound baskets (about four pounds) for 60 cents. We have never before seen Catawbas offered for sale so late. They have been preserved by the cold-storage method. When, among the scores of new grapes, we find one as good a keeper, and as good in quality as the Catawba, the fact will be noteworthy.

THE Michigan Agricultural College is entering upon a new era of prosperity. The freshman class contains 165 members, and more are coming every day. "How fortunate," writes our informant, "that we have held to our labor and agriculture, pure and simple." There is the secret of the great success of this college in a nutshell. It is not the tail of a university, it is not ashamed of its name, it holds labor in the foreground. The few colleges that insist upon work as a necessary element of education grow stronger every year. The many that ape the influence and tone of a literary school and still attempt to pass as agricultural institutions, grow weaker and weaker. The reason is plain. In one case faculty and students are proud of their work; in the other there is a constant effort to apologize for the existence of the institution.

ACCORDING to the Report of the Connecticut Agricultural Experiment Station, potash in muriate has cost the past year, at wholesale in New York, about three-and-one-third cents a pound. At retail it has cost about four cents. Kainit at wholesale in New York cost in December less than one cent. It rose until April, when it cost 3.8 cents per pound. Then it fell to 2.8 cents per pound in July, rising to three cents in November. Now at *retail*, the cost has been about 4.5 cents per pound. Farmers should note this. A pound of potash in kainit is worth just as much as a pound of potash in the muriate, unless the salt in the latter is thought to reduce its value. It varies in composition, and at the above prices it is assumed that the per cent. of potash is as much as 12. At wholesale it has been much cheaper than high-grade muriate; while at retail it has been much higher.

As many as 10 years ago, one of the best farmers living in the vicinity of the Rural Farm, began the use of bone flour as a fertilizer. The effect was very satisfactory indeed. His crops were evidently increased. The neighbors saw this and bought *bone* and spread it upon their fields. Of late years, bone is less popular. The farmer above referred to thinks it does not have the same effect as at first, and some of the neighbors who followed his lead agree with him. Now, potash is just as much a plant food as bone, which, besides a little nitrogen, furnishes only phosphoric acid. During these 10 years, where has the potash come from which the crops required? Evidently from the soil. And the soil has been growing poorer and poorer in potash every year until now it can not supply the quantity which the plants need, and the lighter yields are attributed to the fact that "bone does not have the same effect now that it did 10 years ago." Try potash, friends, and if this does not give satisfactory crops, you may conclude that it still needs bone as well as potash, and, very likely, nitrogen as well. But don't condemn bone.

Perhaps, no other improvement in a garden or home gives such rich and enduring results as the setting of some well chosen grafts. Now is the season, and every boy should try his prentice hand while observing or assisting a practised operator. Success depends on a healthy stock, on sound, plump grafts of good firm wood, not dried or hurt by severe cold, nor at all swelled by any start of bud growth; a sharp knife, the close and unmoved joining at some one point at least of the line between bark and wood in the graft with the same line in the stock on faces freshly and smoothly cut; a complete covering of the entire wound with a coating of wax, which, being waterproof, and devoid of any oily, salty, or any other free matter, will prevent the wound from drying without interfering with the tender protrusion of new matter, which will unite the parts in the course of a few weeks, if not disturbed.

COMPLAINTS are made that carrying fourth-class matter in the mails at the present rate is a losing business. What if it is? Has not the carrying of any sort of mail matter into many parts of the country been always a losing business? Shall the mails be stopped altogether, therefore, over all the "star routes" and several others, or shall the rates on letters be raised to out-of-the-way places? Uniformity of postal rates for the whole country has been found best by every nation. A profit is made on some classes and for some distances; a loss is incurred in others, and generally they counterbalance each other. The letter and post-office-order departments of the Post Office are acknowledged to be the most profitable; and to the profits of these there is hardly anything that contributes more than the letters and remittances connected with the mailing of fourth-class matter. Such matter must not exceed four pounds, and includes a vast variety of goods, from silk to sorghum seed, and probably an average of three letters and one postal remittance is associated with the mailing of each package. Will not the profits on these more than make good any loss on fourth-class matter? An expert in the Post Office here says the present shortage in the Post Office receipts will be increased by at least $3,000,000 a year, if the Wilson Bill becomes law. One of the great dailies here characterizes it as a "foolish" bill; it is that and worse—it is a foolish and culpable attempt to tax the multitude for the benefit of a few.

SPECIAL.

Those who, having applied for the Rural's present seed distribution prior to March 5th, have not yet received it, will kindly notify us by postal at once.

The seed packages for Canada subscribers were expressed last week to be mailed there.

THE JAPAN CHESTNUT.—A WARNING.

THE RURAL would not influence anyone to invest largely in Japan Chestnuts unless he has money to lose. Too little is known as to their adaptability to diverse regions of our country. We are placing before our readers all the information we can gather, in order to enable them to act judiciously. How much cold will the trees stand? Not over 15 degrees below zero, Mr. Hallock thinks, as he states in another column. But different seedlings possess different degrees of hardiness. We know of trees that have stood 24 degrees below zero. Of this one thing we are confident:—Where the best varieties of the Japan Chestnut will thrive, they will prove among the most valuable nut-bearing trees in cultivation. Again, we fear that the Japan Chestnut is not the easiest tree in the world to transplant, and we would advise those of our readers who purchase trees, to see to it that they be not exposed to wind or sun; that the holes be large enough; that the soil be worked in among the roots; that the soil be well compacted *over* the roots, and, finally, if necessary, that a mulch be applied if the weather be very dry. The nuts sprout freely, and seedlings may be raised with little trouble.

Mr. Hallock was one of the first to raise seedlings, and to propagate from the best of them by grafting. He has many trees now in bearing, and wishes he had ten times as many. He says the quality is better than that of the Spanish, though not quite so good as that of the American unless the nuts are cooked, when there is no difference. He has no trees, nuts or cions for sale.

CHINESE LABOR ON THE FARM.

IT is said that 30,000 Chinese are engaged in agricultural pursuits on the Pacific Coast. Many of these work on their own account, raising garden "truck" for the markets in towns and cities; but the great majority are hired by farmers, hop growers, fruit growers, and especially by owners of vineyards. The wages paid are not low in comparison with farm wages in the East, as they range, it is said, from $25 to $45 a month and board. No complaints of Chinese "cheap labor" can therefore be justly made by those who wish the expulsion of the Celestials from the State. Indeed, there are not enough white men to take their places should they be driven out, and as their foes congregate mostly in cities, towns and villages, and are unwilling, and, for the most part, incompetent to perform agricultural work, the expulsion of the Chinese must entail disaster on the farmer and fruit grower. Accordingly, the agriculturists in many portions of the State are protesting against the crusade now carried on against this very useful class of farm laborers. In Solano County upwards of one hundred prominent fruit growers, owning 5,551 acres of orchard, say: "The present condition of the labor market, and the sparseness of our population make it absolutely impossible to carry on the business of fruit culture here without the employment of large numbers of Chinese laborers." Their workingmen are alarmed and ready to desert, and the fruit growers say their departure would cause them a loss of a $1,000,000. The Hop Growers' Association, of Mendocino County, say the hop crop is the only one to which they can look for money, and most of their capital is invested in hop-yards, and in machinery for raising and handling the crop. "We cannot pick and save our crops with white labor alone," they say, "as it is not in the State, and can not at present be had." Like many other employers on the Pacific Coast, they are willing to exert themselves to stop Chinese immigration, and prefer white labor when it can be found; but they insist that the Chinese now in California should be protected. The Anti-Chinese agitators, mostly foreigners, will not pick hops or grapes, or do any other farm work, and in any case many farmers prefer Chinese as "they are steadier, more faithful and more trustworthy." There are always two sides to a question, even to that of "Chinese cheap labor."

A STATE DEPARTMENT OF AGRICULTURE.

WHILE we are strongly in favor of placing the agricultural interests of any State under the control of a single honest, capable and efficient head, in the belief that such a course would best promote those interests, and be most economical of labor and money, we are very decidedly of opinion that such a head should not be a politician, or subject to the whims or influences of party "bosses," or be liable to be changed every two years, as is proposed by the Law bill now before the New York Legislature. As a rule, the farmers of this and other States, while capable of managing their own affairs, are not working politicians or wire-pullers, and if such a head were made elective and placed on the State ticket, in nine cases out of ten he would inevitably be some incompetent, political place-seeker, more intent on serving his party, than on advancing the farming interest of the State.

It is a sad fact that the farms of New York are not as productive as is desirable, or possible; that her dairies are languishing, and that their products are not always as good as we would have them; that our forests are being neglected and destroyed with no provisions for growing new ones in their places. But we can all see that a Department whose head is a politician and not even likely to be a farmer, and who would be liable to be changed every two years, is not by any means the best, or even a proper one into whose charge such important interests should be committed.

The RURAL is, and has been a strong advocate of the necessity of a State Board of Agriculture in the Empire State, which should assume entire charge of its agricultural interests. All States are alike to us, and we should have taken the same position with regard to any other, had the question arisen.

While we have at present no plan to propose for the organization of a State Board, we are very certain that it should be composed of active, progressive farmers, and should be so chosen or appointed that it would be next to impossible for it to become in any degree partisan or political.

CHARMING BARBARITY.

So enormous is the slaughter of birds now taking place to supply the demands of feminine adornment, that the speedy extermination of whole species is a question of only a short time, unless some means are devised for putting a stop to it. Out of our whole population, at least 10,000,000 are not only of bird-wearing age, but of bird-wearing proclivities. At least two-thirds of these are now wearing as ornaments to hat, bonnet or head, the wings, head or whole bodies of one or more birds, and they average at least two hats each thus adorned. Of 50 women met on one of the streets here yesterday, 41, by actual count, wore the spoils of song birds—the nine others were shabbily dressed and too poor to afford the cruel luxury. Over 40,000 terns were killed in a single season on the shores of Cape Cod to supply the demand for plumes. A similar slaughter in the interior has greatly reduced the number of feathered favorites that cheered the scene with their songs and brightened it with their plumage, besides doing an inestimable service to the agriculture of the country by destroying myriads of the insect pests that prey upon every branch of it. Add to the millions of birds annually slaughtered for frivolous fashion, the vast numbers of nests robbed by juvenile thoughtlessness, curiosity, cruelty and greed, and by the wicked ambition of older marauders to make up worthless "scientific" collections, and is it any wonder that the "balance of Nature" has been deranged, and that insect pests multiply to an alarming extent as their foes are recklessly exterminated? We are glad to see that associations are being formed in numerous places to discountenance and check this barbarous carnage; but laws should be passed and sternly enforced in every State to protect all insectivorous feathered friends of the farmer and fruit-grower, and every one of these should at once urge upon his representative in the Legislature of his State the importance of such legislation. If heartless fashion must be gratified, why not confine its cruelty to the English sparrows? With these pests the painter's art ought to be able to satisfy the desires of the vainest, most thoughtless, charming and fashionable of the amiable but cruel sex.

BREVITIES.

THE Potato Special next.

WE reap what we sow. Too many of us turn about and sow what we reap. We thus make sure of two poor crops.

THE careful experiment made by the RURAL several years ago, as to the best depth to plant peas, resulted in favor of two inches. The soil was a mellow loam, rather clayey than sandy.

A FRIEND who has raised the Japan and Spanish Chestnuts for years, writes: "I am glad that you are giving the Japan Chestnut a boom. I do not know of anything more worthy."

NUMBERS of our subscribers, in various parts of the country, write us that their cattle are afflicted with a serious skin disease. The symptoms are the same in all cases. Our friends are referred to the article printed on page 74.

A SUBSCRIBER of Erie, Co., N. Y., Isaac Henstreet, Jr., writes us that he received one Japan chestnut tree (by mail) from a nursery three years ago. It has done well, he says, not a bud having been harmed by cold weather as yet.

A FRIEND writes: "The attempt to double the rate on fourth-class matter is a rascally piece of business. It was a rascally piece of business engineered by the express companies in 1872, when the postage was raised from eight to sixteen cents a pound, and the people ought to demand of their Representatives that it be at once reduced to the old rate of eight cents a pound."

THERE are at least two sides to every question, and it is wise to hear both before coming to a conclusion. A short time ago Velancy E. Fuller presented, in our columns, the Jersey side of the question as to the "best cow for the dairy," according to the results of Prof. Brown's tests at the Agricultural Experiment Station, of Ontario, Canada. In this issue Mr. E. M. Powell presents very forcibly the Holstein-Friesian side of the matter, and really doesn't he make out a strong case?

Farm Economy.

FENCE ACROSS SMALL STREAMS.

The posts or crotches shown in Fig. 118, should be set firmly into the banks of the stream on opposite sides. Then get six bars with the bark on, long enough to reach from one crotch to the other. One bar rests above high water in the top of each crotch. One end of

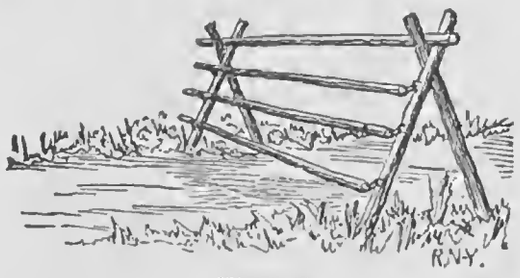

Fig. 118.

each remaining bar is fastened by two staples and one link to one leg of the crotch on one side of the stream. The other end rests loosely on one of the several pins in the crotch on the other side. These bars must be on the side facing down the stream, so that in time of high water one or more bars may swing around down the current and let all flood-wood and rubbish pass. Afterwards they can be restored to their places. J. KRUPP.

Miscellaneous.

CATALOGUES, ETC., RECEIVED.

JOHN S. COLLINS, Moorestown, N. J.—An illustrated catalogue of fruits, especially small fruits. Mr. Collins sent us plants of the May King Strawberry, on June 15, 1884, and we have found the variety of good quality and among the earliest of those tested at the Rural Grounds. We deem it well worthy of extended trial. Mr. Collins's is one of the two head-quarters of the Lawson (Comet) Pear, which the R. N.-Y. was the first to bring to the notice of the public. Whatever has been said for or against it, our opinion, as already expressed, is that it is one of the largest and *handsomest* pears of its season we have ever seen, its season being, as we remember, late July. The quality is—well, *sufferable*, or, as the Am. Pom. Society would class it "good," being the lowest rating. Mr. Collins also sent us plants of his Early Cluster Blackberry which we cannot as yet praise.

THE EUREKA MOWER, from the Eureka Mower Co., Utica, N. Y. The motto of this firm is a good one: "How good and durable a machine can we offer to the farmer?" Changes were made in 1885, which greatly strengthen these mowers. The grass-rods were made larger and of steel, resting higher upon the tongue-irons. The guards were made heavier and stronger; steel was substituted where wrought iron was previously used in the axles, back and crank shaft, side arms, pole braces, hoisting rig shafts, in fact, in all places where it would make the mower stronger and stiffer. A brace was introduced from the axle to the cross-rail near the gearing, making the frame more rigid and stronger. We cannot begin to give all the good point of these machines. Send for the catalogue.

D. M. FERRY & Co., Detroit, Mich.—Notwithstanding the main seeds house of this old firm was entirely destroyed by fire, the business scarcely suffers an interruption. The catalogue is one of 125 pages, offering everything in the way of seeds, and it will be mailed free to our subscribers. It opens with instructions as to the formation and management of a vegetable garden, and tells the whole story, including the making and care of hot-beds, etc. It offers Manshury Barley, the Saskatchewan (Spring), Fife Wheat, which is deemed by the firm to be the best No. 1 Hard Amber yet introduced, and the most valuable milling wheat in the world. Fruit, evergreen and deciduous tree seeds are also offered.

ELLWANGER & BARRY, Rochester, N. Y.—A descriptive, illustrated catalogue (140 pages) of ornamental trees, shrubs, hardy perennial plants, etc. This is probably the most trustworthy catalogue of its kind published. It aims to *aid* the reader to make judicious selections, not to confuse him by indiscriminate praise of everything in the list. If without the aid of one who knew, an inexperienced person was obliged to select his own plants from a catalogue, we should place before him this one.

PURE AUSTRIAN OR GERMAN CARP.—Pamphlet from Chas. S. Medary, 145 Broadway, New York. A short treatise on carp culture with various opinions as to the quality and productiveness of the fish and the profit to be derived from raising them. Prices are given. Those interested in carp culture should study the pamphlet.

GRAPPLING HAY FORKS AND RAILWAY HAY CONVEYERS.—Pamphlets from Gardner B. Weeks, Syracuse, N. Y. Unlucky is the man who, in this age, seeks to handle a large quantity of hay with the ordinary hand fork. If you wish to learn how to handle hay in a wholesale manner, send for this pamphlet.

PROCEEDINGS OF THE NEW JERSEY STATE HORTICULTURAL SOCIETY 1885.—190 pages. It is full of interest to the horticulturist, the best report yet published by the society. Write to E. Williams, Sec'y, Montclair, N. J.

BIG LAMBS.—I have just sold 13 Shropshire lambs, which averaged 136 pounds each; I began to feed them November 15. I fed nothing but whole grain and clover hay. My ewes are looking well. I feed them all the good straw they can eat three times a day, and about a pint of culled beans once a day to each ewe. I claim that with proper handling and breeding there is more money in feeding lambs than in any grain crop the farmer can raise. C. P.

Farmer Village, N. Y.

FIGHTING INSECT PESTS.—You can keep the cabbage worms in check by using the following mixture: Ten cents' worth of aloe, in six gallons of water raised to boiling heat. This amount will answer for 200 plants. Fight the currant worms by placing around the bushes, as soon as the ground thaws in the Spring, unleached wood ashes. Hoe away all grass and weeds. W. H. P.

Boone Co., Ind.

TO SEVERAL INQUIRERS.—Answers can seldom be returned to such inquiries as the following: "What is the standing of Graham & Co.? Is the firm trustworthy?" "Are the goods advertised by Brown, Smith & Co., worth what they say they are?" "Will Jones & Robinson do all they promise?" "Will the High Art Electrograph Co., really pay the salary they offer in their circulars?" Questions of this kind are constantly received from people who evidently think the Eye-opener must be acquainted with all the doubtful and rascally concerns in the country. What is the address of Graham & Co? What kind of goods do Brown, Smith & Co., advertise, and where do they "hang out?" Who are Jones & Co., and what do they promise? That highfalutin' artful affair, what salary bait is it offering to gudgeons?

Most of the large towns all through the country are infested with a number of swindlers who prey upon the public and especially on the agricultural part of it, by means of advertisements in the press and in circulars; while many small places are notorious on account of the great number of frauds advertised from them. In such cases there are sometimes several advertising sharpers in a place; but usually there is only one person or set advertising under several different names. The knaves seldom operate under the same name for any considerable length of time. They soon become too well-known to be trusted; and as there is always a multitude of new and attractive names, they readily change a disgraced one for one which they will soon render equally notorious. Then these rascals have no stronger attachment to a place than to a name, and are constantly changing the scenes of their villainies. Neither mercantile agencies nor any other respectable sources of information take any notice of them; and as soon as the police "spot" them they generally change their abode or title or both. For these and other reasons it is quite impossible for the Eye-Opener to learn the names and abodes of all the advertising humbugs and swindlers in the country, or even to keep track of those that have once come within the blighting rays of his lantern.

Inquirers often say: "Answer in next issue, or better, by return mail." How little such people know about the difficulty of tracing swindlers. It has often required several visits to their dens and a great deal of inquiries among the neighbors and more interviews than one with the police to ascertain, beyond a doubt, the real character of several advertising swindlers in this city. How much more difficult it is to learn, through the courtesy of others, about similar swindlers at a distance, even when their addresses and the nature of the business they profess to carry on are known. Each inquirer should, therefore, send on all the information he has about the party whose standing he wishes to ascertain; and no one should feel hurt in self-importance or ruffled in temper by delay or even failure on the part of the Eye-Opener to answer his questions. In most cases it is difficult and in some impossible to discover not merely the standing of the parties, but even their names and residences. There is here a world of willingness to answer everybody promptly and fully, to expose all humbugs, mountebanks and swindlers; but there is an unsurmountable reluctance to base the answers or exposures on mere guess-work or inference, or on anything less trustworthy than solid information. One consolation each waiting inquirer will always have—if he does not deal with the doubtful advertiser until he sees an answer to his question here, he will not be swindled.

The doings of the petty swindlers who offer women "work at home" have become so outrageous in Boston, that the Women's Educational and Industrial Union of that city has undertaken to protect the "innocents" from their operations. Over and over again we have denounced a number of these frauds by name, and we are glad of the assistance of the above local association in our efforts to protect the public from the knavery of the rascals. The other day one of these victimizers of the needy and distressed was ejected from his den and his mail accumulated for four weeks, when it was found that it contained over $800 in small sums. These had been sent to him for "outfits" in answer to a number of advertisements in various papers, and were intended to cover the cost of materials, patterns, implements, etc., etc. The poor women who have scrimped themselves to send petty sums to such scoundrels seldom or never hear about their applications, unless there is a fair chance that more money can be weedled out of them. The above association, No. 74 Boylston St., Boston, "will gladly investigate, free of charge, advertisements offering to women 'work at home,' if the advertisers live in or about Boston." We advise all intending investors to seek its services. Similar sharpers advertise from all large cities and many small places—would that similar associations were ready everywhere to expose them.

We are constantly receiving accounts of swindles by agents for Bohemean Oats and other grains; but such swindles have been described here so often and so fully that none of our readers can be among the dupes unless through his own stupidity, gullibility or greed. A sharp, even if expensive lesson would doubtless be wholesome for such a person.... ..... R. F. Loyd, Hebron, Ala., who offers "10,000 books free," is a confessed humbug according to his own circular, and a swindler according to the judgment of any honest man. The rascal offers to send for $1 full instructions how to obtain books free on false pretenses. His plan might be successful if publishers were ninnies; as they are almost invariably smart business men, the only dupes of this precious rascal will be those who send him the one dollar required.

We have already said here that St. Andrew, by the Sea is one of the Florida "paper cities" in which no sensible man will invest a dollar in spite of the attractive circulars sent out about the place.....Some weeks ago we said that we were inclined to think the "Chicago Dried Fruit and Produce Company" an honest concern. Further information strengthens that belief. It is hardly wise, however, to talk too much about the value of a franchise which any sort of an honest concern can get for the asking under the State laws..... The Farm and Household, Hartford, Conn., is "all right".....We have said before that we do not believe in the claims put forth on behalf of the "Acme Penetrative," which "positively burns stumps." All we have heard about it since renders us all the more incredulous.....We do not recommend the Popular Monthly, Kansas City, Mo. The appearance of an advertisement in a religious paper is by no means a proof of the reliability of the advertiser. Of course, the editor is always a truly good man, but sometimes he has a "wicked partner" in the publisher, and it is the publisher's department that manages the advertising business.....The N. Y. Truss Co., of this city, will send on goods ordered, and their reputation is fair, but we do not indorse all the claims put forth on their behalf. .....We have twice already said that Garden City, Silver Springs Park and Palma Sola, Florida, were humbugs. The prospectuses and advertisements of these and other "Florida land frauds" are "meant to deceive," and have been quite successful, as many victims testify. The RURAL was the first journal to denounce about a dozen of them, as the writer was personally well acquainted with the miserable character of many of the places they represented as earthly paradises.

THE ANCIENT GREEKS.

THEIR BELIEF CONCERNING THE SEAT OF LOVE AND PASSION.

The Liver regarded as the Favored Organ—How Could it be So? Recent Facts partly Confirm this Belief.

THE ancient Greeks thought the seat of love and passion was in the liver, and in great measure their opinion was not far astray. The lover whose liver is off, or the husband who is bilious, is not half a man—his sluggish liver has filled his blood with bile.

Of all the mean contemptible counterfeits in the world, red blood full of bile is the worst, —the very worst!

We have about 10 *quarts* of this fluid in the average size man. It is constantly undergoing change and is manufactured from the food the we daily consume by a chemical process nature has. *She selects only that portion which, after digestion, is found to be proper*, and takes it up by a tube called the thoracic duct, emptying it into the large vein near the left collar bone, from which it is at once carried to the *kidneys to be strained of all the deleterious matter* which was left by the bowels.

If the kidneys are in healthy condition the blood is in *absolutely pure state*, contains all the elements for repairing waste, returns at once to the heart and is thrown by that organ to every part of the living body to give up its nourishment and take up all the worn-out material.

Contrary to general belief *the liver is not a blood-purifying organ;* its purpose is only for nutrition digestion and it secretes daily many pounds of bile, some being used in digestion and nutrition, and the balance as a cathartic.

Now, after being housed up all winter, with meat largely composing the diet for the purpose of producing heat, the liver *increases one-third of its supply of bile*, and in the spring, nature not having use for the excess, it is thrown into the blood, *carried to the skin* (for it must be got rid of in some way) *and causes that condition known as "bilious"* when the person is dull, lethargic, restless, well to-day and half sick to-morrow: because *the blood is loaded* with this substance, which is just as foreign to it as so much *dirt or corruption, and poisons the entire body, making your blood impure.* You know there is something out of gear and the natural impulse is to take cathartics, —but drastic cathartics do not remove the cause—they make matters worse.

You ask, why? Because, my friend, the liver is a sluggish, lethargic organ that cannot be relieved of any ailment except by medicine which acts upon it in a *quiet, steady manner, producing permanent effects, and assisting, not goading its normal action. The kidneys do the purifying.* Always remember that! No other organ in the body can take their place in this respect, and they *attend to over* 9,000 hogsheads of blood in a year! Think of it and wonder that they are able to do so large an amount of work!

A healthy kidney to purify, and a healthy liver, emptying its poison *into the bowels and not into the blood*, are the true and only givers of pure blood.

The interior of the kidneys have *few nerves of sensation*, and a stone can be, and often is present without any indication until it reaches the first outlet, which is supplied with nerves that soon sound the alarm.

Do you see the moral of this? A healthy liver and kidney is all there is to this question of pure blood. Keep them in order. Don't wait until you find they are diseased, for then it may be too late. Do this and you are *bound to have pure blood.* Warner's safe cure has a direct action upon both the kidneys and liver, and has become a recognized agent for its health-preserving and blood-purifying properties, and as such is used by many physicians. A few bottles will positively prevent disease, and we are certain that disease of either organ is prevented by its use if taken in time.

The spring approaches, and nature needs help. Take it and save sickness and doctor's bills. Don't let any season go by without its use, or you may regret it forever.

A prominent practical agricultural writer says of the "ACME" Pulverizing Harrow: "Its various qualities fit it for easy, rapid and efficient preparation of land and in cheaply working the broad fields of a large farm into as fine a condition as a garden."

Domestic Economy

CONDUCTED BY EMILY MAPLE.

HOUSEKEEPING IN CALIFORNIA.—II.

MARY WAGER-FISHER.

OF course, one of my first questions in hiring our cottage was from where the water supply came, and what was its reputation. The landlady said it came from Lake Chabot (pronounced Shabo, being French). She didn't think it was very good, but it was "healthy." She never heard that it made anybody sick. However, our first terror was produced by the water. When it ran from the faucet connected with the hot water boiler, the smell of it was nauseating! I begged Anaximander to draw off the water at the bottom through the faucet at the end of the pipe by the fire, which, of course, man-fashion, he didn't think would do any good; but I insisted that it would do no harm, and when drawn off there were gallons of foul muddy water. This cleansing operation did some good, but the bad odor of the water still remained, and was so marked, that it was unpleasant to take a bath in it.

As it happened, there lived quite near us a very intelligent lady who had been a fellow-passenger on the upward Alaskan cruise, and who had begged us to come and see her when we came to California, so I went to her for information concerning the Lake Chabot water, and describing to her the smell of it as it came out of the hot water tank, she laughed and relieved my mind by saying that it smelt the same in everybody's house, and that it was even worse in Winter, after the rains had filled the lake, than it was at this time of low water. However, the water had never been regarded as unhealthful, but it should be filtered. Upon further investigation, it appeared that until within a few years Oakland had been supplied with water from artesian wells, which accounts for the numerous windmills all through the city—a population of 45,000. But these wells not being altogether satisfactory, arrangements had been made for bringing the water from this lake, which belonged to Monsieur Chabot, a wealthy resident Frenchman—the same gentleman who has given a charming little observatory to the city. This lake water is properly stored water, the lake being filled by the rains in Winter, and this supply lasts during the Summer. When by chance unfiltered water was put on to boil, a green scum usually collected on the surface, as if it had been dipped from a frog pond, and often aside from filtering it, I also boiled it for drinking. But although assured that the water was "healthy," we never drank it with any enjoyment, and drank milk instead, and more coffee, tea and cocoa than ever before, as well as mineral spring water, which we bought. Anaximander often declared that he would give much for his "fill" from the well at home, which to his mind is the best water in the world.

Our milk was served by a dairyman, whose ranch was six miles out of town, and he charged at the rate of $4.50 a month, for two quarts per day. The milk was good and only occasionally showed sediment in the bottom, which unpleasant fact I rarely failed to report to the dairyman. Unless one lives on a farm and produces his own food, he is utterly at the mercy of other people, honest or dishonest as they may be, and milk, which so readily absorbs the wicked influences of the world—conveying diphtheria, scarlet fever and kindred diseases—can one be too "cranky" and particular about it?

While out shopping, to provision our pantry, I noticed an attractive bakery, and going in, I asked a pleasant, bright-faced woman behind the counter what kinds of bread they made. She smiled and said "We make good bread," and then showed me their various kinds and styles of loaves. We selected what we desired—long French loaves, with a hard crust all over. These large loaves cost 10 cents, but a more economical way, the woman said, would be to buy 13 tickets for $1—each ticket paying for one loaf, so daily a little oldish Frenchman, with a large basket on his arm would come with the excellent bread, wrapped in a brown paper. Sometimes I would tell him not to come the following day, as we had bread enough to last over. But he usually came, saying it was no trouble, and that sometimes company came to me, and the bread would not be enough! After the rain set in, he nearly always had some remark to make about the weather. "*Toujours le mauvais temps, madame!*" In the afternoons I often saw him in a fresh suit of clothes, pushing a small cart about the streets in which he had French mustard to sell.

Our supplies cost as follows: Seattle coal, which in Seattle cost $4.50 a ton, cost here $9; anthracite coal from Pennsylvania sold for $16; wood costs about the same as coal. A dollar paid for 12 pounds of granulated sugar. Epp's cocoa in tins cost 25 cents; coffee about the same as in the East. Butter all prices; for rolls weighing rather less than two pounds, from 65 to 85 cents. California fresh eggs 50 cents a dozen; good Eastern eggs from Utah and elsewhere, 40 cents. Our landlady had abandoned her vegetable garden scheme as involving too much hard work, and her chicken ranche had become reduced to one lone hen, which roamed lonefully around in the Alfalfa in the adjoining lot. One would suppose that in a State which has so much of mild climate, where hens can get green food the year around, eggs and poultry would always be abundant and cheap. The scarcity of eggs is undoubtedly owing to the "rush" with which so many people have gone into the chicken business, expecting to make a fortune at once, but failed, for scarcely an attempt has been made in the State to raise chickens in large numbers, that has not resulted in failure. They do not thrive in large colonies, but if every farmer kept a few, the profit would be sure and unfailing, and the home demand would at least be filled. Porter-house steak cost 20 cents the pound; sirloin and from the round, 15 cents to 18 cents. Mutton chops and leg of mutton to roast 12½ cents. Three heads of lettuce, never so nice as the Puget Sound lettuce, five cents. A small bunch of celery the same; fresh tomatoes from three cents to five cents the pound, but it was very late in the season for them. A ten pound sack of cracked wheat 35 cents; of Graham flour 35; of oat meal 50 cents; of corn 35 cents; 25 cents bought three pounds of rice. Canned oysters, 20 cents the can. Fresh oysters—eastern oysters that have been fattened—here, from 40 to 50 cents the dozen. Eastern oysters do well here after being planted, growing rapidly, but no one has yet succeeded in propagating them in California waters. The small native oysters cost 50 cents the hundred. Cheese from 20 to 25 cents; cranberries from all parts of the Union, from 10 to 20 cents the pint; Fresh raspberries from five to ten cents the small basket; strawberries 10 cents the quart, or 30 cents for a box holding four quarts; Mexican limes five cents the dozen; California oranges were not yet ripe; quinces were abundant and cheap; pears rather dear, and apples—I am at the bottom of my sheet and will hold forth concerning them next time.

SUMMER GOWNS.

E. L. TAPLIN.

THRICE blessed is the busy housewife who has her summer sewing "done up" before warm weather begins, for the extra household work peculiar to this season, together with the enervating heat, makes much sewing trying in the extreme. It is not very difficult to arrange matters for this desirable result; a little foresight and industry during March and April will wonderfully lighten the burden of summer work. As far as purchase of material is concerned, an inspection of the good New York shops shows abundant choice in material and price during these months, since the spring novelties were shown almost before holiday goods had left the counters. So we must decide what we want and how to make it. Graceful simplicity is the cardinal rule of summer gowns, though this does not always imply inexpensiveness. It is a rule with the writer never to make a washing gown with flounces or ruffles when it can possibly be avoided, as these trimmings add so much to the labor of washing and ironing. For excessively warm afternoons, when the bare labor of dressing seems almost too much to undertake, it is well to have a *negligé* robe after the style of the oft-derided Mother Hubbard. The back may be pleated, the front gathered and tied in at the waist-line from the side seams with a ribbon or sash of the same stuff; at the back the fullness should be held in place by a tape at the waist, leaving the pleats to hang out full and unconfined. A very nice material for such a robe is "crazy cloth," a soft, cotton stuff with a crape-like finish. It comes in cream, pale pink and pale blue, is warranted to wash and costs from 12 to 15 cents a yard.

For ordinary afternoon wear, a simple muslin on very warm days, or seersucker when a trifle cooler, will be found most satisfactory. The crinkled seersuckers come in very handsome colors, and have a much better look than the plain goods, though only costing about as much as the crazy cloth. If a combination of dark colors is chosen, such as navy blue and red, navy blue and fawn, or seal brown and fawn, the gown may be worn a season without washing, only pressing it a little when it becomes tumbled. In this case, it may be made after the model of a stuff gown; but an every-day frock, likely soon to make an acquaintance with the wash-tub, must have no troublesome drapings or flounces to vex the soul of the laundress. In the latter case, either for muslin or seersucker, the best model is a peasant suit, having a plain, straight skirt, requiring three breadths of yard-wide goods; the bottom should be finished by a hem three-and-a-half inches deep, and two tucks each two inches deep, above the hem. A plain pleated waist should be finished by a belt or sash, with a large bow in the back; the ends of the sash may be tucked like the skirt.

A frock of this style would require about 12 yards of 27-inch material; it is becoming to most figures and very easily laundried. To my mind, this pleated waist is much prettier than the gathered spencer or yoke waist. The same style in gingham or cambric without the sash, does admirably for morning wear, and is much neater than the gabrielle wrapper affected by so many women, for this latter garment is very apt to have a dragged appearance after one washing. It is advisable always to tack a muslin frill or tucker, as our grandmothers would say, into the necks of our morning gowns—it removes the untidiness so often attendant on a hurried toilet. There are many models for our more elaborate seersucker gown, though it is well to avoid one having very bouffant drapery which is apt to become crushed. Navy blue and red stripes, trimmed with colored embroidery, navy-blue ground worked in red, would be handsome, and peculiarly becoming to a dark-haired woman. The skirt may have a very full back composed of two triple box pleats, without other drapery; the front and side breaths may be finished at the bottom by a knife-pleating three inches deep. A full front drapery, looped high on the left side, while falling to the pleating on the right, should have a border of the embroidery, put on perfectly flat. A short basque, with square front and two little tabs, separated to the waist line at the back, should be finished with embroidery put on to simulate a vest, and cuffs of the same. A little bonnet or round hat of rough blue straw, trimmed with loops of blue ribbon and a bunch of poppies, or with red velvet, will make this a very jaunty walking costume. These crinkled seersuckers come in all the pretty light shades; but the pale pinks and blues, charming while new, are apt to lose their color through exposure to the sun, though oddly enough, washing frequently restores the faded color.

This season we are offered many new and charming washing fabrics, a very pretty novelty being Turkish crape, a crape-like material printed in colors of Oriental aspect, but the price—45 cents a yard—seems to me excessive. There are also some very pretty linen etamines, or canvas.

Of course every woman, save those in the sere and yellow leaf, must have a pretty white gown for her "Sunday best," and we have a wide range of fabrics to choose from. We may safely say that a thick, entirely opaque, white washing gown is a mistake, therefore we should taboo piqué or Victoria lawn: the latter, by the way, looks as thick as Lonsdale cambric when washed. Fine India linen, organdy or mull is charming, and washes admirably. Most of the white gowns I have seen in the shops this season have skirts made after a design given for the seersucker suit, with a plainly fitting basque rather than a round waist. Swiss or nainsook embroidery is preferable to lace for trimming, as it washes better. Yoke waists are rather out of date, save on children's frocks.

Another pretty white gown of fine mull may be entirely without drapery: the back very full pleated, and the front and side breadths covered with an embroidered flounce reaching to the waist. A round waist with embroidered fichu is most appropriate with this skirt. A hat or bonnet to accompany the white gown should be covered with the same material and trimmed with a bit of lace and some white flowers. It is a very inexpensive head-gear, but harmonizes with the costume as nothing else would.

KITCHEN HINTS.

ANNIE L. JACK.

TAPIOCA cream is a very good dish for dessert, and is made by soaking four table-spoonfuls of tapioca in a cup of cold water for three or four hours. Then drain off the surplus water and beat up with a quart of rich milk.

Miscellaneous Advertising.

When Baby was sick, we gave her Castoria,
When she was a Child, she cried for Castoria,
When she became Miss, she clung to Castoria,
When she had Children, she gave them Castoria,

Place in a double boiler and let it cook till clear. Then stir in the beaten yelks of four eggs, a cup of sugar and whatever flavoring is prepared, stir till it thickens to a soft custard.

Part of the family being away, the younger members wanted to make some butternut taffy. It was done by stirring brown sugar with a little white vinegar, and boiling till it set quickly on ice. The nimble fingers of the children peeled some of the butter-nuts, and the taffy strung out white and pretty when they pulled it. This sort of candy is purer and simpler than any to be bought, while it pleases the little folk to help in the making.

We have some white corn flour, and it makes delicious muffins by using three eggs and a cup of sugar, and a pint of milk in two small cupfuls of the flour with a little baking powder. It is mixed just like a light cake, the last thing added being half a cupful, or a little more wheat flour. We cook in muffiin rings, or gem pans.

Eggs have been scarce till lately, and we made a very good molasses cake without them, by mixing together a cup of molasses, one-fourth of a cup of butter, half a cup of sour milk, two scant cups of flour, a teaspoonful of ginger, and a teaspoonful of soda which is desolved in the sour milk. The flour is put in last, and it is baked in shallow pans. The children quite appreciate it, though one of them said it had an egg—less taste.

NAPKINS.

I saw a very pretty set of napkins at a neighbor's house lately, and as the idea was a novel one I send it to the readers of the RURAL. They were made from a home-spun linen sheet well worn in the middle. Napkins of the desired size were cut from the edges and fringed, pretty designs of fruits and flowers were outlined in one corner with red marking cotton, using the etching stitch. A worn table-cloth might be made over in the same way. If wanted for ten napkins, the Kate Greenaway designs are pretty. M. B. S.

New Jersey.

RIBBON WASTE.

We fear our Western contributor "Palmetto" has been misinformed as to the price of ribbon waste per pound. Upon inquiry at the Paterson and other silk mills, we find the waste sells for several dollars per pound.

PRESERVING ORANGES.

Oranges are now plentiful and cheap, and there is no more delicious fruit for preserving. The Dundee marmalade is world-renowned and one can make it at home just as nice at one-half the cost. Cut up two dozen oranges, using a silver knife. Hold them over a bowl to save the juice. Be careful to extract the seeds. Have also two good-sized or four small lemons, which peel, taking off the white pith and cutting them up, add them to the oranges, together with seven quarts of water. Stir all together, and covering them, let them stand all night. In the morning put over the fire and let come gradually to a boil, place them where they will simmer until the orange peel becomes clear and tender, then add gradually 14 pounds of granulated sugar. Let it boil a quarter of an hour, or until the mass looks transparent and when a little cooled upon a saucer takes on the consistency of jelly. When this stage is arrived at, let it partially cool, then put in small jars with tissue paper covers inside the other covers. If this marmalade is well made it will keep for years.

Oranges and apples can be combined and together form an exceedingly nice and cheap preserve. You can make a jelly, a marmalade, and candy the orange and lemon peel by following the instructions given below. Take an equal number of oranges and apples, cut them up together with one lemon for every dozen oranges. Peel the lemon and the oranges, and place the peelings in sufficient water to cover them, adding an even tablespoonful of salt to every quart of water, let them stand all night. Put the oranges, apples and lemon with a stick of cinnamon and a blade of mace over the fire, cover with cold water and simmer them until they are reduced to a pulp; then pour into a jelly bag, and let the sirup drip out without squeezing it. To one pint of juice thus obtained, allow one pound of sugar, and after it comes to a boil stir in the sugar and let it boil until it jellies. Take the pulp out of the jelly bag, remove the spices, add sugar in the proportion of one pound to a pint of fruit and boil till well cooked. After your peeling has stood over-night, drain it and put it over the fire to boil in clear water, and let it boil until tender; then put it to drain upon a sieve. Make a sirup of a pound of sugar to a pint of water—this for the peel of a dozen oranges. Boil together until clear, skimming well. When the orange peel is dried and the sirup is getting rather thick, dip the peel into brandy, letting it drip off quite dry and dip it in the sirup; then place it on the sieve and let it get dry thoroughly. Repeat this dipping in the sirup three times. The day after you have begun this, heat your sirup and dip the peel in it, draining it on the sieve and dipping it three times. Repeat this for several days until the peel looks like that you buy. AUNT ADDIE.

ROOT CELERY.

If the RURAL and Mr. Falconer will dress their root celery, after stewing, with butter, vinegar and a little sugar, I think they will find it a very desirable dish; at least I have for the past 25 years. J. A. S.

Miscellaneous Advertising.

Catarrh

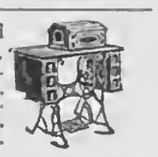
Is frequently an indication of a Scrofulous taint in the system. Ayer's Sarsaparilla purifies the blood, and thus restores health to the affected membranes. It also stops the nauseous catarrhal discharges, and prevents the infection from reaching the lungs and stomach. Catarrh should be treated as a blood disease.

I suffered for years from chronic Catarrh. My appetite was very poor, and I felt miserably. None of the remedies I took afforded me any relief until I commenced using Ayer's Sarsaparilla, of which I have now taken five bottles. The catarrh has disappeared, and I am growing strong and stout; my appetite has returned, and my health is fully restored.—Susan L. W. Cook, 909 Albany st., Boston Highlands, Mass.

Ayer's Sarsaparilla,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by all Druggists. Price $1; six bottles, $5.

12 DOLLARS each for *New* and *Perfect* SEWING MACHINES. Warranted five years. Sent on trial if desired. Buy direct and save $15 to $35. Organs given as premiums. Write for FREE circular with 1000 testimonials from every state. GEO. PAYNE & CO., 47 3rd Ave. Chicago, Ill.



ORGANS The most beautiful and finest toned in the world. Low prices, easy payment. Send for Catalogue. Address Weaver Organ & Piano Co., YORK, PA.

MARVELOUS PRICES!

BOOKS FOR THE MILLION

Complete Novels and Other Works, by Famous Authors, Almost Given Away.

The following books are published in neat pamphlet form, many of them **handsomely illustrated**, and all are printed from **good type upon good paper.** They treat of a great variety of subjects, and we think no one can examine the list without finding therein many that he or she would like to possess. In cloth-bound form these books would cost **$1.00 each.** Each book is complete in itself.

1. **The Widow Bedott Papers.** This is the book over which your grandmothers laughed till they cried, and it is just as funny to-day as it ever was.
2. **Fancy Work for Home Adornment,** an entirely new work upon this subject, containing easy and practical instructions for making fancy baskets, wall pockets, brackets, needle work, embroidery, etc., etc., profusely and elegantly illustrated.
3. **Grimm's Fairy Stories for the Young.** The finest collection of fairy stories ever published. The children will be delighted with them.
4. **The Lady of the Lake.** By Sir Walter Scott. "The Lady of the Lake" is a romance in verse, and of all the works of Scott none is more beautiful than this.
5. **Manual of Etiquette** for Ladies and Gentlemen, a guide to politeness and good breeding, giving the rules of modern etiquette for all occasions.
6. **The Standard Letter Writer** for Ladies and Gentlemen, a complete guide to correspondence, giving plain directions for the composition of letters of every kind, with innumerable forms and examples.
7. **Winter Evening Recreations,** a large collection of Acting Charades, Tableaux, Games, Puzzles, etc., for social gatherings, private theatricals, and evenings at home; illustrated.
8. **Dialogues, Recitations and Readings,** a large and choice collection for school exhibitions and public and private entertainments.
9. **Parlor Magic and Chemical Experiments,** a book which tells how to perform hundreds of amusing tricks in magic and instructive experiments with simple agents.
10. **The Home Cook Book and Family Physician,** containing hundreds of excellent cooking recipes and hints to housekeepers, also telling how to cure all common ailments by simple home remedy.
11. **Manners and Customs in Far Away Lands,** a very interesting and instructive book of travels, describing the peculiar life, habits, manners and customs of the people of foreign countries; illustrated.
12. **Sixteen Complete Stories** by Popular Authors, embracing love, humorous and detective stories, stories of society life, of adventure, of railway life, etc., all very interesting.
13. **The Budget, of Wit, Humor and Fun,** a large collection of the funny stories, sketches, anecdotes, poems, and jokes that have been written for some years; illustrated.
14. **Useful Knowledge for the Million,** a handy book of useful information for all, upon many and various subjects; illustrated.
15. **Called Back.** A Novel. By Hugh Conway, author of "Dark Days," etc.
16. **At the World's Mercy.** A Novel. By Florence Warden, author of "The House on the Marsh," etc.
17. **Mildred Trevanion.** A Novel. By "The Duchess," author of "Molly Bawn," etc.
18. **Dark Days.** A Novel. By Hugh Conway, author of "Called Back," etc.
19. **The Mystery of the Holly Tree.** A Novel. By the author of "Dora Thorne."
20. **Shadows on the Snow.** A Novel. By B. L. Farjeon, author of "Bread-and-Cheese-and-Kisses," etc.
21. **The Gray Woman.** A Novel. By Mrs. Gaskell, author of "Mary Barton," etc.
22. **The Frozen Deep.** A Novel. By Wilkie Collins, author of "The Woman in White," etc.
23. **Red Court Farm.** A Novel. By Mrs. Henry Wood, author of "East Lynne," etc.
24. **In Cupid's Net.** A Novel. By the Author of "Dora Thorne."

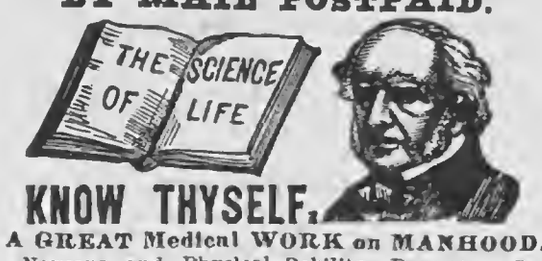
FRANKLIN NEWS CO., Philadelphia, Pa.

THE SCIENCE OF LIFE. ONLY $1. BY MAIL POSTPAID.



KNOW THYSELF.

A GREAT Medical WORK on MANHOOD.

Nervous and Physical Debility, Premature Decline in man. A book for every man, young, middle-aged and old. It contains 125 prescriptions for all acute and chronic diseases, each one of which is invaluable. So found by the author, whose experience for 23 years in such has probably never before fell to the lot of any physician. 300 pages, bound in beautiful French muslin, embossed covers, full gilt, guaranteed to be a finer work in every sense—mechanical, literary and professional—than any other work sold in this country for $2.50, or the money will be refunded in every instance. Price only $1.00 by mail, postpaid. Illustrated sample 6 cents. Send now. Gold medal awarded the author by the National Medical Association, to the officers of which he refers.

The Science of Life should be read by the young for instruction, and by the afflicted for relief. It will benefit all.—*London Lancet.*

There is no member of society to whom The Science of Life will not be useful, whether youth, parent, guardian, instructor or clergyman.—*Argonaut.*

Address the Peabody Medical Institute, or Dr. W. H. Parker, No. 4 Bulfinch Street, Boston, Mass., who may be consulted on all diseases requiring skill and experience. Chronic and obstinate **HEAL** diseases that have baffled the skill of all other physicians a specialty. Such **THYSELF** treated successfully without an instance of failure.

Mention this paper.

PILES. Instant relief. Final cure in 10 days, and never returns. No purge, no salve, no suppository. Sufferers will learn of a simple remedy, free, by addressing C. J. MASON, 78 Nassau Street, N. Y.

News of the Week.

HOME NEWS.

SATURDAY, March 13, 1886.

REPORTS of great distress and starvation among the inhabitants of Labrador. No bread, people living on dog meat..... Several lynchings during the week—one of a negro outrager of a young woman in New Jersey, within 45 miles of this city; another near Shoals, Ind., where three brothers, who for years had terrorized several counties and committed all crimes, from pilfering to murder, were hung by a resolute mob.....A "high-license" bill, introduced last Wednesday into the New York Senate, provides that in New York and Brooklyn, where all kinds of liquors are sold, a liquor store of the first class shall pay $500 a year, of the second class $300, and of third class $150. Where ale and beer alone are sold the licenses shall be respectively $150, $75 and $60. In Buffalo, Albany and Rochester the first-class liquor stores are to pay $300, $200 and $100 respectively, and the ale and beer stores $100, $50 and $40. In cities of less population the licenses are to be $150, $100 and $75 respectively, and for ale and beer $30. In all other places the license fee is to be $100 and $60 respectively and $20 for beer.....A House bill declares forfeited the land granted to aid in the construction of a railroad from Portland, O., to the Central Pacific in California.....The Secretary of the Interior has rejected the selection of some 130,000 acres of land made by the St. Paul, Minneapolis and Manitoba Railway Company within Dakota Territory.....A Senate bill provides for "forfeiting a part of certain lands granted to the State of Iowa to aid in the construction of railroads in that State."....Tuesday the House passed without opposition a bill requiring Pacific Railroads to pay the cost of surveying their lands and to take out patents thereto. Same day, the bill prohibiting convict labor on work for the General Government was passed—yeas 249; nays eight..... .....Good prospect for the passage of a bill appropriating $250,000 to reimburse, at the rate of $3.50 per acre, those who, under the land laws, settled upon or purchased lands within the grant made to the Northern Kansas Railroad, but who were deprived of their lands by the courts "on account of priority of grant to the railroad."..... .....Legislation is sought by California viticulturists against adulterations and imitations of wine.....Mrs. Seymour, widow of ex-Gov. Horatio Seymour, died of pneumonia last Monday at Utica, N. Y., at the home of ex-Senator Conkling, who is married to her husband's sister.....Mrs. Brewster, wife of ex-Attorney-General Brewster, died of the same disease last Tuesday at Philadelphia..... ....Ex-senator Chaffee, of Colorado, died last Tuesday, at the age of 62, from the effects of a severe cold, at Salem Center, Westchester Co., N. Y., in the house of U. S. Grant Jr., who had married his only surviving child. Mrs. Grant will probably inherit nearly all her father's property—somewhat less than $1,000,000; he lost $500,000 by the failure of Grant & Ward.....Senator John F. Miller, of California, died at Washington, Monday, aged 55—a complication of diseases due to a wound in the eye received during the war..... ....After all, it is said the Panama Canal will be finished. The reports of the visiting experts and commercial representatives will, on the whole, be favorable. So much money has been sunk, that the enterprise cannot be given up now. Several times more money will be needed, however, than at present estimated. America is as quietly but steadily opposed to the Panama as England was to the Suez Canal, and about as doubtful of the possibility of its completion. De Lesseps says he, with his family, will steam through it from the Atlantic to the Pacific in July, 1889..... .....The Utah Legislature Tuesday showed the first sign of concession in agreeing to appropriate pay for jurors, heretofore voted down repeatedly.....Representatives of the rice growers of S. C., of the sugar growers of Louisiana and of the tobacco growers of Connecticut and Ohio have been urging upon the House Committee of Ways and Means the necessity of "protection" for their home products. The first were opposed by the brewers who say one brewery uses more "broken rice" every year than is produced altogether in this country, and that the increase of duty sought by the rice growers would therefore be unjust to them. They require several million bushels of "broken rice" every month—much more than we grow of all kinds of rice.....Owing to the falling off in exports of agricultural products, gold is leaving the country steadily to pay for goods bought in Europe and interest on American Government, railroad and other securities held there, and also the expenses of American tourists and residents abroad. Last Tuesday alone $1,500,000 in gold were engaged in this city for export.....Liquor licenses in Boston are to be raised from $50 to $500 a piece..... ....The "Gould Southwestern railroad system" extends into six States. Missouri, Kan. and Tex. are gridironed with these roads; one, the M. K. & T., crosses the Indian Territory. Louisiana is traversed from the northeast to the southwest by the leased Texas Pacific. Arkansas is crossed diagonally by the Iron Mountain, with seven lateral spurs. There are in all at least 6,000 miles, the Missouri Pacific being the main stem. On this whole system there is now a great strike which has blocked all freight traffic and a good deal of local passenger travel, though the mails are not interrupted, lest the U. S. authorities should intervene. The Texas Pacific is bankrupt and in the hands of a receiver, and the trouble began there by the refusal of the receiver to concede certain demands of the Knights of Labor; the strike was then extended to the rest of the system to prevent traffic with the T. P. Over 12,000 hands struck—freight handlers, brakemen, switchmen—all except conductors and engineers; but these are mostly ready to go out if ordered. The K. of L. who were not "called out" have all been discharged. Business all through the tributary country is paralyzed. Stock and perishable goods on the cars are greatly injured or ruined. Grain shipments are absolutely stopped. Not a car-load of freight has been moved for nearly a week on any road in the "system." There are reports that 'it is war to the knife"; that the railroads are determined to break up the labor organization at any cost. Others say the roads will be "boycotted"—the last recourse of the K. of L.; others say the latter must certainly win their point ere long. Plenty of funds on their side, and, apparently, of determination. Hitherto all has been peace; the K. of L. have detailed men to protect railroad property wherever danger threatened; but there is considerable muttering about tearing up tracks and burning bridges, should "scabs" be employed instead of the strikers.....The following are a few specimens of the hundred strikes in progress or imminent in various parts of the country: Strike of 1,500 car drivers and conductors threatened at Pittsburg, Pa.....Strike of chair makers for 10 hours a day, instead of 12, at Indianapolis. Strike of 2,000 shoe operatives for higher prices per piece, at Woburn, Mass.....About 20 different strikes in this city for more wages, shorter hours, or both—carpenters, plumbers, bricklayers, steam-heating workmen, laborers, musicians at places of amusement, waiters, etc., etc.....Strike of ship carpenters at Detroit, Mich..... Free striking miners threaten to release convicts working the mines at Greenwood, Ky., unless the Legislature passes a law against such work, within 10 days.....Plasterers of Montreal on strike for higher wages..... Russell M'f'g Co., Middleton, Conn., refuse to employ K. of L. Boycott of all dealing in their goods probable.....A hundred retail stove and tin-ware dealers in St. Louis have combined to boycott large mercantile houses who include these goods in their stock..... Over 600 workmen and 250 "girls" will strike at the cordage works at Newark, N. J., unless their wages are increased before April 1..... Over 10,000 miners are now out on strike in Pennsylvania.....More than 1,000 hands have struck at the Studebacker Wagon Works, South Bend, Ind.....A lockout of 6,000 spinners expected at Cohoes, N. Y..Here are a few specimens of the numerous strikes settled during the week: Knights of Labor amicably settled shoemaker strike against convict labor, Tuesday, at Chicago...Railroad amicably settled street car strike at Troy, N. Y., same day..Nearly 1,000 coal miners submit question of wages to arbitration at Clearfield, Pa..... ...The Fuller & Warren Stove Company, Troy, N. Y., after 18 months' struggle, yielded Tuesday to the demands of the Knights of Labor, and the boycott on their goods all over the country was removed. ....The "Standard" of Troy, which was boycotted for admitting F. & W.'s adv., yielded the night before. Boycott also everywhere removed from merchants who sold the stoves, ...Cigar-makers of Davenport, Ia., have yielded to the K. of L.....Coal miners near Charleston, W. Va., have resumed work on an increase of wages.....Since January 1, last, the Executive Board of the Knights of Labor, has settled satisfactorily by arbitration 350 cases in which strikes would otherwise have occurred..... Akron, O., Saturday morning was visited by a disastrous fire that destroyed the huge oatmeal mills of Ferdinand Schumacher and the New York, Pennsylvania and Ohio railroad stations with a total loss estimated at $1,000,000. The mills were the largest in the country, if not in the world.....Ida Schneider, a little dried-up, dirty, 57-years-old Chicago rag-picker, who was sent to an insane asylum last week, has picked up a fortune of $80,000 during 40 years' rummaging among the ash heaps and refuse piles of the city.....The delegates to Washington from the Creek Nation attempted treachery to their people by offering to sell Oklahoma; but the sale has been repudiated by the Indians, whose consent was essential to its validity..... .....After a delay of many months Chief Poundmaker and eleven braves of the Canadian Northwest have been liberated and returned to their tribes.....It is the talk at Washington that Gov. Stoneman, of California, will appoint millionaire Flood to the Senate to succeed General Miller.....Joshua T. Child, a Missouri nuknown, is to represent the United States in Siam.....Alexander Stewart, a Vermont farmer, who claims to be an heir of the dead millionaire, has filed a complaint in the United States Court at New York, in an equity suit against ex-Judge Henry Hilton to recover $200,000. Stewart has been adjudged a lunatic in his native State, and the action is brought by his guardian, Benjamin F. Whelden.....Archbishop Kendrick of St. Louis, and Archbishop Leroy of New Orleans, both refuse to follow in the footsteps of the Bishop of Montreal, and condemn the Knights of Labor. The Catholic Church, they say, has always been the friend of the laborer. .....The protest of Mormon women in mass-meeting assembled at Utah last week against their possession of undivided portions of husbands, must not be taken as an expression of the genuine sentiment of women in Utah. If the women favored the institution of polygamy, their voices would have been lifted in its defense years ago..... .....

AFTER two years' trial, we unhesitatingly pronounce the Boss ZINC and LEATHER COLLAR PAD, the only durable and successful one that we have ever used. It retains its shape, is cooling, prevents chafing, and thereby keeps the horses' necks clean and healthy. HIRAM G. DODGE & SONS, Wood & Coal Dealers, Madison, Wis.—*Adv.*

H. J. BAKER & BRO. N. Y.

Gentlemen—I used 1,000 lbs. of your Potato Fertilizer to the acre, in 1884, and had a good crop—better than from a piece alongside manured heavily with city stable manure. I then sowed wheat after the potatoes were dug and applied no additional manure, and I have harvested a *better crop of wheat* this year than I did from the piece manured with stable manure which was sown after the potatoes were dug. I am satisfied your fertilizer is as lasting on the soil as STABLE MANURE

JOSEPH WILLIAMS,
Dec. 8th, 1885. East Williston, L. I.—*Adv.*

AGRICULTURAL NEWS.

SATURDAY, March 13, 1886.

Great activity in the Texas cattle region. All preparations for the grand "drive" complete. Several herds will start northward within a week, as grass will henceforth meet them on the trail. Last Tuesday's telegrams say careful estimates show the drive for 1886 will reach 300,000 head, and with fair prices this will be exceeded. Yearlings in Northern Texas bring $12 per head, and "twos" $14, while in Southern Texas yearlings sell at $7 and "twos" at $10 apiece..... Mrs. Sensenback died Tuesday at S. Bethlehem, Pa., from trichinosis. One daughter died from same cause three weeks ago; another seriously ill—raw ham..... Benjamin Hill, convicted of selling bogus butter in this city, appealed to the Supreme Court to get a decision on the constitutionality of the law forbidding the sale of bogus butter. The court has reaffirmed his conviction and refused to question the constitutionality of the law.....Senator Miller, of New York, introduced in the Senate at Washington on Wednesday last a bill requiring all manufacturers of, and dealers in oleomargarine, butterine, lardine and suine to display signs in a conspicuous place in their places of business indicating that they manufacture or sell such articles, imposing a special tax of $500 on manufacturers, $250 on wholesale dealers, and $100 on retail dealers in such products, and requiring them to take out annual license to carry on such business, under penalty of fine and imprisonment, and requiring all persons engaged in such business to keep books and enter therein an accurate and detailed account of all imitation butter manufactured or sold by them, such books to be subject at all times to the inspection of the Treasury officials. There are at least half a dozen other anti-oleo bills before Congress, many of them merely "buukum," not to be pressed in Congress, but to be nicely printed at the Government's expense and generously distributed *gratis* among the introducers' constituents, "just to tickle the honest farmers."..... ....The Fruit Dealers' League in this city has voted to limit its membership to 100 instead of 500, as originally contemplated, and to raise the annual dues from $15 to $50. It embraces the principal fruit dealers in this city, Philadelphia and Baltimore....Ex-President Clark, of the Mass. Ag'l College, died Tuesday.....

STEBBENS & RICHMOND, Northfield, Vt., write: "We are selling Thatcher's Orange Butter Color and it gives satisfaction every time." For strongest testimony on earth send your address to H. D. Thatcher & Co., Potsdam, N. Y.—*Adv.*

Crops & Markets.

SATURDAY, March 13, 1886.

A slight advance in wheat prices in London and Liverpool during the week. Last week, however, prices of wheat in England were the lowest for over 100 years. The Mark Lane Express of last Monday cables that "continuous frosts retard Spring work" in the English wheat fields. It characterizes prices as "irregular," saying that in some places they have not improved, while in others they are 6d. to 1s. dearer. Foreign wheats in London were not as active as they have been since, but were firm and in some instances higher. The "consumption of bread" has increased in the United Kingdom during the Winter, owing to the prolonged cold weather and the short supply of vegetables. American flour has been quiet but steady.

THE March report of the Department of Agriculture, on the consumption and distribution of the grain crops, a summary of which was telegraphed from Washington last Thursday, makes the proportion of corn still in the hands of farmers 40 per cent. of the last crop. One year ago the proportion of the crop on hand was 37.6 per cent., two years ago 33 per cent. of the short crop of 1883. It amounts to 773,000,000 bushels, 98,000,000 more than last March and 261,000,000 more than in March, 1885. The proportion is lowest in the West, where heavy winter feeding is required, averaging 38 per cent. in 12 States. It is 45 per cent. in the South, where it is required for feed of plow teams in Spring and Summer; and 40 per cent. in the Middle States. The proportion merchantable is 62.6 per cent., which is slightly above the average of a series of years. The value of the merchantable averages 35.9 cents a bushel; of the unmerchantable 21.5 cents. This makes the average value of the stock on hand 33.3 cents, which is half a cent a bushel more than the December value of the crop, when the aggregate value was estimated at $635,000,000.

The Stock of wheat in the hands of farmers is 30.1 per cent. of the crop. It was 33.1 one year ago, and 28.4 two years ago. It amounts to 107,000,000 bushels, against 169,000,000 last March and 119,000,000 two years ago. It is only 9,000,000 bushels more than in March, 1882, and the shortest in visible supply of recent years. The visible and invisible supply March 1, was therefore 159,000,000 bushels, against 212,000,000 last March. The proportion of the crop for consumption within the county where grown is 41.8 per cent. The average weight per bushel as estimated, is 57 pounds, against 58.3 for the previous crop and 56.9 for that of 1881. The consumption for bread and other uses, the seed sown, and approximately 85,000,000 bushels exported since the 1st of March, 1885, make a distribution equal to the supply from March last.

A total (visible and invisible) supply of but 159,000,000 bushels of wheat on March 1, is below previous or current estimates, and leaves but 72,000,000 for Spring planting and exports until the next crop, inasmuch as about 88,000,000 bushels will be required for home consumption between March 1 and July 1 next. If 24,000,000 bushels be required for spring wheat planting, it cuts down the total remaining to 48,000,000 bushels. If we are to export from this, the reserve will undoubtedly be small enough to satisfy the most exacting bull.

Reports of the American Rural Home of Rochester, N. Y., from 5,000 correspondents in all parts of the country, say that the winter wheat crop continues generally in favorable condition. Some spring wheat is sown, but the area is small.

In the home markets prices of wheat rose early in the week, but suffered a reaction later. Here No. 2 Red cash has advanced five cents a bushel within six weeks. Strange, although the Southwestern strikes stopped shipments from that section, instead of raising, they have had a depressing effect. The Government report on the comparatively small amount of wheat still on farmers' hands was a bull card.

The visible supply of corn increased 1,465,147 bushels. Prime, the Illinois crop statistician, reports corn in the crib at 1,630 railway stations amounting to 13,614,600 bushels on March 6th, against 5,036,500 bushels a year ago, and 6,676,400 bushels on March 5th, 1884. The large stock of corn in farmers' hands, ac-

cording to the Department of Agriculture, has had a depressing effect on prices.

Oats weaker in sympathy with corn, though the visible supply declined 224,645 bushels. Little inquiry for rye or barley. The visible supply of the latter declined 126,792 bushels, and of rye 56,531 bushels.

The receipts of products, as well as of live hogs, at Western centers have declined, and the hogs received continue to show a smaller average weight than the record for the corresponding period last year. A report from Kansas City says that between November 1 and March 1, 300,557 hogs were packed there, out of 642,000 for the whole year, and the average weight was 261 pounds against 273½ pounds the previous year. The average cost was $3.57 1-16, against $4.21½ last season, and the loss in weight was 12½ pounds, while that of the value was 64 7-16 cents per 100 pounds. Current advices are that a like exhibit from Chicago shows an average decline of about 20 pounds in weight per hog as compared with the period November 1 to March 1, 1884–85. The receipts of hogs at Milwaukee were the heaviest and their weight the lightest for 10 years, with the exception of the season ending March 1, 1884. Receipts, 343,412; average weight, 190.74.

Receipts of wheat at Minneapolis during the week have been only a trifle short of 750,000 bushels. Grain there and in St. Paul and Duluth has increased 500,000 during the week. Country deliveries as brisk as ever. Market dead; but no fall in prices in spite of heavy stocks "in sight." Mills running as much as the stage of water will allow. Output for the week 76,680 barrels of flour, shipments 86,000 barrels.

The Combination of Ingredients used in making BROWN'S BRONCHIAL TROCHES is such as to give the best possible effect with safety. They are the best remedy in use for Coughs, Colds, and Throat Diseases.—*Adv.*

DYSPEPSIA Its Nature, Causes, Prevention, and Cure. By JOHN H. McALVIN, Lowell, Mass. 14 years Tax Collector. Sent free to any address.

LINSEED MEAL.
ABSOLUTELY THE BEST FEED FOR
CATTLE, HORSES,
CALVES,
SHEEP AND HOGS.
This Meal is the product of pure sound Flaxseed. Linseed being its other name, and is the most nutritious of all feed, because it contains the largest proportion of nitrogenous substance.
It is almost needless to say that, in order to derive much benefit from the use of Linseed Meal, it must be fed in quantity. At least one-half of all an animal consumes may safely and profitably be LINSEED MEAL.
☞Please send in a sample order or for circular and prices. Orders will be promptly filled by any one of the following parties:
Cleveland Linseed Oil Co., Cleveland, Ohio.
Toledo Linseed Oil Co., Toledo, Ohio.
Detroit Linseed Oil Co., Detroit, Michigan.
I. P. Evans & Co., Indianapolis, Ind.
St. Paul Linseed Oil Co., St. Paul, Minn.
Cincinnati Linseed Oil Co., Cincinnati, Ohio.

J. CUSHING & CO., Fitchburg, Mass.
JOHN KING, Norristown, Penn.

For the Young.

WE have had a "bushel of letters" lately. The names of those who wrote will be found at the end of the column. Have patience and I will get at them yet. Don't think because your letters do not appear at once that Uncle Mark ever forgets his boys or girls. He never does that. He is only sorry that we cannot have more space so that all can see their letters "in print."

Now here is another chance for somebody to get some fine stock. Remember that a very small club may win these chickens. Try hard for it.

UNCLE MARK: To induce the Cousins to get subscribers for the RURAL, we will offer a pair of our Light Brahma chicks (to be shipped in September), to the Cousin under 16 years of age, who sends the second largest club before June 1, 1886. The birds will be the very best and worth at least $5.00. We will send catalogues to any of the Cousins who will send us their address. E. H. UPSON & BRO.

Wilmot, Ind.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK: It ought to be one of the rules of our club that any boy or girl who knows of anything useful, he or she should tell what it is, so that all may have the benefit of it. Now, I have a little thing which I find very useful, and I made it myself. Any boy or girl can make one. It is made out of the handle of a tooth-brush, and I call it a dibble. It is one of the handiest little things I ever used for pricking out seedling plants, making drills for small and delicate seeds, and a good many other things. I have tried all kinds of wood and metal, but there is nothing equal to the handle of a tooth-brush for a small dibble. All the Cousins will want one when they get the RURAL seeds.

This is the way to make it: get an old tooth-brush and saw or file off the handle at the smallest part, which is near the brush. Then round the end off to a point with a fine file. In some handles there is a shoulder where the taper begins, and this should be rounded down with the file, to make it look neat. The small end will do for small seedlings and the large end for large ones, and also for cuttings. A dibble like this is always clean, and may be carried in the pocket. I usually have one in my pocket to give to some little boy or girl who loves plants. This dibble is not only good for little boys and girls, but is also worth the notice of the big boys and girls over in the RURAL Department.

If any of the Cousins would like to know how to use this dibble, I shall be glad to tell them. Now I want some of them to tell me something good for me to know. I wonder if any of them live near a big pond, where I could go fishing and get water lilies.

COUSIN HORTICOLA.

DEAR UNCLE MARK AND RURAL COUSINS: On the 17th of last October, Papa sold our farm in Iowa, and on the 11th of November, we started for this western country. So you may judge for yourself whether we were busy or not. We chartered a car and brought all household goods, farming implements, poultry, stock, canned fruit, house plants and nearly everything, except the place itself. We landed here on the morning of the 13th. Papa and brother found claims to suit them and have made some improvements on them. We (Mamma, sister and myself) are staying in town. Last Sunday we drove out to see the claims. They are 6½ miles from this town, and 3½ from Bordeaux. Will tell you some of the things that can be seen from our claims. Some of the country is lovely, but some of it is great buttes and hills. Now, Uncle Mark and Cousins, imagine yourselves with me just a few minutes. First, look northwest. There, do you see those black clouds? Those are the far-famed Black Hills, and loom up in the distance like great black clouds; they are 60 miles from us, but can be seen very plainly with the naked eye. Now turn your eyes farther north, and you will see the entrance to a great cave; that is 10 miles from us. Look east there! Do you see those two great hills with the narrow passage between? See; the walls are cut straight down; it looks as if man's hand had done it, but a more wonderful worker than man did that. It is called "Sheridan's Gates," so named because Sheridan and his men passed through it at the time of Gen. Custer's massacre; distance 10 miles also. Next is "Chimney Butte;" it is not very large, but quite high, and resembles a house with a big chimney set on the north end. It is quite a curiosity, and only three miles from us. Now, south. A telegraph wire is stretched across hill and valley from Fort Robinson to the Indian Agency. There! we have seen all the most important sights, so we will have a little chat. Our claims are on the old stage road from Sioux City, Iowa, to Helena, Montana. Custer and his men camped on the claim also. There are 12,000 cattle driven along the old stage road every year to the agency for the lazy Indians. I don't see why they do not work as well as we. I'm sure they are able to. A great many people think they will break out in the Spring and massacre the whites. So if I do not write again next Summer, you may imagine me with some of the rest. The first house in this town, Chadron, was erected the first of July last, and now it has over 2,000 inhabitants and is a great business town. The land around here is mostly taken up, but some is still vacant. Any single lady who is past 21 can take a homestead, same as the men.

Dawes Co., Neb. ETTA SHAFFNER.

[Indians ought to work. Every person who eats ought to earn his food. I think you will be safe. I am glad the ladies can take up claims. I believe in "woman's rights" to that extent surely.—U. M.]

DEAR UNCLE MARK: I use a figure four trap for catching rabbits. Perhaps some of the Cousins do not know how to make one. I will try and tell them. I use first for a box a large soap box and then three sticks, one upright, a diagonal piece, and the trigger or horizontal piece. The first may be made, say eight inches long, the upper end being whittled to a thick edge, not pointed. The horizontal piece or trigger about ten inches long, and square. Have a notch one side about seven inches from the end. On the upper face of the trigger about six-and-a-half inches from the side, notch in another notch. The diagonal has both ends beveled or brought to a wide edge and a notch cut near one end. In setting up the figure, hold the perpendicular up, fit the trigger to the side, then adjust the notch in the diagonal to the perpendicular and then insert the other end of the diagonal in the notch near the end of the trigger. Now let the box rest on the end of the diagonal. This will make the figure four stand firmly, yet ready to fall at a very slight pull upon the trigger to which the bait is fastened.

Macedon, Wayne Co. FRED. E. REEVE.

[That ought to catch them I think.—U. M.]

MY DEAR UNCLE: I am much pleased in reading the many letters from the Cousins out West, especially those who tell you what they see every day, whether it be a wild bird, or beast, a new flower or fruit, all of which have a great interest for lovers of nature whose homes are far from all of these things. I have seen the Rocky Mountains, Pike's Peak, Long's Peak, and Central City; buffaloes, antelopes, prairies and prairie dogs, but it was only once, and that time 10 years ago. Here we, on the stormy Atlantic, have entirely different surroundings. In an hour we can see hundreds of sailing and steamships, from Europe, Asia, Africa or the multitude of islands which dot the ocean. From these vessels are being landed continually fruits from France, Spain and "up the strait," as the sailors call those countries lying along the warm Mediterranean. Oranges, lemons, figs, dates, prunes, prunelles, almonds, French walnuts and chestnuts, Brazil nuts, Cocoa nuts, Bananas, pine apples, and hundreds of other articles of food. All of these are daily shipped in every direction by the railroads, reaching every village and hamlet from the Atlantic to the Pacific, and from the frozen regions of the north to the Gulf of Mexico on the southern border. Besides these ocean-crossing vessels, every hour are seen coming up the bay from Sandy Hook, or down through Hellgate from Long Island Sound and Eastward, myriads of smaller fishing vessels, with their holds or wells filled with cod, blue fish, herrings, or other fish, as we have, including those from fresh water, nearly 100 kinds to select from in our markets. Besides these edibles from the sea, there are sometimes brought by these fishing vessels, a small whale, a porpoise, a skate an octopus, or whatever else strange may be met with. Few of you have seen such vessels, or such animals, and many of you perhaps never will, and so, of us here, but few will ever see a real live buffalo, or a Rocky Mountain Sheep. So let us once in a while exchange ideas, and both will get new subjects for thought. HAWORTH.

A MATCH FOR ASTHMA.

THE distressing wheeze and vicious cough of asthma are familar. It chokes and smothers till existence seems impossible. "The most stubborn of all diseases," said an old man and eminent practitioner, "and the most oppressive and treacherous."

Some one has described sea sickness thus: "At first you are afraid you are going to die; then you are afraid that you won't die." Asthma frightens with its suddenness and violence, and then becomes such a torture that death seems welcome.

A curious disease is asthma all through. Like a tiger in a jungle, it attacks you when you don't expect it. Doctors say it is a disease of the air-pipes, and they talk learnedly about it. This is very pleasant, but not so pleasant to a patient as a cure for it. It always seemed queer to us that a disease which was so common and on which so much learning was wasted, had never before this met its match.

But so it is, and there is no use regretting it. It couldn't be that way all the time. The day of keeping up a doubtful rough and tumble fight with asthma is passed. Any one who wants to can now grapple with it squarely and with full assurance of winning. If it strikes suddenly you can strike back suddenly. If it strikes violently you can give blow for blow. If it plays the bulldog you can batter him to death with your good, stout club.

Asthma is in the line of diseases which involves the pipes and lungs. It is generated and fed by conditions of the system, which, in another person, or, under other circumstances, in your own, would breed bronchial and lung troubles. Hence, its stubbornness and treachery, and hence also the failure to reach it with local remedies, except very temporarily.

"Such a thing as *a cure* had not been known till the introducion of the Cannabis Sativa Remedy, which has been prescribed for thousands of years in the East Indies as a cure for consumption.

That we now have in it *a cure* is due to the fact that as a treatment it reaches below the disease and breaks up the conditions which feed it. How far off we have been from anything we could hitherto call a cure is plain when we consider that most of those who have been cured of their asthma by Cannabis Sativa have suffered with the disease for a long time—some of them as much as twenty years. Please note this closely.

There is an instance right at hand—that of Rev. Phillip Axtell, of Prosperity, Pa. His old medical friend, Dr. E. H. Cary, met him the other day and thus writes of the interview: "Have known Mr. Axtell to be a sufferer from asthma and sub-acute inflamation of the air passages for ten years. He told me he was entirely well of his asthma and that he had been cured by the Cannabis Sativa Remedy alone, having taken no other medicine. He is one of the most reliable men we have."

Ten years is a good while to suffer with so terrible a disease; and no doubt he had the best of medical treatment all the time. At least such must surely have been the case with Mrs. Dr. Buffum, of Kilgore, Gregg County, Texas, who writes that she had been trying remedies for her asthma for twenty-three years and had lost faith entirely. Poor woman; no wonder! "But," she continued; "I used your Cannabis Sativa for two years, not regularly, and had but one spell. When without it I had eight spells in six months. I had despaired of ever being cured."

Mr. J. L. Kantner, of South Easton, Pa., was so grateful for the cure of his wife's asthma by Cannabis Sativa—she had been afflicted with it for ten years and was cured in six days—that he told some of his friends who were suffering with it, and they told others, and now the remedy has such a reputation that Mr. Kntner wrote us, saying he would soon need a secretary to help him answer correspondence if it continued to increase.

Sitting up at night in order to breathe is one of the many asthma horrors. Mrs. M. O. Ward, of 120 Congress street, Newark, N. J., did this off and on for two years. "Then:" she says, "I began to take Cannabis Sativa and found immediate relief."

Preventive power is a fine quality in a remedy. Rev. W. M. Williams, of New Market, Va., an asthmatic sufferer, took time by the forelock. Writing in July, 1883, he says: "Took two packages of your remedy last fall and had no asthma after November." He saved himself much suffering and an immense doctor bill.

What a contrast between the two existences of Mr. S. Samuel Monroe of Bassett, Chicksaw County, Iowa. He writes: "Before I took your Cannabis Sativa for asthma I could not sleep at night unless I burned saltpetre paper. Many a night I have had to sit up all night and thought I would die with it. Have not had the least sign of asthma since I began to take your remedy. Have worked every day since."

A crisp word from the Pacific coast. Says Arthur Bailey, of San Francisco, Cal. "Two years ago got three boxes of your Cannabis Sativa, which cured me of asthma."

A. J. Wilder, of Tidal Wave, Whitely County, Ky., fought his asthma for two years at an expense of $200, and then gave it up as a bad job. At the persuasion of his brother-in-law he tried Cannabis Sativa without any faith. Writing, he says: "To my surprise the trial package gave me more relief than all the medicines I had ever taken. Am glad to say I continued its use and feel like a new man."

Charles Atkins, of Severance, Kan., expresses a true filial feeling thus: 'Your remedy, Cannabis Sativa, has cured my mother of asthma."

These testimonials are tokens of gratitude. And well they may be, for of the diseases which flesh is heir to there is none so oppressive and provoking as asthma. Sufferers come to dread it worse than death, and especially after they find that doctors are of no avail and all their own expedients are no longer of any use.

There is no further occasion for dread. The above evidence of *a cure* for asthma ought to prove to the satisfaction of every one—or if it does not the testimony can be increased indefinately—that the disease has at last *met its match*.

For full information about the Cannabis Sativa Remedy and its remarkable curative properties address W. A. NOYES, 149 Powers Block, Rochester, N. Y.

PERSONALS.

REPRESENTATIVE BRECKINRIDGE, of Kentucky, is not yet 49 years old, but his heavy hair and beard are snowy-white—a family peculiarity.

EX-PRESIDENT ARTHUR'S friends feel seriously concerned at his condition. While not alarmingly sick, he has been quite unwell for several weeks.

MRS. MARY GRANT CRAMER, sister of General Grant, is lecturing in Massachusetts under the auspices of the Women's Christian Temperance Union.

MOST of the late British Cabinet were smokers, notably Sir Hicks-Beach, Lord Randolph Churchill and Sir Richard Cross. Most of the present Ministers, including the Premier, are non-smokers.

LULU HURST, the electric girl, made enough money from her professional tour to stock her father's farm with Short-horned cattle and insure her family's comfort for life. She is now at a Southern college.

THE late Governor Seymour, speaking of State and National Government offices, said: "I never yet made or procured an appointment for a young man for a clerkship, which did not in the end prove of great injury to him."

THE late Ex-Senator Chaffee was of medium size and stout. His hair had grown gray and bald spots were plentiful on his head. He had a massive head, solidly planted on broad shoulders, an open, genial face, smooth-shaven, with a smile on it oftener than repose, a high and expansive brow, square-set iron jaws and steady gray eyes.

BURPEE'S SEEDS, FARM ANNUAL FOR 1886
Will be sent **FREE** to all who write for it. It is a **Handsome Book of 128 Pages,** with hundreds of new Illustrations, two **Colored Plates,** and tells all about **the Best Garden, Farm** and **Flower Seeds, Bulbs, Plants, Thoroughbred Stock** and **Fancy Poultry.** It is the only complete catalogue of the kind published, and describes **RARE NOVELTIES** in **VEGETABLES** and **FLOWERS,** of **real value,** which can not be obtained elsewhere. Send address on a postal to
W. ATLEE BURPEE & CO., PHILADELPHIA, PA.

FAIR AND SQUARE DEALING.
Believing that if a man has dealt squarely with his fellowmen his patrons are his best advertisers, I invite all to make inquiry of the character of my seeds among over a million of Farmers, Gardeners and Planters who have used them during the past thirty years. Raising a large portion of the seed sold, (few seedsmen raise the seed they sell) I was the first seedsman in the United States to warrant (as per catalogue) their purity and freshness. My new Vegetable and Flower Seed Catalogue for 1886 will be sent **FREE** to all who write for it. Among an immense variety, my friends will find in it (and in none other) a new drumhead Cabbage, just about as early as Henderson's, but **nearly twice as large!** James J. H. Gregory, Marblehead, Mass.

SCOTT'S ROSES
ARE KNOWN wherever planted for their STRONG and VIGOROUS GROWTH, their Fragrance and Beauty, and are ALWAYS TRUE to Name. **OUR INTRODUCTION BOX OF 12 ROSES** all colors, by express, first size, for **$1.50** by mail, 2d size, **$1.00.** Our Illustrated CATALOGUE, containing all the New and Rare Roses, as well as the FINEST STANDARD SORTS, with directions for growing, mailed FREE.
ROBERT SCOTT & SON, ROSE GROWERS, Philadelphia, Pa.

STOCKBRIDGE MANURES

Take the place of Stable Manure

No fertilizer can fully do this, but the Stockbridge Manures, being made for different crops, very nearly do so. They are very concentrated, containing all the elements required, in the right forms for each crop, and not only give crops an early start, but "back them up" throughout the season. Send for pamphlets.

WOODLAWN FARM HOLSTEINS.

A few Bull Calves and Yearling Bulls, from the finest stock of my own importation and breeding, with my own records, for sale.

The Herd contains Bulls and Cows of the RIP VAN WINKLE, BILLY BOELYN, AAGGIE, and EMPIRE strains, in addition to many magnificent animals of my own importation.

Moolke 3d's Clarion.—Calved January 1st, 1885. Sire, Clarion, H. H. B. 870. He by Billy Boelyn, H. H. B. 189. Out of Clyte, H. H. B. 549. Her record (for Hon. G. S. Miller) 63¾ lbs. of milk in one day, and an average of 41½ lbs. a day for four months without forcing. Dam, Moolke 3rd, H. H. B. 1540. Record 19 lbs. 5 oz. butter in seven days, made 7½ months after calving. One lb. butter from 12⅔ lbs. milk. Cream test 28 per cent. Her dam, Moolke 689, record 72 lbs. milk in one day. Sire of Moolke 3rd, Johannis 428.

Iris 3d's Clarion.—Calved January 19, 1885. Sire, Clarion 870 (for whose pedigree see above). Dam, Iris 3rd 1542. Milk record 68 lbs. in one day.

Iris 3d's Prince.—Full brother of above. Calved January 27, 1885.

Consul.—Calved February 18, 1886. Sire, Clarion 870. (For his pedigree see above.) Dam, Consul 1225. Record 48 lbs. of milk in one day.

Moolke 2nd's Clarion.—Calved October 31, 1885. Sire, Clarion 870. (For his pedigree see above.) Dam, Moolke 2nd 803. My Moolke family I believe to be one of the finest strains of Holsteins in the Country; beautiful in form and marking, of fine bone, deep milkers, large size, giving rich milk and easy keepers.

Dots Clarion.—Calved November 27, 1885. Sire, Clarion 860. (For his pedigree see above.) Dam, Dot 282. Milk record 8042 lbs. in one year.

Zyp's Robert S.—Calved January 20, 1886. Sire, Robert S. 3210. He by Sire Henry 2nd of Aaggie 1151, whose dam Aaggie Rosa 2705 gave 91 lbs. of milk in one day and whose sire was the celebrated De Ruyter N. H. B. 89.

All the above calves will be recorded in Vol. I. of the Holstein-Friesian Herd Book.

Hilda's Empire.—H. H. B. 3562. Calved August 2, 1884. Dam, Hilda 556. Record 58 lbs. of milk in one day. Sire, Empire 688, whose dam Empress gave 100 lbs. of milk in one day and 19,714¼ lbs. in one year.

SEDGWICK STEEL WIRE FENCE

Is the best general purpose wire fence in use. It is a **strong net-work without barbs.** Don't injure stock. It will turn dogs, pigs, sheep and poultry, as well as horses and cattle. The best fence for Farms, Gardens, Stock Ranges and Railroads. Very neat, pretty styles for Lawns, Parks, School-lots and Cemeteries. Covered with rust-proof paint, or made of galvanized wire, as preferred. It will last a life-time. It is better than boards or barbed wire in every respect. Give it a fair trial; it will wear itself into favor. The **Sedgwick Gates** made of wrought-iron pipe and steel wire, defy all competition in lightness, neatness, strength and durability. We make the best, cheapest and easiest working **all-iron automatic or self-opening gate**, and the neatest cheap iron fences now made. The best **Wire Stretcher, Cutting Pliers and Post Augers.** For prices and particulars ask Hardware Dealers, or address, mentioning paper,

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XLV. No. 1887. NEW YORK, MARCH 27, 1886. PRICE FIVE CENTS. $2.00 PER YEAR.

Entered according to Act of Congress, in the year 1886, by the Rural New-Yorker in the office of the Librarian of Congress at Washington.

SECOND Potato SPECIAL!

COMPOSITION OF POTATO ASH.

SIR J. B. LAWES, LL.D., F.R.S.

THE RURAL NEW-YORKER of January 16, gives some analyses of the composition of the ash of the potato tuber, which, it must be admitted, show a very wide range in its composition, as it is stated that the potash ranged from 73 to 44 per cent., the soda from 17 to 0 per cent., the magnesia from 13 to 1 per cent., the phosphoric acid from 8 to 27 per cent., and so on. Without in any way wishing to raise a question in regard to the accuracy of these analyses, I would wish to point out that, as far as our experience at Rothamsted goes, the ash of the potato tuber is exceedingly constant in its composition, even when placed under circumstances where it was likely to show great variations.

Our system of growing crops without change of manure for a great number of years, is well adapted to bring out the properties of the various plants, as regards their capability of substituting one substance for another. For instance, if we apply nitrate of soda alone as a manure for a long period of time—say 30 years—we drain the soil to a great extent of its available potash. Under such circumstances the ash of hay grown in a pasture, instead of containing, as it would in its natural state, between 40 and 50 per cent. of potash, might contain not more than 14 or 15 per cent., and soda might be in larger quantities than the potash. The mangel is another of the plants which, when manured with nitrate of soda, will take up a large amount of soda.

Let us see what capacity a potato tuber has of making use of soda in the absence of potash, upon land which has been manured with nitrate of soda and has received no potash for about 30 years. This potato ash contains 52.61 per cent. of potash and less than three per cent. of soda. The ash of the potato which receives 14 tons of farm-yard manure every year, and that which receives 500 pounds of sulphate of potash per acre every year, contain, respectively, 57.47 and 57.58 of potash; that is to say, only five per cent. more potash than the nitrate plot, and they contain hardly any soda.

Phosphoric acid is a substance of such extreme value to plants that they cannot possibly exist without it. In the experiments published by the RURAL NEW-YORKER this substance is said to vary from 8 to 27 per cent. Some of our potatoes receive a large amount of superphosphate of lime every year, while others have never received any. The ash of the superphosphate plot contains 12.83 per cent. phosphoric acid; while that of the plot which receives no superphosphate contains 10.97, a difference of rather less than two per cent.

Magnesia is another substance which in the published experiments shows a very large variation, that is to say, from a little more than one per cent. to over 13 per cent. Our highest amount of magnesia is 3.76 per cent. and the lowest 3.12, a variation of not much more than half of one per cent. and this too on land of which some receives magnesia every year, while other portions have received none. As far as our own results go, it would appear that the potato—though it is grown under very different conditions in regard to the supply of mineral food—is yet very uniform in its composition, and although the ash does not equal in uniformity that of the cereal grains—when grown under similar variations in regard to manures—still it is evident that the composition of the minerals of the potato, does not indicate the character of the manure applied, as is the case with some plants.

The extreme difference in the percentage of ash in the dry matter of our potatoes is from 3.52 to 4.72, while the nitrogen varies from 0.755 to 1.523. Where nitrogen is applied every year without minerals, the potato contains twice as much as when it is grown every year with mineral manures, but without nitrogen. A deficiency of minerals therefore causes a great waste of nitrogen.

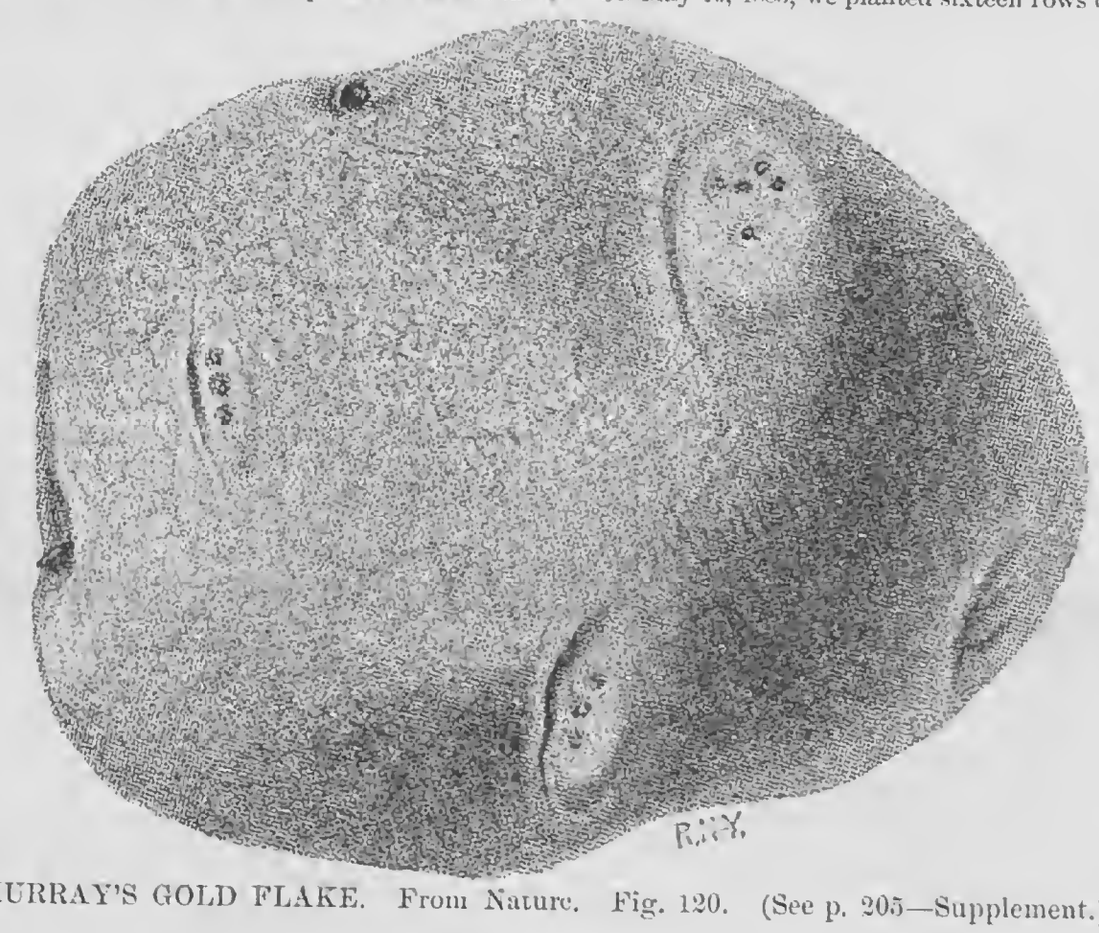
The amount of potash taken up by a potato crop is very large; some of our crops indeed carry off considerably more than 100 pounds per acre of that substance. In Great Britain potatoes are rarely grown as a farm produce unless where the cultivator has access to purchased town manure, the drain of potash being too great to be furnished by the resources of the soil.

Rothamsted, England.

POTATO EXPERIMENT IN NEW YORK.

PROF. I. P. ROBERTS.

ON May 16, 1885, we planted sixteen rows of Dakota Red and two rows of Mammoth Pearl Potatoes. The rows were meant to be 30 inches apart, but proved to be a shade less when the whole area was measured; they were 24 rods long, and two rows constituted a plot. The seed consisted of pieces cut to two eyes, and was planted 18 inches apart in the row. The land was fairly well drained, clayey, and had a south-west exposure. In 1884 it produced a heavy crop of grass and clover, which was mowed. In the latter part of the season the land was pastured. The plot was a part of a 20-acre field devoted to corn and mangolds, and was no richer than the remainder of the field. The object in planting these potatoes was three-fold: first, to illustrate to the students what I conceived to be the best and most profitable way or raising potatoes; secondly, to get some potatoes; and, thirdly, to make some simple experiments. In early Winter about ten tons per acre of manure were spread upon the grass. During the last days of April the land was plowed and well prepared and planted about the middle of May. About two weeks after planting, the land was treated to a dressing of 200 pounds of German potash salts per acre. Plot one received a mulch of cut straw, as recommended by the RURAL, and plot four a mulch of manure of nearly the same thickness. They were cultivated five times and the weeds were hoed out twice, and late in the Fall a few that had escaped were pulled. Flat culture was given in all cases.



MURRAY'S GOLD FLAKE. From Nature. Fig. 120. (See p. 205—Supplement.)

Plots.	Pounds Yield per Plot.	Bush. Yield per Acre.	How Treated.	Variety.
2	1215	457.11	Straw mulch.	Dakota Red
4	1260	474.04	Manure mulch.	" "
1	1205	446.42	No mulch.	" "
3	1185			
5	1186			
6	1164			
7	1194			
8	1186			
9	All rotted.			Mam'th Pearl

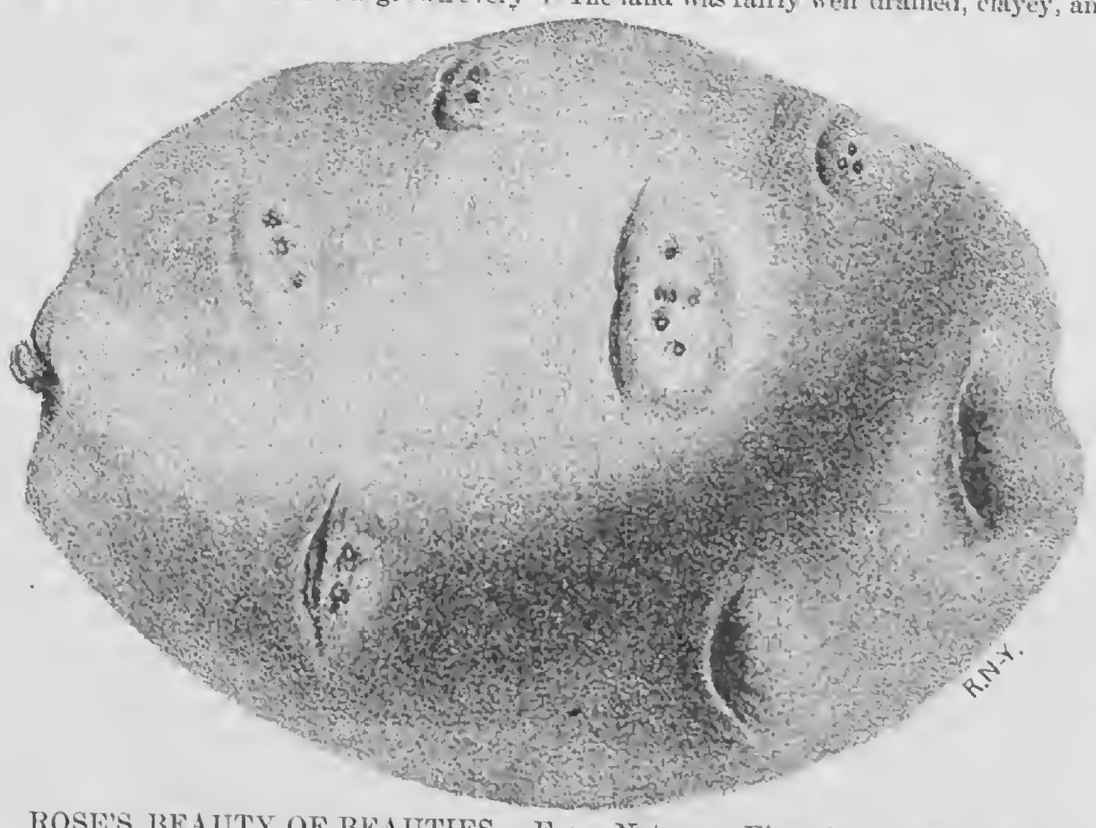
The labor account of raising these potatoes and the mangolds was kept under the general head of "root field," I am therefore unable to give the cost of raising them, and in any case it would be of no value to the public. One man may get 16 hours' labor for 75 cents, while another will have to pay $1,50 for ten hours. One man pays $4 a cord for manure; another gets for nothing all he can haul. It appears to me that it is far better to tell just what is done, and leave the reader to figure out what it will cost him to perform the same labor. It is evident that it would not have paid us this year to have mulched with straw, and the 28 bushels extra yield of the plot mulched with manure, over the unmanured plots, would hardly pay for the extra expenditure. The potatoes mulched with manure were very "scabby," while those from all the other plots were almost entirely free from that disease.

Cornell University, Ithaca, N. Y.

POTATOES IN THE POTATO DISTRICTS.—CULTURE, CARE AND KINDS.

COL. F. D. CURTIS.

POTATOES are a leading farm crop in the part of New York where I live. Washington County, which is adjacent to Saratoga, produces yearly between four and five million bushels. It has a larger crop than any other county in the State. The farmers all follow about the same system of routine and culture. The potatoes are planted on corn stubble or a clover sod. These are considered the most favorable conditions. The corn land is usually manured for the crop of corn and is in good heart for potatoes, with the desired mellow condition. The clover sod gives to the land the advantages of the decay of the roots, and the humus arising from the stems and leaves, and from these materials the potatoes derive a supply of the constituents required. Barnyard manure is relied upon by the large growers of potatoes as the best fertilizer, and the rotation of crops is so conducted that a good coat is given to the land for each crop of potatoes. A grain crop succeeds the potatoes, and with it the land is seeded down. Rye is the best to follow potatoes, but when the crop cannot be taken off in time, oats or barley are put on the following Spring and the land is seeded. When lands are very fertile an unwise farmer will sometimes raise several crops of potatoes on the same field. Potatoes are naturally a very exhaustive crop in potash, and will rapidly deplete land of this element unless there is a latent supply. This is the case in Washington and Rensselaer Counties where the crumbling rock furnishes an additional amount. Mr. David Smith has



ROSE'S BEAUTY OF BEAUTIES. From Nature. Fig. 123. (See p. 205.)

frequently raised five crops of potatoes on quite thin,sandy land by planting them early, in hills, and just as they were coming through the ground, putting a forkful of manure right on top of the hill. The manure keeps the weeds down and the moisture in, and at the same time enriches the hill. After the potatoes are well up through the manure, they were worked with a cultivator.

I have grown the smoothest and best potatoes I ever grew, by dropping pieces cut to one eye, about a foot apart right into the grass, and then covering the whole surface with oat and buckwheat straw, not mixed, but both kinds about a foot thick. Wherever the grass or thistles appeared above the straw, a fresh lot of straw was put on to smother them out. After the potatoes came up they took care of themselves, and the whole surface was a tangle of vines. In the Fall the vines and rotten straw were raked and pitched into heaps, leaving the potatoes in clean bunches or piles just as they grew. It was a perfect success.

The unmerchantable potatoes are generally kept for seed, and one, two or three are dropped where the marker rows cross. They are then covered by a double plow which turns two furrows inside over the seed.

Potatoes were dug with a fork, but many large growers use both a fork and a spring-tooth harrow. Some run a plow underneath the hills and then go over the ground with a coarse harrow. Thus most of the potatoes are gathered with little hand labor. No potato-digging machine has yet been invented which gives entire satisfaction or which has come into any general use. Potatoes are mostly drawn directly from the field or pits in the field to the point of shipment. Only a small per cent. are stored for Winter. When spread out rather thinly and dusted with dry lime, they will best resist the rot.

The kinds most grown and doing best are, Burbank, White Elephant and Beauty of Hebron. The Peachblows and Roses seem to be running out. The Peerless and Queen yield well, but do not command first prices. Two hundred bushels per acre is about the average yield. To make the crop profitable there should be 300. Wet, murky weather is conducive to rot and scab. Cool, dry weather is the most favorable to fine tubers, but the dryness should not be a drought.

Saratoga Co., N. Y.

NOTES ON POTATOES.

PROF. L. H. BAILEY, JR.

THE "ideal potato" in my judgment should be oblong, smooth, white, with shallow eyes, medium in size, and uniform throughout the hill. Oblong and rather thin potatoes are usually sound, and cook more quickly and evenly than very thick ones. A smooth surface is easily cleaned, and renders the tubers attractive. We have many excellent sorts, well-nigh perfect; but we must continually rear new ones to take their places. Probably varieties of no other crop run out so soon as those of potatoes. A series of experiments which were carried on through many years at the Michigan Agricultural College strongly illustrates this fact. The cause of this deterioration is apparent. The potato is propagated by cuttings from a variable, unstable tuber. Cross-pollenation has no influence upon the tuber, and we are constantly inbreeding. It is undoubtedly true that varieties of plants which are propagated by seeds hold their own longer than do those which are propagated exclusively from cuttings, other things being equal. Many wild plants propagate largely by stolons and bulbs, but they also produce seed which probably corrects the evil tendencies of other methods of propagation. Our budded fruits do not run out, probably because the stock upon which they are set is a seedling. I look for the most permanent improvement in varieties of potatoes by raising new sorts from crossed seeds; not that I should expect crossed seeds to produce a variety intermediate between their parents, but because of the increased vigor of those seeds.

I should expect better results from a cross made by bringing together varieties long grown in widely separated localities than from one made between plants long grown side by side. In other words, I should plant by the side of my Early Rose which I had grown for several years in Michigan, potatoes of the same or other varieties which had been long grown in New England or in Minnesota, and should cross them by hand. The wonderful value of this crossing with foreign seed was clearly demonstrated by Darwin, although not with potatoes. I expect that the wild potatoes which are now coming in as curiosities, from Arizona and Mexico, will prove valuable as stocks for crossing. It is undoubtedly better to use these plants for this purpose than to attempt to breed up large tubers from them directly. To be sure we need to experiment with them in both directions. I have no faith in the hope of some experimenters who look for a rot-proof variety from these Mexican potatoes. If the fungus will attack the tomato, it will undoubtedly attack all kinds of potatoes. In fact, a wild Mexican potato which has been cultivated in France has suffered from the rot the same as the common sorts. Our potato is losing the power of producing seeds; we must not let this tendency go too far.

As to soil, I prefer a well drained gravel which has had a recent application of vegetable matter. Unctuous soil makes poor potatoes. The typical prairie soils illustrate this fact. It is almost useless to plant over a high and retentive subsoil. I planted an acre on such ground last year, and, as I expected, did not get a quarter of a crop, and it was poor at that. It would have paid us better to buy potatoes. Another patch upon a freshly turned sod, in warm gravel, returned a heavy yield of most delicious, smooth tubers. A similar patch adjoining this, but upon which potatoes have been grown successively for five or six years, produced a scabby crop. I hear more complaints of scabby potatoes from the East than from the West. Do we need a rotation?

We have not tested varieties of potatoes to any extent of late, but of a half dozen sorts which we are growing, the Pearl of Savoy has done the best.

Ag'l. Coll., Lansing, Mich.

IMPROVEMENT OF THE POTATO.

PROF. J. L. BUDD.

IN every market of Eastern Russia, I found the Early Rose, introduced here by Mr. Chauncey Goodrich, and I was told that it was a favorite variety in Persia, Bokhara, and Central Asia. With the present general appearance of the potato rot, would it not be well to inquire whether such varieties as the Early Rose, White Elephant, Cloud's White Chief, Boston Market, Queen of the Roses, Pearl of Savoy, President Arthur, Charter Oak, and other new sorts, which at the West have escaped the rot the past season, are not direct descendants of the varieties which Mr. Goodrich grew from the seeds of the wild Peruvian and Chilian potatoes he imported in 1849, 1850 and 1851? In Europe I found the impression general that the new era in potato growing commenced with the thousands of seedlings which Mr. Goodrich tried and sent out for trial, and that his views in regard to the causes of the rot were well founded, viz.: sudden changes in temperature and moisture of air unlike those of their native clime, and consequent exhaustion of vitality.

I am told that the rot has never appeared in the cultivated potatoes of Chili, and I was shown on the grounds of M. Henry Vilmorin, in France, rows of several varieties of Chili potatoes, which exhibited marks of inherent vigor and vitality not shown by anything else in his great collection. Has not the time come when some of our enterprising originators of new varieties can profitably go back to the parents of the Garnet Chili, Cuzco, White Chili, etc.? With a little research, we may be able to find better parents for new seedlings in Chili than those which gave such valuable results in 1850.

Ag. Coll., Ames, Ia.

INSECT ENEMIES OF THE POTATO.

PROF. A. J. COOK.

OF course, all the noxious insects that infest the potato sink into insignificance in comparison with the Colorado Potato Beetle—Doryphora decemlineata, Say. Thomas Say discovered, named and described it on the Western Plains three-fourths of a century ago. For years after his discovery it was unknown even to our entomologists, when, all at once, it attracted attention in the Western States by its formidable attacks in the potato fields. Then the late B. D. Walsh described it anew, foretold its devastating march across the country, and made an exact prophecy as to just when it would reach the Atlantic coast, as subsequent experience proved.

REMEDIES.

Mr. Terry, the able writer and noted potato specialist, in his admirable little work on "Potato Culture," recommends hand-picking as the cheapest, safest and most desirable method of ridding the vines of these insects. He employs cheap labor—usually children—pays according to results, and lays special stress on the importance of "nipping the evil in the bud." That he is right in this last suggestion will appear from the fact that I secured over 1,300 eggs from a single female beetle. Killing such a beetle in time would prevent the laying of this number of eggs and the consequent appearance, later, of an equal number of hungry grubs. If hand-picking is resorted to, the beetles may be put into pails containing a little kerosene, and, as already suggested, the vines should be kept clean as soon as they come: so that all increase, so far as possible, shall be prevented.

I have experimented quite thoroughly, and have found that when the insects are at all common or numerous, it is much better to destroy them by the use of Paris-green or London-purple. I have known beetles to come to my garden each successive day for a week at a time, in numbers varying from a score to hundreds. To hand-pick under such circumstances is a task not to be coveted. To kill by the use of the arsenites is safe, quick, easy. One application just as the plants come up, kills all the beetles, prevents increase, and saves a great amount of work. Most fail right here—they wait till eggs are laid and hatched, when the vines are much larger and have been already seriously injured. Any one who uses the arsenites in time will never complain of the labor, efficiency and satisfactory character of the method. As all know, there are two ways of applying the arsenites—either dry or in a liquid mixture with water. For young potato vines (and it is on these it should always be applied), I have found the dry method the better. I prefer one part of the poison to 10 or 12 of flour, and then only put on just the slightest amount possible. The flour holds the poison even in heavy rains, and the strong mixture makes the poison fatal to the beetles, even though the slightest amount be used. It is desirable to use a slight amount, as the plants do better. To apply this, nothing is better than a muslin bag tied to the end of a cane or other stick. I have used all the various sieves and shakers, and prefer the simple bag to any and all. We have only to shake the bag slightly over each vine.

When the vines get large—time of the second brood—they nearly cover the ground, and then I would use the liquid mixture. If the first beetles are well attended to, there will be little to do in fighting the second brood, unless we have near neighbors, who cultivate the potato, and are heedless as to protecting against its chief enemies.

The enemies of the potato beetle, parasitic and predaceous, are becoming very numerous and efficient, so much so that some are hailing with joy the day of liberation. I fear such rejoicing is premature. True, these helpful insects, birds, etc., are doing us much good, but to say they will be sufficient protectors in future is, I fear, to reckon without our host. Last year some regions were almost free from the ravages of the beetles, while in other places they were never so bad.

OTHER ENEMIES.

The Cucumber Flea-beetle—Haltica cucumeris, Harr.—is also an enemy of the potato, as it is of all our garden vegetables. These little jumping beetles which are often the source of so much annoyance in the early spring, when our little plants need all their vitality, quickly succumb to the arsenites, and also to gas lime, either dry or in water, sifted or sprinkled on to the plants, and with care the plants will suffer no injury.

ATTACKING THE TUBER.

THE wire-worm grubs, or larvæ of Elater beetles, are the only insect enemies so far as I have observed, that injure the potatoes. These eat into the growing tubers and often bore through them. They are especially liable to attack potatoes planted on rich, deep soil the second or third year after plowing green-sward. As is well known, the Elater or spring beetles, the parents of these wire-worms, lay their eggs on the stems or roots of grass. If such grass is plowed, the decaying roots seem to satisfy them the first season, while the two succeeding seasons the corn, wheat, potatoes, etc., are often injured seriously. It is said that beans, peas and buckwheat will not be attacked by them. Upon making this statement at one of our Farmers' Institutes in Sanilac Co., where these wire-worms are almost as destructive as were the forest fires which devastated the same region, a farmer said, "They killed my beans. What do you say to that?" I replied, "I can only say that in your region they probably don't 'know beans.'"

On my own farm the past season I had a rich, deep creek bottom, thoroughly drained two years ago, and plowed one year ago, planted this season to potatoes. The crop was splendid and the potatoes superb, except that the scab and these same wire-worms had done their worst work; most of the potatoes were more or less tunneled and were only fit to feed the stock. The remedy here is obvious:—If these wire-worms are prevalent, plant potatoes the first year after plowing green-sward, and not the second or third, as these long, slender, wire-like, six-legged grubs live nearly three years as larvæ.

THE SCAB.

I still think this disease, as seen in Michigan, must result from fungus attack. This year I frequently examined potatoes on some sandy ground, which became very scabby, and I could find no myriapods—thousand-legged worms—anywhere in the soil. I know our friend, the Editor of the RURAL (and he is a close observer) thinks the myriapods the cause of the scab. It seems to me that either there are two kinds of scab, differing in their cause and character, or else in the cases mentioned by him, the scab was already present and furnished a good place for the jaws of the hungry Iulus which was in the soil. In this case, the Iulus would not be the cause of the scab; but being potato-hungry, would eat this diseased portion, thus doing the least possible harm to the tubers. Surely if the myriapods are thus kind and thoughtful, they deserve a well-earned vote of thanks. It has always seemed to me that scab was most to be dreaded in soils that were very rich, abounding in vegetable matter. I shall continue my study of this subject, and intend to settle it conclusively the coming Summer.

Ag'l Coll., Lansing, Mich.

[We hope that Professor Cook will be successful. We can give some forcible testimony that the scab which often injures our potatoes at the Rural Grounds and some other places, is caused by the Iulus. But so many have written us that scab prevails where wire-worms are not seen or known, that we are obliged to conclude that there is another cause or, as Prof. C. says, that there are two kinds of scab. —EDS.]

THE RURAL'S TRENCH-MULCH SYSTEM MODIFIED.

LEVEL VS. HILL CULTURE FOR POTATOES.

E. J. BROWNELL.

I HAVE long been an advocate of level culture for corn and for most garden crops, though, like many others, I had become so wedded to the hill system of culture for the potato, that I had come to think that no other could be correct for growing that crop, and as I have been much troubled with sunburned potatoes, especially with such varieties as Early Rose and Beauty of Hebron, I had got into a habit of making very large and high hills in the effort to cover the tubers sufficiently to prevent this trouble; but still a great many of them would reach the surface and become burned. Seeing such favorable reports of the RURAL'S trench-mulch method of cultivation, I resolved, the past season, to try a modification of that plan, not with the idea of avoiding the sunburn, but because it could hardly be worse with this system, which might be advantageous in some other respects. Accordingly, on a small garden plot of the same kind of soil in which I had previously grown potatoes for a number of years by the hill system, I planted about 20 square rods, as follows:

With a spade, I opened a trench about six inches in depth, in the bottom of which seed-pieces, cut from medium-sized potatoes with three or four eyes to a piece, were dropped and covered three or four inches in depth, a slight depression being left along each row until the first hoeing, when the dirt was hauled in to nearly a level. Clean, thorough culture was given and the ground was kept entirely level as far as possible, and after the last hoeing, a good coat of partially rotted horse and cow manure mixed, was wheeled on and spread over the entire surface. Now for the result: The season was very dry and unfavorable; but this plot seemed to withstand the drought much better than potato ground on adjoining farms treated in the ordinary way, and, much to my surprise, when I came to harvest the crop scarcely a sunburned tuber was to be found; in fact, the fewest I have ever had. I did not measure the yield, as a considerable portion were dug for family use before the time for harvesting the crop; but it was much greater than the ordinary yield this season on similar soil, and fully double that on a small plot in the same soil, which I cultivated in hills. I am so well pleased with the result that hereafter I shall admit of no hilling for potatoes on my grounds, unless further experience should change my opinion. I can see no philosophical reason for striving to raise the roots of any crop above the surface under ordinary circumstances, and certainly my experience with all garden crops is opposed to the practice.

Delaware Co., N. Y.

MARL—FERTILIZERS *vs.* FARM MANURES—APPLICATION, ETC.

UNTIL within the last 10 years the only fertilizers used in this section in the growing of the potato, were farm manure and marl. Of the last there are inexhaustible beds found everywhere throughout our country. In certain parts these are near the surface and underlie whole farms; in others they are deeper down and can be reached only at points where

"pits" are opened, and from these the neighborhood gets its supply. This marl is a green sand, and is not, I think, credited by the chemist with anything especially rich in the way of plant food. Its action, however, whether chemical or mechanical, has a decided influence on the growth of plants. Upon the potato it seems to have almost a specific effect, producing, as a rule, smooth and bright tubers. The ways of applying it to the crop are generally as follows:

1. The farm manure is spread upon the field in the Fall, and in the Winter the marl is carted from the "pits" and broadcasted over the manure. 2. The manure carted out of the yard in the Spring is composted with the marl, and the compost is either spread broadcast in the Fall and Winter, or put in the row in the Spring. 3. The marl is put directly in the row; the manure, applied sometimes in the Spring, being plowed under. It is with this treatment that the specific action of the marl spoken of is noticed. When the marl is on the farm, or so near it that its cost is nominal, and where large stocks of animals are kept on the farm, the conditions for successful and profitable potato growing are about perfect. Of course, on the great majority of farms these very favorable conditions do not exist, and the question always uppermost in the minds of their owners has been, "How can we best compete with those whose advantages are so superior to ours?"

It was in the search of an answer to this question that our farmers, about ten years ago, began the use of chemical fertilizers. As regards convenience, the verdict is unanimous in favor of the latter. As regards profit, a verdict is not so easily reached because of the fact that such variable values are placed upon farm manure. The one thing, however, that has been proven beyond a doubt is that, placing anything like a fair valuation upon the farm manure, and then applying, acre for acre, its equivalent in a high-grade chemical fertilizer, the yield, not only of the potatoes but also of the wheat following, will be greatest where the fertilizer was applied.

The almost universal way of using these fertilizers is in the row. That is very well if they are to supplement the use of manure; but if the crop is to be grown with them alone (and in that case, of course, more will be used) it has been found that the following is a more profitable way. Having plowed and harrowed the field, about one-third of the fertilizer to be used, is put on with an ordinary grain drill. By this not only is the fertilizer nicely distributed, but the ground is also put in order for the crop. The ground in order and the furrows marked out, the drill is again used. This time the hoes are taken off, and the rubber tubes are tied together so that they shall scatter the fertilizer in two of the furrows at the same time. In this way the second third is put on. Or, should there be a planter on the farm, this second application will be made by it instead of the drill. When the plants are about four inches high, the rest of the fertilizer is applied, using the drill as in the last instance except that the tubes nearest the plants are crossed and tied so that the fertilizer can not fall upon the plant. The cultivator following and working this in, the fertilization is completed. W. S. COMBS.

Monmouth Co., N. J.

CULTURE OF THE POTATO.

PRES. T. T. LYON.

THE Early Rose was, for a considerable period, the favorite in this region; but it is now mainly superseded by quite a number of more recent varieties, the most popular of which it would be difficult to determine. Among these, I will name Burbank, White Elephant, Peerless and Late Rose, which are esteemed about in the order named.

We regard a sandy loam, with porous, well-drained subsoil, as preferable for the potato. A vigorous shoot, from a single eye, is preferable to a greater number, but the habit of different varieties seems to vary considerably in this particular. Whole tubers of certain varieties will rarely push from more than a single eye; while others will generally send up several shoots, which, as a matter of course, are likely to be comparatively less vigorous. Single shoots will, in most cases, set fewer tubers, which will generally develop more evenly; hence be of average, even size. With several shoots, one or more will, in general, take the lead in vigor, resulting in unevenly developed tubers. Such being the case, my preference is to cut to a single eye, preferring those near the crown; and planting from one to three eyes in a hill, in check rows, about three feet apart each way, admitting of cross cultivation.

The potato is most nearly in its natural condition when left where it grew, until needed for use. This being the case, when dug, I would have it exposed to the air only long enough to thoroughly dry the surface, and then, as soon as practicable, remove it to cool, dark quarters. Probably few localities excel Northern Michigan in the production of sound, healthy potatoes. Here, the ground is never frozen, the earth being covered with snow before freezing, and vegetation starting even prior to its disappearance in Spring. It is a very common practice here to leave the crop in the hill till Spring, when not needed sooner for actual use. The potato evinces its satisfaction under this treatment by becoming a weed, very difficult of eradication; since every minute tuber remaining in the soil, is sure to become the parent of a more or less numerous progeny. Under this state of things, the shiftless farmer, when he has suffered the proper season to pass without having planted, resorts to his last year's "patch," and ekes out his supply with the second crop, known as "volunteers."

South Haven, Mich.

THE RURAL BLUSH.

THE past season I dug, in all, 750 Rural Blush Potatoes, 614 of which were of merchantable size, and of these I picked out 100 which weighed 87 pounds: the next 100 weighed 59; the third, 51; the fourth, 35; and the remaining 214 were quite large enough for family use. The 136 refuse potatoes, some of which were of good size but cut in digging, weighed 13¾ pounds. H. L.

POTATO GROWING IN KANSAS.

FOR a successful crop of potatoes, three conditions are essential—good seed, perfectly prepared ground, and very favorable weather. To have good seed, the potatoes should have been well handled at harvest time, well kept during the Winter in a place cold enough to prevent their sprouting and warm enough to prevent their chilling. Some varieties do better than others on the same soil. Some do well one year and not so well another. To have the ground perfectly prepared, the elements of plant life—nitrogen, phosphoric acid and potash—should be within easy reach and readily soluble, and there should be sufficient moisture, so that the plant may never suffer for one moment, from germination till maturity.

With me, seven hills of Mammoth Pearl yielded 60 pounds—one bushel. One hill gave 110 tubers, more than half of which were of marketable size; some weighed two and one-half to three and one fifth pounds. The land was quite new; on it prairie grass used to grow six feet high, and was burnt off the year before. I broke the ground in June, plowed it again in the Fall, manured it well in the Winter, and plowed it once more in the Spring. A crop of weeds had grown five feet high by July; and after plowing them under, I planted the potatoes, harrowed them when breaking the ground, cultivated them flat three times, and at the last cultivation gave them a mixture of burnt bone (dissolved), fish scrap, blood, wood ashes and fine sheep droppings—about a handful round each hill.

Being close to the creek, they never suffered for moisture, so I dug the finest, smoothest and the heaviest crop of potatoes I ever saw. I have had the same conditions on other parts of my farm, but never realized so large a crop. The RURAL's Fertilizer Special was worth the price of the paper for the whole year. Those "out West" who will only take the trouble to save all their manure will make crops when their neighbors will fail E. Z. B.

Solomon City, Kansas.

A CARD FROM MR. A. RAND.

IN the RURAL Potato Special of January 16, Rand's Dictator is a misnomer. It should be Brownell's. As sent to me by the originator last Spring, Dictator and Great Eastern are identical. The RURAL Special is a valuable issue, and I consider it worth more than the subscription price for the whole year. I have probably originated more varieties of potatoes than any other man in America; but they have not made me a rich man, nor have I yet found the "ideal potato." I have made all sorts of crosses, but have never been able to make such as Mr. Alexander claims in producing Carman, Carnival, State of Maine and several others. It cannot be done here in Northern Vermont. I have not been able to make the cross that Mr. Hawley speaks of on page 37. It may be possible under the most favorable conditions of soil, culture, etc., but we must have pollen in one of the varieties, or it is worse than nonsense to speak of a cross.

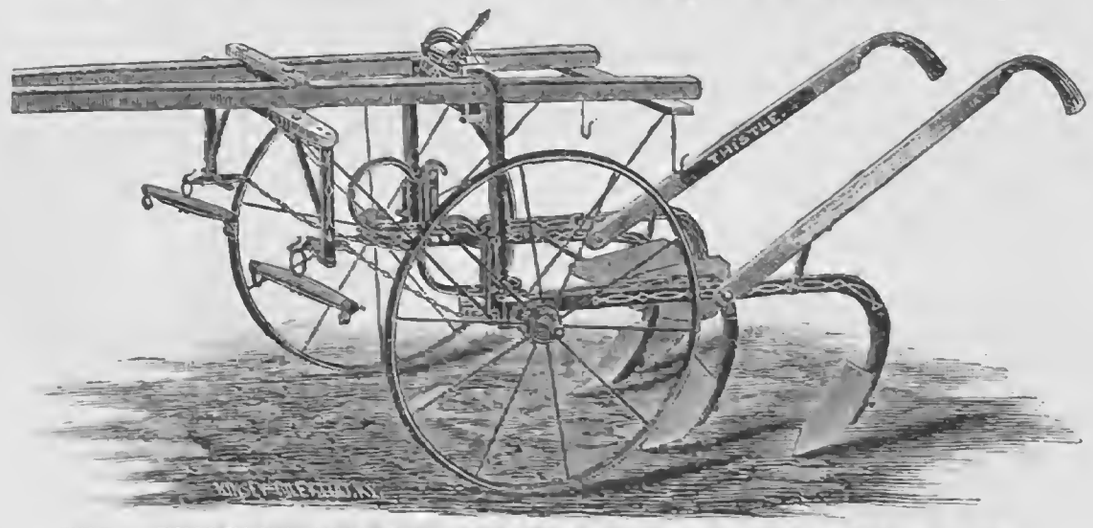
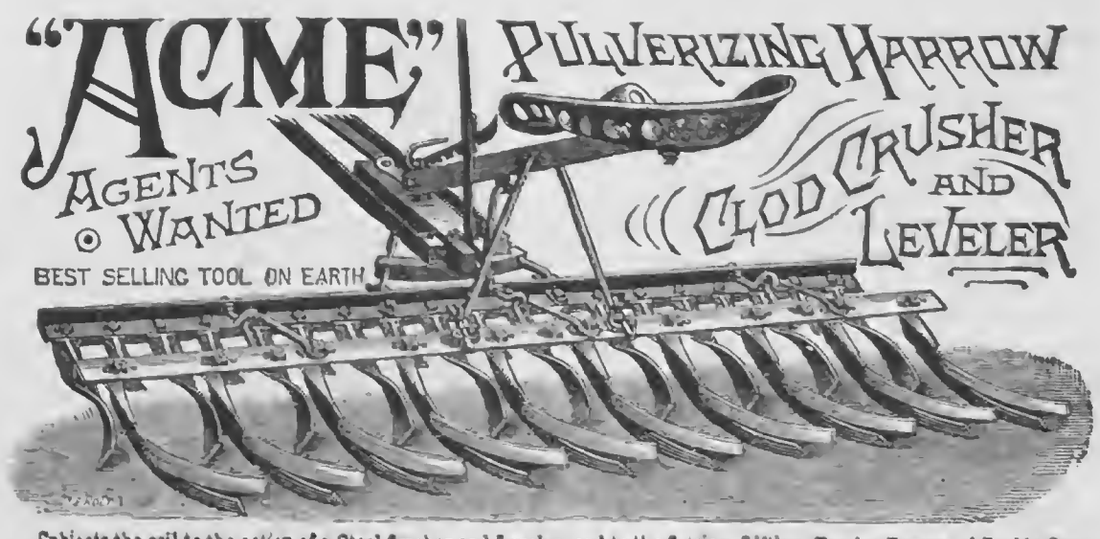
BEST POTATO CULTIVATOR.



THE "THISTLE" WALKING CULTIVATOR WITH EXPANDING ARCH.
The only cultivator that the farmer can instantly adjust to cultivating rows any width apart. The expanding arch permits the wheels to be set closer together or further apart at the will of the operator. Just what you need for cultivating potatoes, corn, tobacco or any garden produce. Send for circulars and prices to
The Edmiston & Waddell Co., Brooklyn, E.D., N.Y.

"ACME" PULVERIZING HARROW
AGENTS WANTED
CLOD CRUSHER AND LEVELER
BEST SELLING TOOL ON EARTH



Subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting, Lifting, Turning Process of Double Gangs of Cast Steel Coulters. Immense cutting power. Crushing, Leveling and Pulverizing performed at the same time. Entire absence of Spikes or Spring Teeth avoids pulling up rubbish. Only Harrow that cuts over the entire surface of the ground. Sizes, 3 to 15 ft. wide. With and without Sulky attachment. We deliver free at Distributing Depots.

FAIR PLAY. DO NOT BE DECEIVED. Don't let dealers palm off a base imitation or some inferior tool under the assurance that it is better. SATISFY YOURSELF BY ORDERING AN "ACME" ON TRIAL. We will send a double gang Acme to any responsible farmer in the United States; if it does not suit, he may send it back, we paying return freight. We don't ask pay until tried on his own farm.

Send for pamphlet containing thousands of testimonials from 48 States and Territories.

(*Continued from page* 199.)

20 with a double team and the largest-sized plow, going plump 10 inches deep, and finishing by opening with the same team and plow trenches of the same depth and three feet six inches apart. Next by hand, fine soil to the depth of about three inches was filled into the bottom of these trenches, where the sets, cut to two eyes apiece, were dropped one in a place 12 to 15 inches apart. Next unleached ashes at the rate of 100 bushels per acre, were sowed in the trenches, and about three inches more of soil filled in, leaving the trenches not quite full. Just before the vines were ready to come up, I went over the plot with a light harrow. As soon as the tops were fairly up, I went through with a five-tooth cultivator, and t ereafter once every five days, on an average, for the next 40 days, I cultivated them out, going only once each time between each row. The labor of hoeing was next to nothing. There was not a pound of weeds at any one time on the field. The surface was kept perfectly level, and was at all times through the season literally "as mellow as an ash heap." No potatoes grew out of the ground, but in a trial in the season of 1884, with level culture and common shallow planting, very many were exposed, resulting in serious injury. Potatoes were dug as soon as perfectly ripe, the last day before September 1, and stored in barrels in a dark cellar. No loss from rot. The season of 1885 was exceptionally wet here, at no time did the crop suffer for rain, so that this trial did not fairly test the merits of this mode of cultivation in carrying a crop through a drought.

Now, as to the yield of the several varieties: The rows were each 18 rods long, and of no kind planted was there less than a full row. All were planted on the same day, and the estimate of the yield per acre is based on the actual yield per row, and on that of several rows of some varieties.

Dakota Red at the rate of 250 bushels per acre.

Early Sunrise at the rate of 175 bushels per acre.

Early Telephone at the rate of 150 bushels per acre.

Vick's Improved Peachblow at the rate of 50 bushels per acre.

Vick's Prize at the rate of 100 bushels per acre.

White Star at the rate of 175 bushels per acre.

Of no variety, except the Improved Peachblow, was there hardly enough small potatoes to render assorting necessary. The crop was not only sound, but unusually free from scab. On a piece on which, in 1884, by the use of stable manure only a light yield had been obtained, by substituting superphosphate, tubers of more than double the size were obtained and twice the yield. The average yield in this section last year was not more than half as great as usual. S. S. C.

Fredonia, N. Y.

HIGH MANURING.

HERE is my experience with potatoes:—The ground was naturally good, but very much exhausted. I procured about 100 loads, or 75 tons, of manure made by two or three horses, as many cows and a small number of hogs. The latter ran loose in the yard, and were also fed in an adjoining pen. The offal from the slaughter-house was thrown into the yard and was well mixed with the stable manure by the rooting of the hogs. About 40 loads of the manure were put, broadcast, on a trifle less than three-quarters of an acre—about 90 feet by 400 feet. The potatoes were plowed in every third furrow, making 30 rows not quite 400 feet long. Varieties, Peerless and Peachblow, which were worked with horse and cultivator, with some hand weeding. The growth of vines was simply immense.

Very much to my agreeable surprise, we dug 379 bushels of exceedingly large tubers besides a few bushels of small ones. Twenty of the largest actually filled a bushel measure, and aggregated 45 pounds, the largest single one weighing 4¼ pounds. I think I could have picked out 50 bushels, not one of which would have weighed less than half a pound. The Peerless were the largest, but the Peachblows were the smoothest and best formed.

Northeast, Md. S. C. R.

POTATOES WITHIN POTATOES,

THE specimen from which our illustration, Fig. 124, was drawn was sent to us by Mr. M. E. Park, of Ontario, Can. He says it was found in a potato bin in the cellar, which was exposed to light and air. Such abnormal growths are not uncommon, and no doubt have their origin by some suppression of the external buds, which induces the growth of adventitious buds within.

FEEDING POTATOES WITH SAFETY.

WHEN animals are fed roots or potatoes whole or cut into large pieces, they are frequently in danger of choking themselves by attempting to swallow before the food has been properly chewed. The device shown at Fig. 125 will be useful in preventing this trouble. The small wooden bar, shown in the drawing, is placed across the stanchions so that the animal cannot raise its head to swallow a large piece. The bar is held in place by means of a pin, as shown. After the feeding the pin may be withdrawn, and the bar hangs down the stanchion out of the way.

Farm Topics.

SILAGE FOR STOCK.

MR. EDWARD ATKINSON at the recent meeting of the ensilage congress, spoke as follows: "My experience in silos is limited. When my attention was drawn to the subject some five or six years ago, I built two small silos of 10 tons capacity, on the silage of which I keep my two family cows. Since building these silos I have studied the subject as an economist and statistician. I have concluded that if I were not an underwriter by profession, I would establish a beef factory in the East and feed the cattle on silage." In this connection a correspondent says:

"My experience with ensilage is less favorable than that of Mr. Atkinson; practically, I find the results of silage not encouraging. As regards fattening stock, I think its effects first-rate, but for milk, it is of doubtful utility. Silage is tart and sour, and its acidity prevents the milk from keeping any length of time, say 24 to 36 hours; whereas, if cows are fed on cut fodder, corn meal and cotton-seed meal together with turnips or cabbage, all mixed and a little salt added, the milk will keep sweet fully that time, if not longer. Doubtless the flow of milk is good from cows fed on silage, and this kind of food encourages it, being a stimulant, but the quality and keeping properties e injured.

Now, would not the "sweet" silage counteract these defects and at the same time give a natural stimulation which would not injure the stock? R. H.

[The advantages of "sweet silage" have been discussed much more freely and frequently on the other side of the Atlantic than on this, and there it appears to be meeting with general approval, inasmuch as it seems to obviate many of the objections to sour silage, which has hitherto been generally fed in this country. In many cases the latter has given good results; but the enthusiasm which inspired its advocates a few years ago, has to a great extent died out, and some of the most earnest and honest of them have dropped the system. As we have frequently said, ordinary farmers will find hay, root and corn fodder the cheapest stock food. Ensilage is yet on trial; let men of ample means test the system thoroughly, and let prudent feeders act according to the results.—EDS.]

Doctors Prescribe

Ayer's Cherry Pectoral, for three reasons:—it is perfectly safe for old or young,—can be relied upon in cases of emergency,—and possesses great curative powers.

I consider Ayer's Cherry Pectoral a medical success and a chemical triumph. I have found this medicine a powerful specific for Colds, Coughs, and Pulmonary Complaints. I use it in my own family and recommend it in my practice.—Parker Cleveland, M. D., Prof. of Chemistry and Materia Medica, Bowdoin College, Brunswick, Me.

Ayer's Cherry Pectoral is an invaluable remedy for Colds, Coughs, and all Pulmonary diseases. I use it myself and prescribe it in my practice.—A. S. Pettenger, M. D., Glen Gardner, N. J.

Ayer's Cherry Pectoral,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by all Druggists. Price $1; six bottles, $5.

RURAL SPECIAL REPORTS.

Colorado.

TABLE ROCK, El Paso Co.,—From the package of Thousand-fold Rye I raised 24 pounds. The D.-M. Wheat winter-killed. The Garden Treasures did well. A few of the Flageolet Beans ripened, the rest were spoiled by frost. The White Elephant Potato is still ahead in this country—brings from five to 10 cents more per cwt. than any other, except Beauty of Hebron. The White Washington Oats yielded 54 bushels to the acre. J. E. K.

Dakota.

GLADSTONE, Stark Co., March 7.—Stark County lies about mid-way between the Missouri and Pyramid Park (Bad Lands) and is one of the finest agricultural counties in the Territory, and the best watered. Two good-sized streams—the Knife and Heart Rivers—run the entire length, and the Green River and Antelope Creek form a junction with the Heart at this village. Lignite coal is very abundant; in fact, it underlies the whole country west of the Missouri at a depth varying from five to thirty feet, and crops out along all the streams. Coal is worth, delivered in coal-sheds, $2 per ton. It burns readily in self-feeding base-burners, and in any cook stove is vastly superior to bituminous, although not so lasting. Wheat brings 62 cents; oats, 35 cents, corn 64 cents to 70 cents, on the cob; eggs, 25 cents; butter, 22 cents; potatoes, 85 cents; barley 65 cents. Diversified farming and stock raising are followed here, although farming in this country is the rule and herds are the exception. The Northern Pacific Railway runs through the center of the country and furnishes at present the only transportation. Our markets are west in the mining and stock regions of Montana. Gladstone boasts a roller flour mill built of stone, capacity 75 barrels per day, and will erect a woolen mill the coming season. Plenty of good Government land to be had for the asking, and all the fuel one wants for the digging. No straw is burned here. We feed and bed our cattle with it and return the good, rich compost to our broad acres to keep them in good trim for succeeding crops. G. S. C.

Florida.

SWITZERLAND, St. Johns Co., March 3.—In the RURAL of January 9 there is a letter from Manatee, Florida, signed J. F. B. As he says he has lived in the State 20 years, I think that he has used his eyes to very little advantage, judging from some of his statements with regard to the unsuitableness of Florida for certain kinds of fruit. It is true that tropical fruits, such as the mango, alligator pear, etc., etc., cannot be profitably grown in the State, except, possibly, in an occasional exceptionally favorable location in the extreme southeastern part; but many are proving their faith in the cocoanut by setting out thousands of trees, and they are not offering lands or trees for sale or urging others to go into the business; but the soil and climate suitable for the cocoanut are found only in a very limited territory along the Atlantic coast in the extreme south. The extreme cold of January 9 to 12 has probably put an end to many costly experiments in growing tropical fruits; but it has also shown conclusively that orange and lemon trees are not tropical fruits, and that they will stand a much greater degree of cold than has been generally supposed. The cultivation of the pineapple has been made quite profitable on the east coast of Florida, along the Indian River and in that region. It has been grown quite extensively in other parts of the State; but as it is necessary in those places to protect it from the cold during the Winter, I do not consider it as profitable as some other crops. Still, the pineapple and the banana can and should be grown for home use in almost any place where oranges do well. All that is necessary is to spend a little time and labor in protecting the trees from frost in Winter. Lemons are attracting very general attention throughout the orange belt, for as the prices are generally higher than for oranges, there is more money in them. The severe cold of the past Winter has not been equaled since February, 1835. Here, 22 miles south of Jacksonville, we can show hundreds of bearing orange trees entirely uninjured beyond the loss of their leaves. These trees are putting on their spring growth now, and are starting to the very tips of the smallest twigs. They are full of blossom buds, and give promise of a good crop this year. We can also show lemon trees from 15 to 18 feet high, from six to eight inches in diameter, only set six years, that never lost their leaves from frost until this Winter. Now they are somewhat hurt, many small limbs being killed back from six to eighteen inches. Occasionally a very tender sprout in the top, that had shot up very rapidly, was killed back for five or six feet feet. On the other hand, many of the twigs are starting into growth to the very last bud. These trees are growing in an orange grove near the river with no artificial protection whatever. Thousands of dollars were lost this Winter by the freezing of the oranges that were on the trees. But that is no real cause of discouragement—crops are lost in other States. How often has the wheat crop been destroyed by severe Winters at the North; how often are the peach buds killed by severe freezing, etc., etc., yet no one thinks of giving up the growing of wheat or the cultivation of potatoes on that account. W. C. S.

Massachusetts.

MARSHFIELD, Plymouth Co.,—I think so much of farming that I have no time to think of anything else. We find money in poultry raising. I have a goose that was hatched in July, began laying December 19, and has laid 22 eggs. I never before knew a goose to begin laying so early and to lay so many eggs before wanting to sit. C. S. P.

Michigan.

KELLOGG, Allegan Co., March 8.—This month, which is usually severe in this latitude, opened with quite severe cold weather, but as there was no wind, it has been regarded as very mild for March. There is very little snow left, and wagons have been in use for transportation for the past three weeks. Wheat, rye and clover fields were so well protected by snow that they are looking well now, and it is reported that peach buds are all right, except in a few unfavorable situations. There is plenty of forage here, both hay and grain, and consequently cattle and all kinds of farm stock are looking well. Prices rule low: Wheat, 80 to 86 cents; oats, 32 cents; corn, 35 to 40 cents; hay, $8 to $10; potatoes, 30 to 37 cents; beans, 85 to 75 cents. The weather was bad last Fall for curing beans, hence the variation in prices. Butter (dairy), 14 cents; cheese, 12½ to 15 cents; eggs, 14 cents; apples, per bushel, 25 to 36 cents; beef, dressed, per 100 pounds, $4.50 to $5.50; pork, $4.25 to $4.50. Business has been rather dull part of the time this Winter, consequently poor men with families have had to economize to make both ends meet. The potato crop last year would have been good except for the rot, which prevailed to a great extent after the crop was nearly ready to harvest. The tubers suffered worst on clayey and loamy soil, as many as seven-eighths of the entire crop having rotted in some localities. The corn crop, also, was poor on low land, owing to continued rains soon after it came up. The hay crop was good, and there has been a good demand for baled hay for shipment at from $8 to $11½ per ton. The maple sugar season has arrived and some of those having a "sugar bush" have commenced operations. Farms that 10 years ago made it a prominent industry, are now almost entirely devoid of maples, so ruthless has been the hand of destruction. H. D. E.

New York.

CLIO, GENESEE CO.—Most of the RURAL corn did well, but some was too late. Stratagem very fine. P. of W., mildewed somewhat. Flageolet Bean very prolific and better than the Lima. The Johnson Grass grew three to six feet. The Garden Treasures were indeed delightful treasures for the whole family. D. M. Wheat very prolific—got 6½ pounds which were sown and the stand is looking well. Wheat has been somewhat the damaged by the ice and cold weather since middle of Feb. Prices are: Wheat, 85 cents; oats, 32 cents; shelled corn, 50 cents; potatoes, 30 to 35 cents; butter, 14 cents; eggs, 15 cents. I heartily indorse all that has been said in praise of the RURAL, and look upon it as my Agricultural Bible. L. B.

Pennsylvania.

CARLTON, Mercer Co., Feb. 24.—The Rural Blush Potato has been worth more to me than four years' subscription to the RURAL. It has but three faults—deep eyes, flesh not quite as white as desirable, and it sometimes straggles in the hill; on the other hand, it resists drought, scab of all kinds, elater wire-worms, Colorado and other insect pests to a remarkable degree. It is also an excellent keeper, and there are few better table sorts. It is very productive, and there are very few small tubers. The cut-worms destroyed most of the corn crop; but I got at the rate of 60 bushels of ears to the acre. I am very much pleased with the Rural peas. The Flageolet Beans did well. The D. M. Wheat produced too much stalk; but is very promising. J. A. H.

SUNVILLE, VENANGO CO., March 9.—The Rural peas were very good; tomatoes and beans excellent. Garden Treasures, treasures indeed. Corn all taken by the birds. W. B.

Washington Territory.

SPRAGUE, Lincoln Co., March 1.—All the RURAL seeds were very good, except the beans,

which didn't do very well. The Prince of Wales Peas were very prolific, with pods from five to seven inches long.(?) All the corn didn't get ripe; some stalks bore seven ears. Tomatoes and flowers excellent. W. A. D.

THE FARMER'S CLUB

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention. Before asking a question, please see if it is not answered in our advertising columns. Ask only a few questions at one time. Put questions on a separate piece of paper.]

POLL-EVIL; FISTULA OF THE POLL.

T. C., Carbondale, Ill.—1. A fistula on my mare is festering and running on both sides of the neck. A three-year-old mare has a fistula also; but it has not broken yet. Both animals are in good condition; what should be the treatment? 2. Another mare had sweeny last Fall; on turning her to pasture, the lameness disappeared, but the shoulder is still shrunken; what will make it fill out again. 3. What is a good condition powder for horses?

ANSWERED BY F. L. KILBORNE, B. V. S.

1. Carefully examine the recent case for any fluctuation about the poll to ascertain whether suppuration—the formation of matter or pus—has taken place. In case it has not, apply a large sponge to the swelling, and keep it constantly saturated with cold water, to which may be added vinegar and tincture of arnica. Internally give a purgative—five or six drams Barbadoes aloes—and follow by a laxative diet to keep the bowels freely open. When the inflammation has subsided and there is no longer any tenderness, tincture of iodine may be applied to reduce the swelling. If there is fluctuation, indicating that matter has already formed, an opening should be made as soon as possible to allow the escape of the pus. The treatment of the two cases will now be quite similar. With a silver probe, find the base of each and every sac, if there should prove to be more than one, and make a free incision to the base of each sac to allow the pus to readily escape as it is formed. Wash out daily with a weak solution of chloride of zinc or boracic acid—one-half dram to each quart of water—until the formation of pus ceases. Then treat as an ordinary wound until healed. If there is danger of the wound closing before the formation of pus ceases, tie in a piece of tape and allow it to remain until healing has begun, then gradually draw it out at the base as the wound heals from above. A competent veterinary surgeon should be employed to probe and open the sacs. If the disease has not reached the joint, a recovery can usually be expected, with proper treatment; but where the disease is deep-seated so that the joint becomes implicated, it is usually incurable. During the treatment it is very important that the animals should be kept indoors, fed from a high rack, and the head tied so as to keep it elevated. After healing, they should not be turned to grass or fed from a low rack for a year or longer. Avoid bad-fitting bridles or the overdraw check, and keep clear of low stables or low doorways, where the animal can bruise the poll by throwing up the head. Inquiries like 2 and 3 have been answered quite recently in the RURAL, and as our space is overcrowded, we must refer our friend to the answers.

PERIODIC OPHTHALMIA—MOON BLINDNESS.

E. A. S., Kinmundy, Ill.—1. The formation of the film over the eye of your young horse in the present case is due to the recurring attacks of periodic or specific ophthalmia, a constitutional and hereditary affection, the nature of which is not very well known. Anything that depletes the general health may develop the disease. Young horses out of condition, especially at time of teething, are most commonly attacked. The attacks are liable to recur every three or four weeks after the first until a cataract has formed on one or both eyes. An attack usually lasts about a week. 2. There is no known remedy for this disease. The most that can be done is to adopt preventive measures to ward off or prevent further attacks. When once the disease appears it is usually incurable and ends in a cataract, blindness, although a very few cases recover under an improved regimen. Give special attention to the general health and comfort of the animal, so as to bring him into prime condition. Daily exercise that does not exhaust the animal, thorough daily grooming, good feeding, and a comfortable, dry stable are all important. Wherever the disease is prevalent, avoid damp, marshy, or malarious localities. Do not breed from diseased animals as their offspring are very liable to be likewise affected. The severity of an acute attack may be partially relieved by giving a laxative—four or five drams of Barbadoes aloes—followed by one-half dram of powdered colchicum, four drams of niter and 20 drops of tincture of aconite twice or thrice daily. For an animal that is out of condition, a course of tonics will be beneficial by improving the general health. After recovering from an attack, give twice daily for a few weeks, two drams of sulphate of iron, one dram of aloes and one-half ounce each of gentian and ginger.

"HOLLOW-HORN."

H. G. C., Marietta, Ga.—1. One of my cows is subject to attacks of "hollow horn." The former owner, as is usual in such cases, bored holes in her horns, put in salt and pepper and then forced turpentine in at the roots of the horns. Shortly afterwards she recovered. The other night she came home looking bad, with her head down and to one side, as if in pain. She gave but little milk and ate nothing. By the advice of neighbors I reopened the holes in the horns. There was little discharge from one, but considerably more from the other—nearly a cupful of thick, bloody matter. I put salt and pepper into the holes and poured turpentine on the head, and she was well in a few days; though she has not given as much milk as she used to before the attack. What is the proper treatment? 2. What will prevent a sow from eating chickens? 3. A veterinary author condemns the boring of cows' horns for "hollow horn;" what does the RURAL think?

ANSWERED BY F. L. KILBORNE, B. V. S.

1. Strictly speaking, there is no such disease as "hollow-horn." It is a popular name conveniently used by "cow doctors" to indicate any disease of horned cattle, the nature of which they do not understand. When a cow is sick, they proceed to bore the horn, find it hollow and pronounce the disease "hollow horn." If they would bore the horns of a few healthy cattle they would find the disease much more prevalent than they suppose. In other words, the horns of a healthy animal are normally hollow, which fact accounts for their almost invariably finding them hollow in sick animals. No satisfactory treatment can be recommended on such general principles. The present case was most likely one of digestive disorder with some fever, the attack being brought on or hastened by exposure. A much more rational treatment would have been a moderate dose of Glauber salts, followed by niter and aconite. 2. Keeping the chickens out of the reach of the sow. 3. We fully agree with the author. Not only is it unnecessary and ridiculous, but it is oftentimes positively injurious, as we believe it was in the present case.

DEVICE FOR TRANSPLANTING STRAWBERRIES; HARDY PEARS; GROWING CLIANTHUS DAMPIERI.

P. O. M., West Bend, Wis.—1. Is there any successful machine for transplanting strawberries with balls of earth about the roots; would it pay to patent such a device? 2. Is the Anjou Pear sufficiently hardy to do well there. Flemish Beauty and Dearborn's Seedling thrive. If not, what early winter pear will? 3. For three years I have been unable to get seed of the Clianthus Dampieri to germinate; why?

ANS.—1. The transplanting of strawberries with a ball of earth is practicable only on a limited scale, and when the ground to be planted is in immediate juxtaposition with that from which the plants are to be taken. Even to this extent, however, a machine that can satisfactorily prepare the cavities to receive the plants, take up and settle them in their proper positions, without breaking the balls of earth, would be a desirable acquisition, if it were capable of rapid operation and not too expensive. 2. Our experience and observation would indicate that the Anjou Pear is fully as hardy as either the Flemish Beauty or Dearborn. Winter Nelis is decidedly superior to this in quality, though not as satisfactory in habits of growth, and possibly somewhat less hardy. 3. Clianthus Dampieri is a half-hardy shrub, a native of the desert regions of Australia, although in our climate it usually is treated as an annual. The seeds, as well as the young plants, are difficult to manage, even by an expert, and, in the climate of Wisconsin, should not be planted in the open ground until all fear of alternations of cold are past—say toward the middle of June. Even then, without special care in watering the young plants, they are very liable to "damp off," as propagators phrase it. The best method we know of avoiding this danger is to fill the pot in which the seeds are to be planted with rich sandy loam, and in its center insert a smaller pot, without a bottom, and fill this last with similar soil, about an inch higher than that in the outer pot. Water with care—not excessively—and in the outer pot only. When the earliest growth has become matured, the difficulty of management has mainly ceased.

THE NORTHERN BOUNDARY OF THE U. S.

R. H. S., Tiffin, Ohio.—There is little danger that any one wishing to settle in far northern Dakota will by mistake find himself in the Dominion. The boundary is marked plainly and continuously by stone cairns 7½x8 feet; mounds, 7x14 feet; iron pillars, seven feet high, eight inches square at the bottom and four at the top, and timber posts five feet high and eight inches square. There are 385 of these marks between the Lake of the Woods and the base of the Rocky Mountains. East and west of the Red River, the boundary is marked by cast-iron pillars at mile intervals. "American" and "British" pillars alternate. On one side of each post is "Convention of London;" on the other "October 20, 1818." Where lakes are crossed, stone heaps have been built projecting several feet above water. In forests the line was first marked by felling the timber a rod wide and clearing away the underbrush; where this line has since been obliterated, posts have taken its place.

BUILDING A CELLAR WALL.

D. C. S., Jasper.—In building a barn basement, where there is difficulty in making the wall stand up well, we can see no use in tapering ("battering") a wall on either side. In digging for the basement, excavate two feet more each way than the barn is to be; build the wall from one-and-a-half to two feet thick, according to the hight and size of barn to be placed on top of it, and leave a space of one foot on all sides next the dirt; fill this space with loose stones, so that no soil will touch the wall, and if you will provide good drainage to the foundation, nothing will ever disturb the wall. It is dampness and frost that ruin walls.

CHEST FOUNDER IN HORSES.

H. H., Stamford, New York.—As a remedy for chest founder in a horse, first make sure that the difficulty is in the chest and not in the feet. At the outset give four or five drams of Barbadoes aloes if the bowels are not already purged, and thrice daily 25 drops of tincture of aconite and one-half ounce of niter. Clothe warmly with blankets, and keep in a warm, airy stable. The cause of the difficulty will govern the general treatment of the animal, which should be such as will best relieve that particular case.

Miscellaneous.

"Subscriber," (no address).—1. For two years my mare has kept quite poor though liberally fed with carrots, oats and Timothy hay. While eating carrots and oats, she frequently chokes and then draws up her back and squeals once every two or three minutes. She then coughs up slimy matter with her feed. She doesn't digest her grain, though her appetite is good. She has had four colts in as many years, but is not with foal now; do her teeth need filing? 2. Is the Manshury Barley four or six-rowed?

ANS.—1. If any of the teeth are overgrown so as to project beyond the wearing or grinding surface, they should be filed. If the mare chokes only on the oats and carrots, it is, most likely, due to her habit of eating. Feed the oats in a box in which there are rocks as large as one or both closed fists. This will prevent the mare from eating the oats so rapidly. Also try feeding the carrots in some other condition. If the difficulty continues, there is something wrong in the mouth or throat, and the services of a veterinary surgeon may be required. Internally give five or six drams of Barbadoes aloes to open the bowels, and follow twice daily with two drams each of niter and sulphate of iron, one-half ounce each of powdered gentian and ginger, and one-half dram of aloes. 2. Six-rowed.

H. O. N., Weeks, M. T.—Three years since I lost four horses. They showed no signs of sickness, were in good health and flesh, with smooth hair and bright eyes, ate and looked well; but they would choke and fall down after the least exertion. A post-mortem examination showed that their lungs were almost entirely gone or solidified. I thoroughly cleaned the stable and bought a pair of mules, and last Fall, thinking I had got rid of all germs of the disease, I bought a pair of young mares. Since then both mules have died, though they showed no sign of disease; the mares are healthy still; what was the matter?

ANS.—We cannot tell from the symptoms given what caused the death of your animals, and consequently cannot suggest a course to pursue in regard to the cure or prevention.

J. W. D., Washington, Can.—1. A few days ago my calf began to run about as if stung by something, carrying its tail over its back; it would stop suddenly and try to gnaw itself all over. It drinks milk but doesn't take anything else; what ails it? 2. Which is the better way to feed wheat bran and corn meal mixed—dry or wet?

ANS.—1. The symptoms are too brief to say definitely. Probably there is either some nervous disorder or disease of the skin causing extreme irritation. Not knowing the nature of the difficulty, we cannot recommend a course of treatment. 2. It depends upon what stock you are feeding and also, to some extent, upon the diet of the animals. In general, for horses we prefer it moistened; for cattle or sheep, dry; for swine, wet.

A. B. H., Brooklyn, N. Y.—1. Some cattle in Massachusetts ate Polypod or Marsh Fern with their hay. They swelled up and moved round and round, as was discovered by the prints of their hoofs in the ground; what ailed them? 2. What are Scuppernong Grapes?

ANS.—1. There is no Polypod in Massachusetts that can be called a Marsh Fern. Of the other ferns there are several species that grow on marshy lands, but none, so far as we know, that has received the name of Marsh Fern. If the plant is a true fern the popular name thus given it must be purely local. Without knowing the plant, we can only recommend that it be avoided in the fodder. 2. Scuppernong Grapes are cultivated varieties of the Vitis vulpina, the Muscadine or Southern Fox-grape.

E. B. B., Oneida, N. Y.—My four-months-old sow pig is losing the use of her right fore-leg and foot. She makes motions as if to walk, but only touches the ground; sometimes she tries to get around on her knees. She is worst in the morning. The other legs appear to be affected of late; what ails her?

ANS.—A personal examination would be necessary to give a satisfactory answer. We would suggest that you should call a competent veterinary surgeon to see the case.

J. D. T., Brookside, N. J.—My cow has good care and feed, and gives six quarts of milk a day; but while there is a fine lot of yellow butter in the churn, it cannot be gathered; why?

ANS.—Perhaps your churn is in a cold place and the butter gets too cold to gather by the time it comes. Most dairymen would not worry about gathering the butter. They would take it out of the butter-milk, wash it, salt it and pack it together.

W. P., Newtonville, Mass.—My cow's milk has a bitter taste so that we can't use it. She is all right, eats well and is in good condition, but she comes in in April: what's the trouble?

ANS.—It is hard to answer such conundrums. She may get some bitter weeds in her hay, or her nearness to calving time may have some effect. The latter will make milk salty, and perhaps bitter. We should dry her off.

C. H., Mt. Pleasant, Iowa.—My last spring calves are troubled with spots, like warts. They spread and the scab and hairs come off. The hair of others falls off from about the eyes; what's the matter?

ANS.—Common ring-worm. See "Ring-worm in a Colt" in the F. C. of Jan. 30, for treatment.

R. D. F., Baltimore, Md.—There are several "Floral Dictionaries with apposite quotations from the poets:" but all of them are more or less disappointing. Miss C. H. Waterman published, in 1857, "Floral Lexicon—Language of Flowers," and H. G. Adams, in 1868, gave us "Language and Poetry of Flowers." Then there are Mrs. S. C. Carter's "Lexicon of Ladies' Names, with Floral Emblems," 1865; T. Miller's "Poetical Language of Flowers," 1855; L. Hooper's "Lady's Book of Flowers and Poetry," 1864, and some others not so well known.

M. A. B., Niagara, Ontario.—1. Yes, the Brighton Grape is quite suitable for a vineyard where it succeeds. It is a valuable grape. 2. Worden is as good as Concord and many think a few days earlier. It is not earlier at the Rural Grounds thus far. Moore's Early is at least one week earlier than Concord. The bunch is smaller, berry larger—the same in quality.

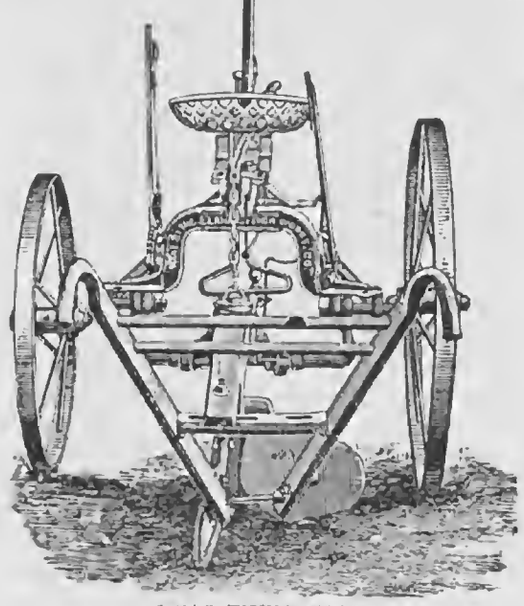
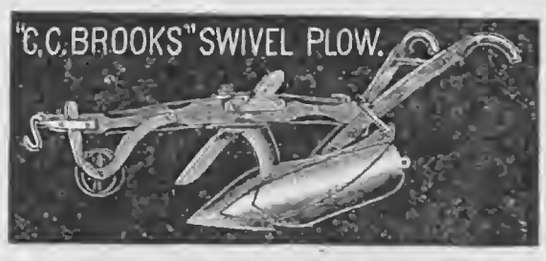
$25 A DAY saved by using the Little Giant Road Machine, instead of making roads in the usual way. It is the cheapest and the best. Send for circular.
STRONG & PARKER, Vergennes, Vt.

THE ELKHART
PLOW SULKY



READ THESE FACTS.
Lighter Draft with Driver Riding than ordinary Plow with Driver Walking. Turns square corner without backing. It is wholly constructed of Iron except tongue and front lever.
We claim and GUARANTEE that a Plow attached to the Sulky and carrying the driver, is from five to 100 pounds lighter draft than the same Plow doing same work without the Sulky. Write for prices.
ELKHART IRON WORKS,
ELKHART, IND.
Mention Rural New-Yorker.

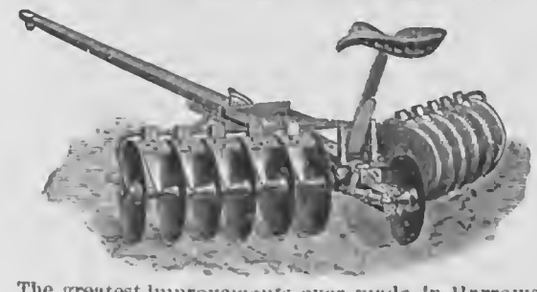


The Best SIDE HILL PLOW in the Market
WARRANTED TO DO AS GOOD WORK AS ANY PLOW IN THE MARKET.
We manufacture a full line of Tools, including the Mudgett Hay Tedder. Circulars and Price Lists FREE.
Agents wanted in all unoccupied territory.
B. & J. W. BELCHER,
P. O. Box 75, Chicopee Falls, Mass.

Lufkin's Swivel Plow
NEW MODEL.
Made of Steel and Iron. Warranted to be the best, and to sell for lower prices, than any other plows in the market. May be returned if not satisfactory.
Agents wanted. Send for Price List.
C. M. LUFKIN, Alstead, N. H.

Grain Threshers, unequaled in capacity for separating and cleaning.
Combined Grain and Clover Threshers, fully equal to regular grain machines on grain, and a genuine **Clover Huller** in addition.
Two Speed Traction & Plain Engines, 4 to 15 Horse Power, positively the most desirable for Lightness, Economy, Power and Safety. Boiler has horizontal tubes, and is therefore free from the objectionable features of vertical boilers.
Horse Powers, both Lever and Endless Chain. All sizes. Send for Catalogue. Address,
THE WESTINGHOUSE CO.,
Schenectady, N. Y.

The J. S. C.
FRAMELESS DISK HARROW



The greatest improvements ever made in Harrows are embodied in the J. S. C.
It is the most perfect working Harrow ever put into the market.
Be sure and examine it and send for circular.

SECOND POTATO SPECIAL—20 pages.

If the number on your address label is 1887, your subscription expires with this number; if 1888, next week; 1889, in two weeks, etc.

The present Potato Special should be read as a part of our *first* Potato Special, since it is undesirable, for obvious reasons, to repeat what has so lately been published.

Mr. Peter B. Mead tells us of a farmer who raised potatoes for 42 consecutive years on the same land. The land yielded well and the potatoes were sound to the last. The potato rot had not then appeared.

Readers who are willing to interest themselves in extending the Rural's circulation should not fail to read our announcement on page 208, the last of the Supplement.

If the lady readers of the R. N.-Y. were aware how easy it is to raise roses from seed, we dare say there would be more seedling roses in their gardens. If one has no other facilities, the seeds may be kept until Spring and then planted in well prepared beds in the open garden. Try it, friends.

How much less does a bushel of deep-eyed potatoes weigh than a bushel with the eyes on the surface or *not* deeply sunken? Let us take a bushel of each and *peel* them for boiling, and then weigh each. We fancy that the result would determine our readers never again to raise deep-eyed potatoes if they could raise shallow-eyed potatoes as desirable in other respects.

Moore's Early and Cottage Grapes the Rural recommends for the earliest blacks. The vines are hardy and healthy. The berries of the latter are better than the Concord; those of the former larger in size and as good. The Cottage at the Rural Grounds follows Moore's by about a week. For a large, showy grape we are anticipating a good deal from the comparatively untried Eaton.

Ten years of experimenting with potatoes at the Rural Grounds have taught us that the results of the experiments of one season must not be accepted as trustworthy guides for the next. We do not think that any farmer could even learn at what depth he had best plant his potatoes in less than 10 years' consecutive trials, and he would then need to plant the same variety of potato and know in advance whether the season was to be wet or dry.

Let us allow that there are 230 good-sized potatoes to a bushel. If we plant a whole potato one foot apart in drills three feet apart, we have 14,520 hills in an acre, requiring, in round numbers, 62 bushels. If worth 50 cents per bushel, the seed will cost about $30. Now, if we cut these potatoes in five pieces, which would give more than one eye to a piece, about 12 bushels would be required for an acre—a saving of $24 per acre in the cost of seed. Careful experiments made at the Rural Ex. Grounds have shown that two-eye pieces, from potatoes of rather large size, will yield as well as if whole potatoes are used for seed. Experiments made by others, however, tell a different story.

A few weeks ago we bought two packets of chrysanthemum seeds at 50 cents each. They were labeled as being seeds from the choicest new varieties. The contents of either little envelope could easily be held on the "point of a penknife," as we say. "Rather high-priced seeds" thought the writer, as he sifted them over the nicely prepared soil of a flower pot as he would have sifted so much dust. In a few days—less than a week—no less than 50 seeds in each pot sprouted, and the little plants are thriving nicely. One must expect to pay high prices for choice, fresh seeds, and he should be well contented if he gets what he buys. But to pay high prices for trash maketh the heart sad. We presume that these seedlings will bloom next Fall.

Potato growers in Michigan have met with serious loss in consequence of the "red streak" in the Late Rose. Probably $75,000 would not cover this loss. In some localities, farmers are inclined to regard the report of losses as a "scare" intended to affect the market. The disease is undoubtedly genuine, however. We are reliably informed that there are thousands of bushels of potatoes in the cellars of West Michigan of no value whatever for eating purposes, while many even question the safety of feeding them to stock. Various reasons are given as to the cause of the trouble. Some farmers hold that it was simply the result of the very wet season last year; others assert that the tubers were stunted during the drier part of the season, and that the late rains induced a second growth. Those who have most carefully studied the matter state positively that the variety has "run out." This result has been brought about by continued planting. Potato growers who suffered last year will do well to try other varieties. We consider this to be the best way out of the difficulty.

Always desiring to be on the conservative side in speaking of the seeds or plants which the R. N.-Y. has introduced until their real value has been made known by the thousands of reports with which our readers kindly favor us, we have scarcely expressed any opinion whatever of the Rural Blush Potato since its introduction (three years ago), except to say that generally it "straggled in the hill" and was sometimes "hollow-hearted." Now, we eat samples of at least 80 different kinds of potatoes during the year, and we now wish to make the bold remark that the Blush is in quality as good as any we have ever eaten at this season. It is sweet, nutty, mealy—as much so as any of the old Peachblows at their best. It is certainly a good keeper, and, as the reports of our subscribers show, highly productive. Many seedsmen now offer this good potato for sale, and our newer subscribers might do well to plant it in a small way.

Mr. Casper Hiller is considered one of the most successful farmers of Lancaster County, Pa. Mr. H. M. Engle writes that he invariably gets the largest yields from large whole tubers. But when it is considered that at least 30 bushels of such seed are required for an acre, and that a great proportion of the increase is in small, unmarketable potatoes, he finds but little profit in using such seed. He agrees with the R. N.-Y. that the two-eye cuttings are the best. He advocates the Rural's trench-mulch system with the modification of spreading the fertilizer nearer the surface, or, in other words, covering the pieces with three inches of soil rather than less before sowing the fertilizer. In this case he thinks the fertilizer would be near enough the surface to feed upon the upper roots, while the leaching down of the manure would feed the lower. Mr. Hiller believes that commercial fertilizers are best for potatoes, giving a larger and cleaner crop, and being cheaper than farm manure. He uses nine hundredweight of dissolved S. C. rock, seven of kainit and four of nitrate of soda, costing $25 per ton. Unless salt and magnesia are deemed valuable additions, we should prefer potash in the form of sulphate, or, perhaps, sulphate and muriate, with a smaller proportion of the latter.

"One should never be ashamed to acknowledge that he has been in the wrong; for it is but saying, in other words, that he is wiser to-day than he was yesterday." Senator Wilson, of Iowa, is wiser to-day than he was when he introduced that bill for doubling the postage on plants, cions, cuttings, seeds, etc., and, strange phenomenon in a Congressman! he is not ashamed to acknowledge that he is. The Legislature of his own State has passed a joint resolution protesting against the proposed increase, and requesting the Iowa Senators (Wilson and Allison) and Representatives in Congress "to use all proper means to prevent such legislation." A "joint resolution" by the Legislature of a State is a marvelous teacher of wisdom to the Senators of that State, whose reelection will depend on the good-will of that Legislature. Wisdom has also been swept in upon the Senator by the storm—hurricane—of protest and denunciation from "all sorts and conditions of men" in all parts of the country. He has, therefore, changed the provisions of the bill so as to decrease the rate on plants, seeds, etc., while increasing that on other items of fourth-class matter. We are thankful for this tardy concession; although, in view of the hot indignation of the public at the proposed legislation, all danger that the original bill would pass through Congress, had vanished before the Senator's lately acquired wisdom had induced him to alter it.

CHECKS ON FRAUD IN FERTILIZERS.

In a recent editorial we remarked upon the value of the analyses of chemical fertilizers made by the stations. It was stated that these analyses determine the *strength* of a fertilizer, but not necessarily the *value* of the strength. Of two samples that analyze just alike, one might be worth agriculturally twice as much as the other. Why then, we asked, do not the makers of inferior grades avail themselves of this margin to counterfeit the first-class article more than they do? There are several answers to this question. In the first place, many low-grade materials are bulky and can not be so combined as to show a high percentage of plant ingredients. Again, while unscrupulous manufacturers do avail themselves of the cheapest sources of plant-food supply, yet the cost of selling inferior goods, through dealers who look to large profits, is very heavy. Their goods need pushing, while the first-class goods sell themselves. The general expenses of manufacture, freight, storage, etc., are perhaps as great for the poorest as for the best and highest grade fertilizers. The manufacturers of doubtful or fraudulent fertilizers are really in the hands of the dealers or sellers, who to sell them are obliged to put down the price, to give long credits and offer every inducement to purchasers.

SPECIAL.

Those who, having applied for the Rural's present seed distribution prior to March 10th, have not yet received it, will kindly notify us by postal at once.

The seed packages for Canada subscribers have been expressed, to be mailed there and all should have received them by this time.

RAISING CALVES UNDER GLASS.

Is the idea absurd? Do we not start hardy plants under glass? Are they less hardy than those planted later? Is there so much difference between plant life and animal life that what will benefit one cannot be applied in growing the other? We recently saw some fine-looking calves that were being literally "raised under glass." The south side of a shed had been filled with ordinary sash. The calves were placed in this shed when two days old and given the benefit of a daily sun-bath. They were in splendid condition, fat and smooth and contented. We are told that calves raised in this way are perfectly hardy. They are certainly larger and of better shape than those tied in a dark stall or turned into a cold yard. All young animals should be made comfortable. It is a mistake to think that by exposure we can harden a tender and growing animal. Some parents pursue this course with their children. The little people are thinly clad and purposely sent out into the cold, in the hope that they will become tough. This system has produced many nervous and shattered men and women. As to the value of sunshine as an element of health, argument is not necessary. A warm sun-bath induces the hens to lay and gives evident comfort to the cow and horse. Without it health is impossible; with it medicine is hardly necessary.

EASTWARD RATES ON WESTERN MEAT.

The schedule of transportation rates on live stock and dressed meats, which went into force on the trunk-line railroads on the first of this month, appears to give satisfaction to nobody, and is to be "reconsidered" by the railroad "pool." All the railroads appear dissatisfied with it, except the Pennsylvania, which gets an undue share of the traffic, the Grand Trunk being especially discontented with it. The dressed-beef shippers have prepared for the Courts a "strong case" against the tariff; while the live stock shippers are preparing a case on the ground of unjust discrimination in favor of their opponents. The public have come to the conclusion that it is impossible at this late date, through any manipulation of rates, to change the course of trade in meat from the West to the East. For six years the movement has been steadily against the live stock shippers, as shown by the following table of relative shipments east:

	Actual tons.					
	1880.	1881.	1882.	1883.	1884.	1885.
Cattle	416,205	433,600	383,660	372,214	310,410	281,022
Dressed beef	30,705	43,774	65,775	149,640	184,993	231,634

Shipments of cattle from the West to the New England States, outside of Boston, have nearly ceased; while in the "Hub" itself, the receipts of dressed beef last year nearly equaled those of cattle. In New York, outside of this city, the dressed beef trade has shut nearly all the western live cattle out of the markets. Although this city was the last territory invaded by the dressed-beef men, the trade is rapidly increasing. With regard to the supply of meat from the West, the trade in New Jersey and Delaware is nearly all in the hands of the dressed-beef men. Just as Western wheat is now turned into flour at Minneapolis, so Western live stock must be turned into meat near the sources of supply. At present Chicago almost monopolizes the business; but there is no doubt whatever that points further west and south—nearer the great stock ranges—will ere long become local centers of the trade. The movement has already acquired no small consequence in Dakota, Montana, Nebraska and Texas, and there as well as in all the other great cattle-raising States and Territories, the business is sure to multiply and increase rapidly in importance.

BREVITIES.

First-class seed potatoes scarce and high with a lively demand.

Plant Sweet Peas. There are many new and beautiful varieties.

One of the greenest evergreen trees at the Rural Grounds during the Winter is Nordmann's Fir.

March 19, we sowed several small trial lots of so-called new oats. We have never as yet sown oats too early.

If we were to plant another hedge we should select the different colored varieties of the Japan Quince for that purpose.

After 12 years' experience with the Bird Cherry (Prunus padus) we have discarded it as unworthy of a place in ornamental grounds.

A fortune is patiently waiting the man who shall invent a potato digger that will work as satisfactorily as do some of our potato planters.

"I can see no philosophical reason for striving to raise the roots of any crop above the surface of the ground under ordinary circumstances, and my garden experience with all crops is opposed to the practice." See E. J. Brownell's article elsewhere.

There is a present for everyone of our subscribers who chooses to work for the R. N.-Y. in the way of raising clubs. Read the last page of the supplement. The *regular* premium-list as well as the $3,300 list of gift prizes and the Rural posters will be mailed free to all who apply for them.

Don't prune Forsythias, Japan quinces, lilacs, viburnums, thorns, Judas trees, weigelas, etc., in the Winter or Spring, unless you would deprive yourself of just so many flowers as the wood cut off would bear. As we have often advised our readers such shrubs should be pruned, if at all, as soon as they have bloomed.

Those who are interested in the potato reports from the Rural Ex. Grounds, will by them be enabled to judge somewhat as to which of the newer varieties it is well to try. The following kinds may be specially mentioned as worthy of trial: White Star, Empire State, Late Beauty of Hebron or White Elephant (they are *very* nearly alike), Rural Blush, Green Mountain—all for later crops—Early Maine, Pearl of Savoy, Thorburn and Beauty of Hebron for early.

By a misprint in the last report of the Connecticut Agricultural Experiment Station, the potash of kainit is quoted at wholesale in December of 1884 at less than one cent (.82) a pound. It should have been 2.82. But kainit at wholesale means the article in bulk on board of the vessels importing it. To this should be added, not only the bags and the cost of bagging, but the cost of lighterage, receiving and storing, cartage to point of shipment, etc., all of which items cost just as much in low-grade as in high-grade fertilizers. Figuring upon this basis, it appears that the cost of the actual potash in kainit during 1884 averaged somewhat higher than the potash in high-grade muriate.

The Cherokee Strip Live Stock Association procured a lease of the entire Strip from the Cherokees for $100,000 a year, and then, reserving some for their own use, sublet the rest for $500,000,, thus securing free grazing for their own stock and pocketing $400,000 a year by the job. Why are poor homesteaders excluded from this region or driven out at the point of the bayonet, while foreign and domestic cattle syndicates and kings are allowed to occupy it in violation of law; for it is a well settled fact that Indians cannot legally grant leases of their lands to white men, without the written consent of the Department of the Interior? Why was the President's proclamation expelling the cattle barons from the Indian Territory confined to the Cheyenne and Arapahoe Reservations? Was it because influential Senators and Representatives were pecuniarly interested in the leases of other parts of the Territory?

SECOND POTATO SPECIAL

OF THE

Rural New-Yorker.

CONTINUED FROM PAGE 200.

POTATO EXPERIMENTS AT THE RURAL EXPERIMENT GROUNDS.

O. K. MAMMOTH on *poor, light soil* yielded as follows:

	Bushels.
With no fertilizer—rate of	191.54
" 200 lbs. Lister's Fertilizer, per acre	252.04
" 600 " " " " "	483.54

WHITE STAR, under the same coudition of soil, etc.:

	Bushels.
With no fertilizer—rate of	231.88
" 300 lbs. Mapes's Potato Fertilizer	376.27
" 600 " " " "	352.88
" 1200 " " " "	231.80
" 300 " Lister's " "	332.71
" 600 " " " "	393.21
" 1200 " " " "	312.50

Single strong eyes gave a yield at the rate of 171.45 bushels; two strong eyes, 252 bushels; three stroug eyes 292.50; four strong eyes 322.86.

Two-eyed pieces of Queen of the Valley planted iu a spade-wide trench four inches deep, covered lightly with soil, the furrow nearly filled with cut straw with the fertilizer placed on the straw, yielded at the rate of 169.40 bushels to the acre. The same sized pieces planted under alternate layers of soil and hen manure, yielded at the rate of 405.83 bushels per acre.

With salt at the rate of 40 bushels per acre spread on the soil, the seed pieces rotted in the ground.

Two-eyed pieces of Peerless were first covered with soil lightly, then with salt at the rate of 15 bushels per acre, then with stable manure, theu with hen manure, at the rate of 30 bushels per acre, and finally with unleached ashes at the rate of 15 bushels. It was desired to learn (1) whether a surfeit of manure would increase the yield, and (2) whether the salt would prevent the depredations of wire-worms. The yield though at the rate of 226.83 bushels, was yet smaller than the yield of the same number of pieces when fertilized with stable manure alone. They were badly eaten by the wire-worms.

Potatoes tested in a rich soil, and shaded after 12 M., yielded at the rate of 390.30 bushels. The same variety, under the same conditions of culture, shaded until 2 P. M., yielded at the rate of 520.30 bushels. The afternoon sun, in this experiment, gave more potatoes of a smaller size.

It is more economical to mix Paris-greeu with plaster than with water. The water mixture is never perfect. A table-spoonful of the plaster will be needed to render a pailful of water effective, while the same quantity thoroughly mixed, will do the work for two pailfuls of plaster. Much of the water mixture falls to the ground and is lost. What falls upon the plant collects upon the ceuter of the leaves so that the bugs can eat the edges safely. The poisoned plaster settles upon all parts of the leaves, and the bugs are killed with comparatively little injury to the vines.

It will be hard to improve upon Paris-green as an insecticide. When properly applied it need not injure the leaves in the smallest degree. Mix on an unused floor, using an iron rake. Buy pure Paris-green, aud use enough to impart the first tint of green to the plaster.

London-purple is a powerful insecticide, but we find that it will not bear auything like so much extension as Paris-green. If used too strong, the leaves are at once scorched.

It does not pay to try and pick off the first potato beetles in the hope of saving work later on. If all the parent beetles could be destroyed, there would be no grubs, but at the time of picking, a large proportion of the beetles will be concealed under the ground, or be creeping about from place to place, so that it is impossible to destroy them all. Whenever this work has been attempted, we have still been driven to the use of Paris-green as in previous years, so that the work is thrown away.

A good-sized Peerless Potato was peeled so that but one strong eye was left at the middle with a narrow ring of skin about it. The design was to plant a single strong eye with the whole potato as a seed piece. The yield in rich soil was at rate of 806.66 bushels per acre. The same kind of potato cut to a single eye, at one end, with a narrow cylindrical piece running through the potato, cultivated in the same way, yielded at the rate of 211.75 bushels.

The quantity of flesh that should go with each seed piece is, theoretically, that which, without unnecessary waste, will support the eyes until, by the growth of roots, support from the flesh is no longer required. Repeated experiments alone can determine how much of seed nutriment may be needed. Difference in sorts or seasous, causing rapid or slower growth, must be taken into account in preparing seed.

On page 682 of the RURAL for 1884 will be found an elaborated statement of experiments with different fertilizers on potatoes in a "worn-out," saudy, loam soil. Twenty-seven different single fertilizers or combinations were used. The best yield was obtained with a mixture of 500 pounds of Mapes's potato manure and 50 pounds of kainit per acre with hay mulch. Ten tons of old farm manure gave fewer potatoes than 800 pounds of potato fertilizer, and a larger number were of marketable size.

At the rate of 40 bushels of uuleached ashes yielded 184 potatoes with 78 marketable, while at the rate of 55 bushels of heu manure per acre yielded 347 potatoes with only 47 marketable. Nitrate of soda, sulphate of ammonia, hen manure, coal ashes and ground boue gave the smallest percentage of marketable potatoes. Potash alone did no good. Dissolved burnt boue, which furuishes phosphoric acid only, did no good. Nitrogen increased the growth of the vines, which for want of potash and phosphoric acid iu the soil, gave no increase of tubers. Complete fertilizers in every case gave an increase of crop.

If you do not kuow what the potato land needs, apply complete fertilizers till you find out. A tou of potash might be spread upon the land without any result. Plants, like humau beings, need a complete food. On some soils a single element will make the food complete, while in others several must be applied. It does not pay to experiment upon the whole piece with a single element.

Barn manure, aside from its mechanical effects, is the same as the concentrated fertilizers except that it is less soluble. If we could burn the barnyard manure and preserve its nitrogen we should have what we apply as a chemical fertilizer.

Pieces cut from the seed end yielded at the rate of 118.96 per acre. Pieces from stem end with similar conditions of soil and cultivation, yielded at the rate of 164.20. Seed-end pieces appear above the ground first, but there is little difference in the time of maturity.

Drought aud lack of available food are the two great enemies of great yields of potatoes. The latter can be supplied by fertilizers. We cannot control the seasons. By means of mulching, we cau conserve moisture to be used by the plant duriug the dry season. It is evident that the tuber takes no part in the nourishment of the plant, but that it must be nourished by the plant and its roots. The tuber is so largely made up of water that any lack of supply checks the growth materially.

Experiment Grounds of the Rural New-Yorker.

TESTS OF NEW VARIETIES OF POTATOES CONTINUED.

SOIL, CULTURE, ETC.

SUBSCRIBERS should understand that these tests are made in a rich, moist, garden soil. The crop never suffers seriously either from drought or too much wet, as the land is well drained. Not only has farm manure been liberally supplied, but fertilizers of every kind have been used in abundance. Potatoes have been raised on this plot for six consecutive years. Trenches are dug one foot wide and six inches deep, and three feet apart. Two inches of soil are raked back in the trenches, and the seed pieces (two strong eyes each) are placed one foot apart. Two inches of soil are then raked over them, and the fertilizer is strewn evenly at the rate of about 1,000 pounds to the acre. The rest of the soil is then returned to the trenches as loosely as possible. The cultivation is then effected by hand cultivators, and hilling up is studiously avoided.

CHARLES DOWNING. Received from O. H. Alexander, of Charlotte, Vermont. Planted April 15; dug August 4. Four pieces yielded 44 potatoes, 36 marketable. None very small. Resembles Beauty of Hebron, except it may be a little earlier. Weight seven pounds. Best five weighed one pound seven ounces. This per acre would be 423.50 bushels. The cut of the Lake George Potato serves for this in every way.

LAKE GEORGE. Also from Mr. Alexander. Planted April 20; dug in early August. It is earlier than Early Rose—perhaps one of the earliest potatoes we have ever tested. Five seed pieces yielded 51 tubers, of which 39 were of rather small marketable size. Weight 7¼ pounds. Five largest weighed one-and-a-half pound, an average of 8¼ to a hill. This yield per acre would be 302.50 bushels. Eaten when dug. Flesh not so white as E. Rose; quality inferior. See Fig. 121 (p. 199).

GREAT EASTERN (Rand) from Thorburn & Co. Planted April 15. Late. Six seed pieces planted, which yielded 10 pounds of potatoes, 34 in number, of which 28 were marketable. Yield per acre at the rate of 403.33 bushels. Buff skin; eyes rather deep; shape variable. Eaten Dec. 1st. This seems to be of the Peachblow class, the quality of which is never good as raised in this soil.

WHITE LILY, renamed Early Standard, from George Nigh, of Piqua, Ohio, was accidentally mixed with others when dug. He says it is a cross between White Star and Beauty of Hebron, and 10 or 20 days earlier than any other, handsomer, a greater yielder, and equal if not superior in quality to any other potato grown in the world. Rather important claims certainly.

MURRAY'S GOLD FLAKE, from William Murray, Mount Gilead, Morrow County, Ohio, who says: "This is supposed to be a sport of the Mammoth Pearl. It was found among a lot while digging, the Fall of 1883. Its peculiar color, good shape and smoothness attracted my attention and I carefully preserved and planted them the Spring of 1884. They are as good as any of the much talked-of new kinds."

Six seed pieces were planted April 20, and yielded, August 15, 43 tubers, weighing 12 pounds, of which 29 were marketable. The best five weighed three pounds three ounces. The shape is broad, short, somewhat roundish, some flattened. Fig. 120 (page 197), presents the shape as nearly as we could determine it. Eyes not deep, but large. Skin of a russet or dull yellowish color. Distinct in appearance. The yield would be at the rate of 510.66 bushels to the acre. Eaten November 18. Flesh nearly white—quality not of the best as raised in this soil.

ROSE'S BEAUTY OF BEAUTIES.—From A. Rose (Peun Yan, N. Y.), who writes: "It is a seedling of the Peachblow." Nine seed pieces were planted April 20. It is a late potato. The yield was 16 pounds, 52 tubers, of which 37 were marketable. The best five weighed 3½ pounds. This yield would be at the rate of 428.50 bushels per acre. Yellow-buff skin; eyes medium in number, a trifle deep. Eaten November 3. Flesh yellow-white, soggy. Our illustratiou (Fig. 123, p. 197), shows the typical shape.

VERMONT FAVORITE, from O. H. Alexander, Charlotte, Vermont. Five pieces were planted April 21. Late. Yield 16¼ pounds—45 tubers, 29 marketable. Best five weighed four pounds eight ounces. The yield is at the rate of 786.50 bushels per acre. A chunky potato, usually smaller at one end and truncate at the other, as shown at Fig. 122 (p. 197). Eyes medium as to number and depression. A large, coarse potato. Eaten October 28. Wet and heavy.

POTATO FIGURES. We give below the potato production in the United States for the 14 years, from 1871 to 1884 inclusive. The largest average yield was 111 bushels in 1875. In this year the price averaged but 37 cents, while in 1881, when the average was but 53 bushels, the price rose to 91 cents. The average yield for the 14 years was 93 bushels, and the average price 49 cents, making the average product per acre for this crop $45.51. The average value of the corn crop for the same period, was, in round numbers, $12, and of wheat $13 per acre.

	Acres.	Bushels.	Value.
1871,	1,220,912	120,416,100	$72,249,660
1872,	1,331,331	113,516,000	68,109,600
1873,	1,295,138	100,089,000	74,249,660
1874,	1,310,041	105,981,000	72,067,080
1875,	1,510,041	166,877,000	65,082,030
1876,	1,741,983	124,827,000	93,334,000
1877,	1,792,287	170,092,000	76,541,400
1878,	1,776,000	124,126,650	73,234,723
1879,	1,839,800	182,626,400	79,914,736
1880,	1,842,510	167,659,570	80,476,593
1881,	2,041,670	109,145,494	99,322,399
1882,	2,171,636	170,972,500	95,804,844
1883,	2,289,275	208,164,425	87,849,991
1884,	2,216,800	190,263,668	75,302,480

Of the crop of 1884, the latest for which complete returns have been received, the New England States, with New York, New Jersey and Pennsylvania, produced 51,935,528 bushels, or about 27 per cent. of the entire product, with a value of more than $30,000,000. These States, with Ohio, Michigan, Illinois and Iowa, produced more than half the entire crop of the country. The average value of an acre of potatoes in New England was $49. In the Gulf States an acre of potatoes brought $68; in California $57; in Ohio $31. In 1884 Great Britain and Ireland, with a population of 34,872,566, had 1,373,835 acres in potatoes; or, with 67 per cent. of the population of the United States, the United Kingdom had only 60 per cent. of our potato acreage, though the average yield was larger.

CULTURE OF THE POTATO.

FRANK FORD.

THE varieties most extensively grown and found most profitable for market here are Burbank, White Star, O. K. Mammoth, and Orange County White. The White Elephant, Queen of the Valley, and Mammoth Pearl are raised to some extent. The State of Maine and Rochester Favorite are varieties that will be largely planted when better known. Both are of fine quality and very productive. Very few early potatoes are grown for market. Those mostly grown for our local market and home use are Lee's Favorite, Clark's No. 1, and Beauty of Hebron; all of the very best quality and good yielders. The Empire State did well last seasou and promises to be a leading variety. Its quality is excellent.

I prefer to plant on ground that was thoroughly enriched and planted to corn the previous year. Use no fresh manure: but, instead, Mapes's or some other fertilizer of about the same analysis. Next to corn ground I prefer clover sod. I would not plow until time to plant, and then I would as deep as the nature of the ground will admit without turning up too much poor soil. Pulverize the soil thoroughly. The Acme Pulverizer does good work, but is very hard on the team. Mark out the ground in *straight* rows three feet apart, and from three to five inches deep: plant deeper in light soil than in clay. Cut the potatoes so as to give to each piece enough substance to sustain the sprouts till they have grown enough to enable the roots to take nourishment enough from the soil to keep up a rapid growth, whether it be one, two, three, or more eyes to each piece. For very early planting of early varieties, plant medium-sized whole tubers for best results.

Drop the pieces about a foot apart in the row. Cover with the Planet Jr. Coverer. Planting begins here early in April and continues till the first of June. I prefer the middle of May. It is well to harrow the ground once or twice before the potatoes appear above the surface, but never afterwards. I have used Mapes's and Bradley's Special Fertilizers with splendid results, both in the drill and mixed with the soil before the potatoes were dropped, and by covering the seed about an inch and then scattering the fertilizer along the rows, the tubers are of more uniform size and less liable to be scabby—and the yield will be larger.

I hill the potatoes but very little, for I prefer flat culture as nearly as can be given, while using the Planet Jr. Cultivator often enough to keep the ground mellow, allowing scarcely a weed to start. I know of no way to avoid blight or rot, and know less about scab than I thought I did several years ago: but that fungus is the cause cannot be disproved by facts. Wire-worms eat into potatoes and make holes, but that is not scab.

We dig with forks, and the thousands of car-loads shipped from Portage County are mostly dug by hand either with forks or hooks. No potato digger that has been tried has given satisfaction. We sort and sack our tubers in the field, never allowing them to lie in the sun longer than we can help. They are carefully hauled to the cellar and put where they are to remain till used or sold. The cellar is kept dark and as cool as possible without chilling the potatoes. The small tubers are fed to stock, being never used for seed. I prefer to dig soon after the tops are thoroughly ripe, and before the fall rains have soaked the ground. I raise potatoes mostly for seed; but those who grow largely for ordinary market, think it pays best to sell from the field, even if the price is not quite as high as they wish, as it saves storing and a great deal of heavy work.

My ideal potato would be oblong and slightly flattened or oval, medium-sized with pink or flesh-colored skin, abundant and rather prominent eyes, denoting good yielders; flavor free from the old Peachblow taste, but so pure as to be really palatable without even salt as a condiment. I have now a very few such, and on fair farm soil they should yield not less than 250 bushels per acre, and should ripen early or medium early.

The average yield of potatoes in this vicinity is not over 100 bushels of marketable tubers per acre by the ordinary slovenly methods pursued. I think it a poor yield if I do not get over 200 bushels, and often run to 500 without any special amount of fertilizers or care. In growing potatoes, there are a few essential points that must be kept in view to insure a good yield—use a fair or liberal amount of seed; plant as deep as the nature of the soil will admit; keep the ground mellow; never allow a weed to grow, and make a judicious selection of varieties.

We conquer the Colorado Beetle with Paris-green—a small teaspoonful to a three-gallon can of water, or, if used with plaster, one pound to 200 pounds of the latter; this is quite

strong enough to be effectual, and it will not injure the vines.

Portage Co., O.

PREVENTING ROT.

FOR 20 odd years, I have used dry slaked lime in storing potatoes in the cellar, whether in a box, barrel or on the ground. We first sprinkle a layer of lime, on which we place a six-inch layer of potatoes; then comes another sprinkling of lime and so on till all are stored, when a good sprinkling of lime is made on top. When thus treated with one bushel of slaked lime to 40 bushels of potatoes, the pile is safe. Even though an occasional affected one should chance to get in, it won't rot those around it or impregnate the air of the cellar. Since we began the use of lime, no foul air has been detected in the cellar, and there has been no overhauling for rotten potatoes. PETER M. GIDEON.

Hennepin Co., Minn.

THE RURAL BLUSH AHEAD.

AFTER another season's trial with many varieties of potatoes, I find the Rural Blush greatly ahead of all others in productiveness, size, freedom from rot, and smooth, attractive appearance. It is almost equal to the best in quality. While most other varieties were scabby, this was entirely free. I think there are several causes of scab. In most cases fungus seems to be the predisposing cause. This attracts the wire-worms, and I have also observed on scabby potatoes small, white pin-worms about three-quarters of an inch in length. These I have often found in large numbers. In many cases the scab seems to be incipient rot.

The Blush had as competitors, the White Star, Beauty of Hebron, Early Maine, Clark's No. 1, Lee's Favorite, Mayflower, Magnum Bonum, Parson's Prolific and Dakota Red. I have discarded the Mayflower, Magnum Bonum and Parson's Prolific as being unworthy of further trial. The Blush outyielded them all. The potato beetles were numerous just as the plants broke through the surface of the ground, and as I was very busy at the time, I did not use an insecticide, and consequently many varieties were greatly damaged and some almost entirely destroyed. The Blush seemed to have an immunity from the destructive ravages of the pests, not being injured in the least. This I account for by its robust and vigorous habit of growth, whereby it got and kept ahead of the bugs' voracious appetites.

The land was moderately enriched with stable manure and the seed was planted in drills three feet apart and five inches deep. The pieces, cut to two eyes, were dropped one foot apart and covered with a one-horse, eight-inch plow, the ground being then dragged and harrowed. As soon as the sprouts could be seen above the surface, they were hoed by hand once and after that cultivated three and some of them four times, with the Planet Jr. horse-hoe and cultivator. For first early, I like the Early Maine the best. They are early, of good quality, very productive, smooth and handsome. The Blush yielded 350 bushels to the acre—a much larger yield than that of any other variety, nearly three times as many as White Star, which is generally considered a model of productiveness. The Blush has another favorable peculiarity—it is such a rampant grower, and the vines so completely cover the ground as to almost utterly extinguish weeds. And the tops die so late that there are scarcely any weeds to annoy in digging the crop. All my other varieties produced such immense crops of weeds, after the tops had died down, that the pests had to be mowed off. T. B.

Monticello, Ill.

THE RURAL'S MULCH-TRENCH SYSTEM.

My farm is hill land, a moist loam lying over clay. In my usual way of raising potatoes I manure lightly from the barn; plow and harrow; mark off drills three feet apart; sprinkle in the drills a small quantity of phosphate; drag a brush through the drills, drop in them the seed, cut not too fine, about a foot apart, cover with a hoe, and when they are ready for it, cultivate and hoe twice. Last Spring I made 20 drills in a patch about 100 feet long and 60 wide. The four middle drills I planted in accordance with the trench-mulch system in a rough way; that is, I ran a light plow both ways in each of the four drills, sprinkled in sawdust on the potatoes, then sprinkled the phosphate and then covered with a hoe without taking much pains to level the ground more than in the other 16 rows. The cultivation afterwards was the same. In the mean time I had to listen to a good many jokes about my new way of raising potatoes from sundry visitors, neighbors and my own workmen. I intended to weigh at digging time the potatoes in the four rows and in the four next on each side, but where we began to dig the land was richer and wetter than in other parts of the lot, and the potatoes had rotted badly for from 10 to 15 feet, and I thought they were a failure under both systems of cultivation; so I told the men to dig them all and pay no further attention to the systems; but after they had dug 10 or 15 hills they found the yield much better, and threw the tubers in between the rows and notified me, and I overlooked the picking up. The yield was very nearly 10 bushels in the four mulched and very nearly eight bushels in the four adjoining rows cultivated by the old system. I intend to try the RURAL'S system again next season in a more accurate and thorough way, for I am satisfied that the yield in this locality will be one-quarter more by using it. C. W. C.

Ferryville, Conn.

THE IDEAL POTATO.

My ideal of a perfect potato is one of medium size, with a clean, white skin (although any kind of color would not be objectionable, provided it possessed all the other qualifications), with very shallow or slightly raised eyes; flesh pure white, cooking dry and floury; without any earthy or other decided flavor, unless it should be a peculiar nutty taste, occasionally found in some sorts when grown under favorable conditions. The plant should be stout but not rank, and the tops should not be too spreading, while the yield of marketable tubers should be large, with very few or no small ones. It should be a good keeper, retaining its early good quality until late in the season. The tubers should grow compactly in the hill and be produced at a shallow depth, without any tendency to grow out of the soil. Moreover, it should be adapted to a wide range of country, retaining its size, quality, productiveness, etc. nearly everywhere, on an almost infinite variety of soils. Although we have hundreds of varieties, we have as yet no single potato with all the above qualifications. In order to bring about this desired improvement, there is evidently but one way—to save the fruit of sorts most nearly approaching the "ideal" in every particular (cross-breeding or hybridizing, if possible, kinds which together possess all that is desired), and plant the seeds from these fruits until the perfect ideal potato is obtained. E. G. M.

Otsego Co., N. Y.

RURAL'S TRENCH SYSTEM, ETC.

IN the Fall of 1883, I plowed about one-tenth of an acre of old Timothy sod—a dark loam, but loose, light and easy to cultivate. The following Spring it was cross-plowed and given a dressing of barnyard manure at the rate of about 20 wagon loads to the acre. It was then thoroughly harrowed and planted with Blue Victor Potatoes, two eyes to a piece, two pieces in a hill. The crop got good cultivation under the old hoeing and hilling-up plan. Yield 10 bushels, at the rate of 100 bushels to the acre. I think it was the poorest crop I ever raised. In the Fall the ground was again plowed and the next Spring (1885) cross-plowed and a light dressing of barnyard manure was well harrowed in. About one-twentieth of an acre was then selected for my experiment. Trenches five inches deep, over a foot wide at the bottom and about 3½ feet apart from center to center were then made, and the seeds, two eyes to a piece, were dropped, one piece in a place, about a foot apart in the row. They were then covered with about an inch of earth, then with a coating of, perhaps, half as much unleached hardwood ashes, and, lastly, with earth enough to fill the trenches. They were slow in coming up; but of the darkest, richest green, in striking contrast with the dark brown soil. As fast as weeds began to appear, I went through the patch with a hoe, this being all the cultivation given, and I found it light work.

My experiment having attracted the attention of neighboring farmers, and in their opinion, the time for hoeing having arrived, some came and watched the novel mode of cultivation, and put in remonstrances. "A good-enough way to plant potatoes, but a fool of a way to cultivate them," said one. "I should go through them with a plow and hill 'em up, anyway," declared another. And they predicted a clearly defined case of "dearly bought wit." However, I persisted in the RURAL'S plan, except mulching, which was unnecessary, the season being wet, and the vines soon completely covered the ground, so that it was impossible even to pass between the rows. At digging time, the result was all that could be expected or desired—yield, White Elephant, 18; Beauty of Hebron, 10, and St. Patrick eight bushels; total, 36 bushels, or at the rate of 720 bushels to the acre, all marketable, the small ones not being included.

During my experience as a farmer, I have usually been successful in potato growing, whether on light or heavy soil. I attribute my success to placing the manure *above* the seed, deep planting, thorough cultivation, and the free use of hard-wood ashes as a fertilizer. My usual method has been to break up clover sod after haying, cross-plow it the following Spring, give it a thorough harrowing, then a good dressing of barnyard manure, again harrow, then furrow out one way, three feet apart, and drop the seed crosswise of the furrows, two eyes to a piece and three pieces in each hill. I cover well and give good cultivation, beginning as soon as the weeds appear, and going through with a hoe whenever necessary, until we can no longer get among the vines without injuring them, hilling-up but lightly and "ashing" in the hill at the first hoeing.

With a slight difference in planting—that of first covering the seed with an inch or so of earth, then applying the ashes, then covering well with earth, and giving a more level cultivation—I think crops may be raised to more than equal those grown by the RURAL'S system. From past experience, I find that larger potatoes may be thus grown in hills, and I think that with proper management, remarkable results may be secured. As soon as they are ripe and the vines begin to die, my potatoes are dug, allowed to dry off, placed in boxes or barrels and covered till the following day, then carefully looked over. All affected ones are rejected and the good ones are placed in the cellar in bins holding from 10 to 25 bushels. I sprinkle slaked lime among them as stored in the bins. I think this a decided help in preventing rot in the cellar. As soon as a rotten potato is found in the bins, it is removed and burned; but with the lime, anything except dry rot is seldom seen.

With me the Snowflake is not a good yielder, and is unfit for boiling, except in its jacket, as it boils away so badly; but it is a fine baking potato. Sprague is large, a good yielder, in quality a trifle below the Rose. The White Elephant and Beauty of Hebron are both excellent and yield well. St. Patrick is in quality unsurpassed, scarcely equaled, and in yield hardly second to any of the best. A. V. V.

Ulster Co., N. Y.

VARIETIES—KEEPING QUALITIES, ETC.

THE last season for planting and growing potatoes was so wet that the crop was much damaged, and most varieties rotted very badly, especially on poorly drained clay land.

Dakota Red averaged twice as large and yielded three times the number of bushels per acre (under equal conditions) as any other variety. They are moderately long, with pretty deep eyes and free from rot. Though extremely large, none are hollow. I think they are the greatest improvement since the Early Rose was introduced, and the most productive I have tried. American Giant, a long, thin, pretty-looking potato; a moderate cropper, and poor keeper. Lee's Favorite, a poor thing every way. Early Mayflower is very little better. Big Benefit is the worst I have, being the poorest cropper and almost every one rotted under good care. Early Sunrise and Early Ohio are among the best croppers and the worst rotters. Beauty of Hebron was our favorite for the table, but a poor cropper and only a moderate keeper. Wall's Orange appeared pretty good when dug, but nearly all have rotted since. Magnum Bonum is a good large potato; a good cropper and keeper—among the best. White Star rather poor in every way. [This surprises us.—Eds.] Coljum's Superb, moderately good in every way. Irish Wonder, a pretty good cropper, but a poor keeper. Mammoth Pearl and Snowflake, medium sorts in every way, large. New Champion, a moderate cropper and poor keeper—a very bad-looking potato, ill-shaped and with deep eyes. Home Comfort, beautiful, indeed; of even size, long and pinkish red, a very good cropper and a moderately good keeper. White Elephant, a very heavy cropper, but bad keeper. Halton's Seedling, a moderate cropper; very small size, a good keeper. Rural Blush, a charming variety to every person who sees it, of even, moderately large size, about the shape and solidity of the old Peachblow. Rot is entirely unknown in it. It requires a season much longer than any of the others. Early Rose, pretty badly run out here; but it still yields a fair crop, and doesn't rot worse than the average.

We keep potatoes in small piles in the field where they grew until wintry weather is expected, and then (if not marketed) we store them in pits dug deep enough to keep them dry—say 12 to 18 inches. Bank the excavated earth on the edge of the pit; then pile in the tubers; cover well with dry straw, (being careful through all the digging and storing to keep them dry) and a few inches of earth; and as the weather gets colder, apply another layer of straw and a few more inches of earth; and if the weather gets extremely bad throw on a few wagon loads of stable manure.

We had no scab this year. I believe it is generally caused by worms. Our soil is a sandy loam. We find the best crops and cheapest culture, or, in other words, the most profit by the following system: "Get the best varieties for seed, and change the seed every few years. Start cutting the potato from the stem end, one or two eyes to the piece, until nearing the eye end, and then split the rest through the center of the bunch of eyes. Leave the seed a couple of days to dry after cutting. Then, in a rich, sandy piece of land, make furrows with a narrow plow—say three feet apart. Drop the pieces about 15 inches apart in the furrows, and cover with a plow about four or five inches deep. Then, just as they are growing out through the surface, harrow all over, thus killing the first and worst crop of weeds and giving the potatoes the start. After-culture depends much upon what implements are to be had; but I generally use a double-mold-board plow for hilling and digging, and I like it well. I find it generally pays best to market in the Fall.

Kent, Ontario, Canada. F. W. WILSON.

POTATOES IN COLORADO.

I PLANTED four acres of potatoes last year, and gathered 1,100 bushels. I plowed the ground in April and then manured it with about ten loads to the acre, and planted about the last of May, plowing the ground and dropping the "seed" in every third furrow. Varieties: Early Ohio, Bell, Mammoth Pearl, Peerless, White Elephant, Wall's Orange, Rural Blush, Compton's Surprise, Ruby and Snowflake. The Mammoth Pearl and Peerless (which I believe are the same) out-yielded all the rest. The Bell is very fine, did well and is excellent for eating. From the little Rural Blush I raised, the first year, six pounds; the next six bushels, and this year 175 bushels, and I did not plant all either. It is a very good eating potato, but very late. Wall's Orange is a humbug. E. H.

Fort Collins, Colorado.

GROWING POTATOES ON IRRIGATED LAND.

DID you ever wonder how potatoes were managed in a country where the soil and climate are so dry that from one to four irrigations are necessary to grow any kind of farm crop? I have successfully grown considerable quantities for some 10 years, and having for the greater part of the time had control of the moisture, I have learned by observation and experience the degree of humidity required by the potato plant at its different stages. Of these latter there are three—1, from planting to the beginning of the formation of tubers; 2, from then until the growth of the tuber is nearly completed; 3, from then until the tubers have matured. For moisture during the first stage we can safely depend on spring storms, which are usually not excessive, but sufficient to carry the plant along till it begins to blossom. No matter if the plant at this time looks sickly and wilted for want of water, let it struggle along till the tubers begin to form. Then we apply the water—soaking thoroughly, not by flooding over the surface, but through trenches between the rows. During the second stage the ground must not be allowed to get dry. Keep it damp three or four weeks. If rains fall during this time we irrigate less. After the tubers are grown, the ground will dry gradually till they ripen. No danger of the soil getting too dry then.

In the season of 1884 the Rural Blush took the lead. Last year it was an even thing between these and the Vermont Champion, planted side by side. In quality the latter was a trifle the better. Other varieties on different soils did finely, such as Early Beauty of Hebron, Early Ohio, Chicago Market, Lee's Favorite, Brownell's Best, Alexander's Prolific and several others. The very best, however, for Fall and early Winter is the Early Mayflower, quality considered. Rot we are seldom troubled with. Scab is worst in that part of the field that gets the most water, usually the upper end near the ditch, and here only when the ground has "soured" and becomes moldy by excess of moisture, C.

Longmont, Colo.

HOW TO PREVENT DISEASE.

IN preparing poison for my potato vines, I mix 100 pounds of plaster with three pounds of sulphur and one pound of pure Paris-green, if I can find it. I am inclined to believe that the sulphur prevents blight. I used this preparation on half an acre last season and did not have a diseased potato. In order to escape disease the following points are considered important: 1. Select well-matured, sound seed. 2. Plant, as far as possible, on

new soil or on ground which has not received an application of rich manure for several years. 3. Avoid all strong, partially decomposed manures. 4. Plow deep and thoroughly pulverize the soil; encourage the growth of the tuber rather than that of the stalk.

Chittenden Co., Vt. O. H. ALEXANDER.

SCAB.

IN the RURAL'S excellent Potato Special of January 16th, Prof. Caldwell appears to have not fully noticed all that Worthington G. Smith says of the potato scab. In addition to the portion quoted from his work on "Diseases of Field and Garden Crops," there will be found, under the head of "Smut on Potatoes," the form of the "smut," or scab, best known to me, the Tubercinia scabies. This is very prevalent in some seasons and is at times, in warm cellars, very destructive to the stored crop. Mr. Smith, on page 35, fully describes the species of fungus that causes one of the commonest forms of scab. The fact that it is described by Mr. Smith under the name of "smut" rather than "scab," is perhaps the reason why Prof. Caldwell failed to notice it. I do not doubt that the scab produced by the cracking of potatoes by their rapid growth when grown on a rich soil, is assisted also very materially by wire-worms. I have found that potatoes used for seed, that are scabbed by the Tubercinia, are apt to yield a crop more or less affected by scab, according as the season is warm and wet. I think Mr. Smith is correct in saying, "No potatoes showing a trace of smut, should be used as seed."

Philadelphia, Pa. ELI MINCH.

THE EARLIEST.

FOR Early Market the Early Ohio, I find by experiment, takes the lead of all the most prominent early potatoes. On April 19th, last year, I planted Ohios, one and two eyes to a piece, and on June 26 I marketed tubers the size of goose eggs, of which there were four to six in each hill—period 68 days. I have seen about 91 potatoes making a bushel of 60 pounds. Pearl of Savoy is two weeks later, but yields 12 to 15 marketable potatoes in each hill. C. HARRIS.

Franklin Co., Ohio.

THE POTATO QUESTION.

PRESUPPOSING that the soil is in average good condition and drained—either naturally or artificially—the discussion is narrowed to a consideration of improved methods and the application of labor-saving devices. Whether the land be in sod or stubble, the best kind of plow, with jointer attached, should invariably be used, in order that all refuse which might interfere with thorough and unobstructed working of the soil, may be completely buried out of the way. Plowing done, the pulverizer, in the shape of the Acme or some other equally good implement, should be put at work and kept at it until the soil is thoroughly reduced; after this I have found the following treatment uniformly satisfactory: Buy, hire, beg or borrow a Kemp manure spreader and drive to the compost heap.

For the benefit of this farmer's savings bank my barn and yard are so arranged as to save all excreta, solid and liquid, from all stock upon the farm. In addition, every bit of farm refuse is deposited there, to be drawn out in the Spring. With every load of barnyard manure two or three loads of muck have been composted, and to assist in decomposition, as well as to add in value, unleached ashes have been incorporated in the proportion of 600 pounds to as much manure as is desired upon one acre of land. To each 600 pounds of ashes 200 of raw bone were added, that the potash in the ashes might render the plant-food in the bone available. To the above mixture 100 pounds of air-slaked lime were added to assist the potash, and an equal quantity of gypsum to absorb the ammonia thus set free. The preparation of this compost heap has been a work and a study, but it has been a study of interest and a work of reward. The outlay I think justified, as the resultant benefit must be divided between several successive crops following the application of the manure.

Load up the Kemp, attach the markers and deposit the compost either broadcast or in drills. If in drills, follow with a light harrow lengthwise of the marks, to slightly cover the manure with soil, as the growing tubers are impatient of immediate contact with stable manure. Follow with the planter. As the plants are just about to break through the soil, harrow with a light, steel-tooth harrow, and kill millions of weeds and spare the hoe. Harrow again after a few days, and do it thoroughly and fear not. I have harrowed potatoes when a foot high, with uniformly good results. Use the cultivator and shovel plow, and when the blossoms show, stop: but be ahead of the blossoms in hilling up, if you do not favor level culture, and don't favor it unless you mulch the land. Discard the hoe, but drag the weeds to death. In the day of your reward, take your team and digger and turn out an abundant crop.

Wire-worms will not cause scab, but they will fill the crop with holes and rottenness. No remedy can be found for them equal to thorough underdrainage. Scab is undoubtedly caused by fungoid growth, and, as well as rot, appears to be beyond the control of the cultivator.

In Northern Ohio, the Snowflake is the standard of quality, and ranking near it are the Hebron and Rose. Burbank, Pearl and numerous others are greater yielders, while Burbank commands the highest price here. Of the more desirable sorts from 250 to 450 bushels per acre can be grown by the above methods in field culture, and the expense of production can be kept within 30 cents per bushel. If stored in a dark, dry cellar with a temperature as uniformly near to freezing as safety will permit, the remaining details of successful storage need little consideration. An affected potato will rot, even if varnished and insured. A. W. RUSSELL.

Cuyahoga Co., Ohio.

POTATO GROWING IN THE PROVINCE OF QUEBEC.

BY A MONTREAL MARKET GARDENER.

POTATOES may be grown on any kind of soil, but to grow them of the best quality, requires land of a sandy nature, well drained. To grow them for early market, plant the sets in hotbeds, as close together as they can be put, about 10 days before setting them out in the field so that they may have a growth of an inch or so in length. Some start them in boxes or barrels in a kitchen or warm room; but that is only when small quantities are wanted. Have the land plowed the Fall before, and in the Spring work it well with a pulverizing harrow. Draw the drills about 30 inches apart, putting the manure in the bottom at the rate of about 20 tons to the acre. It should be well rotted. Plant the sets in the drills, about 10 inches apart, sprouts upwards, handling them carefully so as not to break off any shoots, and covering them gently with a little earth with the hands or feet to keep them from being dried by the sun before they are covered in with the drill plow. Before covering with the plow, apply commercial fertilizer at the rate of about 400 pounds per acre, scattering it over the sets, using a fertilizer containing a good percentage of potash. By using fertilizers I have had potatoes 10 days earlier than some in the same field where no fertilizer was used. In a few days the vines will be through the ground; keep the weeds under by the use of the hoe and cultivator; when the plants are high enough, they should be moulded up with the drill plow. By this mode of cultivation I have had potatoes on the market by the end of June, bringing from two to three dollars per bushel.

For general crop, plow in the manure in the Autumn, putting on 25 to 30 tons to the acre, and using 300 to 400 pounds of a good fertilizer as for early potatoes. Manure put in the drills in the Spring, especially cow manure, tends to produce scabbed potatoes. Plant the sets immediately after making the drills, and cover them at once, for if the drills are made and left a day or two exposed to the sun, the hot earth scalds the sets so that they either never start, or come up weak and sickly. It is a good thing to pass the roller over the drills after covering in, as it makes the ground firm so that it holds the moisture. When the potatoes are on the point of coming up, pass a saddle, brush or Scotch harrow, turned upside down, along the drills. Keep the weeds down by hoeing and cultivating. Last year I had a crop at the rate of 450 bushels of marketable potatoes per acre by this mode of cultivation. Land that has been in clover or pasture for some time yields the largest crops.

The earliest potato I have grown is the Early Vermont, which has been ten days earlier than the Beauty of Hebron or the Rose. The former is a popular market variety, but was much affected by rot last year.

Last season I raised 200 bushels of Early Maine Potatoes, all marketable, besides some small ones, from 7½ bushels of seed on less than half an acre of land, but I did not compare them for earliness with the Early Vermont.

Farmers in this neighborhood go into potato growing pretty largely, some of them having from 50 to 75, or even 100 acres some seasons.

HOW I PLANT POTATOES.

I MANURE and plow the ground in the Fall, leaving the surface as rough as possible. I plow again in the Spring, harrow it well and then furrow it out, using a two-horse plow and going twice in a place, dead-furrow fashion. Spread the fertilizer in bottom of the furrow. Change the teeth on a Whipple spring-tooth harrow so that they will all run in the furrows, which will put the ground in fine order for planting, with the fertilizer well mixed with the soil in bottom of the trench. I next drop the seed-potatoes in drills or hills, as preferred. Then I prepare the spring-tooth harrow by removing the two center teeth, and going lengthwise of the row it covers the potatoes splendidly and leaves the ground in the most perfect order. Just as the vines are peeping through, I put on what additional fertilizer is desired, and go through with a one-horse plow, throwing the soil towards the rows and burying the potatoes. Two days afterwards I harrow well, which levels the ground and kills all the weeds. After this, I work with any good cultivator, and have no further trouble with weeds.

Franklin, N. Y. W. V.

EXPERIMENT WITH SCABBY POTATOES.

I TRIED an experiment with scabby potatoes during the season of 1885. My object was to learn whether they would perpetuate the disease, when used for seed. They were planted upon land that had not been used for growing potatoes before. The ground was a clayey loam, and had been a Timothy meadow once, and was turned over and planted with corn in 1884, and fitted up for potatoes in 1885 by plowing, harrowing and furrowing, and planted with Burbanks May 21st. From the seeds that were planted, enough scabby seed was saved to plant a row by itself in the middle of the field, the potatoes being so deformed by the disease that it would be hard to tell to what variety they belonged. Most of the field was planted with medium-sized potatoes cut lengthwise in halves; the scabby ones used for the experiment were left whole. The season was a little too wet; but all made a fair growth, considering the season.

After the vines were dead, and rather late in the Fall, they were all dug. Whatever may be the cause of scab on potatoes, the conditions were not favorable to perpetuate it in this experiment; all seemed free from the blemish. The men who dug and picked them up were asked to notice if there was any difference in the looks of the tubers from the two plantings, and they could see no difference, unless the potatoes from the bad "seed" were a little the larger. I noticed this peculiarity, and can account for it only on the supposition that the "seed" was so deformed by the disease that only a few vines grew to each hill. H. H. SPENCER.

Cuyahoga Co., Ohio.

[No doubt the scabby seed was caused in this case by wire-worms and not by a fungus —EDS.]

POTATO TESTS IN MICHIGAN.

IN the Spring of 1884 I planted, for experimental purposes, 18 varieties of potatoes on land very uniform in quality, 90 feet long north and south, and 55½ wide; soil a clay loam. The year before, it had grown corn, and had been top-dressed with barn-yard manure at the rate of eight two-horse loads per acre. It had been well plowed and harrowed and thoroughly mellowed. On May 20 furrows were made six inches deep and three feet one inch apart, and next day three-eyed seed-pieces, cut from tubers that would average five ounces each, were dropped 22 inches apart in the bottom of the furrows, and four inches of earth drawn over them. Just before the vines appeared, the ground was top-dressed with well-rotted yard manure at the rate of ten two-horse loads per acre well harrowed in. The ground was cultivated several times and kept quite flat until the last of July, when the crop was shovel-plowed to cover the tubers exposed to the sun. No hoeing. The vines were dusted twice with Paris-green and plaster, mixed at the rate of one pound of the former to 200 pounds of the latter per acre. The season was favorable. They were dug and weighed October 20th.

Name of Varieties.	Order of Yield.	Scale showing Vigor of Tops.	Scale showing Order of Ripening.	Pounds of Marketable Potatoes.	No. Pounds of Small Potatoes.	Aggregate Yield in Pounds.	Yield per Acre in Bushels.	No. of Pounds in 5 of the best Weighed.
White Star	1	8	7	121	16	137	385 20-60	4
Burbanks'dling	2	7	6	121	14	135	380	4
White Elephant	3	9	8	116	17	133	354 40-60	4 12-16
Mam'th Prolific	4	7	6	103	10	113	301 20-60	5 4-16
Rural Blush	5	9	9	100	11	111	296	4 13-16
Round Pinkeye	6	10	10	93	16	109	290 40-60	3 9-16
Imp. Peachblow	7	9	9	85	23	109	288	3 5-16
Mammoth Pearl	8	6	3	80	15	105	280	4 5-16
Late Rose	9	6	3	86	17	103	274 40-60	3 4-16
Blue Victor	10	7	5	80	15	95	253 20-60	1 7-16
Early Rose	11	3	2	72	15	91	250 10-60	3 4-16
Magnum Bonum	12	5	3	83	8	91	242 40-60	3 11-16
Beauty of H'br'n	13	4	3	70	17	87	232	2 10-16
Eureka	14	1	3	70	16	86	229 30-60	2 8-16
Snowflake	15	4	4	63	24	86	229 30-60	3 1-16
St. Patrick	16	7	6	80	3	83	221 20-60	4 4-16
Chicago Market	17	3	2	58	16	74	194	3 8-16
Triumph	18	1	1	47	17	64	170 40-60	2 10-16

In the scale showing the growth of tops, 1 indicates the smallest and 10 the largest and thriftiest. In the next column 1 denotes the earliest and 10 the latest.

The White Elephant is the best of the late varieties in quality. The Imp. Peachblow, White Star and Rural Blush come next, in the order named, the Round Pinkeye being the poorest. Of the medium-early kinds I consider the Snowflake the best, followed by Late Rose, St. Patrick, Mammoth Pearl, Mammoth Prolific, Magnum Bonum and Victor. Among the earliest I would place the Beauty of Hebron first, followed by Early Rose, Chicago Market and Eureka. Triumph is the poorest. I have grown the Ohio for two years and think it one of the best; it is certainly the earliest I have, but it is liable to become hollow when grown on strong land.

The yield was best on the fall-plowed land cultivated in the Spring. I could see no difference between that which was both fall and spring-plowed and that which was only spring-plowed. It will be seen by the table that the White Star yielded more than the Elephant. The Stars were planted along side of the Elephants in the main patch and out-yielded them, giving at the rate of 435 bushels per acre. Last Spring I planted the same kinds with nearly the same results, White Star yielding the most, but they were not as good as the Elephants. I also planted the following varieties besides those tried the year before: Queen Victoria, Early Vermont, Brocton, White Rose, Lady-finger and Late Beauty of Hebron. Queen Victoria was no better than the Blue Victor; the Vermont was about like the Early Rose; Brocton the same as Ohio; White Rose the same as the Snowflake, and the Late Hebron like the White Elephants. DAVID W. CRAIG.

Lapeer Co., Mich.

THE POTATO "PATCH."

THE potato is, decidedly, the poor man's crop. It is the most economical vegetable, and the most palatable, as it can be prepared in numberless ways. Turnips and cabbage are good for a "change," but we would quickly grow tired of either as a steady article of diet. Scientific men frequently attempt to prove that there is really very little "nutriment" in the potato, and that there are far cheaper and better foods for the poorer classes. Such men never practice their own theories. They have their choice of foods, they know little of the needs of poverty, or the effects of hard physical labor. Men who count the value of every penny, know that the potato is a valuable food. They would as soon think of beginning the winter with an empty potato bin, as with an empty flour barrel. In all the large manufacturing towns the sale of potatoes is enormous, and it actually increases from year to year. For a man with a small garden spot, the potato is about the most profitable crop he can raise. I proved this to my own satisfaction some years ago, while working in a manufacturing town in Michigan. I had a little sandy garden spot, that was with difficulty kept from blowing away in a strong wind. I tried raising small fruits on it; but my account book always showed that I could buy them cheaper at the store. My early vegetables were never early, and my corn never reached its full size. One year I determined to plant my full patch to potatoes as an experiment. The garden was too small to plow, so I dug it over with a long-handled spade. After digging, I raked the ground over with an iron rake, raking in two loads of horse manure. There was plenty of wood-ashes to be had for the asking, and I worked bushel after bushel into that little garden, till I fairly changed the color of the soil. I dug holes with my hoe and planted some small potatoes. I never knew what variety they were. The vines grew wonderfully. I cut down every weed that showed itself, and every morning and evening, in pleasant weather, I swung my hoe among those vines. The bugs came, but I hired the children to pick them off. We began to dig about the middle of August—just enough for table use each day. The potatoes were better than any I had ever seen; large and shapely and white and mealy. Perhaps they seemed better to me than they really were, but from the time those potatoes were large enough to eat, my bills for meat and fish were lessened. I had three boarders, all good eaters. We had those potatoes fried, baked, boiled and cooked in numberless other ways, and the more we varied the style of cooking, the more our boarders ate. In fact, they ate so many, that had we been obliged to buy them, there would have been a serious loss. When the vines died, I dug the whole patch. The ground seemed fairly alive with the tubers. I was too busy to measure them. I had to take half a day from my regular work for the digging, and I could not afford to experiment. I stored them in shallow boxes and bins in the cellar, and they lasted us all Winter. It was the most successful farming I ever attempted. Many workmen have a small garden spot in which they attempt to raise a great variety of vegetables. I believe it would pay them, in a majority of cases, to plant the whole patch to potatoes. That has been my experience, at least. S'RED MAN.

SUMMARY

OF THE RURAL'S SEED DISTRIBUTION FOR 1886.

A full description, with illustrations, was given in the R. N.-Y. of Nov. 14, and this number will be mailed (free) to all who apply.

The Nov. 14th Number also presents a full account of the

$3,300

worth of presents which are offered to subscribers (not to regular agents) for clubs.

N. B.—One package (six in all), will be sent to all REGULAR SUBSCRIBERS who apply, and to them only. A two-cent stamp should be inclosed in the application, except by those who subscribe for the R. N.-Y. in connection with some other journal which offers the seeds in connection with the combination. In that case, an application is unnecessary. The seeds will be sent without application.

FIRST.

The Alaska Pea.

It is claimed that this is the earliest blue pea; that it is the best of its class; that it has superior shipping qualities, the pods remaining green longer than those of any other variety. It has never been offered for sale.

SECOND.

The Best of the New Watermelons.

Comprising a few seeds each of Kolb's Gem, Mammoth Ironclad, Scaly Bark, Cuban Queen, and Pride of Georgia.

THIRD.

Angel of Midnight Field Corn

This proved last season the earliest field corn ever tested at the Rural Grounds, though it may not so prove again. The longest ears measured 14 inches. The ears were borne low, with often three to a plant. Plants short.

FOURTH.

Garden Treasures,

for our lady friends, being a packet of not less than 100 different kinds of flower seeds mixed together..

FIFTH.

THE BIRD CANTALOUPE

(From Colorado.)

Introduced by the R. N.-Y. Oblong in shape, thickly netted, deeply ribbed; flesh thick and light green, sweet and delicious. Very early. The largest specimens weigh 20 pounds, as grown in Colorado.

SIXTH.

Hackensack Valley Muskmelons.

Gathered by the R. N.-Y. from the best growers of the Hackensack Valley of New Jersey

IMPORTANT.

1st.—The RURAL NEW-YORKER never SELLS seeds or any plants grown upon its Experiment Grounds.

2d.—ONLY Regular Subscribers need apply.

3d.—IN MAKING application, it is only necessary to write "SEND SEEDS."

4th.---Strangers should send for the Nov. 14th issue of the R. N.-Y., which fully describes the Free Seed Distribution, Mailed without charge.

Address
The Rural New-Yorker,
34 Park Row, N. Y.

THE BEST PAY FOR SUBSCRIPTIONS.

Ever offered by any Journal!

In the November 14 issue of the RURAL NEW-YORKER we offer **$3,300** worth of sterling Presents to our Subscribers and to them only for Clubs. But all seem to have taken tor granted that *others will draw the Premiums*, and therefore all seem to prefer to work for our *regular* Premium List. The result is that, beyond any question, the gift list of $3,300 *will pay from*

ONE TO THREE DOLLARS FOR EVERY SUBSCRIPTION SENT!

A better chance to secure valuable articles has never been offered by any reputable Journal.

The November 14th Rural New-Yorker will be sent free to all applicants.

SELECTIONS FROM OUR REGULAR PREMIUM LIST.

What You Can Get

BY SENDING ONE NEW SUBSCRIBER.

List 1.—Any PRESENT subscribers who will send us ONE NEW one, may select any one of the following: 12 plants of the Marlboro Raspberry, or 12 plants of the Rancocas Raspberry, or six plants of Golden Queen Raspberry, or eight plants of the Jewell Strawberry, or three plants of the Earhart Everbearing Black-cap Raspberry, or one Poughkeepsie Red, or one Ulster Prolific Grape Vine, or a combination Saw Set, or a beautiful Silver-Plated Butter Knife, or either "Needle Work" or "Knitting and Crochet," by Jennie June, or any book of the "One Syllable Series." See REGULAR Premium List.

FOR TWO NEW SUBSCRIBERS.

Any one sending two New subscribers, may select any three of the plants for one subscriber, or a Niagara Grape Vine, or a Louderback's Combination Tool, or a Needle Hay Knife, or a Pearl Rug Maker, or a Dust-pan, or a Pair of Shears, or a Knife, or a Shot Flask, or a Watch Charm, or a Harmonica, or a Premium Drill, or "Stop Thief" Scale, or any one of the following books: American Political Ideas, Uncle Tom's Cabin, Fruit Culture, Talks Afield, How to Paint, Low Cost Houses, Comforting Thoughts, Highways of Literature, Boy's Useful Pastimes, What Girls can Do, Simple Ailments of Horses.

WHAT YOU CAN GET

For Four New Subscribers

A No. 2 IDEAL FOUNTAIN PEN and Holder, with Filler and Case; warranted to fit the hand and please. Or a No. 22 Enterprise Meat Chopper; or an Emmerson Crosscut Saw; or any of E. P. Roe's Works; or a Farm Bell worth $5; or a Wheeden Toy Engine.

OR, AGAIN:

The Enterprise Meat-Chopper.

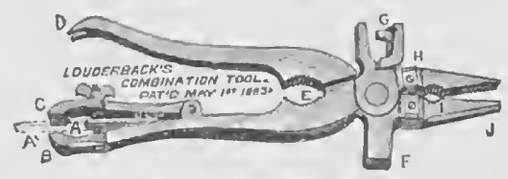
Every family should have one. Size No. 22 will thoroughly cut one pound in a minute. The meat is chopped—not mashed. Price $4. Given for FOUR SUBSCRIBERS.

WHAT YOU CAN GET BY SENDING

TWO SUBSCRIBERS.

Louderback's Combination Tools.

This little implement is a regular tool box of itself, as it contains ten very convenient and almost indispensable tools in one. We will point them out by reference to the illustration:



A, Adjustable Screw-driver; B, Hand Vise; C, Wrench; D, Nail Puller; E, Large Gas Pliers; F, Hammer; G, Leather Punch; H, Wire Cutter; I, Small Gas Pliers; J, Pincers.

Size No. 2 is nine inches long. The price is $1.25. We will give it for TWO SUBSCRIBERS.

The Ideal Fountain Pen

FOR FOUR SUBSCRIBERS.

Is used in the RURAL office, and thought to be by far the best Fountain Pen made. We guarantee it is as represented. Every farmer needs one, as it may be used at all times. It carries ink which, with continuous writing, will last at least 12 hours. The price is $4, and it can't be bought for less. Given for FOUR Subscribers. Send for full descriptive circular to the Ideal Fountain Co., L. E. Waterman, Manager, 155 Broadway, N. Y.

FOR BOOK PREMIUMS

SEND FOR THE REGULAR PREMIUM LIST.

For Three Subscribers.

THE MAHER & GROSH

Pruning, Whittling and Budding Knife,

Warranted.

See Premium List, sent to all applicants.

FOR TWO SUBSCRIBERS.

STOP-THIEF SCALES

Warranted by JONES OF BINGHAMTON, N. Y.

Price $1.15.

THE BEST SEWING MACHINE IN THE WORLD!

An entirely new principle. It is nearly noiseless and the easiest-running machine in the world. We guarantee it in every way. In case of dissatisfaction it may be returned at our expense. We would respectfully impress it upon our readers that this must not be confounded with old machines or with those offered by other journals. Price $60. Given for only 40 subscribers. For descriptive circulars apply to the Avery Sewing Machine Co., 812 Broadway N. Y.

A $60 AVERY SEWING MACHINE for 40 Subscribers.

A $57 MYSTIC RANGE for 57 Subscribers.

A $4 IDEAL FOUNTAIN PEN for 4 Subscribers.

A $50 SYRACUSE SULKY PLOW for 50 Subscribers.

A $6 FIELD FORCE PUMP for 6 Subscribers.

A $4 ENTERPRISE MEAT CHOPPER for 4 Subscribers.

CORNELL FARMERS' INSTITUTE.

(RURAL SPECIAL REPORT.)

(*Continued.*)

"Close" feeding of stock; need of soil renovation; ensilage; the Jersey for the dairy; ration for milch cows; worthless cow in the dairy; Shropshire sheep; inoculation as a preventive of contagious diseases; a State Board of Agriculture; the Holstein-Friesian as a dairy cow; rations for milk and butter; the average farmer's cow; care of her; making and keeping a pasture.

Mr. W. B. Powell, of Springboro, Pa., would not think of feeding without exercise; it is unnatural, and stock so raised would certainly deteriorate. It is wrong to so teach the people. The meat so produced is not fit for food. Mr. Woodward said he had not spoken as a breeder, but as a feeder; not as an improver of horses or other domestic animals; but as a producer of meat from animals to be kept only a few months, and he knew that animals so kept were perfectly healthy and their meat sold for the highest prices. He is feeding for manure and money, and not for the improvement of the breeds; besides, he does not fancy the exercise cattle get standing in a barn-yard and shivering in the cold.

Col. Curtis said the keeping of animals confined out-of-doors in a close barn-yard is simply barbarous. Mr. Foster, of Tompkins Co., was convinced that close housing in warm barns is the best. Mr. Smith, of Syracuse, was in favor of warm housing, but would give exercise every day in the barn-yard. The cows belonging to his firm had shown by their milk production that this was the best way. Mr. Sibley, of Franklin, Pa., had found that when his stock needed exercise, the best way was to drive them actively about until they had had sufficient, and then at once to return them to the stables. He also warmed all the water needed for the stock.

Prof. Roberts does not believe in keeping cattle in close quarters; neither does he believe in exposure in open yards. He has an inclosed yard in which the cattle take ample exercise.

Prest. Adams said man cannot make any machine that will do more than convert one form of force into another. No portion of mother earth can feed us for an unlimited time unless we, in turn, feed it. The country once so fruitful as to be said to "flow with milk and honey" is now for the most part a barren waste. Rotation of crops is not enough to restore the fertility of the soil, though it might defer the evil day. England and the Continent of Europe have been learning these lessons, and profiting thereby. He cannot expect America to be exempt from the universal law; in fact, in the older States we have already thousands of acres too exhausted to be profitably tilled. He made a most earnest plea for more special schools for the education of the prospective farmers.

Prof. Roberts said that Cornell had succeeded in creating such a sentiment that students in agriculture and the mechanic arts are as much honored and respected as any in the institution. To the charge that farmers are not represented in the halls of legislature, he has only to say that the boys being now fitted in the agricultural colleges are not yet grown to be men and farmers.

Harris Lewis said that if a boy likes farming he will stay on the farm; if he does not, the sooner he goes away the better, for no one who hates farming can ever make a decent farmer. Mr. Woodward said the notion that a boy needs less education for the farm than for other callings is entirely erroneous. If we apply brains and science to the farm in such a way as to make farming pleasant and profitable there is no danger that boys will leave the farm. Nothing commands attention and respect like success.

Major Alvord, in considering silage, said it makes but little difference of what a silo is made so long as it is air and water-tight, and it will be all the better if frost-proof. It is now known that a silo may be filled rapidly or slowly at the convenience of the owner. The best time to cut corn for ensilaging is when it is approaching ripeness. Indian corn is the best crop; it costs in the silo not far from $2 per ton. An acre will produce four times as much silage as cured fodder; but the cured fodder will occupy eight times as much space. Silage should be fed only in moderate quantities—not more than one-third of the amount of forage needed. It is about one-third as valuable as hay per ton. He did not think silage could supplant the root crop; it might be used as an auxiliary.

Mr. J. C. Sibley read an able paper in favor of the Jersey as a model dairy cow, in which he gave records of over 950 pounds of butter in one year from single animals. He thinks the general introduction of the best blood of Jersey breeds would double the production of butter, and that no breed has ever shown such powers of digestion and assimilation as the Jersey. As a feeding ration for cows he recommends hay in the morning, 10 or 12 pounds of silage at noon, and corn fodder at night with two quarts of bran, one quart of linseed meal and three quarts of oat meal mixed and divided into two feeds.

Dr. Sturtevant discussed the value of milk for butter and cheese-making. Inasmuch as a cheese is, in round numbers, one-third each water, fat and caseine, it is absurd to claim that cows of any particular breed are good for cheese-making, because their milk is rich in caseine. It might as reasonably be claimed they were so because their milk contains an abundance of water. He had demonstrated that the milk of certain cows added nothing to the production of butter in a herd; but not only this, they were sometimes positively damaging. Some cows are so worthless that the dairyman would make money by giving them away. He recommended testing each cow separately.

W. B. Powell, in discussing the influence of climate, etc., on breeding, took the ground that the heavy Percheron or Clydesdale can be dwarfed to the size of the Shetland; in short, that the different breeds of animals and the different races of men are the results of selection and outside influences, hence the great importance of intelligence and care in breeding all our domestic animals.

J. L. Stone, in an essay on Shropshire sheep, claimed for this breed great prolificacy, superior mutton production, a fine grade of wool, early maturity and great hardiness. He claims that they spring from the old sheep of Shropshire and the Morfe Commons, and that the claim commonly made of an infusion of South Down blood is untrue. This breed was first known as Shropshire in 1848, and first recognized as a distinct breed by the Royal Agricultural Society in 1853, since which time they have rapidly gained in favor.

Dr. James Law, in recommending measures for restricting contagious diseases of domestic animals, said that although, under peculiar circumstances, an animal might have a second attack, yet inoculation is *almost* a sure preventive. He recommends treating animals when young and of comparatively little value. He suggests the following modifying conditions: 1, testing virus from mild cases; inoculation in some organ but little affected; for instance, lung plague should be communicated by inoculation in the tail, where there is but little lymphatic tissue; inoculation with virus weakened by passing through some other animal, or by long exposure to light and air; or by cultivation in an artificial medium, like some chemical solution; or by exposure to pure oxygen under pressure, or by heat (either of the latter means weakens the virus or entirely destroys it when carried far enough); inoculation with virus so diluted as to introduce but a single germ; inoculation into the veins instead of into the arteries. The Doctor said he was greatly in favor of the use of heat in destroying the virulence of the virus, as it could be carried to just the point desired. He is greatly impressed in favor of the chemical solutions, because with these there is no danger of infection, either to other animals or to the buildings or clothing.

Major Alvord offered the following: Resolved that it is the opinion of the farmers here gathered that there should be established by law in New York a State Board of Agriculture similar to such boards in other States, and that to this end the President of this meeting appoint a committee of 11 to consider the subject, mature a plan and take such action as they may deem advisable, and report when they shall deem it expedient. This met the approval of every person present, and was passed by a unanimous and rousing vote, which showed there was an urgent desire for New York to do something for her farmers' education. The President nominated as such committee, Major H. E. Alvord, Houghton Farm; J. S. Woodward, Lockport; J. McCann, Elmira; F. D. Curtis, Charlton; W. J. Smith, Syracuse; F. C. Stevens, Attica; J. P. Ray, Hemlock Lake; Frank S. Peer, Mt. Morris; Harris Lewis, Frankfort, and T. R. Proctor, Utica. It is to be hoped this committee may mature a good plan and be successful in getting such a law speedily enacted. There is urgent need of such an organization in this State.

W. J. Smith wrote up in an able manner the claims of the Holstein-Friesians as dairy cows. He claimed that they are the greatest milk producers in the world as well as superior for butter and cheese, and valuable meat producers in the end. His people feed, for milk production, from 10 to 16 pounds daily of mixture two-thirds bran and one-third ground oats with one feed a day of silage. For butter, the same quantity is given, made up of one-third each of bran and ground oats and one-sixth each of corn meal and linseed meal. He prefers clover hay to all others to feed with silage. F. D. Curtis, in discussing the cow for the average farmer and her care, said, "We need not expect large results from any cow without a corresponding consumption of feed. The best plan for any farmer is to weed out his poor animals, give those retained better care, and breed from some thoroughbred stock. Regularity in feeding is very essential. Cold water is not at all suitable for cows; it is often the cause of disease and abortion. They should be warmly housed. It is the most foolish thing a farmer ever attempted, to warm up his barnyard by keeping his cattle in it." He has calves and cows that have not been out once during all Winter, and they are healthy and happy.

Harris Lewis in telling how to make and keep a pasture, said we have the pasture as nature made it, we turn on too early in Spring, pasture too late in the Fall, and then growl because the pastures run out. He makes land designed for pasture very rich; covers it well with manure, which he works into the surface, and then, for fear he has not made it quite rich enough, he adds a few loads more, and then adds 400 to 600 pounds of bone flour. His grass mixture is, two bushels of Orchard Grass, two of Meadow Fescue, half a bushel of Kentucky Blue Grass, one-half bushel of Meadow Foxtail, and if the land is at all moist, one-half bushel of Red Top. This is an expensive seeding, but he makes his pastures permanent and can afford it. This gives a succession of grasses during the whole Summer. He turns on early in Spring, before the grass has become coarse, and turns off by the middle of October. It is poor policy to eat the roots bare so late in Fall, to save hay. Once in two years he top-dresses with manure, sows 200 pounds of bone dust and goes over the fields with the smoothing harrow. He prefers spring seeding and without growing a grain crop.

It was announced that Cornell would next year hold another Farmers' Institute with a more extended programme, and with a hearty vote of thanks to the President and Professors, the Institute adjourned, and thus ended one of the most entertaining and profitable meetings ever held in the State of New York.

J. S. W.

Miscellaneous.

CATALOGUES, ETC., RECEIVED.

ASPINWALL MANUFACTURING CO., Three Rivers, Mich.—An illustrated circular setting forth the merits of the Aspinwall Potato Planter, which we would advise our readers to examine. We have not seen or tried the machine, but from the character of the firm selling it and of the testimonials in its favor, we should judge it to be all that is claimed for it. It is said to mark, furrow, drop and cover. It is claimed that five acres per day can easily be planted; that the seed is planted in a perfectly straight line, admitting of close cultivation; that the planting is of uniform depth; that the machine will plant on inverted sod and cover well; that it may be adjusted to plant either cut or whole seed from 10 to 25 inches apart, and also at different depths; that it is light of draft and may be operated by a boy, etc., etc. A fertilizer attachment may or may not be purchased with the machine, as desired. There is also a corn-planting attachment. We presume it would scarcely pay any farmer having less than five acres to plant to buy one of these machines unless he cared to hire it to his neighbors.

BARTLETT & DOW, Lowell, Mass.—In this catalogue especial attention is called to the "Common-Sense Milk Pail" which is represented as the only *perfect* milk pail offered to the public. It is made of heavy XX tin highly polished. There are but two seams that come in contact with the milk. The strainer is perfectly fitted to the inside of the nozzle, making a smooth, air-tight joint. This strainer may be removed in an instant so that every part of the pail may be reached by the hand and thoroughly cleaned. The nozzle of the pail is the right size for pouring into milk cans, and is arranged with a button that catches to the top of the can so that it cannot slip off, however careless the man may be handling the pail. The price is $1.25. The catalogue also offers a goodly list of seeds of all kinds. Free.

SULKY PLOW ATTACHMENT.—Circular from the Elkhart Iron Works Co., Elkhart, Ind. This attachment is really a comfortable seat, on wheels, to which any common plow can be attached so that the plowman can avoid the wearisome walk behind the plow handles. The mechanism of the implement is certainly simple and strong. The plow is not attached *rigidly* to the sulky, but with a loose connection, which gives the plow an independent motion. Those who have used the sulky are positive that the weight of the driver adds nothing to the draft of the plow. We could not give all the facts regarding this useful implement without printing the entire circular. We believe a farmer can obtain more than his money's worth of ease and comfort by securing the implement. We advise our friends to send for the circular.

WOMEN'S SILK CULTURE ASSOCIATION.—This little five-page pamphlet is a statement of the work done by the above association, or rather an appeal for a continuance of the Government aid it has received in its efforts to make silk culture a profitable business in this country. This, of course, has not been done by it or by any other institution in the country; but it claims to have established a successful experimental station with the slim means at its command. The Congress of 1884-5 appropriated $30,000 for the advancement of the "new industry," and of this the association received, from March 1885 to January 1886, $3,245.62, which has enabled it to purchase some necessary appliances and to pay more promptly for the products of silk culturists. The association was formed in Philadelphia in 1880, and since then it has paid $6,015.49 for eggs, cocoons and reeling. The ladies composing the association have worked gratuitously, energetically and philanthropically, and although facts and figures are unsympathetically unfavorable to the profitableness of the "new industry" in this country, under the present conditions of labor, the members of this association, and especially its earnest President, richly deserve the encouragement and sympathy of the public.

CORRUGATED IRON.—An exceedingly well-prepared pamphlet from the Cincinnati Corrugating Co., of Cincinnati, Ohio. The use of corrugated iron for roofing, siding and ceiling purposes has been greatly extended of late years, and bids fair to become yet more popular. Iron roofing is lighter and more secure than slate, far more durable than shingles, and more easily kept in repair than tin. Persons who live in dry, hot countries where cisterns are indispensable find that iron roofing gives good satisfaction. Send for the catalogue. There are many items of value contained in it.

WILLIAMS, CLARK & CO., general office Cotton Exchange Building, Hanover Square, N. Y.; sales offices Boston, Syracuse, Rochester, Baltimore, Atlanta and Jacksonville.—A little treatise giving directions for using their standard bone fertilizers as well as reasons for doing so; a history of the progress of the firm; the value of a fertilizer; mixing fertilizers at home; notes on the application of fertilizers; analyses showing their value, etc., etc. Sent free to all who apply to the above firm.

HALSTED'S PERFECTED CENTENNIAL INCUBATOR.—A pamphlet from the Centennial Manufacturing Co., Rye, N. Y. The incubator is well described and many testimonials are given as to its efficiency. A considerable space is given to showing the pleasures and profits to be derived from the poultry business. Among other implements and appliances described are brooders, egg-testers, feeders and a portable hot-bed.

CATALOGUE OF THE WINONA STOCK FARM, from C. H. Warrington, West Chester, Pa. The stock kept at the Winona Farm consist of Chester White, Poland China and Berkshire Swine, Jersey Cattle and Bronze Turkeys. The catalogue shows that the compiler has made a study of the origin, characteristics and breeding of the animals he has for sale.

"SPEED THE PLOW."—An illustrated catalogue of Timothy B. Hussey's agricultural implements. The various plows, harrows, cultivators, road scrapers, etc., manufactured by this house are well described and illustrated. The catalogue can be obtained at North Berwick, Maine.

FAY'S BUILDING MANILLA.—Circular from W. H. Fay & Co., Camden, N. J.—This material is recommended as being cheap, effective and reliable. It is used for roofing or as a substitute for plaster. It is also used as a carpeting, for which purpose it is said to give good satisfaction. Well described in the circular.

AGRICULTURAL IMPLEMENTS.—Circular from B. & J. W. Belcher, Chicopee Falls, Mass. The two implements which are particularly noted are the "C. C. Brooks" Swivel-plow and the Mudgett Hay-tedder. Both implements are well described. There are plenty of testimonials from those who have used them.

AARON LOW, Essex, Mass.—A garden manual and illustrated catalogue (100 pages) of

seeds, etc. It is a sterling catalogue and will well repay an examination. The list of potatoes comprises all the best kinds, varying in price from three to four dollars the barrel. Free to RURAL readers.

HORSE SENSE.—A circular from C. S. Beebe, Racine, Wis., descriptive of the Beebe Carts. If we may believe this circular, one of these light carts on the average farm will save a vast amount of horse flesh and make trotters out of the colts.

THE CARE AND FEEDING OF INFANTS.—Doliber, Goodale & Co., 40 Central Wharf, Boston, Mass.—This treatise, which sets forth the advantages of the well-known Mellin's Food for infants, will be sent free to all who apply. It is both interesting and instructive.

Literary.

BOOKS.

"YOUNG PEOPLE'S HISTORY OF ENGLAND." By George Makepeace Towle. Lee & Shepard, Publishers, Boston. Price, cloth, $1.50.

This is a very readable book of 366 pages. It presents clearly and concisely the main facts in the history of England. To such as dislike statistical detail, this will prove a work of value and one of great interest.

"HAPHAZARD PERSONALITIES; CHIEFLY OF NOTED AMERICANS." By Charles Lanman. Lee & Shepard, Publishers, Boston, Mass. Price, cloth, $1.50.

A work in which the author states: "It has been my fortune to make many friends among the noted men of time, and it is to a portion of these that I have devoted this volume." Among the persons here referred to are Henry W. Longfellow, Washington Irving, William C. Bryant, Henry Clay, Edward Everett, Park Benjamin, James Brooks, Lewis Cass, Alex. H. Stephens.

THE MESSAGE OF THE BLUE BIRD TOLD TO ME TO TELL TO OTHERS. By Irene E. Jerome. Lee & Shepard, Publishers. Price, $1.00.

A beautiful illustrated Easter poem, charming in style and execution.

HARPER'S MAGAZINE FOR APRIL.

We are glad to see that this sterling magazine is devoting more and more attention to agriculture and kindred topics. This departure will be appreciated, as a great many readers of Harper's are more or less intimately connected with farm life. The article on "Cattle-Raising on the Plains" will be read with interest. It fairly bristles with facts and figures. The meat trade of our country is assuming such mammoth proportions that all are interested in its development. The Eastern farmer should study the situation that he may the sooner understand that nothing but better stock and better care will enable him to compete with the West. The literary features of this number are strong, including, "Their Pilgrimage," Chas. Dudley Warner; "Springhaven," by R. D. Blackmore, and "King Arthur. Not a love story," by the author of "John Halifax, Gentleman." Act iv. "She Stoops to Conquer," "Plebian and Aristocratic Pigeons," by F. Satterthwaite; are beautifully illustrated articles. There are several poems with the usual Editor's Easy Chair, etc.

Domestic Economy

CONDUCTED BY EMILY MAPLE.

FARM LIFE AND HEALTH.—II.

PHILIP SNYDER.

TWO FARM NUISANCES.

Two dangers which lurk about many farm homes, though sometimes causing virulent sickness or death, often receive little thought. They are the hateful and hideous barnyard and the family vault. Which is worst is hard to determine.

Usually most of the water from the barn roof is discharged into the barnyard, and there it stays until it either settles into the soil or is evaporated in the sun. Sometimes an open drain carries it off to some uncultivated spot; but that may be no improvement. Where it goes to nobody seems to know or care. It goes out of sight and that is supposed to be the last of it; but it isn't. Subsoils are not uniform in texture; there are often veins of sand or coarse gravel, and through them these barnyard decoctions may reach the family well or the drinking water of the livestock. Every now and then there is a case of typhoid fever in the country, and the light and joy of some family goes to a premature grave, and the case is regarded as "a bitter dispensation of Providence." But investigations generally show that there is a cause for fevers, with which Providence has little to do, except through the laws of Nature. Providence never designed that barnyard pollutions should go into the human stomach; nor is it easy to see that it approves highly of barnyards, the sort of cleanlines they maintain being a long remove from godliness.

This is also to be said of this domestic monstrosity known as the privy. Why is it that people who are scrupulously clean in other respects can tolerate, within a few feet or rods of the house, such a reeking abomination, when a little care and forethought would obviate all its objections? The subject is almost too repulsive to write about, and yet, —as Webster said about the Bunker Hill monument,—"there it stands" and generally it is a prominent object in the landscape. What it is in detail I will not try to describe now—what it should be is more agreeable.

In the first place, hide it if possible with a hedge, trees, vines or a corner of some building. In the second place, never, *never* dig a vault under it. Instead, put under it a movable water-tight box, of a size that one or two men can move, with a crowbar to assist; keep a long and narrow box of some deodorizer in the building, and at least once a day shovel some of this into the box. This may be dried muck, road dust, land plaster, coal ashes (never wood ashes), sawdust, finely cut straw, chaff, or almost anything that will absorb moisture and odors. Then there will be little about it to offend: and when the box is nearly full, move it back far enough to shovel its contents out into a cart or wheelbarrow, and dump them where they will "do the most good." Then no wells, or springs, or streams will be poisoned; no clothes will carry a perfume into the home; and no lungs will be filled with one of the vilest odors in creation. A death's head would be the proper sign to put over the door of most country vaults.

WHY REFORMS ARE SLOW.

The sewage problem is a great one for cities, where the danger from innumerable water-closets connected with many miles of underground sewers, must be guarded against to escape the pestilence which "walketh in darkness." In the country there is no serious difficulty about it, when plain, common-sense rules are observed. But away back in feudal days our revered ancestors were barbarians, brutal, shiftless and "nasty," and to wholly breed out their blemishes, wonderful patience and persistence are needed. But it is a matter for astonishment that a danger so easy to remedy and remove should linger so tenaciously, and that too in the face of such fearful results as mark the history of thousands of families and almost every neighborhood. The very existence of malignant fevers is a warning that something is wrong on the premises.

EATING TOO MUCH.

The average farmer and farm laborer are chargeable with two other failings, which injure health and shorten life, both heir-looms of the highly barbarous feudal ages just referred to. They eat too much and bathe too little. Some of the food is objectionable as to the quality, but the quality is less harmful than the quantity. The farmer's out-door life gives him a vigorous appetite, and not enough restraint is exercised against an excess. His table drinks too (which may be classed as part of his food) are also objectionable, being very generally strong tea and coffee. The drink failing is particularly prevalent among the females. When a person regards strong tea or coffee as an absolute necessity for a meal, it is, in itself, a bad sign. An appetite for an unhealthy stimulus is fastened on the stomach and the path to disease is short and easy. Nature's simplicity is gone, and in its place are nervousness, changing moods, and a tendency to enjoy other stimulants, such as the most highly seasoned foods and condiments, and, not infrequently, intoxicating drinks. Children yet in arms are brought up to tea and coffee and the whole range of condiments, along with pie and cake to any extent, and their tender stomachs are disorganized at an early age. Then when a dangerous disease sets in—dyspepsia, heart-burn, frequent colic, flatulency, nausea, etc., the child is "weakly," unable to work, and an early death is regarded as "an inscrutable dispensation of an all-wise Providence." There are thousands to-day half broken-down, prematurely old, complaining that "food does them no good," or that it "distresses them," and who are running after the doctor, or swallowing quack medicines, who could yet be cured by a proper system of diet. Some, it is true, are too far gone, and yet hardly one in a thousand will listen with patience to a kind remonstrance against his bad habits.

THE DELIGHT OF BATHING.

As to neglect of bathing, that is due to a non-appreciation of its great importance. The face and hands are washed with commendable regularity, but the body—well, how many times a year do the average farmer, or farmer's sons, or even his daughters, give themselves a sponge bath from head to foot in cold water, rubbing first with a towel and then with the hands until there is a glow. There is "no time," it will be said; perhaps "no need of it," and certainly there are not many conveniences. But nothing is better to guard against colds, which are the besetting danger of farm life, and which so often lay the foundation for consumption. If the face is enlivened and cleaned, and one's lassitude banished by a morning ablution, the body will be still more so, and admirably fitted for the day's work or exposure. After a day of severe toil, particularly if the work has been dusty, a bath before retiring takes away all outer impurities, as well as the stiffness out of the joints, and prepares one for delightful sleep. Begin with Summer and continue in the Winter, even if we must break ice in the pitcher, to get at the water. There is no danger of catching cold in such an exercise; it will inspire to lively work and that will soon bring a glow to the skin, and when one jumps into his clothes he feels like a new man. A narrow income is no excuse for neglect; water costs nothing; an old piece of carpet or several newspapers on the floor will absorb the little water that falls, and a towel or two, and then the hands will make a delightful finish to an exercise foolishly dreaded by thousands. Accustom the children to it, and teach them how to do it expeditiously. It is worth more than a life insurance policy, and costs next to nothing.

Vineland, N. J.

A DELIGHTFUL DINNER.

DAINTY TIDBITS TEMPTINGLY PREPARED.

MENU.

Soup a la Bonne Femme.
Boiled Bass Caper Sauce.
Sweetbreads with Cauliflower.
Roast Ducklings.
Salad.
Rice Cake with Peaches.

CUT a good-sized onion into very thin rounds and fry in a little butter or fat taken from the top of soups; do not allow it to brown and when half done throw in the finely cut leaves of a tender head of lettuce, a handful of sorrel also cut small; add pepper, salt and a little nutmeg, and keep stirring until the vegetables are nearly cooked. Then put in a teaspoonful of sugar and a cupful of veal stock; let this boil until it is reduced one-half, add a quart of veal stock; give one boil and keep warm until the time of serving. Meanwhile prepare a dozen and a half very thin slices of bread, about an inch wide and two inches long, taking care that they have a crust along one of their sides; dry these in the oven. Free the soup from fat; set it to boil, and then take from the fire and stir in the yelks of two eggs beaten up with a gill of cream. Pour the soup over the slices of bread, and serve. This extremely wholesome soup deserves to be better known in America. A French lady suffering from fatigue refreshes herself with sorrel soup. In all cases where eggs are added to a soup they must be well beaten and stirred in very slowly or they will curdle. Do not allow the soup to boil after they are in.

Pin your fish in a piece of clean muslin if you have no fish-kettle. Cover with cold water to which you have added a little vinegar and salt. Allow eight minutes to the pound after the water begins to boil; make some drawn-butter sauce, stir in a spoonful of capers or pickled nasturtium seeds, and send to table in a sauce-boat.

Sweetbreads are sometimes an expensive dish in the city, but a farmer who kills his own veal may enjoy the luxury cheaply. Trim the skin and cartilages from them and put over the fire in cold water containing salt and a little vinegar. As soon as the water boils, take them out and press between two plates with a weight on top. When cold, egg and bread crumb them, dip in beaten egg and cracker crumbs, and fry brown in boiling dripping. Dish them in a circle on a hot platter with a mound of cauliflower in the center; pour a cream sauce over all. If cauliflower is not in season, send green peas to table in a separate dish.

A very tasteful dressing for roast ducklings is made by frying a minced onion in butter, and adding half a cupful of thick stewed tomatoes and two cups of bread crumbs. If they are really ducklings, they will roast in from 30 to 40 minutes. Thicken the gravy in the pan and add the giblets which have been stewed and minced. Serve with currant jelly and green peas when in season.

Rice cake with peaches can be made with the canned fruit. Boil some rice, using half milk, and while it is hot stir in a tablespoonful of butter, two of sugar and one egg for each cupful of boiled rice. Butter a pudding dish, put in a half-inch layer of rice, then a layer of peaches and so on until the mold is nearly full. Bake for 20 minutes; turn out upon a dish and serve with wine sauce. PALMETTO.

ABOUT YEAST.

A FRIEND gave me some of her yeast. Never before did such a little deed so much lighten my work, and consequently do me so much good. She gave me what looked like a white potato ball. She said, "Mash as much more boiled potato fine, and mix with it; add one teaspoonful of salt, and two teaspoonfuls of sugar, let it stand a few hours, and your yeast is ready to use. Take half the yeast to make your bread; with the remainder start the yeast the same way again; keep it in a cool place in Summer, and where it will not freeze in Winter, and you will always have good yeast." It did not look like yeast, but it smelt nice and as my friend said it was good it must be so. I tried it and found the making of bread and the keeping of nice fresh yeast on hand a much easier task than it ever had been since I became a housekeeper.

One heaping coffee-cupful of the potato yeast and three quarts of warm water make my four-gallon bread-pan full of risen dough. I knead it (not too hard), at the first mixing in the evening and often bake breakfast biscuits from it. Like all other dough that is expected to rise, it must be kept warm, but not *too* warm.

I asked my friend where she got the yeast. "Oh, Mrs. Dash gave it to me," she replied. "She doesn't know who started it, so I tell folks it must have been made when the world was; and that's as far as I can go," she laughingly added. I have since found out how to start it, or it would be no use to tell of my yeast. Moisten some mashed boiled potatoes with baker's yeast, add one teaspoonful of salt and two of sugar and let it rise, divide it and add potato and sugar and salt as before, and after a time it will become as dry as if nothing but potato had been put in it. I prefer to use *nearly all* my yeast every time, for, as I bake only once in three or four days, a little yeast can raise the whole meantime, and it helps keep it sweet.

It seldom happens that I have to boil potatoes on purpose to renew the yeast; even cold, baked potatoes will do to use, the greatest objection being that they do not readily mash fine, but that is overcome by putting the yeast into some of the water and straining it through a colander into the flour. It makes no difference whether the yeast is used in that way or mixed dry with the flour. I have seldom added soda to my risen bread since I have used this yeast. When I was obliged to do it, it was because other work kept me from attending to the bread when it was light enough to put into the pans. Mrs. Stowe once wrote that "the bread should rule the kitchen." I have found that baby's claims are ahead there, and sometimes the bread must wait till the butter has had "the cool of the morning." Nearly every housekeeper finds the bottling of liquid yeast very troublesome. Those who do not live near a baker must keep their own supply of yeast, and I am sure no one can produce a more economical or satisfactory way of doing so than the one I have just written about. My friend makes a thin batter in the evening, and adds the rest of the flour in the morning, and the dough rises very quickly; but those who have a great deal of work to do find it a great help to have the bread made as nearly as possible in the comparative leisure of the evening. Bread made with this yeast does not require much kneading, at least not with our fine Colorado flour. I keep my yeast in a bowl with a saucer turned over it. S. E. H.

DOMESTIC RECIPES.

CROQUETTES.

PUT two tablespoonfuls of butter in a frying-pan, and when it is very hot, fry in it, until brown, a teaspoonful of chopped onion; stir this constantly to prevent scorching. Now rub in a tablespoonful of flour till it is smooth, add two cupfuls of chopped meat of any kind, pepper and salt, and a teaspoonful of minced parsley, or the same quantity of dried parsley rubbed fine. Stir this mixture about with a knife until nice and brown, add a teacupful of broth, a gill of cream, and a beaten egg; take at once from the hot part of the fire, and stir for a few minutes where it will keep hot without cooking. Flour a bowl and press the meat in firmly; set away to get cold; when wanted for use, mold them in a tiny cup or wine glass, roll in cracker dust or bread crumbs, then in beaten egg, again in the crumbs, and fry in boiling fat. Have the fat really boiling, and they will be dry and creamy inside. Lay them on a sieve turned bottom up before the fire, or in a warm oven for two or three minutes, put a folded napkin on a hot dish, and send to table. In cold weather they may be kept in a covered bowl for several days and be ready for frying at any time, which is a great advantage in case of unexpected company. M. M

VEAL CROQUETTES.

Scald half a pint of rich milk, and stir in a large cupful of dry bread crumbs, half a cupful of butter, and two cupfuls of boiled veal chopped very fine; season with salt, a quarter of a grated nutmeg, red pepper and a teaspoonful of grated onion. Take from the fire, and when slightly cool, stir in a beaten egg. Butter a dish and lay the mixture upon it in separate tablespoonfuls until quite cold; then roll in beaten egg and crumbs and fry. L. J. B.

FRYING AND SAUTEING.

To saute is to fry by immersion in boiling fat; in frying only a little fat in the bottom

Miscellaneous Advertising.

When Baby was sick, we gave her Castoria,
When she was a Child, she cried for Castoria,
When she became Miss, she clung to Castoria,
When she had Children, she gave them Castoria.

of the pan is used. In either case the great thing is to have the fat boiling before you put anything in it, to cook it quickly, and not to let the things stay in a minute after they are done. It is not always convenient in small families to have as large a quantity of fat on hand as is necessary to saute; in this case a skillful cook can try the article by using great care so as to have it as nice as if sauted. A croquette, potato-cake or chop can be fried brown if very little fat is used, provided that little be hot enough when the article to be fried is put in. When you do really saute anything, have no half-way measures, but put in enough fat to swim the thing to be fried. If all the fat from streaks, soups and the top of gravies is carefully collected in a family where a moderate amount of meat is used, a considerable quantity of nice fat will generally be on hand. Lard or cooking butter may be mixed with this dripping, but lard alone is not so nice. ELSIE.

EHRICH'S FASHION QUARTERLY for March contains some 170 pages, 24 of which are devoted to the fashions and literature, while the remaining pages bristle with illustrations and price lists of men's, women's and children's wearing apparel of every description; table and bed linen, upholstery, jewelry, stationery, china, silver-plated goods, etc. Those of our readers who are interested in such things will do well to send for this enterprising publication. Single copies 15 cents. Address The Fashion Publishing Co., No 18 Jacob Street, New York., P. O. Box 3491.

Care for the Children

Children feel the debility of the changing seasons, even more than adults, and they become cross, peevish and uncontrollable. The blood should be cleansed and the system invigorated by the use of Hood's Sarsaparilla. Give it a trial.

"Last spring my two children were vaccinated. Soon after, they broke all out with running sores, so dreadful I thought I should lose them. Hood's Sarsaparilla cured them completely; and they have been healthy ever since. I do feel that Hood's Sarsaparilla saved my children to me." MRS. C. L. THOMPSON, West Warren, Mass.

Hood's Sarsaparilla

Sold by all druggists. $1; six for $5. Made only by C. I. HOOD & CO., Lowell, Mass.

News of the Week.

HOME NEWS.

SATURDAY, Mareh 20, 1886.

W. S. Warner, an impecunious clerk of this eity, gained most by the frauds of Ward, the swindling partner of Grant & Ward. He was sued for the money he had fraudulently received, and judgment has been given against him for $1,255,361.24, the "profits," or the diferenc between what he "invested" with Ward, and what he drew out, with interest from May 6, 1884: total $1,395,752.54, to be paid over within 20 days. The transfer of property worth $578.56 by Ward to Warner on May 7, 1884, just before the collapse of the swindle became public, is declared fraudulent, and the property must be given up to the creditors of the concern, which is stated to have been bankrupt from the outset. It will be mighty hard to collect that judgment. The case will doubtless be appealed.....There appears to be a lull in the anti-Chinese crusade on the Pacific Slope. A powerful minority vigorously protested against it at a large meeting at Sacramento, Cal.: and at Portland, Oregon, a meeting of 1,500 "reputable citizens" declared that they "will not allow" intimidation or violent expulsion of working men, pledging their "means and lives to uphold these principles" .....The total arrivals of Celestials at San Francisco and other Pacific ports, in three years ending August 1, were 20,077, and the departures 41,322, showing a decrease of 21,245 in our Mongolian population. But while only 2,788 arrived in 1883; 6,042 came in 1884, and 5,568 in the first seven months of 1885. The increase was due to fraudulent immigration either on forged certificates or by traveling overland or by coasting vessels from British Columbia. Congress has given preference to a bill to indemnify outraged Chinese over one still further restricting Celestial immigration. ....The Duluth Board of Trade has "resolved" to indorse the bill of Congressman Weber, of New York, now before the House, for the permanent enlargement and improvement of the Erie and Oswego Canals by the General Government as regulators of freight charges from the West and consequently appreciators of products and land there. The West, and especially the Northwest, would be chiefly benefited by the measure, next to this city, and naturally it is popular there. Wednesday the New York Senate approved the bill by 17 to 3. As seven-eights of the Western States are benefited by the Erie Canal, the cost of improving it ought to be borne by the Federal Government. It is proposed to deepen the water and double the length of the locks.....Gold is still flowing rapidly to Europe. Tuesday morning $1,763,000 in gold bars were sent from this city to Paris. Every "steamer day" transatlantic exports are heavy from this and other ports also. Over $13,000,000 have left this port alone since the movement began in December.....Wednesday Apostle G. Z. Cannon having failed to respond when his case was called in court at Salt Lake City, forfeited $25,000 bail.....A House Committee is investigating the ownership of the Pan-Electric Telephone stock which has been generously distributed gratis "where it would do the most good" among Congressmen, by Rogers, father and son, the inventors of the system, and the disclosures are by no means creditable to some of those who accepted the gifts—a nasty business all round.....The report that Blaine's daughters have become Catholics is authoritatively contradicted from Augusta, Me. Like their father and mother, they belong to the Congregational Church.... ....After Cleveland's inauguration, Governor Murray, of Utah, placed his resignation at the President's disposal, and Secretary Lamar has just asked for it. Murray's removal is much regretted by the Gentiles of Utah, as he was strongly opposed to polygamy.....At Carrollton, Miss, on Monday, during a trial at which 20 negroes were present, 100 masked white men, armed with Winchester repeating rifles, rode up and fired through the court-house windows at the negroes, killing 13 and wounding all the others more or less severely. The assassins, unknown of course, then moved off. Some weeks ago in a "difficulty" between some negroes and a white man named Liddell, the latter was shot and wounded, and owing to his threats, the negroes swore out a warrant against him. The case was on when the shooting occurred.....Mr. Eaton and Mr. Trenholm have retired from the Civil Service Commission, the former for private business reasons; the latter to become Controller of the Currency, a better office. John H. Oberly, of Illinois, succeeds Trenholm, and Charles Lyman, of Connecticut, takes Eaton's seat.....Pres. Adams, of Cornell University, warns the public against a swindler operating in the West as a Professor of Cornell. The rascal assumes the names of various actual Professors of the University and solicits specimens and borrows money. All the Faculty are at the University now.....At Toledo, O., early last Monday morning, Varney, Taylor & Co.'s linseed oil mills, the largest in the country, was destroyed by fire—loss, $130,000. An explosion of a 100-barrel tank of naphtha, used in the "new process" of refining the oil, gave the city an earthquake, broke a multitude of windows and injured five men. .....A short time ago the House passed a bill to increase the pensions of widows and dependent relatives of soldiers and sailors of the late war, from $8 to $12 a month, with a proportionate increase for the relatives of officers. The Senate wished to give widows an additional pension of $4 for each child under 18; but as a number of other amendments were instantly added, and as it was feared that if it went back to the House for consent to them, it would be defeated, talked to death or pigeon-holed in Committee, all amendments were dropped last Tuesday, and the bill was passed just as it came from the House, and went straightway to the President for his signature. It will require an annual expenditure of a little over $6,000,000.....Ex-President Arthur has been troubled with dyspepsia and sleeplessness; but there is no other foundation for the needlessly alarming rumors lately circulated about his condition.... ....It appears from a speech in the Dominion Parliament, last Monday, that the first report of the medical commission sent to examine Riel as to his sanity, was suppressed by the Government (which "had determined to hang Riel right or wrong") and that a second and "cooked" report was drawn "to bear the Government out" in hanging him, and was presented to Parliament as if it were the only one!.....The funeral of each ordinary Senator or Representative dying at Washington, costs the nation about $5,000, on an average; that of Senator Miller, of California, will cost $20,000 on account of the long journey to the grave. There was a regular rush of Congressmen for a place on the House and Senate Committee that accompanied the body, all anxious to enjoy a free transcontinental trip, with free board of the very best kind, and unlimited etceteras—especially the etceteras.... ....Canada has commissioned the cruiser Lansdowne to protect her waters against American fishermen.....Mrs. George Bancroft, wife of the venerable historian, died at Washington, Monday night, aged 82..... Capt. Wadell, commander of the destructive Confederate cruiser Shenandoah, died Tuesday at Baltimore, aged 62. The Shenandoah destroyed 32 vessels and released six on bond. Value of captures, $1,159,000; but claims were made for $6,200,000.....Tuesday the House voted—195 to 44—to fix a day for the consideration of the Reagan Interstate Commerce Bill. This is not considered exactly an indorsement of the bill; but all or nearly all who voted affirmatively are pretty sure to vote for some bill to regulate railroad charges, so as to remedy the evils of over-charges and unjust discrimination, and to put a check on the present system of railroad management..... Same day a vote was taken on fixing the three next Saturdays for the discussion of Bland's Free Silver Coinage Bill. The vote in detail was—yeas, 179, of whom 133 were Democrats and 46 Republicans; nays, 87, of whom 16 were Democrats and 71 Republicans; not voting, or paired, 58, of whom 36 were Democrats and 22 Republicans. This vote demonstrates that a large majority of the House is in favor of the free coinage of silver—it was confessedly a test vote. The President, however, is sure to veto such a bill; and it is still doubtful whether the necessary two-thirds to pass it over his veto can be obtained. Banks and other moneyed institutions as well as capitalists are bitterly against it; the rest of the country are generally for it, ignorantly indifferent, or "on the fence."..... ....The Insurance Commissioner of Ohio is urging war on the "graveyard insurance companies" doing business in that State..... At one o'clock Sunday last conversation was carried on between this city and Washington —280 miles away—by a new telephone patented by Mr. Turnbull, of Baltimore. Voices more clearly heard than when conversation takes place by telephone between two places in this city. Widely separated places will soon be within speaking distance of each other.....The Pennsylvania R. R. Co. owns up that, last year, its gross earnings were $93,000,000! It moved an equivalent of 8,400,000,000 tons of freight for one mile, and carried 54,754,771 passengers!.....The "express" business of the country is likely to be revolutionized by a recent decision of the U. S. Supreme Court, that each railroad company has a right to operate its own "express" to the exclusion of all others. Already notice has been given the "Adams" to get off the Missouri Pacific, and to the "Wells-Fargo" to quit the Northern Pacific. The decision reverses the findings of all the lower courts..... ....Although Congress has already spent a great deal of time in talking about alterations in the tariff and in taking testimony for and against every proposed alteration, and a good deal more time will be used up in discussing every phase of the question, it is becoming a very general opinion that Congress will make no changes whatever in the tariff at this session.....At 4:30 last Sunday morning (March 14), the famous Cunard steamer Oregon, "the greyhound of the seas," which left Liverpool March 6, having on board 896 persons, of whom 641 were passengers, when within 15 miles of the southern shore of Long Island, was run into by an unknown, three-masted schooner, and sank at 1 P. M. All the passengers and crew were saved, so that the Cunarders may still boast that they "never have lost a passenger." Doubtful yet to whom the blame belonged. Schooner had "right of way" of all steamers; but had no lights displayed—it is said. She and all on board were instantly lost and absolutely no trace of her has been found among the floating wreckage. The Oregon was worth $1,250,000; cargo estimated at $500,000; personal property of the rich Cunard passengers as much more; while the mail must have contained a very large sum. Total loss is estimated at from four to six million dollars. There were 598 mail bags, 223 of which have been found among the wreckage. Some doubt the "collision" theory, and say the loss was due to a dynamite explosion.....The suit against the Bell telephone is to be definitely brought in Columbus, Ohio, in a few days; papers are ready; summary published not correct.....Stonewall Jackson's horse "Old Sorrel," said to be the last surviving horse of the Confederacy, died the other day, aged 32.....Archbishop Taschereau, of Quebec, and Archbishop Gibbons, of Baltimore, are to be made Cardinals on April 12.....A good deal of the money received from General Grant's publishers is used to pay some of the debts of Grant & Ward, in accordance with the General's last wishes, where investments were made through faith in the Grant family. One such debt of $25,000 is known to have been paid the other day with a certified check. .....The McCormick works at Chicago are again in full blast, 1,250 men being at work. The malcontents threaten that all labor organizations will boycott all who sell its machines.....Thursday, March 18, was the President's 49th birthday..... Congress is inclined to pass a bill introduced by Wise, of Virginia, authorizing the establishment of manufactories of tobacco exclusively for export, under Government regulations.....Just now it looks hardly probable that that arch-lobbiest, Capt. Eads, will be able to dine, wine and weedle Congress into a guarantee of big interest for 30 years on the capital to be invested in his ship-railroad scheme. There's a great deal of "kicking" even by the love-sick Senator—Jones of Florida.....The strikes on the Gould railroad system are in a fair way of being settled by arbitration and mutual concessions. Immense damage already done to business..... ....Labor troubles still continue unusually numerous. Strikes and boycotting common; here are a few: 250 boys and girls—cracker packers, 10 to 14 years old—have struck for for higher wages, in this city.....West of the Mississippi, farmers and store-keepers along the C. B. & Q R. R. are boycotting the road on account of excessive charges and unjust discrimination in local rates..... The boys attending St. Ann's R. C. school, Brooklyn, who pay 10 cents a week, if able, struck Wednesday for half that rate; but magnanimously offered to relieve the authorities of half the work by attending only three days a week. A policeman arrested two "pickets" while thrashing a "scab" who wished to go to school, and the strike ignominiously collapsed.....Everett & Aughbaug, who control the milling business at Waseca, Minn., and are largely interested in elevators, have been boycotted by the neighboring farmers on account of the low prices they offer for wheat .....A cat show at New Haven, Conn., was boycotted last week because its prizes were made by a firm under the ban of Labor.....The parsons of Minneapolis have "resolved" to boycott Sunday papers..... Excessive rate-cutting still continues on the transcontinental routes; but it is confined to them exclusively. Indications point to a speedy settlement....The prospects of serious labor troubles early in the season greatly unsettles business all over the country. Over 71,000 hands are now out on strike, chiefly railroad men in the Southwest, coal miners in Pennsylvania, and mill operatives in New England; but every part of the country has its strikes, big or little. Many contracts have been refused in all sections, as it was impossible to fix any price that might not be ruinous through the demands of labor.....

AFTER two years' trial, we unhesitatingly pronounce the Boss ZINC and LEATHER COLLAR PAD, the only durable and successful one that we have ever used. It retains its shape, is cooling, prevents chafing, and thereby keeps the horses' necks clean and healthy. HIRAM G. DODGE & SONS, Wood & Coal Dealers, Madison, Wis.—*Adv.*

AGRICULTURAL NEWS.

SATURDAY, March 20, 1886.

THE Chicago dressed meat shippers, through Armour & Co., have prepared a case for the courts against the railroad companies for discriminating against them. The live stock men are also going to law with the roads for a reason precisely similar. Have you ever heard of a "friendly move?".....Com. Colman and others interested in sugar making are urging Congress to grant $1,000,000 to provide for two machines for the manufacture of sorghum sugar by the diffusion process..... ....Two bales of cotton raised in 1861 by slave labor were sold the other day at Rock Hill, S. C., on the death of the owner, who had been offered for it 33⅓ cents a pound in gold. It was sold for 8½ cents—the lowest price touched by cotton since the bales were raised.....Dakota farmers are making plans to grow flax for fuel this Summer. It is said that a ton of flax straw is worth more to burn than a ton of soft coal.....Germany has eight schools of forestry, where five years' training is required of those who seek positions under the Government, although a course of study half as long may be taken by amateurs. France supports a single school at Nancy.....The Legislature of Kentucky instructs her Senators and Representatives not to permit hemp to be put on the free list..... .....For years past our average annual importation of horses from Canada has been 22,000 head. A few years ago the average value, per head, was $95; last year it was $140—improvement in the Dominion and a demand for better horses here.....Farmers about Toledo, Ohio, are greatly alarmed at the appearance of swarms of young grass-hoppers about half an inch in length.....The recent cold spell ruined all the plants on that Governmental South Carolina tea farm, and the experiment has been finally abandoned..... A beef factory is to be established here. Stables "after the most approved patterns" are to be built, and filled with prime cattle to be fed on corn silage, by which means beef, the promoters say, can be supplied at rates cheaper than those asked for Western beef... ....Dairy Commissioner Brown, of this State, gives the N. Y. Senate items of expenditure amounting to $53,403. There have been 263 actual prosecutions for selling adulterated milk and oleo products; as well as 50 civil suits for penalties, and evidence has been collected for over 200 more suits..... The Connecticut Legislature is thinking of exempting from State taxes for 20 years every farmer who shall plant a certain number of trees under specified conditions.....The Austrian Government is about to pass laws to protect the fair fame of Tokay wine from the disrepute brought on it by the spurious concoctions sold throughout Germany under that name. This is the only country where good, pure wine is made more valuable by bearing fraudulent labels of foreign vintages ..... The average farm wages in Michigan, last year, were $17 a month with board, and $29 without.....Secretary Lamar has reversed Commissioner Sparks's ruling that preëmptors cannot take up homesteads on payment of commutation fees. The Secretary says a preëmptor *can* commute a homestead. Joy among thousands in the Far West.....The farmers of South Carolina are to hold a State Convention at Columbia on April 29, as they are "farming towards dispair," and the Legislature, while "not corrupt," "is negligent of the public welfare." A farmers' ticket is feared by the politicians, and a similar movement is under way in Georgia.

DON'T FORGET.—When Chas. Ashley, of Ogdensburg, N. Y., offered a $45 Fairbanks Scale at the Ogdensburg Fair for the three best tubs of butter it was awarded to H. M. Atwater, of the Atwater Creamery. The same three tubs were also awarded the first premium. Mr. Atwater reported to the Society that they were all brought to their beautiful shade with Thatcher's Orange Butter Color.—*Adv.*

Brown's Bronchial Troches for Coughs and Colds: "There is nothing to be compared with them." —*Rev. O. D. Watkins, Walton, Ind.*—*Adv.*

MARKETS BY TELEGRAPH.

SATURDAY, March 20, 1885.

CHICAGO.—Compared with cash prices a week ago, "regular" wheat is ½c. lower; No. 2 Spring, ½c. lower; Corn, ¾c. lower. Oats, ½c. lower. Rye, ½c. higher. Barley, steady. Pork, 35c. lower. PRODUCE COMMISSION HOUSE
ESTABLISHED 1865.
S. H. & E. H. FROST,
100 PARK PLACE, N. Y.
Shippers desiring to favor us will be furnished stencils, shipping cards, etc., on application. Promptness guaranteed. References, RURAL NEW-YORKER, Irving National Bank, etc.

THERMOSTATIC
INCUBATOR.
Send for circular. E. S. Renwick,
19 PARK PLACE, NEW YORK.

"The 'ACME' Pulverizing Harrow, Clod Crusher and Leveler is a capital implement for pulverizing inverted sod, in preparing for planting corn, as it goes down several inches in mellowing the freshly turned earth, while its slanting cut prevents tearing up the sod. For this purpose alone it is worth much more than its cost on any farm of moderate size."
See advertisement on page 199.

ECLIPSE
POST HOLE DIGGER.
The Greatest LABOR-SAVING tool ever invented for digging holes in the ground. This machine works on a new principle, and is unlike anything in the market. It is neither an Auger nor a Plunger, but is driven in the ground with a driving rod, which works in a pipe similar to a telescope. We claim for this tool:
1st. That one man can dig from 40 to three hundred holes two feet in ordinary ground in one day.
2nd. That it will dig holes any size or depth required.
3d. That it will work successfully in very hard or rough ground where other diggers and augers will not work at all.
4th. You stand up straight while using it, consequently no back-breaking work is required.
It will pay you to send for descriptive circulars and prices to COLE & FLEMING, Manufacturers, Springfield, O.

"SMOKE Your MEAT"
With Krauser's Liquid Extract of Smoke.
It is a liquid; you wash it on; it will keep it in a well preserved condition and free from insects; it is much more pleasant to the taste than meat smoked in the old way; it is done in less time, no trouble, and less expense. There is no danger from fire or of being stolen, as you can hang it in a more secure place than a smokehouse. Send for circular.
E. KRAUSER & BRO., Prop's and M'f's, DRUGGISTS, Milton, Pa.

I WILL INSURE YOUR HOGS!
DR. JOS. HAAS'
HOG AND POULTRY REMEDY

[None Genuine without this Trade Mark.]
Is the only Practical Preventive of the so-called Swine Plague.
It has never been surpassed as an increaser of pork and general system tonic. Aiding digestion, stimulating the biliary organs, preventing torpor and engorgement of the liver, and regulating the bowels, it removes and prevents the formation of disease germs, and preserves to the well bred hog his natural constitution. Where it has been fed to such animals in the prescribed quantities, and other directions faithfully observed, it has proved a thorough preventive against swine disease.
AS AN EVIDENCE OF FAITH
In my remedy I make the following offer:
I will insure herds of swine of not less than one hundred in number against disease, at a small fee per head, provided they are fed my remedy under my direction, and prove upon examination prior to contract that they are in a healthy condition, and are neither in-bred, close-bred nor the progeny of such.
1. I will forfeit $100.00 to any breeder whose offer to examine for Insurance I decline, provided he forwards remittance to cover my expenses to and from location of hogs, or I fail to prove to the satisfaction of any disinterested party, that failure to respond to invitation is caused by prior engagement or by matters of at least equal importance.
2. I will forfeit $500.00 if I decline upon examination to insure such herds, if my judgment as to their condition of health is overborne by the result of an examination made by at least two properly qualified and graduated veterinary surgeons.
Facts are Better than Assertions.
Please read the following testimony:
GIBSONTON P. O., PA., Feb. 2, 1885.
Dr. Jos. Haas—Dear Sir: About a year ago our herd here numbered about 2,700 head. Disease broke out, and no remedy we had would arrest the trouble. Our losses were heavy and we had to give up feeding entirely for about two months. We then heard of your remedy and bought a trial lot, and began feeding again. We have used it constantly ever since. We have since April last received about 5,000 head of hogs into our herd and have not had a single death from swine disease. This is our experience. Our opinion is that the remedy has prevented disease, and we would not think of being without it. As an aid in fattening pork, we believe it to be good. On this point, however, we have not made an actual test, *as we would not risk feeding a pen of hogs without the Remedy.*
Yours very truly, WHITE & CO.
[N. B.—White & Co., since writing the above letter, have purchased $450 worth of the remedy.]
The remedy can be procured of all Druggists, or from my laboratory. Prices, $2.50, $1 25 and 50 cts. per package. 25 lb. cans, $12.50.

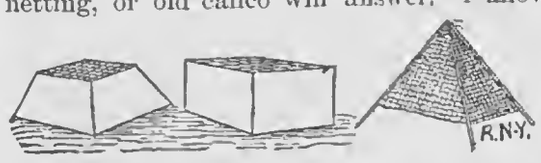
For the Young.

PLANTS AND SCREENS.

DEAR UNCLE MARK: I take much interest in your boys and girls department. I always like to read the letters from the Cousins. I don't know as you will admit a few lines into this department from an old gardener, but I thought perhaps a few suggestions on starting early vegetables might interest the Cousins, so I send you a few crude drawings of some of the contrivances that I use to start things early where they are to grow, by preparing the ground for the crop and planting the seed in the hill and using these screens. You can get almost anything a month earlier than in the open ground; the boys can construct them without much cost. A few thin pieces of boards, or some sticks such as they can cut in the woods, will do to make the frames for them. They may be covered with mosquito netting, or old calico will answer. I know



by experience that these screens will forward plants a month or more. I think many of the Cousins will be interested in making the screens and thus starting their plants earlier. To make the open screens all that is required are four straight sticks with holes in the end to tie them together at the top. Cover them with netting. They will keep all bugs away from the vines, and that is what we need to do. AN OLD GARDENER.

East Bridgewater, Mass.

A DECISIVE VICTORY.

Two things frequently happen with a cold. First, entire neglect; and second, what is worse, trifling with it by using weak and vain remedies.

The same thing happens with a cough, which may be only the voice of a bad cold or solemn warning of the approaches of consumption. It is often neglected entirely or played with by foolish syrups and decoctions till it takes a fatal hold of the lungs.

Of catarrhs one need hardly speak. Everybody knows how they eat up the mucus linings of the nose and throat, and finally go down to the pipes and lungs, playing havoc as they go and undermining the system by inches.

So does everybody know how stubborn catarrhs are. Before the introduction of Cannabis Sativa, the East India Consumption Cure, such a thing as a cure for catarrh, if at all chronic, was not known. Since the introduction of that wonderful remedy for the entire class of diseases which begin with a cold and cough and end with true pulmonary consumption, it can be confidently said that a *cure* for catarrh exists.

Don't believe this because we say so. Think for yourselves one moment and see if it must not be so. Nothing in the world is better established than that Cannabis Sativa is master of consumption. It was the one secret specific of the mysterious and learned medical men of the East for thousands of years. It has been tried here since its introduction in hundreds of the most hopeless cases, and, as numerous certificates show, has made wonderful cures.

The reason is that it reaches and controls the consumptive conditions of the system. It restores functions of the vital organs, reproduces lost stamina, lifts the system above the depression of disease and gives nature a chance to win.

Now what is clearer than that if it conquers and cures the greater disease it will be *a very king* among the lesser diseases which are but the seeds and beginnings of consumption? What will reach and remove an effect will surely conquer a cause, or one of many causes. It is far easier to whip the seperate regiments of an army than to overcome them when they are combined.

This very point came up the other day in a conversation with Mrs. Vannaman, of 940 South Front street, Philadelphia. Speaking of colds, against which she had to guard herself carefully, she said: "I always keep the Cannabis Sativa remedy in the house and I never found anything to take right hold of a cold like it does. It has never failed to break up my worst colds by the second day."

This is just what is needed in a cold; something to "take right hold of it and break it up." No man or woman can afford to dilly-dally with a cold, and especially if he or she inclines to consumption. The heroic remedy is the best with every disease which threatens the lungs.

The Vice Consul at Casablanca, Morocco, Africa, Mr. J. Cobb, writes thus; "I took a violent cold and my cough became so severe as to cause me to pass sleepless nights. I compounded one package of your Cannabis Sativa and began to take it. It gave me relief at once, and before three days I could go to bed and sleep all night. At this writing I feel quite positive I have the remedy in hand that I have long needed."

The importance of Mr. Cobb's statement is increased by the fact that he had been previously troubled with an alarming cough, which a cold aggravated and rendered dangerous.

Just what you might expect with a cold was present with William R. Thompson, of Hightstown, N. J. He writes to say: "I have taken one package of your Cannabis Sativa and am clear of my cough, the soreness in my lungs and the asthma. For ten weeks I could not do anything. Now I am well and working every day. Thanks to you."

It was not the mere cough belonging to a cold that Mrs. S. B. Smullen, of 81 South High street, Baltimore, had. It was the cough that said consumption was coming, and sure. She writes: "Had a dreadful cough for two years and four months. I write with gratitude to say that one $5 package of your Cannabis Sativa has entirely cured me. I consider it a wonderful remedy and superior to anything I ever before heard of."

While space will permit we must pass from these strong and positive endorsements of Cannabis Sativa as *a cure* for colds and coughs, to those, even stronger, which prove its power over catarrh.

Mrs. Gaugler, of Wexford, Allegheny County, Pa., writes: "Cannabis Sativa has made a new person of me. It has done its work faithfully and cured me of obstinate catarrh."

How worrying and depleting catarrh is! It is long drawn agony and without a thing to stop it till the introduction of the Cannabis Sativa Remedy. It is always a terrible threat on the lungs which it may reach any time. R. Hall, of St. Paul, Minn., saved his. He writes: "Had suffered a long time with catarrh and throat difficulty—it had gotten down that far, mind you, and would soon have reached the lungs—and began to take your Cannabis Sativa. Used four packages, following directions closely. It is due to you to say that my catarrh is *entirely cured*, my throat much better and my general health greatly improved."

After curing himself of catarrh Mr. P. F. Cuttino, of Cuttino & Co., dry goods merchants, Newman, Ga., writes that he has recommended Cannabis Sativa to several others and that it is his belief that it is the only remedy which will *positively cure* catarrh.

V. T. McChesney, Esq., of Kearly & McChesney, attorneys at Canton, Texas., writes: "I have been using your Cannabis Sativa Remedy for two months. When I began I only weighed 125 pounds and was very feeble. I now weigh 143 pounds and am nearly as strong as ever. The remedy has wrought a wonderful change in me. My malady was what the doctors called nasal and bronchial catarrh. I am still rapidly improving and gaining in weight at the rate of two pounds a week."

Catarrh won't stop of itself. It will make a wreck of the system. It will get to be consumption—slow consumption. All this is true if you don't stop it. As to how far it will go let Mrs. A. C. Sewell, of Clond County, Kan., tell. She writes: "You have been the means under God of rescuing me from the grave. I had given up hope and only waited death from nearly everything in the form of disease. The catarrh in my head was so bad that there was a continous gathering and breaking for four years. I had pains in my left side, night-sweats, palpitation, sinking spells, swelling of the limbs; in fact I was a wreck. Brother Perry brought me a double package of your Cannabis Sativa remedy—a distance of fifteen miles. I thought it of no use, for I supposed I was beyond medical aid. But I was prevailed upon to take it, and now I can say I am a well woman. Can do all my household work, for which I am thankful to God and you."

So we might number these free-will offerings of testimony till you tired of the reading. They would not make stronger the proof that in Cannabis Sativa I have a remedy that will speedily conquer colds and coughs and give you sure victory over that miserable and insidious disease, catarrh. Others have won; why may not you?

If you wish to know more of the great East India Consumption Cure, Cannabis Sativa, send for my treatise, which tells about it. It will cost you nothing and may save your life. W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

PERSONALS.

WM. D. HOWELLS receives from $50 to $100 a page for his work in the Century and in Harper's, and his estimated income from his writings this year will be about $20,000.

GENERAL JOHN B. GORDON is said to have become a millionaire through his railroad management and speculations, and to be now a candidate for Governor of Georgia, with an eye to a seat once more in the U. S. Senate later on.

MR. ARNOLD MORLEY, the new whip of the Liberals in the House of Commons, is a young and singularly handsome man. He is a lawyer and has worked as diligently at that profession as though he were poor and friendless, instead of the son of a man whose income is $1,000,000 a year.

THE genial Dr. Oliver Wendell Holmes takes a deep interest in the movement for the protection of birds from slaughter. "I wish they could be protected by law," says he, "and if law cannot or will not do it, that public opinion would come between them and their murderers. Not less, certainly, do I feel the shame of the wanton destruction of our singing birds to feed the demands of a barbaric vanity."

CAPTAIN BOYCOTT, formerly of the British army, whose tyranical exactions while agent for an Irish estate, half a dozen years ago, made him detested by all around him who refused all intercourse with him, thus originating the term "boycott," has been appointed agent for the large estates of Lord Waveney, in Suffolk, England. Before he finally left Ireland he had changed his conduct and become quite popular.

Miscellaneous Advertising

Last week we requested you to "Watch this Space." Now, if you will send your address to Hallett & Co., Portland, Maine, you will receive, free, full information about work that you can do, and live at home, at which you can earn from $5 to $25 upwards daily. Some have earned over $50 in a day. Capital not required; you are started free. All is new. Both sexes—all ages. Snug little fortunes await all workers.

FAIR AND SQUARE DEALING.
Believing that if a man has dealt squarely with his fellowmen his patrons are his best advertisers, I invite all to make inquiry of the character of my seeds among over a million of Farmers, Gardeners and Planters who have used them during the past thirty years. Raising a large portion of the seed sold, (few seedsmen raise the seed they sell) I was the first seedsman in the United States to warrant (as per catalogue) their purity and freshness. My new Vegetable and Flower Seed Catalogue for 1886 will be sent FREE to all who write for it. Among an immense variety, my friends will find in it (and in none other) a new drumhead Cabbage, just about as early as Henderson's, but nearly twice as large! James J. H. Gregory, Marblehead, Mass.

Off with the tariff on seeds! - - - - - - Relief for the people!
GREAT SUCCESS TO OUR NEW DEPARTURE IN THE SEED TRADE
SEEDS AT YOUR DOOR AT WHOLESALE PRICES.

THE MAPES
Potato Manure.

EXCELLENT FOR ALL VEGETABLES.

Not a Single Hollow or Decayed Potato---445 Bushels per Acre.---No Stable Manure used---Only the Mapes.

JOSIAH HAWKINS, the well-known Seed-Grower, Southport, Conn., December 23d, 1885, reports:

Crop—Potatoes, "Dakota Red."

Soil—Light, thin and gravelly.

Time of Planting—April 25th.

Fertilizer applied—1,200 lbs. of Mapes' Potato Manure per acre, sown broadcast and bushed in at time of planting. No other manure nor fertilizer used.

Cultivation—Hoed once and plowed three times.

Yield—Dug them the middle of September, they yielded 445 bushels of very large, handsome potatoes per acre.

Quality—Not a single hollow or decayed one. Qualtity and looks much like the "Early Rose," when they were first introduced. I am selling all the time for seed. Old farmers say they never saw such fine potatoes. I have 2,500 bushels of them. The quality of potatoes is of the greatest importance with me—and I generally grow eighteen acres.

Remarks—Last year, 1884, the yield of potatoes of the common varieties, upon the same ground with stable manure, was 115 bushels per acre. I have used many of the fertilizers offered for sale and have found that it pays me well to use your fertilizers and so say my neighbors. I have seen the analyses of your fertilizers repeatedly by our own and other State Boards (Experiment Stations) and I am fully convinced that all who want reliable, lasting fertilizers should have the Mapes. Your Corn and other Fertilizers have given great satisfaction.

Use of stable manure for Potatoes abandoned in this localitiy in favor of the Mapes Potato Manure.

W. F. ANDROSS, East Hartford, Conn., November 18, 1884, writes:

For the fouth year I have used the Mapes Potato Manure with continued and unvarying success. I raised upwards of 700 bushels of potatoes the past season, embracing 17 varieties, and mostly upon the Mapes Formula. I can report only in a general way, as my successes with your manures in past seasons led me to abandon further experiments with them, as I feel assured that I can depend on them every time for satisfactory results. I tried three other kinds of potato manure the past season under similar test conditions with yours, as far as regards soil, variety, and time of planting and harvesting. I find, as heretofore, that the "Mapes" does the best. As to stable manure for potatoes, the fact that its use is abandoned in this locality in favor of the "Mapes" is sufficient argument, that the farmers think yours insures the best results.

SARDY'S
CONCENTRATED PLANT FOOD
A COMPLETE BONE MANURE FOR ALL CROPS.

GUARANTEED ANALYSIS.

*Available Phosphoric Acid,**	*8 to 9 per cent.*
Bone Phosphate (undissolved),	*4 to 6* "
Ammonia,	*2 to 2¼* "
Sulphate of Potash,	*4 to 5* "

Price $28 per Ton.
FREIGHT PAID TO YOUR NEAREST R. R. STATION.
Discount on orders for one or more car loads.

Every batch of this fertilizer is analyzed by *Messrs. STILLWELL & GLADDING*, Chemists to the N. Y. Produce Exchange, whose high reputation is abundant guarantee that the goods are equal to the analysis.

Buyers are invited to have samples drawn and analyzed by their STATE CHEMISTS, and the fertilizer is guaranteed to come up to the above standard by their tests.

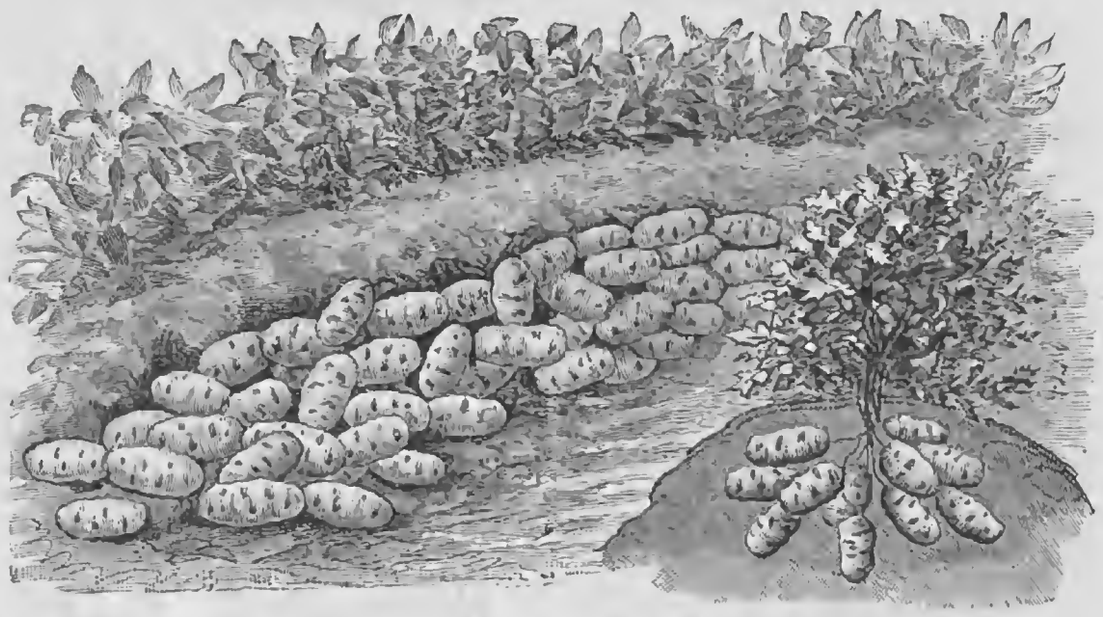
This Concentrated Plant Food is the result of 20 years' experience in the manufacture and use of chemical manures. It is a far higher grade than any fertilizer ever before offered to FARMERS for $28 per ton, PROPORTIONATELY cheaper than any higher or lower priced brand, and cheaper than farmers could buy the ingredients and make it.

It is warranted to contain no leather, shoddy, hoofs, horns, or similar material; all its fertilizing elements being in their most *available forms.*

Compare the analysis and price (*which includes freight*) with other brands.

A. L. SARDY, 10 BURLING SLIP, corner Water Street, New York.

STOCKBRIDGE POTATO FERTILIZER
661 Bushels per Acre.



PRIZE CROPS.

The prizes which we offered in 1885 were awarded as follows by the Vegetable Committee of the Massachusetts Agricultural Society, for the largest crop of potatoes grown on the **STOCKBRIDGE POTATO MAUURE.**

1st Prem.,	H. C. Pierson, Pitcairn, N. Y.	Yield on ¼ acre,	9920 lbs., or	**661**	**1-2**	Bush. per acre.
2d "	Stephen Hoyt's Sons, New Canaan, Ct.	" "	8523 lbs., "	**568**	"	"
3d "	Joel Burt, Sunderland, Mass.	" "	6392 lbs., "	**426**	"	"
4th "	G. W. Sherman, Smithfield, R. I.	" "	4800 lbs., "	**320**	"	"
5th "	G. S. Barber, South Kingstown, R. I.	" "	5461 lbs., "	**364**	"	"
6th "	J. W. Norton, Wolcott, R.I.	" "	4530 lbs., "	**302**	"	"

Mr. Pearson, who took the first prize, planted the crop on May 18, and harvested Sept. 24. Stockbridge Manure *alone* was used, at the rate of 1,000 lbs. per acre. The soil was a sandy loam. Potatoes were planted one piece in a hill, hoed three times, and weeded by hand.

Stephen Hoyt's Sons, who took the second prize, planted on 16th May, and harvested 23rd September. Stockbridge Manure *alone* was used, at the rate of 1,500 lbs. per acre. The soil had been used for nursery purposes, and had not been in turf for forty years. The fertilizer used on this crop was two years old, showing that these celebrated Manures do not lose their virtue by being kept over, as many farmers suppose.

BOWKER FERTILIZER COMPANY,
29 BEAVER STREET, NEW YORK, AND 43 CHATHAM STREET, BOSTON, MASS.

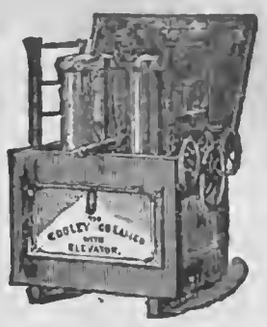
HOLSTEIN-FRIESIAN CATTLE!

LARGEST HERD AND LARGEST AVERAGE MILK RECORDS.
3 cows have averaged over 20,000 lbs. in a year.
5 cows have averaged over 19,000 lbs. in a year.
10 cows have averaged over 18,000 lbs. in a year.
25 cows have averaged over 16,000 lbs. in a year.
63, including 14 three-year-olds and 21 two-year olds, have averaged 12,785 lbs. 5 oz. in a year.

BUTTER RECORDS.
5 cows have averaged 20 lbs. 7 oz. in a week.
9 cows have averaged 19 lbs. 5½ oz. in a week.
11 three-year-olds have averaged 13 lbs. 2 oz. in a week.
15 two-year-olds have averaged 10 lbs. 8 3-10 oz. in a week.

This is the herd from which to get foundation stock. Prices low for quality of stock. **SMITHS, POWELL & LAMB,** LAKESIDE STOCK FARM, SYRACUSE, N. Y.

When writing mention RURAL NEW-YORKER.



IT IS A FACT

THAT THE
COOLEY CREAMERS

Are used by more fine butter makers and stock breeders than any other apparatus, because they have proved to make the **largest quantity** and **best quality** of butter with **least labor** and **expense.** They surpass everything in the Cream Gathering System. Patrons realize from 3¼ to 4½ cents per quart for milk. Send for Circulars giving facts and references sustaining these claims. *Davis Swing Churns and Improved Eureka Butter Workers.*

FRENCH COACH HORSES.

"Superbe," winner First Prize, Antwerp, 1885.

This race of handsome, high-stepping carriage horses, whose fine style, grand action, beauty and power have attracted the attention of all people who have visited Europe, will hereafter find a place at Oaklawn Farm, among the Percherons for which it has so long been famous. The Coach horse of France has been developed under Government patronage, and for every animal of this breed now owned at Oaklawn we have the Government certificate of breeding.

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XLV. No. 1888. NEW YORK, APRIL 3, 1886. PRICE FIVE CENTS. $2.00 PER YEAR.

Entered according to Act of Congress, in the year 1886, by the Rural New-Yorker in the office of the Librarian of Congress at Washington.

Pomological.

HOW TO GRAFT.

THE WHOLE STORY.

GRAFTING is one of the most important operations connected with practical fruit growing, and it is so easily learned and so very successful in changing trees of inferior sorts into those more valuable, that no fruit grower should fail to learn all the various ways of performing it.

The theory of the practice rests on the fact that when the cion is so placed in or on the stock that the cambium layers of the

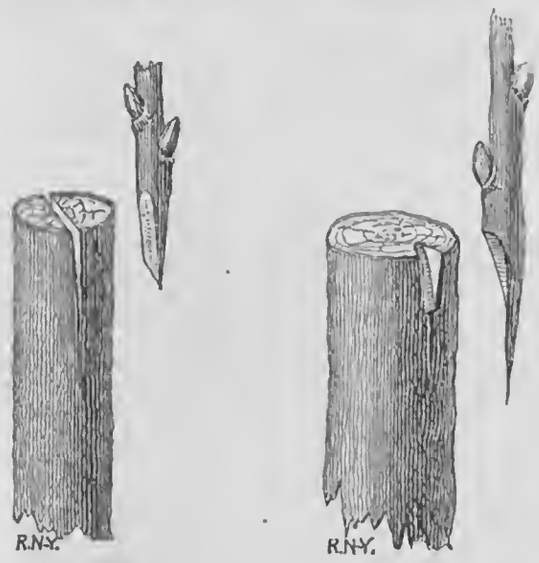

Fig. 126.

Fig. 129.

two are in contact, immediately on the sap's beginning to move, they unite, and the cion at once becomes part and parcel of the tree.

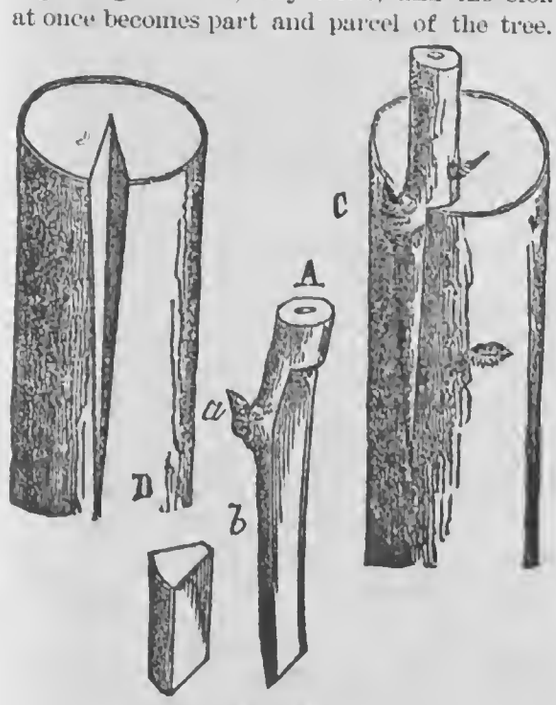

Fig. 127.

This union, however, is only of the growth made subsequent to the operation, and never extends to the wood existing when the grafting is done.

While most trees may, under very favorable circumstances, be successfully grafted, the apple, pear, plum and cherry are those in which farmers are most interested. And these can be grafted with success in the order named.

CLEFT GRAFTING, Fig. 126, is the form most commonly used, and is adapted for stocks from five-eighths of an inch in diameter to those of three inches. The stock or limb is sawed square off with a fine saw, and is then split, as shown, with a "grafting knife," which can be purchased for a small sum at most hardware stores. The cions are "whittled" so as to be wedge-shaped, having the wedge part longer or shorter according to the diameter, and a little thinner on the side designed to go toward the center of the stock, and are cut to such a length as to contain two or three buds. A "wedge," or the wedge part of the grafting knife, is drawn into the "cleft" or split of the stock, until it is open sufficiently to receive the cions, two of which are inserted, if the stock is one inch or more in diameter.

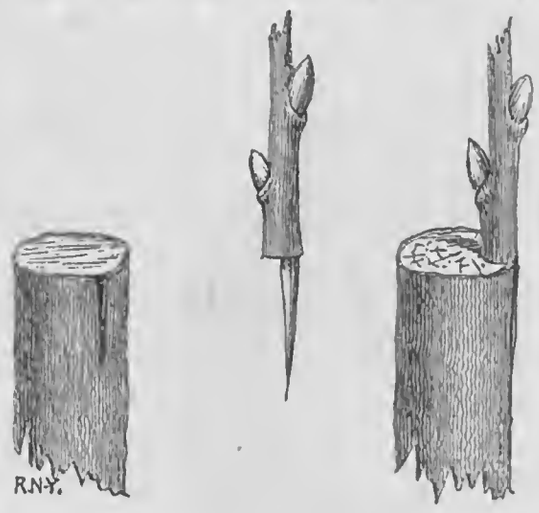

Fig. 128.

And here let us say that in all forms of grafting, care must be used in placing the cion so that the cambium layer (that part between the bark and wood) of it and the stock shall be in direct contact. After the cions are crowded down snug, the wedge is withdrawn, and the whole "waxed. In all styles of grafting, great care must be used that the ends of the stock and cions and the whole slit be fully covered with wax, so that no air can gain admittance to any cut surface.

GROOVE GRAFTING, Fig. 127, is another form that may be used where the stocks are so cross-grained or tough that they will not split with a smooth edge. It is also adapted to grafting grape-vines, etc. The groove shown at D is cut with a fine saw by taking out a V-shaped piece. The cion is whittled to the shape shown at A, and a small section at *b*, is made of such a size that, when driven into the groove by a few taps with a small mallet or stick, it will fit tightly when the

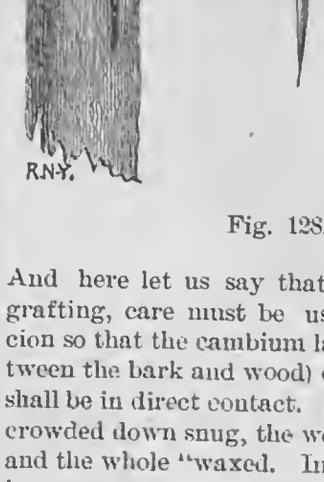

Fig. 130.

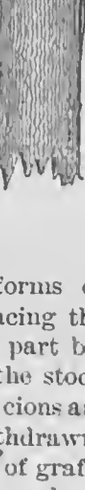

Fig. 134.

cambium layers are in contact. If the stock is large, two or more cions may be used, putting them on different sides.

SLIP GRAFTING, Fig. 128, is another form that may be used where the stocks cannot be smoothly split. It may also be used in connection with cleft grafting where limbs three or more inches in diameter must be cut. In this the bark is slit and slightly raised. The cion is cut half off square, the remaining portion is then cut slanting towards the bark to a point. This part is then inserted into the opening in the bark and crowded down till the square part rests upon the end of the stock. All of these features are shown in the cut, although this does not show the wedge part of the cion as large as it should be left.

BEAR'S-MOUTH GRAFTING Fig. 129, is still another form that may be used where the stocks are refractory. It has the advantage of having more of the wood of the cion left to resist high winds, which are sometimes destructive to young grafts. In this, the stock is sawed in two places nearly as wide apart as the cion is thick, and an inch-and-a-half down the side; this piece is then nicely cut out with a chisel or a narrow-bladed knife. The small cion

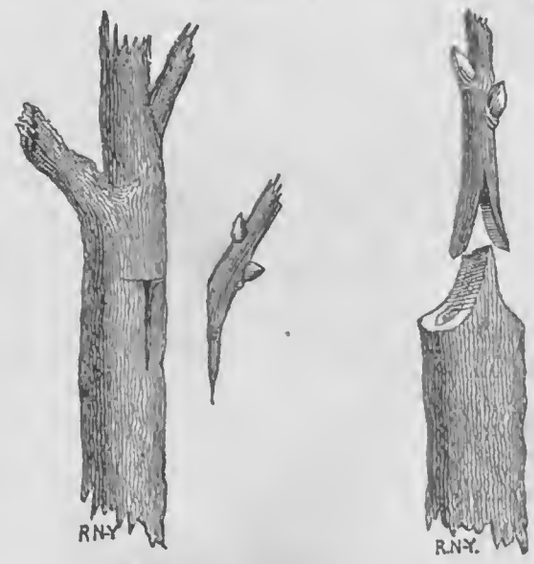

Fig. 131.

Fig. 133.

is slightly scarfed on the side, and cut half off with a slant that will fit into the "kerf". The remaining portion is then cut to a point with a long taper; the bark of stock is then slit below the kerf, and the point of cion is inserted and pushed down under it until the slanting portion of the cion is crowded down into the "bear's mouth."

WIRED GRAFTING, Fig 130, is an entirely new method of grafting, for a cut and description of which we are indebted to our good friend J. V. H. Nott, of Kingston, N. Y. It avoids all splitting of stock or rupturing of bark, and he says it has proved with him very successful, and far ahead of the old style of cleft grafting. The cions are cut squarely off, and holes are made in the center, and a piece of No. 18 wire, 1½ inch long, is forced into

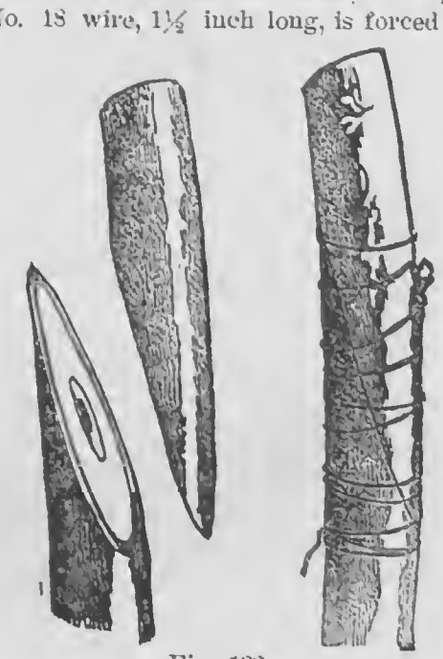

Fig. 132.

each, half an inch. One or more holes are then made in the end of the stock in such position that when the wires projecting from the cions are forced into them, the cambium layers of cion and stock are brought firmly into contact, and the parts are then well-waxed.

SIDE GRAFTING, Fig. 131, is successfully used whenever it is desirable to produce a limb on the side of a young tree, to balance the top, or for any other purpose. A cross is cut on the side of the tree, and a slit is made as if for budding. The cion, cut with a long slant, as shown in cut, is inserted and crowded firmly down, when the whole is nicely waxed. In this form, which is really a variation of budding, it is sometimes necessary, for a short time, to support the young growth by tying it up to the body or some higher limb.

The above are all forms of grafting, designed for large trees and for larger limbs. Where cion and stock are of nearly the same size some of the following methods are used.

SPLICE OR WHIP-GRAFTING, Fig. 132, is very nicely done where both cion and stock are of the same size. Here both are cut with the same length of slants, and are then placed together so as to have the combium layers in contact, and secured by tying with a string,

Fig. 136.

Fig. 135.

and the whole is covered with wax, or, more commonly, wound with waxed cloth.

SADDLE GRAFTING, Fig. 133, is used where the stock is from the size of the cions to two or three times as large. The upper end of the stock is whittled to a wedge, the cion is split, and each side cut to a point. It is then crowded firmly down upon the wedge, and secured by tying and waxing, or with waxed cloth.

TONGUE GRAFTING, Fig. 134, is mostly used by nurserymen for root grafts. It may also be advantageously used in grafting the small limbs produced where, for any cause, grafts set in large limbs, have failed.

In this method a long, even slant is made on both stock and cion. The knife is then reversed, a cut is made parallel with the grain; these are then caused to interlock with each other, and crowded well together and tied and waxed, or bound with waxed cloth. The figure shows the tongues raised as they would be after the parts had been crowded together and have remained so for some time.

SPLIT GRAFTING, Fig. 135, is also used by nurserymen where stocks only a little larger than the cions are to be used. In it the stock is split and the cion, whittled wedge-shape, is inserted and crowded down firmly, and the whole wound with waxed cloth, or bound with string and covered with wax.

CROWN GRAFTING, Fig. 136, is a little the best style of grafting where we wish to do an extra-nice job, and have the wound heal over in the least time and make the least scar. In this the stock is cut with a slant, the bark is slit and raised at both the apex, behind, and base of the slant, in front. The cion is split

in the middle and a distance equal to the slant on the stock added to the distance it is desired to have it extend under the bark below the slant; one half is merely cut wedge-shape at the point; the other is cut off an inch and a half long, and is whittled, from the inside, to a point. It is then applied to the stock as shown in the cut, the shorter end being inserted beneath the bark at the apex, and the longer end at the base-slit, and both are pressed home till the cion sets closely and firmly to the stock, when it is bound with the cloth, or tied with string and waxed.

Of course, in all these forms of grafting in which the cion or any part of it is to be inserted and slipped down beneath the bark, the operation must be deferred until the bark becomes more or less loose; the other methods may be practiced at any time from the opening of Spring till the trees are in bloom; for apples, pears, plums and cherries must be grafted very early or not at all, as after there has been the least circulation of sap, grafting is almost sure to fail. Split grafting and tongue grafting, when used in grafting apples or pears for nursery purposes, may be done at any time during Winter, and if the "grafts" are packed in damp sand, after being "worked," and kept in a moderately cool cellar, they will be found nicely united by planting time, and, if well cared for, scarcely one in a hundred will fail to grow.

GRAFTING WAX can be made according to various formulas. Four pounds of resin, two pounds of tallow and one of beeswax make a very good wax. Six pounds of resin, one pint of raw linseed oil and two pounds of beeswax also make a good article. Four pounds of resin, two pounds of beeswax and one-and-one-half pound of tallow make a capital, though rather expensive wax. In all cases the materials are to be melted together, thoroughly stirred and poured into cold water and pulled by hand until nearly white. To prevent the wax from sticking to the hands, the latter must be kept thoroughly wet and be occasionally greased with tallow.

WAXED CLOTH is made of any old calico or muslin, or may be made of rather tender new muslin saturated with a mixture of four parts of resin, two parts of tallow and two parts of beeswax, melted together. To saturate the cloth, it is torn into strips about 10 inches wide, and closely wound upon a small iron rod into a roll of any convenient size. These rolls are kept immersed in the hot mixture until fully saturated. The cloth is then drained of all surplus mixture, and unrolled and laid upon any wet surface to cool. In using, it is torn into strips a half inch wide, and these are wound upon the grafts, the bands overlapping each other so as to be air and water-tight. With this full description, none of our readers should have any difficulty in learning how to graft by any of these methods, and one worthless tree changed into some valuable sort, will in a single year pay many times the cost of the RURAL.

Rural Topics.

Experiment Grounds of the Rural New-Yorker.

TESTS WITH PEAS.

CARTER'S FIRST CROP OR RINGLEADER, planted April 20, gave the first picking June 16. There was no appreciable difference between it and other "First Crop" Peas.

PUGET SOUND, from A. G. Tillinghast, La Conner, Skagit County, Washington Territory. The average hight of the vines was two feet, branching just above the soil, forming an average of five stems to a plant. Each entire plant averaged 35 pods, covering seeds of the largest size, wrinkled and of fine quality. Pods in pairs. It is a splendid variety in every way. Fifty pods weighed 10½ ounces, contained 225 seeds, of the largest size, which weighed 5½ ounces.

BRECK'S EXCELSIOR, from Jos. Breck & Sons, Boston, Mass., planted April 20—first picking June 16. The plants are not so high by six inches as most other first-crop peas, while in other respects they are much the same.

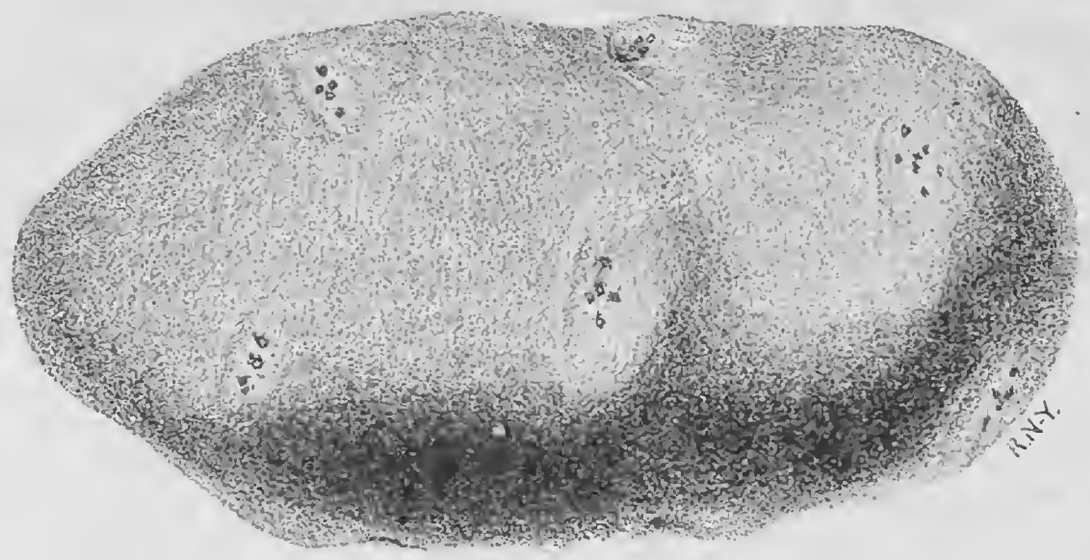
PRIDE OF AMERICA.—Seeds of this new pea were received from James Carter & Co., of London, England. This variety resembles the famous Stratagem, introduced by the same firm, though about 10 days later. Fifty pods weighed 14 ounces, contained 290 seeds which weighed 7¾ ounces, a large proportionate weight of seeds to full pods. The seeds were of the largest size. The quality is about the same as that of Stratagem.

BLISS'S ABUNDANCE.—This was tested here several years ago by numbers before it was offered for sale. We followed the instructions given us, viz., to plant the seeds six inches apart. This is well enough if every seed would grow; otherwise many gaps will occur. We should prefer to plant closer and thin out after a stand is insured. The Abundance is a good intermediate pea, the vines branching remarkably and bearing as many peas as could reasonably be desired. The pods are of medium size, the peas wrinkled, large and of good quality.

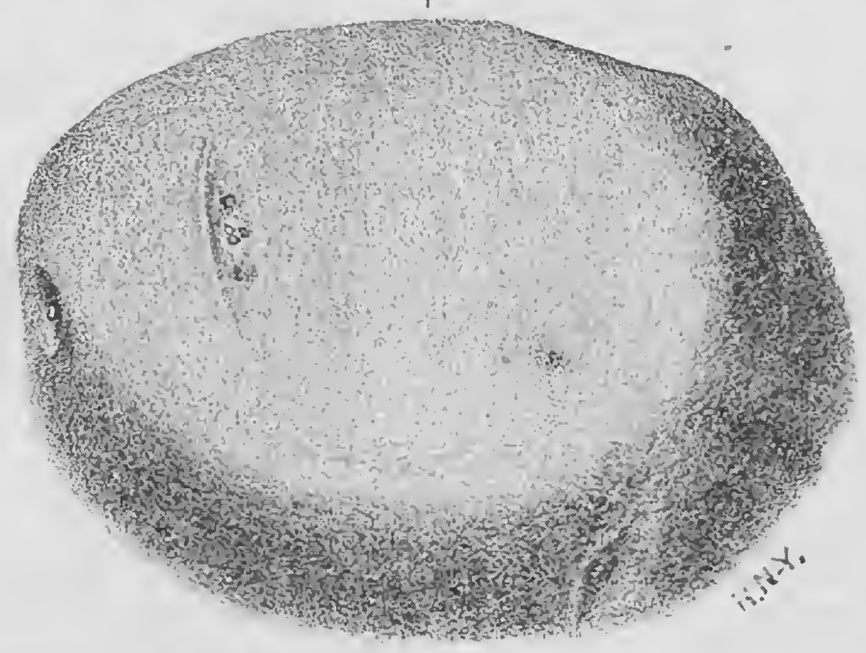
BLISS'S EVERBEARING is much like the Abundance, though the seeds are of the largest size and the plants blossom and mature fruit during a longer period. The quality is excellent; the vines grow about two feet high, and though they do not require support, are better for it. This pea has the same branching habit, each plant forming, in good soil, a little bush. Our readers will not regret a trial of both the Abundance and the Everbearing.

CABLE, from O. H. Alexander, Charlotte, Vermont, grows 18 inches high. It is a very prolific, branching pea, short-jointed, strong-growing, and needing no brush. The pods are often in pairs, and average a dozen to a stem. The seeds are large, though not uniformly so. Fifty pods weighed eight ounces, containing 260 seeds, which weighed four ounces. An intermediate.

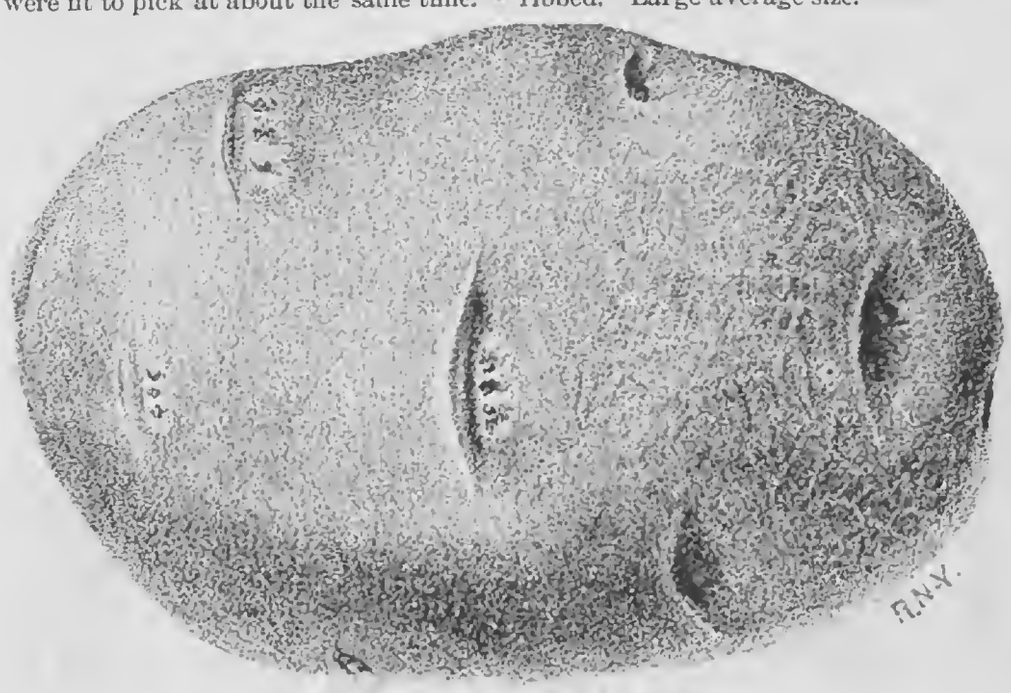
PROLIFIC, from same, did not grow quite so tall as the Cable; not so uniform in hight. They were fit to pick at about the same time. Fifty pods weighed 12 ounces, containing 337 seeds, which weighed six ounces. Seeds large, of fine quality.



VANCOUVER POTATO. From Nature. Fig. 137.



TROY POTATO. From Nature. Fig. 138.



EARLY PEARL POTATO. From Nature. Fig. 139

TOMATOES.

THE ECLIPSE of Sharpe & Co., England, seems to be merely the old Pear-shaped Tomato.

HOVEY is of medium size, firm, pinkish color, smooth and very productive.

CARTER'S ACME (England) is of a dull yellowish-red color, medium size, very firm and smooth.

EARLY MARKET (Johnson & Stokes, Philadelphia, Pa.) is of medium size, smooth, nearly Acme color, but lighter, smooth, firm, productive. This and the Hovey are much alike.

WONDER OF ITALY is a modification of the King Humbert or Pear-shaped Tomato, yellowish-red in color.

OPTIMUS, from D. M. Ferry & Co. We doubt if this has any superior at present. Color yellowish-red, very smooth, ripens all over fully, is never green about the stem. It is firm without cracks or unusual liability to rot, and ripens its main crop as early as any.

CHALLENGE, from Robert Buist, Jr., Philadelphia, Pa., is an immense yielder, yellowish-red in color, generally smooth, sometimes ribbed. Large average size.

PROLIFIC, from same, did not grow quite so tall as the Cable; not so uniform in hight. They were fit to pick at about the same time. Fifty pods wieghed 8½ ounces, containing 268 seeds, which weighed four ounces.

ATLANTIC, from same, averaged a little over two feet high. Fairly prolific, medium-sized pods in pairs; strong stems, healthy foliage. An average of 10 pods to a vine. Fair quality, half-wrinkled.

EARLY PARAGON was received from Charles Sharpe & Co., Sleaford, England. The vines grew five feet high, bearing very large pods (singly), which were not always well filled.

BELLE, from same, is firm large, shapely, rarely with prominent lobes or seams. It does not crack and is free from rot.

SELECT CARDINAL, from Moses Parker, M. D., Groveland, Essex Co., Mass., is firm, smooth, of medium size and good.

EXQUISITE, from same, is of medium size, orange color, firm, ripens fully, very prolific.

TOM THUMB, from R. & J. Farquhar 19 S. Market Street., Boston, Mass., has dwarf vines and curled leaves. Tomatoes lobed and irregular. It has no merits that we discovered.

SWEET CORN.

HERE are the results of careful comparative tests with sweet corn made at the Rural Ex. Grounds: Planted May 9; Early Narragansett and Minnesota were ready for the table July 20, though the ears were small and imperfect, those of the latter being more matured. The plants were four feet high to the tip of the tassel. Both kinds bear but one ear of from 8 to 12 rows to a stalk. They were the only kinds in use up to August 11. The Cory, according to accounts, will now take the place of these.

MOORE'S EARLY CONCORD was fit to eat August 11. It is more prolific than either of the above. The ear is generally 12-rowed, and six inches long. The stalks were slender and four-and-a-half feet high.

TRIUMPH was also ready with Moore's. This grows five feet high, generally one ear (12 to 14 rows) to a stalk.

TUSCARORA was also ready for the table August 11. Stalks six feet high. Generally two ears to a stalk. Ears long and from 8 to 10 rows, often widely separated. The kernels are large, oval, rather flat and perfectly white. They do not shrivel as do most kinds of sweet corn, and though tender are not sweet.

HICKOX grows six feet high. Boiling ears ready August 12. Generally eight rows, ears long and tapering, often two to a stalk, but there are more barren stalks than in Tuscarora.

ASYLUM grows five-and-a-half feet high, one ear to a stalk, ready for use August 11. The ears are 10 to 12 rows, regular and well filled out.

MAMMOTH ready for use August 16. Stalks seven feet high. The ears are large, 12 to 18 rows, one to a stalk.

BLACK MEXICAN was ready for use August 17. Stalks six feet high, leafy and slender. Often two ears to a stalk, generally 8 to 10 rows eight inches long. They are ready for cooking several days before they show color, though sweet and buttery for several days after.

STOWELL'S EVERGREEN. Stalks six feet high and heavy. Ears shapely, 14 to 20 rows, small kernels. Ready for boiling August 19.

EGYPTIAN or WASHINGTON MARKET ready to cook August 19. Stalks seven feet high. Often two ears to a stalk, about 14 rows, short, stubby, well filled out.

POTATO TESTS CONTINUED.

SOIL, CULTURE, ETC.

SUBSCRIBERS should understand that these tests are made in a rich, moist, garden soil. The crop never suffers seriously either from drought or too much wet, as the land is well drained. Not only has farm manure been liberally supplied, but fertilizers of every kind have been used in abundance. Potatoes have been raised on this plot for six consecutive years. Trenches are dug one foot wide and six inches deep, and three feet apart. Two inches of soil are raked back in the trenches, and the seed pieces (two strong eyes each) are placed one foot apart. Two inches of soil are then raked over them, and the fertilizer is strewn evenly at the rate of about 1,000 pounds to the acre. The rest of the soil is then returned to the trenches as loosely as possible. The cultivation is then effected by hand cultivators, and hilling up is studiously avoided.

POOR MAN'S FRIEND, from T. Bacon, Wauconda, Ills., originated with Geo. Vasey, Volo, Ills. Yield at the rate of 363 bushels per acre. not more than half of marketable size. Shape cylindrical, eyes rather deep. Flesh purple-streaked. Late. It "straggles" as much as any potato we have ever raised.

SWINGLEY'S PRIDE, sent by William Murray of Mt. Gilead Ohio, originated with Dr. Swingley of that place. The yield was at the rate of 403.33 bushels per acre, three-quarters of marketable size. Very irregular in shape. Deep eyes, pink skin. Late. Eaten Nov. 2. Nearly white flesh, not mealy.

VANCOUVER from Henry Hard, Middlesex Co. Conn. The yield of 14 pieces was 16½ pounds—65 tubers, 47 marketable. Best five weighed three pounds 6½ ounces. Yellow-buff skin. Medium long, often pointed at one end. Eyes medium in number and prominence Yield per acre 285.21. Eaten Nov. 21. White flesh, fine-grained. About the quality of Early Rose. Late. See Fig. 137.

MARKET GARDEN from O. H. Alexander, Charlotte, Vermont. This is an ill-shapen potato of no value as judged by this trial. Planted April 20—matured Aug. 13.

GEN. LOGAN from same. Nearly all small and of irregular shape.

CANADA RED from same. Five pieces yielded eight pounds, or at the rate of 387.20 bushels per acre. There were 18 tubers, of which 13 were marketable. Best five weighed four pounds 11 ounces. The largest potato weighed one pound 10 ounces. Deep eyes, irregular shape. Eaten Nov. 23, nearly white flesh, not very dry.

ST. JOHN from same. A small yield—late. Six pieces yielded four pounds—30 potatoes, 12 only marketable.

TROY from same. Intermediate. Four pieces yielded eight-and-one-half pounds, or at the rate of 514.25 bushels to the acre. There were 37 tubers, 29 marketable. Best five weighed two pounds. Shape oblong, truncated, flattened, smooth, shapely, few eyes. A handsome potato. Eaten October, 25. Mealy, white flesh, of the Early Rose kind. See Fig. 138.

FORT MONROE from same. Three hills were planted, and produced but 10 potatoes, six of which were of marketable size. Late.

EARLY PEARL, from J. A. Everett & Co., Watsontown, Pa., who speak of it in their catalogue in the highest, not to say extravagant terms Eight pieces were planted April 22, and dug August 31, yielding 17 pounds, 44 tubers, of which 40 were marketable, a high proportion certainly. Shape cylindrical, medium long, not much flattened. Skin buff white, Eyes medium in number and prominence. Best five weighed three pounds and 14 ounces. A substantial-looking potato. Eaten October 24, mealy, white flesh of good quality. The above yield would be at the rate of 514.25 bushels to the acre. Fig. 139, shows the typical form as nearly as it could be determined.

JUNKIS from L. Putnam, Cambridge, Vermont, who wrote at the time of sending the seed: "Be very choice of these tremendous yielders; quality unexcelled." Four pieces yielded seven pounds, 30 tubers, 21 marketable. Best five weighed two pounds two ounces. Shape rather long, flattened, generally tapering at one end, sometimes to a neck, which is an undesirable shape. Yield per acre at the rate of 423.50 bushels. Eaten December 28th. Quality very good, flesh white. Late.

CORRECTION.

IN our account of Rose's New Puple Blush, the yield per acre was stated as 536.25 bushels. It should have been 393.25.

ON page 104 my old friend Hovey has a very pronounced article on "Old Fruits under New Names." I wish to assure him that I am in hearty sympathy with him on this subject. This changing of old names is all wrong, and the reasoning on which it is based is entirely fallacious. Instead of simplifying nomenclature, it is making it a Babel. Briefly, neither the American Pomological Society nor any other society has the least shadow of right to alter these names. To concede such right to the society is to set at nought the hitherto universally acknowledged right of every introducer of a new fruit to give it whatever name he pleases; a right so just and proper in itself that it has come to have all the force of common law in the world of pomology, to say nothing of the sciences. If this right be given to one society, it will be claimed by others, and anybody can see where this will lead. The Pomological Society may very properly request, as President Wilder has done, that hereafter short, unobjectionable and expressive names be given to new fruits by those who introduce them. If, however, a long name will accomplish the purpose better, then I should favor the long name. I believe in taking time to do things well, which, as a people, we do not do in some very important matters.

* * *

The printer (p. 133) makes me say Thuja Canadensis. I wrote Tsuga. On the same page he makes me say Friesa refracta alba, whereas I was particular to write Freesia quite plainly, as I always try to do. Friesia belongs to quite another family. Freesia, I may add, is a proper name and should have a capital F.

* * *

What in the name of goodness does L. E. S. (p. 139) want to paint his cedar posts for? If he will paint them, let him paint them with oil. Better save the money, however, and buy a few more good grape-vines.

* * *

A subscriber is recommended to put his kerosene barrel in a brook or a pond to clean it. I would add to this the caution that, if the brook or the pond should contain fish, the oil would be pretty sure to kill them. So, too, it would be unsafe for cattle to drink from either. Hot lye or washing soda will remove the oil.

* * *

I am glad to see the editor so earnestly recommending the planting of the Japan Chestnut. Besides growing this chestnut, I have seen a good deal of it in different places, and heartily indorse all the editors say of it. Trees grown from the nut vary more or less, and the variation is striking enough when the Spanish Chestnut is substituted for the Japanese, which is sometimes done. Instead of raising seedlings, it would generally be better to buy budded trees from some reliable and careful nurseryman who has a good strain. I would by no means use the Spanish or American for stock to bud on, but Japanese seedlings.

* * *

The time is coming for cabbage, cauliflower, etc. The maggot is very destructive to these plants, and many remedies have been suggested, some good, but many worthless. I make a puddle of shell lime, leaf mold or light earth, and, when at hand, a little soot. I add water enough to make the puddle of the consistency of thin mortar. The roots are dipped in this puddle at the time of planting. This is one the best remedies I have used, and it has the merit of being simple and within reach.

* * *

When the Egyptian beet was first introduced the Bassano was disparaged and pushed aside. Next came the Eclipse, and the Egyptian was said to be a poor kind. Notwithstanding, the Bassano is still, for all eating purposes, one of the best early beets we have. When putting the Eclipse on its first trial, I could not help thinking, "Well, you may be everything that is lovely just now but wait a little while, and you too will be relegated to a back seat." Is it really necessary to disparage and utterly condemn a good old vegetable of any kind for the purpose of introducing a new one? I think there is a better way. If one should sow at the same time a row of the Eclipse, the Egyptian, and the Bassano, he would have a succession of really good beets.

* * *

I am a little disappointed in the William Bennett Rose. It is large, of handsome color, and beautiful in the bud; but not being a full double rose, there is not substance enough in the petals to keep up its character when fully expanded, though this may be owing somewhat to forcing. There can be no doubt, however, about its being a very fine and valuable rose for the use of the florist.

* * *

I think I have grown all of the large-leaved variegated abutilons, and I like Prince of Heilbron best. I once supposed, like most others, that it required the temperature of a hot-house to develop and maintain its handsome variegation; but grown in a cool greenhouse this Winter, it has maintained its markings remarkably well, though, of course, it has grown slower than it would with more heat. Its large and handsome flowers are produced freely. It is an easily grown plant worthy of a place in any collection.

* * *

Of the small-leaved abutilons, the variegated form of A. vexillarium is much to be preferred. Grown to a single long stem, or grafted four or five feet high, it makes a charming pendulous plant. It blooms very freely and the handsomely colored calyx adds much to its beauty. It needs only a moderately rich soil to make it everybody's plant, and has the additional merit of being one of the best of room plants.

Arboricultural.

THE JAPAN CHESTNUT—THE OTHER SIDE.

AFTER seeing the RURAL'S oft-repeated condemnation of the Kieffer Pear on account of its poor quality, I am surprised at its praises of the Japan Chestnut, which occupies among chestnuts the same position held by the Kieffer among pears, or the Champion among grapes; that is, it is hardy, vigorous, productive, bears early and is very profitable for market; but it is not fit to eat. Nine out of ten of the seedlings, on an average, will not be as good eating as acorns, while the best is inferior to the Spanish which is poor enough. Besides this, the kernel is surrounded by a skin fully as bitter as that of the Horse-chestnut, with the additional disadvantage of being astringent, like a persimmon. Yet the trees are very productive, there being from three to seven large nuts in each burr, and they sold readily at 40 cents per quart the past Fall. Their large size will sell them regardless of quality, and this fact, combined with their large yield, makes the Japan Chestnut one of the most profitable nut trees that can be planted. W. WILSON.

Burlington Co., N. J.

[Mr. W. Wilson's opinion as regards the quality of the Japan Chestnut is very different from that of many others. It is certainly

(Continued on page 220.)

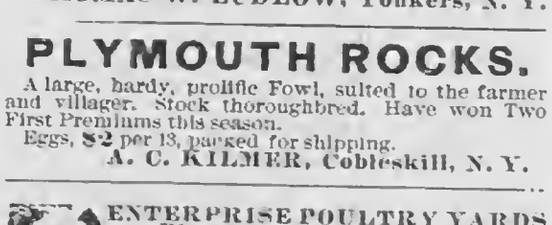
Stock and Poultry.

TOULOUSE GEESE per trio, $10. Eggs $2 for 6 or $3 per dozen. R. C. White Leghorn and S. C. Brown Leghorn chickens, $1 each; eggs, $1.50 for 15. For sale by THEO. DAHM, Box 141. Great Bend, Kansas.

BLOOD WILL TELL.
Have bred fine Poultry for fifteen years and am selling a superior stock of Poultry and Eggs of the following varieties:
Plymouth Rocks, American Dominiques, Wyandottes, Single Comb White and Brown Leghorns, Silver Spangled Hamburgs, and Pekin Ducks. Am breeding from high-scoring birds that have won the highest honors in the show room. Price of Eggs: Wyandotte, $2.50 for 13; $6.00 for 40. All other varieties $2.00 for 13; $1.50 each for two or more settings. Eggs packed in new baskets to go safely any distance. Send for circular. Address JONES WILCOX, P. O. Box 10. East Chatham, N. Y.

High Class Plymouth Rocks and Wyandottes.
All high scoring birds. None better, and full satisfaction guaranteed. Eggs for setting of 13, carefully packed in baskets. Plymouth Rocks, $1; Wyandottes, $2.
W. L. LUNDY, METUCHEN, NEW JERSEY.

NAPKNOLL'S
PROGRESSIVE POULTRY COOPS FOR HENS AND CHICKS,
WITH BROODERS AND INCLOSED RUNS.
The favorite Excelsior Poultry Coop and Nest combined



PRICE $6.

(*Continued from page* 119.)

better than the Spanish, and, as we think, nearly as good as the American. The skin is bitter, it is true.—EDS.]

DIFFERENCES BETWEEN THE WOOD OF THE JAPAN AND SPANISH CHESTNUT.

MR. J. J. HARRISON, of the Storrs & Harrison Co., Painesville, O., kindly sends us twigs of each of the above, and the differences will at once appear to the reader who compares our sketches. The shoots of the Spanish are thick and stubby (Fig. 140), and the buds are twice the size, while they are further apart as we near the base. The color of the bark is lighter, approaching a gray. The Japan shoot (Fig. 141) is slender. The buds grow

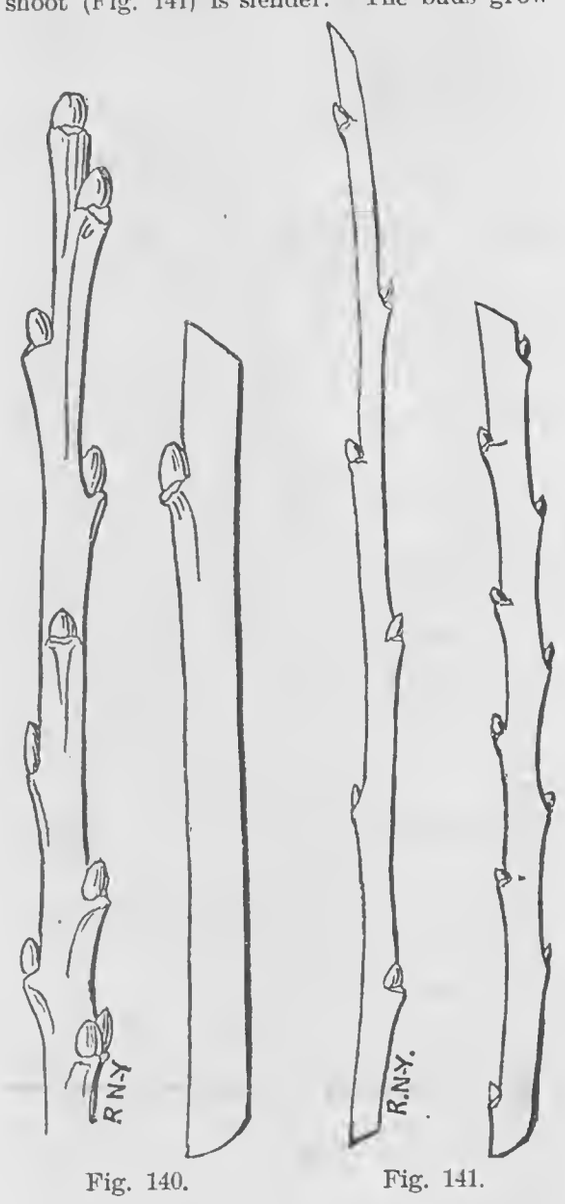

Fig. 140. Fig. 141.

closer as we near the base. The bark is thinner and of a chestnut color. If any of our readers have trees which they are uncertain about, our engravings should enable them at once to determine whether they are the Japan or Spanish. The stems have been cut in two to save space.

What Others Say.

WHICH MAY REMIND YOU.

IN the discussion of the last meeting of the N. J. H. S., Mr. Quinn remarked that he did not consider that we have made much progress in 25 years pomologically. He did not know of a good pear except Clapp's Favorite, and there is no strawberry to supersede the Wilson.

IN the talk about the disease known as yellows, potash and bone were commended as preventives and even as cures, using from three to four pounds of muriate of potash to four to five pounds of bone to each tree according to its size or age.....

PROF. COOK says that kainit has 12 per cent. of potash, while the muriate has 48 to 50 per cent. If kainit costs $10 per ton and muriate of potash $40, the cost of potash in either case is the same.....

MR. MINCH does not believe that peach seeds from trees having the yellows will produce unhealthy trees. From such seeds he agrees to grow fine, healthy seedlings. He deems the man who contends that it is a contagious disease is a dangerous character.....

P. M. AUGUR, of Conn., has an orchard of 1,800 trees. He has used large amounts of potash on it every year for years, but there are many showing signs of yellows. Other members of the society mentioned cases in which potash or potash and bone had not only prevented yellows but cured the disease .....

JUDGE PARRY remarked that size and beauty are the two essentials to make fruit sell well. It must please the eye or purchasers will not buy. We should bear in mind that the more beautiful the object that deceives us, the deeper and more lasting the impression.....

MR. QUINN thinks that 10 years hence, it will be necessary to present a chromo with every Kieffer pear tree sold. He deems the pear all one could ask as to size and color.....

THE Kieffer Pear has, however, friends in Southern New Jersey and Pennsylvania where it thrives; there are few pears better for canning, and occasionally the quality is tolerable when eaten out of hand.....

MR. WARD named for profitable pears Giffard, Clapp, Bartlett, Boussock, Seckel, Sheldon, Clairgeau, Anjou, and Hovey. It will not be long we think, ere the Frederick Clapp will become a favorite for October use, though where it will thrive best is not as yet known. We hope all who can afford to do so will plant this tree.....

WE are pleased to know that E. Williams, the hard-working Secretary of the New Jersey H. S. had a number of Kieffer pears sent to him last season and among them were one or two that he called good. Mr. Rogers also, in a lot sent to him, found "half-a-dozen or so that were good." Pres. Baker had eaten Kieffers which he pronounced "fine, melting and juicy."....

ONE thing is evident, it would appear, viz., that good Kieffers cannot be raised in Northern New Jersey .....

THE new Rose Celery is highly spoken of as a strong grower, stalky and of the best quality.....

THE Ruby King Pepper, Dr. Ward, the Chairman of the Vegetable Committee, said grows bushy, 18 inches high, producing the largest peppers he had ever seen.....

MR. CAYWOOD said the curculio took all his plums till he made a thorough application of slaked lime after every rain, from the time the fruit set till the pit hardened—and, ever since he has had tremendous crops. The same application to peaches resulted in smooth, perfect fruit. He thinks that lime will also save grapes from mildew and rose bugs.....

MR. CAYWOOD was better pleased with the Jewell Strawberry than with any other. Mr. E. Williams, the Secretary, remarked that there was no other so promising.....

THE Cohansey Strawberry was mentioned as a new variety of great promise. The R. N.-Y. will make an effort to procure a few plants.

MR. MINCH kept some of the above berries four days after ripe, and they were still sound and of good color.....

BUBACK'S No. 5 is another new strawberry of promise.....

THE RURAL'S advice, given years ago and since repeated, not to cultivate strawberries until after they bear fruit in the Spring, except, it may be, barely upon the surface, is strongly supported by many experienced growers. Others, however, raise the finest crops through cultivating up to three weeks of the ripening of the fruit.....

MR. WILCOX, in reply to a question by a member of the society, said that Meech's Prolific Quince is an old variety, and that it had been disseminated by three different parties from 15 to 20 years ago. Mr. Jones showed a picture of this quince as shown in Mr. Meech's circular, which was "reduced one-third in size." Mr. Jones, to show the absurdity of this claim, presented a picture *enlarged* one-third. It measured 18 inches in circumference. He asked Mr. Meech, who was present: "Is this true?" Mr. Meech made no response. Taking a large pineapple from the table, Mr. Jones showed that the size of the quince, as claimed by Mr. Meech, was larger than the pineapple. Other claims of Mr. Meech were disproved.....

SPEAKING of starting celery seeds, several members said that they should be sown in rich, mellow soil and not covered, but merely pressed into the soil with the foot or a board. Then keep moist.....

MRS. E. A. ROGERS, in expressing her views as to the low price of fruit, said that prices could be improved and the demand doubled by the prohibition of the liquor traffic, which would close the saloons.....

A MELLOW seed-bed; sow early one-and-a-half bushel of oats per acre, if the land is fertile. The Welcome or White Australian is one of the best varieties. The Schonen is good. The Black Tartarian is perhaps the best side oat, but late and light.....

PROF. BUDD says that in Russia the Duchess of Oldenburg Apple has been cultivated for hundreds of years and innumerable seedlings raised. They are in flavor from sweet to sour, and cover a period of three months in maturing their fruit. The Duchess therefore represents a family of apples, and not a distinct variety as in this country.....

MR. T. V. MUNSON, of Texas, says that the Niagara Grape shows unmistakable signs of foreign blood.....

YOU may prune evergreens until the buds begin to swell.....

THE new Giant Pera Cucumber is said to grow as long as 22 inches, and to be the finest for table use. W. Atlee Burpee says he has grown them to weigh over six pounds each. We shall try it.....

WE have a Gregory's Spruce that is at least 15 years old, and not over two feet high and nine feet in circumference. It is very compact and perfectly hardy at the Rural Grounds. Dwarf evergreens are not planted as much as they deserve to be.....

HENRY STEWART reminds the readers of the Times that we do not sow oats early enough. The land should be plowed in the Fall, and prepared as if the seed was then to be sown. Then in the Spring sow directly upon this soil as soon as the upper four inches are free from frost, and dry. This generally happens in March in the North. Then use the harrow across the furrows to cover the seed.....

OATS need the longest possible growing season, they like cool weather, and moist, well drained land. It is difficult to secure a large crop of oats from late sowing, and the grain is always light.....

OUR Summers leap from the lap of Winter, with scarcely any Spring, so that oats have little time to make growth. Let us provide against this as far as possible by sowing early.

OATS, as Mr. Stewart remarks, are a more exhaustive crop than many suppose, being, according to analysis, two-thirds as exhaustive as wheat.....

MUCH mischief is done by overfeeding brood sows nearly farrowed, in the belief that they will be better able to nurse their young brood. On the contrary, the food should be given very moderately before the litter appears, and afterward should be increased only as the growing demands of the nurselings call for it.

A FARMER who is noted among his neighbors for his fine pigs, feeds the sows a mixture of two bushels of buckwheat, and one of corn ground together, the meal being made into a slop. This food is given in moderate quantities only, apportioned so as to keep the sow in a somewhat thin condition and without making flesh or fat. Before farrowing, the sow is lightly fed, and if it can be avoided no grain is given. In this way the sow farrows safely and never feels inclined to molest the young pigs when they are dropped.....

SELECT young trees rather than larger or older ones. All things equal, the young tree will make a healthier growth than the old one.

WORK the soil carefully and thoroughly among the roots. Handle the roots tenderly. When covered, tramp the soil *firmly* over them, so that the tree will be firm by the support of the soil. Don't forget this.....

SUPERPHOSPHATES, fish guano and poudrette are characterized by the pamphlet of one firm as "incomplete, one-sided, stimulating fertilizers."

BELL'S Messenger says that all milk should be boiled before it is used for human consumption.....

DON'T be deceived in feeding corn-meal to milk cows, says the U. S. Dairyman. Feed freely, it at first increases the milk flow, but soon goes to fat and lessens the milk. Many a valuable cow has been injured by overfeeding in this way.....

IT is a pretty good rule to wait until the buds swell before grafting. . . Prepare for sowing earliest peas as soon as the soil will permit. Is your brush ready? . . . Give the grass plots a dressing of wood ashes and raw bone flour.....

SPEAKING of peach trees, Ellwanger & Barry remind their inexperienced readers that it should always be borne in mind that the fruit is produced on wood of last season's growth. Hence the necessity of keeping up a good supply of vigorous annual shoots all over the tree.....

THE plum stock is advantageous for peaches in stiff, clay, cold or damp soils.....

FOR a sure catch the Husbandman prefers to sow clover in February.....

(*Continued on page* 221.)

Insist that your Grocer keep it.

THE APRIL "CENTURY"

Contains one of the most attractive features ever published in a magazine,—the story of the naval duel between the "Kearsarge" and the "Alabama," told in three narratives by participants, with numerous illustrations, as follows:

LIFE ON THE "ALABAMA,"
By One of her Crew.
A narrative of the two-years' cruise,—the character of the officers and men,—and a thrilling account of the sinking of the "Alabama."

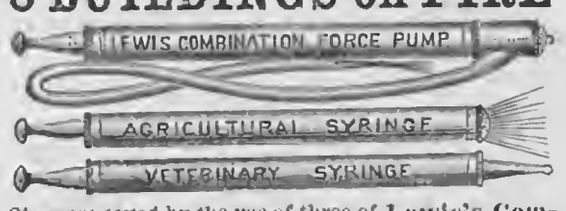
COMBATS OF THE "ALABAMA,"
By her Executive Officer.
Life on the ship as viewed from the quarter-deck—meeting the "Kearsarge"—rescue of Captain Semmes by the yacht "Deerhound."

THE DUEL BETWEEN THE "KEARSARGE" AND "ALABAMA."
By the Surgeon of the "Kearsarge."
The challenge—the fight in circles—the destruction of the Confederate cruiser.

OTHER FEATURES
Of the April CENTURY, many of them illustrated, include: **"Creole Slave Songs,"** by G. W. Cable; **"Italy, from a Tricycle"**; W. D. Howells's new novel, **"The Minister's Charge"**; short stories by Arlo Bates and Edward Eggleston; **"Toy Dogs"**; **"Glimpses of Longfellow in Social Life"**; **"Christianity and Popular Education,"** by Washington Gladden; **"Strikes, Lockouts, and Arbitration,"** etc.

Price 35 cents. Sold by all dealers.

8 BUILDINGS on FIRE



Six were saved by the use of three of **Lewis's Combination Hand Force Pumps.** For a description of said fire, and the saving of many other buildings by the use of the above Pump, send for my illustrated catalogue. **This Pump** makes **3** complete machines, (See cut). I have agents all over the U. S. who are making $10 to $25 per day selling them. I give their names and address in catalogue. *To introduce it, I will send a sample Pump, express paid, to any express station in the U. S., for* $5.50. Made of brass; will throw water from 50 to 60 feet and retails for only **$6.00.** Indispensable for spraying fruit trees. The Potato-Bug attachment is a wonderful invention. They sell rapidly. Agents wanted everywhere. Send at once for illustrated catalogue, price-list and terms. Address, **P. C. LEWIS, Catskill, N. Y.**

HENCH'S RIDING or WALKING Cultivators.
With double-row **Corn Planter and Fertilizer** complete in one machine. **Crowned with Medals since 1879. KING of the CORN FIELD**

Thousands are in use, giving satisfaction. Agents wanted. Catalogue free. Name this paper.
HENCH & DROMGOLD, York, Pa.

CHAMPION HARROW

A Corn Cultivator (cultivating two rows at once), **Potato Digger,** and **Spring Tooth Riding Harrow,** combined in one and sold at price of one. Sold on its merits and is the cheapest made.
New Victor Cultivator and **Horse Hoe** combined. Light and strong; easy to hold, and of easy draught. Six teeth.
Agents wanted. Send for circulars.

(*Continued from page 220.*)

GIVE your hens (those confined) exercise by sprinkling a little wheat among straw of any kind.....

THE 1885 Report of the Connecticut Agricultural Experiment Station (Prof. S. W Johnson, Director), says that the best cotton-seed meal is that which is ground from the decorticated seed. It contains neither hull nor fiber, and has a nearly pure yellow color..

DAMAGED cotton-seed meal, originally good but injured by wet and mold, or ground from damaged seeds, often gets into the market at low rates, but is valuable only as a fertilizer..

COTTON-SEED meal made from the entire seed, after the removal of the cotton fiber as far as practicable, is another inferior grade, and may be recognized by the dark particles of hull it contains. A sample of this was analyzed by the Station and found to contain but 22 per cent. of protein, while the best decorticated seed meal contains 42 per cent. of protein, and is therefore worth nearly twice as much.....

COTTON-SEED contains considerably more nutritive matter than new-process linseed-meal, and is, therefore, much cheaper if the price of each is the same. The very concentrated nature of cotton-seed meal renders caution necessary in its use.....

CATTLE can stand only small quantities of it without digestive disturbauce.....

COTTON-SEED which is not perfectly sweet, is entirely unfit for food. Prof. Johnson thinks it not unlikely that the albuminoids which make up about half of the dry substance of cotton-seed meal, when they begin to decompose on account of dampness, may give rise to poisonous alkaloids similar in nature to those formed from nitrogeneous animal matter under like circumstances.....

PROF. COOK (Director of the N. J. Station), said, at the last meeting of the Horticultural Society, that in his experiments he could see no difference between the muriate and sulphate of potash. He has been trying these experiments for 12 years, and he doesn't see why we should pay seven cents a pound for potash in sulphate when we can get it for three cents a pound in muriate.....

SEVERAL experiment stations make no distinction between potash as a *muriate*, and potash as a *sulphate*, and yet it is well known, says Mr. Mapes, that the muriate of potash is worse than worthless on tobacco. He also states that the potash in the high-grade sulphate is commercially (and also agriculturally on many crops) worth some 70 per cent. more than muriate of potash.....

MR. W. H. BOWKER, at a late meeting of Massachusetts farmers, as carefully reported by the Mass. Ploughman, remarked that the curse of every business to-day is the credit system.....

MR. BOWKER further said that fertilizers, as a rule, are sold delivered all over the country. It seems a law of railroading that the longer the distance the lower the rate of freight. He can deliver fertilizers in Ohio as cheaply as he can in Springfield, Mass., and that is how he can sell delivered in various parts of the country at about the same prices.

MR. BOWKER, in another part of his address, said that there is no farmer to-day who will not admit that in raising a calf, if it is stinted for the first six weeks of its existence, it is stunted for life; so if a crop is stinted for the first 30 or 60 days, it is stunted for the rest of its growth. That being the case, it seems to him we should have plant-food in the most favorable condition, so that if the weather shall be right the crop will make the best possible growth during the first few weeks. This should be one reason in favor of commercial fertilizers.....

SPEAKING of S. C. rock, he said that it is urged by many that we apply South Carolina rock, in a fine ground condition, directly to the soil, and it will give good results; but he thinks that after a long trial the leading experimenters have come to consider that it is far wiser to dissolve it, especially for hoed crops, than to apply it in its raw state, for nearly all hoed crops make the greater part of their growth in 60 days, and plant food, to be of any value to these crops during this period, must be in a condition ready for them to absorb.....

MR. CURTIS (Glidden & Curtis) said that he had the idea that the greatest usefulness of commercial fertilizers was when employed in connection with barn-yard manure. Where barnyard manure is applied, it is necessary to cultivate the soil thoroughly. It is so done and the soil is very carefully pulverized. It is natural to suppose that if chemical fertilizer is used after that careful cultivation of the soil, it will have a great deal more effect and a quicker effect than if it is put upon soil that is not so carefully cultivated.....

Everywhere.

RURAL SPECIAL REPORTS.

Florida.

SAN ANTONIA, Herrando Co., March 18.—We are now shipping some very elegant strawberries, mostly Neunan Seedlings, not overlarge, but quite a nice size. Last Winter froze nearly all of our oranges, but did not hurt any of the large trees, though it injured some very small trees and buds in the nursery. The orauge trees are now full of bloom, with every prospect of a large crop. All small lemon trees were killed to the ground. There has been much improvement here in the last few years, with every inducement to stimulate labor. Crops are looking well. E. G. L.

Illinois.

HIGHLAND, Madison Co., March 14.—Gardeu Treasures very nice. Tomatoes good and very prolific; but those received the year before were better. Peas also good. The 50 crosses were all eaten by chinch bugs after harvest; but the Rural Union Corn is the best we have around here. Times are hard. We have had no good wheat crop since 1881. Last year this county—the second on the list of wheat-raising counties in the State—hardly raised enough for seed and flour. Wheat is worth now 85 cents; corn, 29 cents; oats, 27 cents; potatoes, 45 cents. A. Z.

Indiana.

GREENFIELD, Hancock Co., March 18.—The Rural peas did well. The King Humbert Tomato is a humbug. Did not like the Flageolet Beans. The corn is too small for this country. Sorghum halapense has not put in an appearance yet. Oue melon was splendid. Garden Treasures admired by all that saw them. "X."

New Jersey.

WASHINGTON, Warren Co., March 19.—This county is quite a place for peaches. Of peach buds 80 per cent. are now good on high ground; but on low land the buds are nearly all dead. Wheat is looking better than last week. The best peach we have is the two ** Yellow, which ripens after the Crawford Late. L. W. G.

New York.

CUBA, ALLEGHANY CO.—Many sudden and extreme changes of weather during the Winter, have been very severe on stock, winter grain, meadows, etc., yet all are, so far, in fair condition. Hay was a good crop, but much of it has been shipped, so that the price is likely to go up before grass. Now it brings $9 to $12 per ton. Potatoes rotted badly; some pieces were not worth digging; good ones are worth 60 cents per bushel. The RURAL corn has all been too late for this section. Some of the Stratagem Peas bore very large pods, but mildewed somewhat. The P. of W. did better. The tomatoes were the best I ever saw, except the King Humbert which were not good. Flageolet Beans were prolific and of fair quality. Johnson Grass grew almost three feet, and headed out, but didn't form seed. Garden treasures fine. E. W. M.

ROME, Oneida Co., N. Y., March 20.—Lambs are coming finely, and there are many pairs of twins. So far only one live lamb, when born, has been lost, and that a twin, and the cause, too much milk, and scours. Probably we fed the mother too much too soon after the birth of her lambs. The best pair of lambs we now have are from a small ewe; but she eats wonderfully, and the lambs could soon be made fit for early market if that was our business. I have lately visited the RURAL'S Western New York Farm, and seen the lambs there fitted for the New York market, the methods practised, etc. I had a good visit and was well pleased with my reception and what I saw there. J. T.

WEST SAND LAKE, Rensselaer Co.—The Rural peas grew and ripened well. Flageolet Beans great yielders—very fine for shelled beans. Tomatoes very productive; but the King Humbert doesn't deserve a royal name. Corn all stalk; too late for this section. The RURAL seeds pay for the paper every year. F. H. H.

Pennsylvania.

WOLF RUN, Lycoming Co.—The Thousandfold Rye did well. I had about a peck. The D.-M. Wheat came up well in the Fall, then rabbits ate it to the ground, but it started again and did finely. Very few peas and beans. Some of the corn ripened. The King Humbert Tomato was no better than varieties I already had. L. H. P.

Wisconsin.

LYNXVILLE, Crawford Co., March 15.—The RURAL wheat was splendid. If we had a spring wheat as good as the winter wheat sent out by the RURAL, we would have a variety of which none could complain. The potatoes too were deserving of great praise. The beans did well. The corn was in the form of roasting ears when frost came; but two ears were fit for seed. The Garden Treasures were delightful. Mold's Ennobled Oats do splendidly here; I don't intend to sow any others. W. D.

Purify the Blood.

We do not claim that Hood's Sarsaparilla is the only medicine deserving public confidence, but we believe that to purify the blood, to restore and renovate the whole system, it is absolutely unequalled. The influence of the blood upon the health cannot be over-estimated. If it becomes contaminated, the train of consequences by which the health is undermined is immeasurable. Loss of Appetite, Low Spirits, Headache, Dyspepsia, Debility, Nervousness and other "little (?) ailments" are the premonitions of more serious and often fatal results. Try

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention. Before asking a question, please see if it is not answered in our advertising columns. Ask only a few questions at one time. Put questions on a separate piece of paper.]

HIP OR STIFLE LAMENESS IN A MARE.

E. L., Madison, D. T.—While harrowing, a mare, frightened by the report of a gun, sprang forward, and since then she has been lame in the left hind leg. She pulls and works all right; but when trotting she is lame, and in the stable she always rests on the other leg. No swelling is apparent. What is the trouble?

ANSWERED BY F. L. KILBORNE, B. V. S.

The injury is, most likely, a sprain of the hip joint, and tenderness may perhaps be found by pressure over the joint, midway between the anterior and posterior angles of the hip bone. If in no other way, you can probably locate the seat of the sprain by alternately moving the hip, stifle and hock joints, and also by closely watching the movements of the animal. There will be least movement in the affected joint. A long period of rest is the first essential in the successful treatment of such lameness—from three to six months. After ascertaining the exact seat of the injury, apply a cantharides blister over the region. An excellent blister may be made by thoroughly mixing two drams of freshly powdered cantharides, one ounce of lard, two or three drops of oil of peppermint or lavender, and five grains of camphor gum dissolved in five or 10 drops of alcohol. Cut the hair from the part and apply the blister by rubbing in well against the direction of the hair for 10 or 15 minutes. When the blister is well raised, wash off with castile soap suds, and smear the surface daily with vaseline or fresh lard. Tie the mare's head so that she cannot reach the blistered surface with her mouth. When the effects of the first blister have passed off, a second may be applied. If there is no improvement after a few weeks, it may be necessary to place her in slings at night to prevent her lying down. Do not work her until several weeks after a full recovery.

PUTTING SECTIONAL ROLLERS TOGETHER.

E. C. B., Cuckoo, Louisa Co., Va.—To put together land rollers having several sections, if of two sections, a frame is made having three pieces somewhat longer than the combined length of the sections, which pieces are morticed into end pieces of sufficient length to allow room for the sections to run between the two hinder pieces. The forward long piece should be 3x6 and placed edgewise up and down; the other long pieces should be either 3x3 or 3x4, according to the length of the roller. The sections have square iron plates 10x10 inches, and one-half inch thick, to which are cast either boxes to run on a shaft, or short bearings to run in boxes, and having half-inch holes in each corner for fastening them to the "heads" of the sections. If the sections are to run on a shaft, the shaft should be of 1¼-inch iron, and have a thread and nut on each end, or it may have in each end a key hole through which a key is put—the first is preferable. This shaft passes through the end pieces, and the center is supported by a piece of iron one-half inch by four inches, having in the middle a hole through which the shaft passes and its ends split and bent each way and bolted to the long pieces before and behind the rollers. Where the end plates have short cast journals, a box is bolted to the under side of each end piece and also to the iron passing between the section in the middle of the roller. We much prefer the shaft. Where three sections are used, place the forward two in a frame similar to the one above described, only long enough so that they shall be nearly as far apart as each is long. The third section should be placed in a frame of its own, and behind the center of the forward one so as to roll the space left by the forward ones. This frame is attached to the other by a chain about 13 inches long, from each corner.

TEMPERATURE IN A GRAPERY, ETC.

C. S. N., Lewiston, Mo.—To grow and ripen grapes successfully in a "hot house" or hot grapery (which yours seems to be,) the temperature will depend upon the time when the house is started, and how early you want the grapes to ripen. From 50 to 60 degrees is a good night temperature for a forcing house; and from 80 to 90 degrees for a day temperature when the sun is out. It should not go much below 80 degrees on cloudy days. When it reaches the highest point named, begin to ventilate at the top, and not at the bottom of the house. This should give you early grapes. For grapes a little later, a night temperature of about 50 degrees will do, and a day temperature of 75 to 80 degrees. Sudden changes in temperature should be avoided at all times. 2. The vines should be occasionally syringed in addition to wetting the ground. Do it gently. Suspend the syringing when the grapes are ripening off, as they will ripen better in a comparatively dry air.

SORE TEAT ON A COW.

Subscriber, (address mislaid).—One of my cows which dropped a calf two weeks ago, has on one of her teats a sore that looks like a ring-worm, and it is hard work to get milk out of that teat; what should be done?

ANS.—After each milking apply an ointment made of equal parts of almond oil and spermaceti, melted together. If this does not succeed alone, touch the whole sore with a stick of lunar caustic or with a chloride of zinc wash—one dram of zinc chloride to one pint of water. Milk carefully and keep the teats dry while milking. If there is much difficulty in milking, a milking tube to draw the milk will be necessary.

PARALYSIS OF HIND-QUARTERS IN PIGS.

S. H. W., Upper Falls, Md.—The paralysis in the hind-quarters of young pigs may be due to the breeding, feeding, exposure, straining or other injury. In general, remove the cause. Give a laxative—two ounces of castor oil. Apply a blister of one part of powdered cantharides and four parts of turpentine, to the loins, or send a current of electricity through the hind limbs and loins for 15 or 20 minutes daily. If the animals are very fleshy they may be too heavy for their limbs and should be fed less liberally, or perhaps, most profitably, sent to the butcher.

SORE EYES IN DUCKLINGS.

J. E., Duxbury, Mass.—Of 60 ducks hatched last June, I lost 31; the trouble seemed to be sore eyes; what should have been done?

ANS.—The ducks suffered from colds, probably due to exposure to air draughts Top ventilation often causes the difficulty. Keep them in a warm, dry place, and bathe the eyes and heads in a solution of a teaspoonful of boracic acid in a glass of water. It would not be out of place to examine the heads closely for the large red louse that often causes sore heads.

RAISING CELERY.

C. H. W., West Shoken, N. Y.—In spite of your recent failure to raise celery plants, you will never fail, provided you get good seed, and follow these suggestions: A friable soil mixed with vegetable mold and sand is necessary for a seed-bed. Pulverize it thoroughly; sow the seeds on the surface and merely sift a light sprinkling of the same soil over the seeds. Then cover with boards raised an inch or so, which will help to retain the moisture of the soil until the seeds sprout.

Miscellaneous.

D. C., Homer, N. Y.—1. Does pure water running over land enrich or impoverish it? 2. Is there anything new and true in the new system called "The New Agriculture?" 3. Of what value are ashes from hemlock tanbark? 4. If I have potash in wood ashes, would it pay to buy phosphoric acid and nitrogen to go with it, and, if so, where and in what shape can I get them cheapest? 5. Are the Red Canada and McIntosh's Red identical, and are they desirable for this section?

ANS.—1. No. *Pure* water contains nothing needed by the plant except the oxygen and hydrogen of the water; but where running over a piece of rich land it would both dissolve and carry along with it more or less of the fertilizing elements of the soil, and if then running on, and standing on other land, it would, no doubt, deposit these elements and thus enrich the land. 2. Yes, both; but "the new is not true, and the true is not new." We can see no new principle in this system. There is no doubt that certain lands are greatly benefited by underdraining; others by trenching, and in certain soils a little water might be retained by the ditches advocated in this system; but we should advise every one to go slow in investing money in it. 3. Very little indeed—scarcely enough to pay for drawing, if to be hauled any distance. 4. It would pay certainly, if your land needs it, and what land does not? We cannot say without knowing the facilities for obtaining them near you. In a general way, phosphoric acid may be got most cheaply in a very fine bone flour. Nitrogen can be had in hen manure, tankage, dried blood, sulphate of ammonia and nitrate of soda. 5. No. They are very distinct. We fear the McIntosh Red will spot badly in this country. It does so even in its native home, Canada. If not, it is a very beautiful apple and of good quality. Red Canada is also liable to spot in some countries. If they are not raised about you, get a few cions and try them in a small way.

J. A. L., Philadelphia, Pa.—What disease killed my hogs? Symptoms, they refused to eat; their ears turned to a dark purple; their bristles fell out; their bodies were inflamed all over; hearts unnaturally hard; lungs, spotted with black; livers, unnaturally dark and charged with clotted blood?

ANS.—The disease was swine-plague or hog-cholera. See article in the F. C., January 23, 1886. There is no known remedy that will cure severe cases, and even mild cases can rarely be profitably treated. Prevention is the better method.

F. C., Leominster, Mass.—My quinces are on wet land, and having been neglected, are not fruitful; what manure is best to make them so? Are horn shavings of any use?

ANS.—First drain the land so that water will not stand. Wood ashes, old farm manure of any kind are good. The horn dust is good, but very slow in acting. *Any* manure that is good for any fruit tree, for corn or cabbage, will be good for the quince.

"Friend," Holly, Mich.—The best incubators in the hands of a novice so often produce poor results, that we cannot advise any "beginner" to try so crude a device as a home-made incubator is likely to be. All the incubators advertised in the RURAL are favorites with many. As we have not tried them, we can not decide which is the best. Each claims special merits. Descriptive circulars of all will be furnished *gratis* on application. A sensible man after reading these would not be likely to err in selecting the machine best suited to his circumstances.

W. W. S., Vevay, Ind.—To get a railroad check for baggage, after paying your fare, show your ticket to any of the railroad porters about the station, and he will give or get you a check for it to the place to which you have bought a ticket, or to any intermediate point at which you may tell him you wish to "stop over." When you arrive there, you can get your baggage on showing your check to any of the porters in charge of the baggage, if you see it on the platform, or at the baggage room if it has been carried there.

H. T., Tyndall, Dakota Ter.—The insect eggs found in bunches on the branches of your apple trees, specimen of which you forward, are those of the tent-caterpillar (Clisiocampa Americana), or of its close relative, the Forest Caterpillar. The insect which has bored into the apple twigs sent, is, in its perfect state, a small beetle. Its manner of proceeding is much like that of the Currant Borer. We have never seen this insect in the East, and care should be taken not to introduce it.

Subscriber, Ellenville, N. Y.—1. The Russian Apricot is reported as having endured 40° below zero. The fruit is medium in size and of fair quality. We doubt if it is exempt from insect injuries. 2. *Some* kinds of Japan Chestnuts will bear in three years; others will not bear in eight years. This we know. Seedlings vary as much as our American Chestnuts. Some are hardier than others. See RURAL reports.

J. H. S., Three Rivers, Mich.—If the "Oriental Potato Bug Powder," which is reported to have been lately invented, proves as efficacious as the inventors say it is, it will soon be in the market and widely advertised. Until then, use the tried and well known insecticides.

G. W. W., New York City.—To remove lice from a horse, rub the animal all over with a mixture of kerosene and lard, equal parts, and after a day or two wash him to remove the grease. Of course, he must be kept warm while being washed and until fully dry.

E. J. W., Westford, Mass.—1. Saltpeter waste, at $13 per ton, would not be advisable as a dressing for grass land. 2. Neither would it and cotton-seed meal make a better fertilizer for potatoes, corn and beans than the cotton-seed meal alone.

A. N. Y., Frankfort, Kans.—Your gooseberry bushes "started three years ago from small sprouts," will not be benefited by pruning as yet.

DISCUSSION.

TREE PEDDLERS AND NURSERYMEN.

C. H. W, WEST SHOKAN, N. Y.—I have had the same experience as that related by Mr Morrill in a late RURAL, with regard to purchasing fruit trees. Those in one of my orchards were purchased from a man who went around soliciting orders, and they turned out first-class, and nearly all were true to name. The next year I set out another orchard on land joining. The latter I purchased direct from what was said to be the largest and most reliable nursery in the State, and I have not one-third of the varieties I ordered, and what I have are very inferior stock, some being absolutely worthless The number of trees and varieties were exactly duplicated, and now, after growing side by side for 20 years, what a difference in the trees and fruit! The nurserymen made no pretence of substituting other varieties; for the trees came labeled to conform to my orders. Now these men hold their heads very high, but they are no better than the worst swindlers. When I see in the newspapers the wholesale denunciation of the traveling tree agents, I think the writers do not know what they are writing about, or they knowingly misrepresent things. I think more than half the trees that are sold throughout the country are supplied through the so-called "tree peddlers." These have done and are doing a good work in calling attention to the choice fruits and inducing the setting out of trees. In this neighborhood nearly all the fine fruits in the last 20 years have been purchased through agents. Were it not for the facilities afforded by them very few of the farmers would be so well supplied with fruit. Writers say one has no redress when he buys from tree peddlers. I would like to know where my redress is. It takes nearly 20 years for an orchard to become established in good bearing condition, and it would be useless to try to recover damages from men who have become wealthy by such practices.

G. F. B., ALPHA, IA.—In connection with tree peddlers spoken of in a late RURAL, some years ago one of the ubiquitous race roamed through Northern Iowa. He had all sorts of trees that grow on the glaciers around both poles. Some we knew from the names were really iron-clad, and a few very hardy, and he succeeded in making a fine haul, by promising to replace every tree that would die within five years. The thought of doing so made him weary, however, and he sought another occupation—that of tomb-stone agent. Thinking lately that he was sufficiently forgotten, and hoping once more to take in his former dupes, he started through the scenes of his former deceptions. "Hello! Any one dead in your family? I'm selling splendid tomb-stones for a song; how many will you take?" was the way he usually started conversation. "Yes," was the general answer, "those trees you sold us are all dead, and you had better at once fix up some memorial slabs to perpetuate the memory of your former rascality. You can't get a dollar out of any of your former customers; but they all want to see you." He didn't "reciprocate," however, but for the good of his health, and to save his customers from a breach of the law, he took the first train for other scenes where his character would be more highly but less justly appreciated.

J. S. S., ROXTON FALLS, PROV. QUEBEC, CAN.—A late RURAL asks how peas are raised in the Dominion. Well, we sow them on clay land, not too rich, and if poor, we use land plaster by putting, say, half a bushel in a wash-tub with a bushel of peas, and just enough water to cover the peas and plaster. Stir well with a stick. The land plaster will adhere to the peas. Sow and harrow quickly and do not give the plaster time to dry before the peas are buried. The drainage must be perfect; for the crop will be lost if water is allowed to remain in the field. If peas are sown on sand, the land must be rich. Two-and-a-half bushels of peas, or two bushels of oats and one bushel of peas, well mixed, is the rule per acre. I like the last seeding greatly—peas and oats. When the land is rich, sow little Canadian peas, and if the land is moderately rich, or if poor and dressed with land plaster, sow large peas. They must be sown early, or not more than half the crop will ripen. If peas are sown on land badly infested by weeds, it will be greatly improved for the next crop. In the valley of the St. Lawrence and of the Nebelien River it is a common thing to obtain between 20 and 40 bushels per acre, and this yield is sometimes produced on poor land by the use of land plaster. Vermont has splendid land for pea culture, on mountain slopes.

B. H. F. H., UNION, N. J.—J. F. B., Manatee, Fla., who writes on page 153, was mistaken in abandoning orange culture. It has paid and is paying constantly. It is just as bad to "bear" as to "bull" the business.

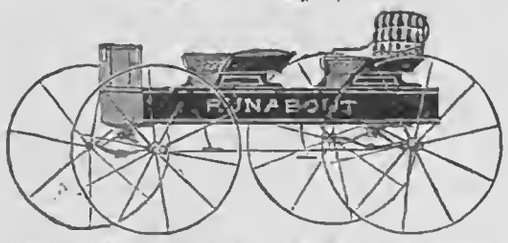
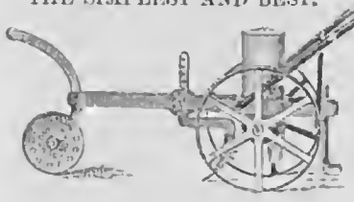
The Runabout Wagon.
Patented January 15, 1884.



Twelve different styles. *Light, Strong, Convenient* and *Low-priced*. The popularity of the RUNABOUT is such that its sale exceeds that of all other vehicles of its class combined.

Send for Illustrated Catalogue and price list direct to the manufacturer, **ORVILLE H SHORT,**
Syracuse, N. Y.

ACME CORN PLANTER.
SUCCESS VEGETABLE SEED PLANTER,
I X L Fertilizer Distributor.
THE SIMPLEST AND BEST.



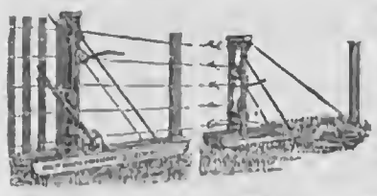
Send for Circular and Price List.
L. C. Stalnaker,
YORK, PA.

DEERE
Seed Drill and Fertilizer Distributor.
NEW AND VALUABLE.

A SUCCESSFUL FERTILIZER DISTRIBUTOR.

Fills a long-felt want. Drops Corn, Beans, Peas, and all similar seeds, and distributes all kinds of Fertilizer in quantities to suit.

Send for descriptive circular to J. B. BARE, General Agent, 50 South Gay Street, Baltimore, Md.; or
DEERE & MANSUR CO., MANUFACTURERS,
Mention this paper. MOLINE, ILL.



HENLEY'S IMPROVED **MONARCH FENCE MACHINE.**
PATENTED

The only practical machine in use that makes the fence in the field wherever wanted; makes the best, strongest, and most durable fence for general use and farm and stock purposes; weaves any size picket and any size wire. The fence will turn all stock without injury to same. For catalogue and full particulars address **M. C. HENLEY,**
Sole Manufacturer,
FACTORY, **523 to 533 North 16th Street, Richmond, Ind.**

A righteous man regardeth the life of his beast — But the tender mercies of the wicked are cruel.—Prov. 12 chap. 10 v.

This Spring Singletree is WARRANTED to stand fair usage until worn out. Is stronger than a stiff one, costs no more, and is the salvation of your horse, harness or plow
Send for circulars and price list to
F. R. WILSON & SON, M'f'rs, Columbus, O.

FARQUHAR KEYSTONE CORN PLANTER
Warranted the best corn dropper and most perfect force-feed fertilizer distributor in the world. SEND FOR CATALOGUE. Address A. B. FARQUHAR, York, Pa.

SEND FOR LARGE ILLUSTRATED CATALOGUE.

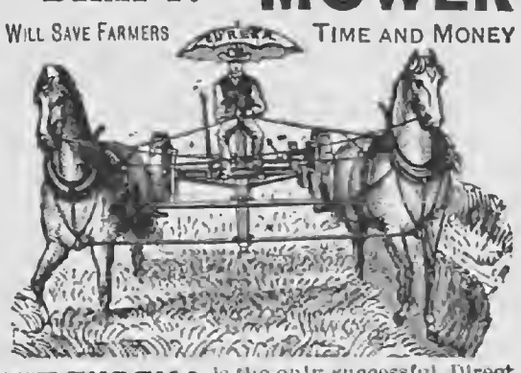
EMPIRE POWER and SEPARATOR
BEST, CHEAPEST and MOST IMPROVED in the market.

We also manufacture Mowers, Reapers, Twine Binders, Rakes, Field Rollers, Plows, Feed Cutter and Crusher, Hand and Power Corn Shellers, etc. Send for Illustrated Catalogue and Price List. S. S. MESSINGER & SON, Stockertown, Pa.

Satisfactory references given. For Illustrated Book address **Osgood & Co.,** BINGHAMTON, N. Y.

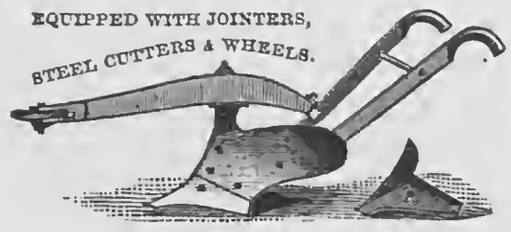
THE ROCHESTER
HAY and GRAIN ELEVATORS SLING and STACKER
BEATS THEM ALL.
Agents wanted. Send for circular. Mention this paper.
W. C. RICKER,
ROCHESTER, N. Y.

-THE-
Broad Cut Centre DRAFT. EUREKA MOWER
WILL SAVE FARMERS TIME AND MONEY



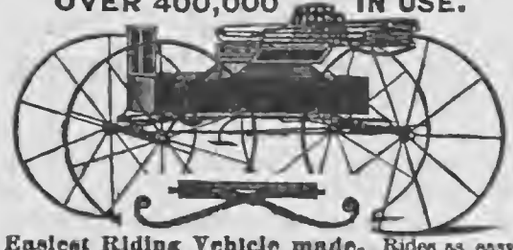
THE EUREKA is the only successful Direct Draft Mower manufactured. It will do at least, one third more work than the side-cut machines with same power. As the cut is untrampled, hay will cure quicker and for more money. Don't fail to see the Eureka before buying. Send for new 1886 catalogue. Mention this paper.
EUREKA MOWER CO., Utica, N. Y.

THE GIBBS PATENT "IMPERIAL"
Steel, Cast, and Chilled PLOWS.
EQUIPPED WITH JOINTERS, STEEL CUTTERS & WHEELS.



MANUFACTURED BY
BUCHER, GIBBS & CO., CANTON, O.

TIMKEN SPRING VEHICLES.
OVER 400,000 IN USE.



Easiest Riding Vehicle made. Rides as easy with one person as two. The **Springs lengthen and shorten** according to the weight they carry. Equally **well adapted to rough country roads and fine drives of cities. Manufactured and sold by all leading Carriage Builders and Dealers.**

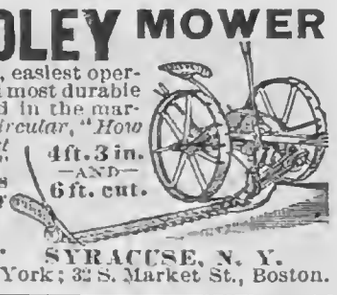
BISSELL IMPROVED CHILLED PLOW
MOST IMPROVED and PERFECT CHILLED Plow on the market. STRONG, DURABLE, LIGHT DRAFT.

Interchangeable & Perfect Fitting Repairs, **No Experiment.** For four seasons has given universal satisfaction where used. **Agents Wanted.** Bolts that cannot turn when tightened or loosened.
Write for Catalogue. Name this paper.
BISSELL CHILLED PLOW WORKS,
South Bend, Indiana, U. S. A.
W. H. HOAG, SON & G. INGRICH, Gen'l Agents,
1719 Market St., Philada. 235 Pearl St., New York.

THE ASPINWALL POTATO PLANTER.

It Marks! It Furrows! It Drops! It Covers!
It Distributes Fertilizer!
CORN PLANTER ATTACHMENT FOR 1886.
Send for Circular to
ASPINWALL M'F'G CO.,
THREE RIVERS, MICH.

THE BRADLEY MOWER



The lightest draft, easiest operated, best made and most durable mowers ever placed in the market. *Send for Free Circular, "How to purchase direct from manufacturer."*
Bradley Mowers Reapers and Hay Rakes. 4ft. 3 in. —AND— 6 ft. cut.
Bradley & Co. SYRACUSE, N. Y.
22 College Pl., New York; 32 S. Market St., Boston.

THOMPSON'S CLOVER & GRASS SEEDER

The only machine that will successfully sow Clover, Timothy, Hungarian, Millett, Red Top and Flax. Indispensable in windy weather when impossible to sow by hand. Simple and durable in construction. Feed positive and uniform. Send for circular describing latest improvements.
Man'f'd by **O. E. THOMPSON, Ypsilanti, Mich.**

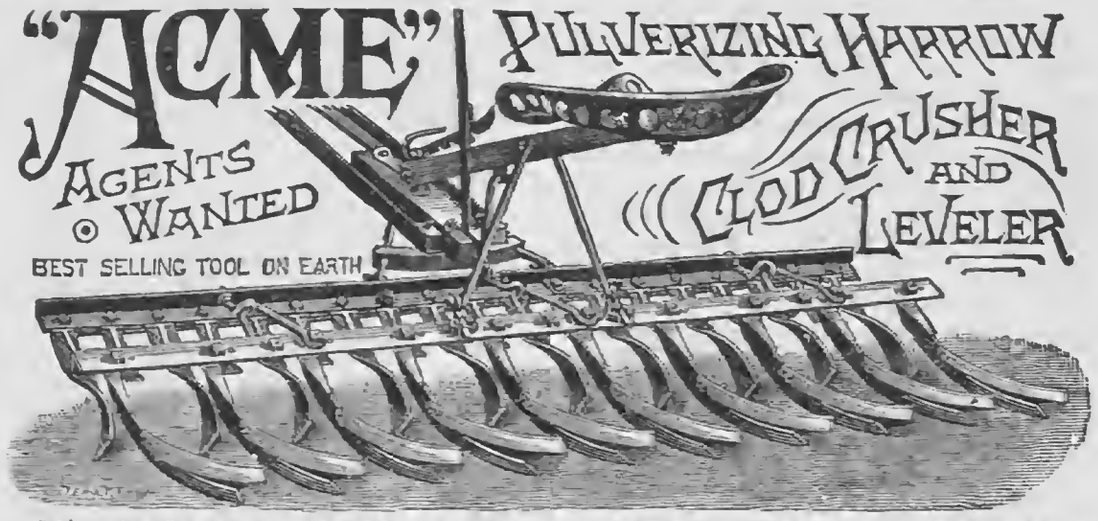
"ACME" PULVERIZING HARROW CLOD CRUSHER AND LEVELER

AGENTS WANTED
BEST SELLING TOOL ON EARTH



Subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting, Lifting, Turning Process of Double Gangs of Cast Steel Coulters. Immense cutting power. Crushing, Leveling and Pulverizing performed at the same time. Entire absence of Spikes or Spring Teeth avoids pulling up rubbish. Only Harrow that cuts over the entire surface of the ground. Sizes, 3 to 15 ft. wide. With and without Sulky attachment. We deliver free at Distributing Depots.

FAIR PLAY. **DO NOT BE DECEIVED.** Don't let dealers palm off a base imitation or some inferior tool under the assurance that it is better. SATISFY YOURSELF BY ORDERING AN "ACME" ON TRIAL. We will send a **double gang** Acme to any responsible farmer in the United States; if it does not suit, he may send it back, we paying return freight. We don't ask pay until tried on his own farm.

Send for pamphlet containing thousands of testimonials from 48 States and Territories.
Branch Office, HARRISBURG, PENN. **NASH & BRO.,** Manufactory and Principal Office, MILLINGTON, NEW JERSEY.
N. B—"TILLAGE IS MANURE" and other essays sent free to parties who NAME THIS PAPER.

HERE IS THE HARROW
For Enterprising Farmers.

THE
RURAL NEW-YORKER.
A National Journal for Country and Suburban Homes

Conducted by
E. S. CARMAN, Editor.
J. S. WOODWARD, Associate.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, New York.

SATURDAY, APRIL, 3, 1886.

A POULTRY SPECIAL NEXT.—It will appear in about one month.

IF the number on your address label is 1888, your subscription expires with this number; if 1889, next week; 1890, in two weeks, etc.

LEGISLATION in favor of the special interests of corporations and individual capitalists is the hardest legislation to kill. It may seem to have been buried under a cloud-capped mountain of public disapprobation and denunciation; but straightway it creeps up quietly or "bobs up serenely" in the same or some other form, and either glides unobtrusively or pushes its way jauntily through our legislatures. Senator Wilson's proposed legislation in the interest of the express companies appears to have been killed, or shorn of its most objectionable provisions, so far as agriculture and horticulture are concerned; yet we are glad to learn that farmers' clubs, farmers' alliances and Grange meetings are still protesting against the proposed outrage, and we strongly urge our friends to continue to remind their Representatives and Senators in Congress that it is their duty and to their interest to offer a vigorous and indignant opposition to any bill including such legislation, should it ever come up for consideration.

BY reference to Notes from the Rural Grounds, it will be seen that from the experiments there conducted, the following kinds of sweet corn may be selected for every day use from the middle of July until September 10, viz.: Early Minnesota, Marblehead, or (perhaps) Cory; Moore's Early, Triumph, Black Mexican, Stowell's Evergreen, if all are planted about May 20. It is worthy of remark that in the above trial the Early Minnesota, Moore's Early, Triumph and Black Mexican matured their pollen while the silk was receptive, while the Evergreen sheds its pollen generally before the silk appears. For small garden plots, it is probably as well to select those kinds whose tassels bloom and shed their pollen at the same time that the silk appears and is ready to receive it—otherwise many imperfect ears may be looked for.

THE N. Y. Tribune says that

Dr. William Trelease, of the Shaw School of Botany, while acknowledging the interesting character of figures cut in wood and published as evidence of the alleged "wheat-and-rye hybrids," thinks they cannot be accepted as conclusive evidence of an actual cross between these two grains either in America or England.

This work of the R. N.-Y. has now been before the public going on four years. Except that an account of it in the Century Magazine of last January did not mention the place or even the country where the crossing was effected, and that it has since been spoken of as having occurred abroad, we know of no attempted hybridization in England or elsewhere. If Dr. Trelease had visited the Rural Grounds and *examined the plants*, instead of the "wood cuts," perhaps he would not talk of "alleged," or about not "accepting them as conclusive evidence of an actual cross between these two grains." With all respect for Dr. Trelease's opinion, it sometimes occurs to us that it is possible to be too scientific for anything.

A STATEMENT appeared in the report of the N. Y. Ex. Station for 1884, that Hammond's Slug Shot was probably composed of a large quantity of gas-lime poisoned with London-purple. Mr. Hammond, as we have said, made an affidavit which was sent to the press and others, that it contained neither gas-lime nor London-purple. A circular recently received from the N. Y. Ex. Station states that the main substance is gypsum containing, according to an examination of one sample, about one per cent. of arsenious acid, of another two per cent. and of a third one-and-one-half per cent. The Director, commenting upon its composition, says that when it is considered that one grain of arsenious acid is a dangerous dose, and that a tablespoonful of any of the above samples would contain more than this quantity, the necessity for caution in its use will be evident.

SPECIAL.

Those who, having applied for the Rural's present seed distribution prior to March 20th, have not yet received it, will kindly notify us by postal at once.

The seed packages for Canada subscribers have been expressed, to be mailed there, and all should have received them by this time.

MIXED SEEDS FOR LAWNS.

WE have many times had occasion to advise our readers in making lawns to sow Red-top or Blue Grass (June Grass), or both, instead of the lawn mixtures sold by the seedsmen and, at this season of the year, advertised under various attractive names. Dr. W. J. Beal, of the Michigan Agricultural College, in a timely bulletin, presents the results of a careful examination of these lawn-grass mixtures procured from several of the leading seedsmen of the country. He finds most of them to consist largely of Blue or June Grass (Poa pratensis) and Red-top, with smaller quantities of White Clover, Sweet Vernal Grass, Perrenial Rye Grass, Orchard Grass, Timothy, Sheep's Fescue, Meadow Fox-tail, etc.; with traces of Chess, Plantain, Orchard Grass, Velvet Grass, etc.

While June or Blue Grass may be purchased for $2.00 per bushel at retail, and Red-top at $1.00, the price of the "lawn-mixtures" varies from four to five dollars per bushel. If, however, by their use, the lawn would prove more uniform, velvety or permanent, a reason would at once be found for selecting them, notwithstanding they cost twice as much. Such, however, in our view, is not the case.

We can not improve upon either Red-top or Blue Grass for lawns, and any additions of Timothy, Perennial Rye Grass, Orchard Grass, Red Clover, Meadow Fox-tail, etc., had better be left out, even though the additions *reduced* the cost. As we have often said, a little White Clover added to the Blue Grass and Red-top will do no harm.

POSSIBLE TROUBLE WITH CANADA.

THERE is prospect of a good deal of umbrage and recrimination, if not of serious international difficulties, between this country and the Dominion with regard to the fishery question. Canada claims for her citizens the exclusive right of fishing within three miles from the Canadian coast, including a line between the headlands at the entrance of harbors, estuaries and bays. This country concedes the three-mile limit, but disputes the other claim. The fishermen of New England are inclined to trespass on acknowledged Canadian waters, and to fish in the large bays anywhere beyond three miles from the shore. The fishermen of the Canadian Maratime Provinces, especially those of Newfoundland, exasperated at the duties imposed in this country on importations of their fish since the abrogation of the late treaty, are bitterly and belligerently opposed to the "enterprise" of the New Englanders. Hence, many unfriendly and some menacing demonstrations. A few days ago a Maine firm engaged 70 men in a Nova Scotia village for the Grand Bank fisheries; but the vessels for which they were hired were forbidden to call at any port of the Dominion to take them on board. The Legislature of Newfoundland is contemplating the prohibition of the sale of bait to Americans. Armed Canadian cruisers have already appeared on the most frequented coasts, under instructions to seize every American vessel found fishing within the three-mile limit. The only possible escape for the fishermen from outrage and for the country from international complications, appears to be the negotiation of a new treaty. "Let us have peace!"

THE JAPAN CHESTNUT.

WHEN a paper endeavors to popularize a new plant of any kind, it runs a risk of depopularizing itself with many who purchase the new plant, if it fails with them. We run this risk when talking up the Japan Chestnut. Scores of inattentive readers see only the favorable comments which appear, or are uninfluenced by the cautions which precede or follow. What we are striving to do is to aid in a dessemination of the best *varieties* of the Japan Chestnut known at present. We *know* that there are several varieties in New York, Ohio and Connecticut, that bear nuts nearly as good in quality as the American; while they are probably three times larger. We know that *some* of these trees bear as early as four years from the seed; that the trees are comparatively dwarf in stature and bushy in habit; that they will endure at least 20 degrees below zero unharmed. We also know of Japan Chestnuts that have been injured by 10 degrees below zero; that bear nuts scarcely larger than the largest American, and usually but one in a burr. We also know of some that are eight years old, that have not yet fruited.

How are our friends to get at these finest varieties? They cannot at present, so far as the R. N.-Y. is informed, except by chance, since they are not as yet offered for sale, though, no doubt, they will be in a year or so. Meanwhile our friends can purchase such trees as are offered for sale and take their chances, or they can plant the nuts and raise their own seedlings. We propose to gather all the information we possibly can on this subject for the guidance of all. But we have already investigated the subject far enough to be impressed with the belief that the introduction of the Japan Chestnut to all parts of the country, where it will thrive, will prove to be a good work, and we shall never shrink from having it known that the R. N.-Y. was the first journal to engage in it.

THE BUREAU OF ANIMAL INDUSTRY.

THE House Committee on Agriculture has unanimously reported in favor of a bill "to promote the export of live cattle" by increasing the powers of the Bureau of Animal Industry, and appropriating $250,000 to pay for cattle killed in order to prevent the spread of infectious and contagious diseases. In spite of the charges of jobbery, incompetence, exaggeration and general unfitness made by some parties against officers of the Bureau, the bill is very likely to pass the House by a considerable majority, and is hardly likely to meet any serious opposition in the Senate. Some minor alterations will probably be made; but doubtless the bill, substantially unchanged, will receive the President's signature ultimately. Before any of the appropriation can be spent in any State, the plans and methods of the Commissioner of Agriculture, under whose direction the Bureau is to act, must be accepted by the authorities, and the Governor must signify his willingness to act with the Commissioner. The sum to be paid for each slaughtered animal is limited to three-fourths of its value, and is not to exceed $150 per head for registered stock and $60 per head for all others. No compensation is to be paid for animals that contracted the disease in a foreign country, or for those whose owners have not taken reasonable care to prevent the spread of the disease.

When the Bureau of Animal Industry was first established, three years ago, we protested against the inadequate legislation and the niggardly appropriation made for stamping out contagious diseases of live stock through its action. Had its efforts not been hampered on this account, it is not unlikely that pleuropneumonia would have disappeared from among our herds, and that our cattle would by this time have obtained free admittance into the United Kingdom like those from Canada. At present, however, 455 herds, containing 60,000 animals, are reported to be affected; and of these 17,000 are sick. The experience of all countries has demonstrated that the disease can be effectually suppressed only by killing all infected animals. European countries have spent vast sums in maintaining quarantines and inspections without avail. The loss to American cattle-dealers by restrictions on importations of live cattle to Europe is from $10 to $15 per head. The capital at stake is $1,200,000,000, represented by 45,000,000 cattle. We cannot afford to run any risk with so great an interest through fear of a trifling risk of mismanagement of the appropriation.

POULTRY RAISING FOR PLEASURE.

WE should be glad if we could induce those of our lady readers who have never done so, to try raising poultry this Spring and Summer. Commence in a small way. A house eight feet square and seven high, with a slanting roof, will be about the right size for 10 hens and a rooster. A glass sash in front, three feet by seven, that can be raised when the weather is warm, will admit all the light and sunshine necessary during cold weather. Three perches made of any kind of wood two inches in diameter, may extend diagonally from any two sides. These should be not over two feet high, and it is well that a little ladder with two rungs should rest against the first so that the fowls need never be obliged to jump from the roosts to the floor. The nests (two will be enough) may be nailed to the sides of the house just above the roosts, or they may be placed on the floor. The house should be raised a few inches above the ground, so that a free current of air may pass underneath. The door should open towards the east or southeast. Such a building will cost about $8 complete. As an inclosure, nothing is better or cheaper than the wire netting now sold for about one cent a square foot, tacked below to a spruce base-board, and above to scantlings of suitable strength, with posts about eight feet apart. For a dozen hens, an inclosure of 20 feet square will be ample, provided the hens be supplied with gravel, bone-meal or oyster or clam shells, and an abundance of green food. The earth should be spaded up every week or ten days, and grain food strewn among straw or hay so as to induce the hens to exercise. Change their food freely, provide fresh water as needed, kerosene the perches and sides of the building every fortnight, sift a little sulphur in the nests, change the straw in them as often as it becomes soiled or dusty, never place more food before them than will be eaten up in half an hour, and if the RURAL may speak from its long experience in poultry raising, the hens will supply what we may call a maximum number of eggs; they will be healthy and contented. Next to the cultivation of flowers, we know of no out-door occupation more likely to please, to interest and to instruct the lady folks of the family. The sooner we set hens, the earlier they will begin to lay in the Fall, and we cannot now, therefore, begin too soon. If pure breeds be preferred, select Black Cochins, Langshans, Brahmas (Light or Dark), Wyandottes or Plymouth Rocks. Such breeds as Leghorns, Hamburghs, Games, etc., are not satisfactory as all-purpose fowls; neither do they thrive as well in confinement as the others. Our lady friends may be aided in making their selections of eggs by sending for the circulars of those who advertise them for sale.

BREVITIES.

OUR Japan Chestnut has passed the Winter in safety.

GRAFTING.—We aim to give a full, explicit and simple account of the whole subject.

ROSE-COMB Leghorns. If we were about to try Leghorns, we should select the Rose-comb.

THE Prunus Pissardii or Purple-leaved Plum does not, as yet, show signs of injury from the past Winter's severities.

OUR readers are still cautioned against buying Nature's Incubator, manufactured by the Company of that name in Quincy Illinois.

IN reply to many inquiries as to where eggs of certain breeds of poultry can be bought, we would respectfully call attention to our advertising columns.

WE have several accounts favorable to the Clydesdale Oats. We are preparing to sow four acres of them. Last year they reminded us of the Welcome or White Australian; but it seems they are not the same.

THOSE of our readers who are anxiously waiting for more about sheep husbandry from the Western New York Farm, will be gratified next week. A press of other matter has kept out these instructive articles of late.

WE learn from reliable sources that the Jewell Strawberry is thought to be the best strawberry for canning, because, first, it seems to retain its form and color perfectly, and, second, it holds the strawberry flavor better than others.

WE know of nothing more airy, refined and graceful in the way of green foliage to mingle with cut flowers or for table decoration, than the Climbing Asparagus. It may be used in vases with fine effect, if only it receives plenty of water.

MR. P. J. BERCKMANS, of Augusta, Ga., writes us: "I have two-year-old trees of the Japan Chestnut, and although transplanted last year, they produced fruit the same season, and this when only three feet high. I am favorably impressed with this fruit, but as the nuts were stolen before maturity, I am so far unable to say anything as to their quality."

AN effort is being made in the interest of pomologists to establish a Bureau of Pomology at Washington. The present Commissioner of Agriculture is in sympathy with the plan. If the proposed Bureau could be established now, there is strong ground for belief that it would be started right. All persons interested in this matter are requested to write to their Congressmen, urging them to confer with the Commissioner of Agriculture and to support legislation and appropriation to this end.

PROFESSOR C. V. RILEY writes us that he has been suffering from over-work for some time back, otherwise he would have stated in his recent article on Grape-vine Mildews, that it was published in advance from the Proceedings of the American Pomological Society. Indeed, he sent to us, with it, a statement that it was an elaboration of a shorter article written for the society. It was at first supposed that the more extended article could not be published in the Proceedings; but afterwards room was made for it.

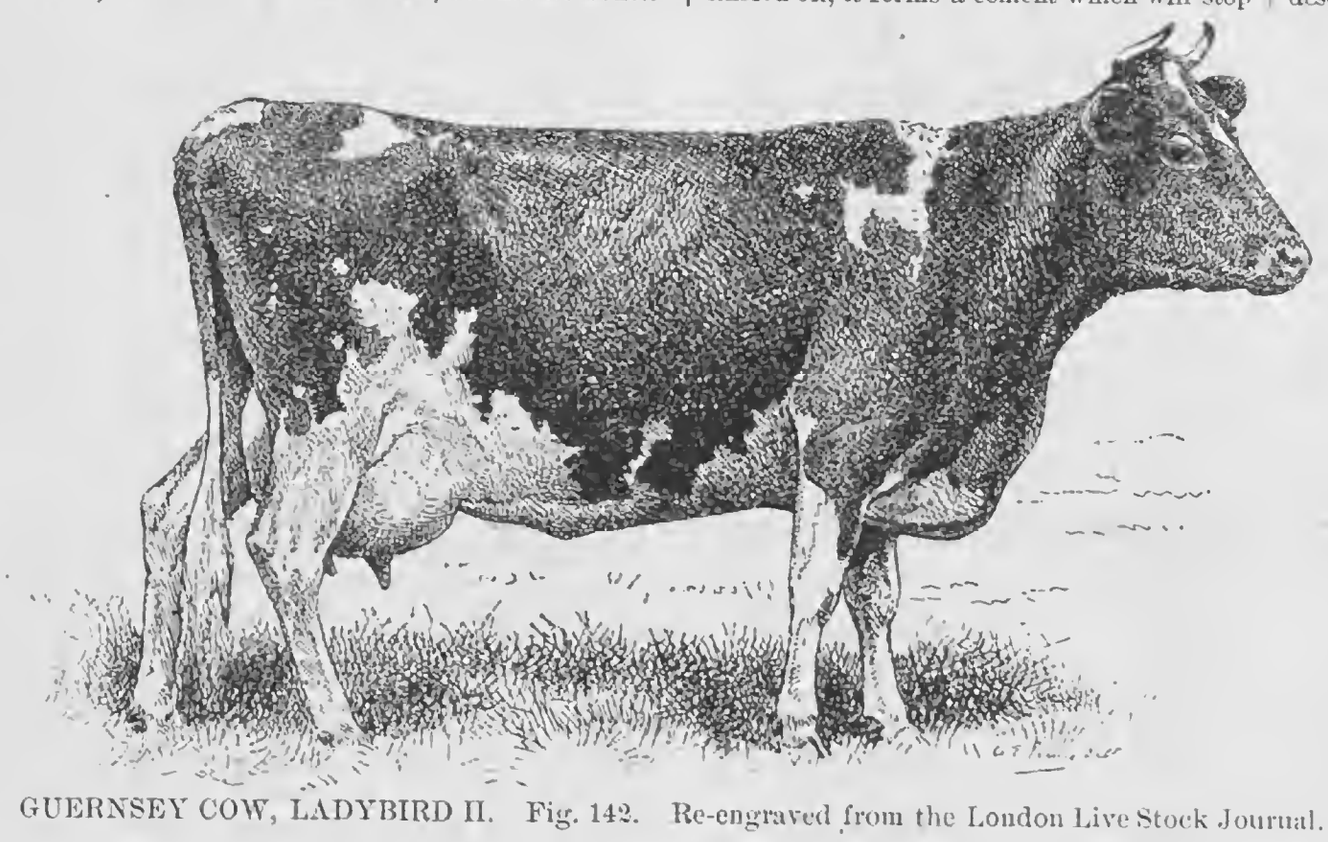
Dairy Husbandry.

GUERNSEY CATTLE.

Not many years ago all the cattle imported into this country from the Channel Islands were known as Alderneys, although it is probable that not a single animal ever came from the little island of Alderney, whose area of rock, furze, timber, tilled and grazing land amounts to only 1,962 acres. It is a mere dependency of its larger neighbor Guernsey, which has an area of 25 square miles. This and Jersey, with an area of 45 square miles, has always been the true source of supply of Channel Island cattle to this country and the rest of the world. Alderney, being nearer than the others to the English coast, was, long ago, the shipping point for all the Channel Islands, and hence gave its name to all the cattle from the other islands, as well as from the mainland of France. Although owing their origin probably to the same source—the cattle of the neighboring coast of Normandy—the Guernsey and Jersey are considered distinct breeds, and long before the opening of this century stringent laws were in force in both islands prohibiting the importation of cattle from any other country, in order to preserve the purity of the native blood; and during this century laws have been passed strengthening the time-honored custom at the islands. It is even forbidden to transfer cattle from one of these islands to the other; but the cattle of Alderney and Sark, which form part of the Bailiwick of Guernsey, have always been allowed to enter Guernsey and to compete at the Guernsey shows indiscriminately with those bred in the island itself. In their native homes the Guernseys and Jerseys have their own separate herd books; and even the cattle of Alderney and Sark find a place only in the Appendix of the "General Guernsey Herd Book," the first volume of which was published as late as 1881, though another publication called "The Guernsey Herd Book," imposing more stringent requirements for registration, was published in 1879. In this country the "American Jersey Herd Book" was commenced in 1866 by a committee of associated breeders; and in 1871 the first volume of "TheHerd Register" was published by "The American Jersey Cattle Club," which was founded nearly three years before—in 1868. It was not until 1879, however, that the "American Guernsey Cattle Club" published the first Guernsey herd book in this country—about the same time when the first work of the kind was issued in the original home of the breed. Guernsey contains about 5,000 animals, and exports about 1,000 annually, mostly to England, the export to this country being not much over 125 a year, though the importations have increased somewhat within the last few years. Although there are more Guernseys in England than in Guernsey, there are few distinctive herds, as Guernseys are used principally to color the milk and butter of other breeds, and so highly are they esteemed for this purpose, that very high prices are paid for choice animals. In America Guernseys are mostly to be met with in Pennsylvania, Maryland, New York, Connecticut and Massachusetts, very few having yet made their way to the South, West, or Canada. Jersey contains from 12,000 to 15,000 animals, and exports about 2,500 a year, a larger proportion to this country than to any other.

In their native islands the prices of average specimens of both breeds are about the same; but owing to the speculation produced by the Jersey "boom" here, and the craze for "solid color" and "fancy" points here, in England and the British Colonies, the best Guernseys sell for considerably less than the best Jerseys. While in their native homes the best Guernseys have sold for from $500 to $1,200 apiece; Jerseys of the best strains have brought as high as from $2,000 to $5,000 each. In this country, also, the same rule holds good: average Guernseys fetch prices quite as high as average Jerseys; though Jerseys of the most fashionable strains bring much more extravagant figures than the choicest Guernseys. Indeed, among the latter there are no families that can compare with the Alphea, Rex, Coomassie, Stoke Pogis and other "boomed" strains of Jersey blood. The number of Guernseys in existence is much smaller; they have never been the pets of English aristocrats for their beauty of form and deer-like appearance, or of American speculators for the money that could be made out of them by skillful manipulation of the market. While there are few phenomenal butter makers among them, it is contended that there are proportionately much fewer poor Guernseys than Jerseys. In contrasting the two breeds, the enthusiastic patrons of the latter claim, however, a greater quantity, a higher quality and a better flavor of butter; also that it is firmer in Summer and of finer grain the year round; and that the Guernsey butter is oily. The Guernsey men contend that the butter of their favorites is quite as great in quantity, as good in quality and (to put it mildly) as firm in warm weather as that of their more fashionable rivals, and that the Guernsey holds out in milking quite as long as the Jersey; while it is conceded that both her milk and butter products are of much higher color.

There is abundance of room and use in this country for all the good specimens of both of these fine breeds of dairy cattle, and there is neither sense nor policy in disparaging either by way of puffing the other. The Jerseys, of which there are now among us probably from 35,000 to 45,000 pure-bred animals, of which not over half are registered, have done a great deal for the American dairy, not only by contributing their own rich milk and choice butter, but, still more, by improving the products of the native dairy stock by grading it up. The Guernsey is equally valuable for both these purposes, and being coarser and hardier, is adapted to a wider range of country, being able to thrive in a climate too rigorous for the more delicate Jersey. The former has never been subjected to the coddling and petting enjoyed by the latter at home and elsewhere, nor has its constitution or milk capacity been tampered with by breeding to suit the whims of fashion, or feeding for phenomenal butter yields. The Guernsey cows are larger and hardier and more docile than the Jerseys, and the bulls are much less vicious and dangerous; while the calves are larger and can be more readily turned into veals. As to colors, those of the Jerseys are mostly light red or fawn, and black mixed and splashed with white, and "solid" colors are preferred as indicative of the most careful breeding; those of the Guernseys include white, red and black in any shade and mixture, except roan, no instance of which has ever occurred in pure-bred animals. Brindle is not uncommon, and the nose may be either black or white. As a rule, the Guernseys are lighter-colored than the Jerseys. There is considerable room for improvement yet in the former; certainly more than in the latter, which have been carefully bred for a much longer time for certain desirable points; and it is not generally denied that the breeders of Jersey are more intelligent, skillful and enterprising than those of the neighboring island.



GUERNSEY COW, LADYBIRD II. Fig. 142. Re-engraved from the London Live Stock Journal.

At Fig. 142 is presented (re-engraved from the English Live Stock Journal) a likeness of the Guernsey cow Ladybird II., 723 P. S., R. G. A. S., an excellent specimen of the breed. She is the property of the Express Dairy Company Limited, Finchley, England—one of the large associations which have lately begun to monopolize the business of supplying cities and large towns with milk, and, indeed, with most of the dairy goods produced on the island. She was calved in Guernsey in 1879, and was taken to her present home in March, 1885. She has had four calves, the last of which was dropped on August 10 last. At the dairy show in London last October, she was awarded the first prize for breeding points and general type, in a very strong class. Afterwards she proved her excellent qualities as a milk and butter producer by winning the first prize and silver medal in the milking competition over all Jersey as well as Guernsey classes. The Live Stock Journal says: "She represents the true type of the old-fashioned Guernsey, possessing a vigorous constitution, great size and depth, is straight on the back, square and deep at the hindquarters, and is of the wedge shape typical of a first-class dairy animal. Her udder is rather deep than long, with the teats well-placed, and long and prominent milk veins."

Miscellaneous.

CATALOGUES, ETC., RECEIVED.

Rossie Iron Ore Paint Co., Ogdensburg, N. Y.—This paint is made from ores mined by this company. It is a pure oxide of iron, the color being natural; that is, not being changed by heat or artificial means. It is claimed that this paint is the best and most durable for tin or iron; for shingle roofs, barns and all out-buildings, pumps, farm implements, etc. It will resist all kinds of weather and will form a firmer coat and heavier body and yet is more elastic than other paints, protecting surfaces from sparks and hot cinders. Owing to the small percentage of clay contained in the ore, it is said that Rossie paint requires one-third less oil to mix and spread it properly than any other metallic paint, while, owing to its strength of color, it will spread a greater surface. When properly mixed, it is claimed that one gallon will cover from 600 to 700 feet of old paint or rough surface, and from 800 to 900 of new tin. Mixed with linseed oil, it forms a cement which will stop leaky roofs, while it is as good as red lead for making joints in pipes. The company will send samples free for experiment to Rural readers.

Challenge Wind Mill & Feed Mill Co., Batavia, Ill.—All who propose to erect windmills should send for this catalogue, or examine the mill described. It is self-governing, so that the motion is said to be nearly as steady as that of a steam engine, being no greater in the most violent wind, than in a fair breeze. The power, however, may be increased by the operator, by changing the position of a weight upon a lever. It is claimed that the Challenge Wind-mill has in every case succesfully stood the test of the terrible storms which have swept over the country from time to time. For pumping water for stock or for irrigation; for dwellings or railroads; or for grinding or thrashing grain; sawing wood; cutting fodder, etc., the manufacturers claim it is unequaled, not that it is the lowest price but because it is the strongest, most powerful simple and durable. The catalogue discusses the improvements in Wind-mills, and finally gives many testimonials, some of which are from men who, like Prof. G. E. Morrow and M. W. Dunham, are well known to all. The catalogue also illustrates and describes the Challenge Feed Mill.

Deere & Mansur Co., Moline, Ills. J. B. Bare, 60 South Gay St., Baltimore, Md., Manager of the Eastern Office.—This is a circular of the well-known Deere One-horse Drill and the Moline One-horse Drill, the latter of which we have used for years at the Rural Farm for planting corn. As will be seen by the circular, the driving wheel is in front. The grain is cut off by an adjustable brush, the kernels being dropped approximately 12, 15 or 20 inches apart. The machine has a steel furrow opener and adjustable coverers. The fertilizer distributor is said to work perfectly. This we have never used, as our fertilizers are always distributed broadcast. The Deere Drill has a runner drill opener with either a flat or concave covering wheel. It drops ordinary-sized corn one kernel at once, 10, 15 or 20 inches apart as desired, this being regulated by the plates. There are special plates for planting beans, peas, etc. For further information regarding these labor-saving machines, send for the circular or apply to the above firm.

H. F. Batcheller & Son, Box M, Rocks Falls, Ills.—A catalogue of Improved Apparatus and Supplies for Creameries and Dairies. The Batcheller Churn is said to be the most easily operated, the simplest and cheapest, producing more butter and a better quality, with a perfect grain, than any other. This churn brings the butter by *concussion*, not by friction, as with dash churns, giving the cream direct and continuous blows. The continued swashing of the entire mass of cream rinses the sides at every revolution, which prevents the accumulation of half-churned cream on the sides. The arrangement for holding the cover on the churn makes an air-tight joint. The circular will be gladly mailed to all Rural readers who apply as above.

Thoroughbred Stock bred at the Halfway Brook Poultry Yards and Kennels; catalogue from Coffin, Zimmer & Co., Glens Falls, N. Y.—This reliable firm will need no introduction to our readers. We saw specimens of their stock at the late poultry show, and feel confident they are exercising the utmost skill and care in breeding. In the present catalogue Partridge Cochins, Wyandottes, Langshans, Plymouth Rocks, four varieties of Bantams, as well as geese and ducks, are briefly described. The special merits of each breed are given. Partridge Cochins are considered best for small inclosures. The birds are quiet and thrive well when confined. Wyandottes contain more good qualities than any other breed. Any person desiring a fowl of any kind would be more than pleased with Wyandottes. Langshans are considered hardy and the best layers of any of the large breeds. Plymouth Rocks are hard to beat as general-purpose fowls. Specimens of six breeds of dogs and some excellent Jersey cattle are also offered for sale.

Napknoll Poultry-yard Co., Goshen, Orange Co., N. Y.—Illustrated catalogue and price-list of the Patent "Excelsior" and "Acme" Poultry Coops with brooders and runs. The coops are illustrated and fully described. They are portable, made of the best material, are tastily painted, and may be carried from place to place. The brooders are also portable so that, when removed, the coop remains in order for separate use. These brooders can not be explained in a notice of this kind. Mr. Henry Hales, one of our most conscientious poultry authorities, says that the chicks and mother can be kept very warm and dry in cold or wet weather, and be cool and safely protected in warm weather. The coops, he says, are proof against minks, rats and vermin, and yet well ventilated.

Northrup, Braslan, & Co., Minneapolis, Minn.—A large, well arranged illustrated catalogue of seeds, etc. Particular attention is called to the new oat "Dakota Chieftain" which the firm has been testing for several seasons. It is claimed to be earlier than any other; to be enormously productive and to be very heavy. It is at present sold only in small packages by the pint or quart at a high price. The catalogue offers the Saskatchewan Fife (Spring) Wheat, Manshury Barley, Angel of Midnight field corn, and Dakota Dent Corn, a selection of Pride of the North and grown in Dakota, It *must* therefore be early. The catalogue is a good one, and the firm enterprising and trustworthy.

Champion Steel Walking Cultivator, manufacured by Hench & Dromgold, York, Pa.—The implement is described as "the Pride of the East, the King of the West, and Monarch of All." The new automatic spring pressure and hoisting device is said to work admirably. The spring hoe attachment is well known by those who have used the riding cultivators manufactured by this firm. This attachment is invaluable in working stumpy or rocky land. Those of our friends who are desirous of finding the best cultivator will do well to send for the pamphlet.

Havens' Climax Condition Powder.—Pamphlet from Wm. Rust & Sons, New Brunswick, N. J. This powder is said by those who have used it, to give good results. The pamphlet is filled with testimonials from reliable men. One of our friends has given the medicine to turkeys with excellent success.

Success! I. X. L.—Circular from L. C. Stalnaker, York, Pa., describing his planter

and fertilizer-distributing machine. The inventor claims to have reached the acme of perfection by reducing his implements to the simplest possible mechanism, and doing away with the many springs and valves which cause so much annoyance when out of order. The implements are cheap and serviceable. Send for the circular.

CATALOGUE OF THE EAGLE PENCIL Company, office 73 Franklin Street, New York.—An elegant pamphlet of 65 pages. We have all used the Eagle pencil. The fact that its use increases from year to year is a sure sign of its great merit. Since 1860 it has steadily won its way into favor. Testimonials as to the excellence of this pencil are printed from many of our best educators.

PERCHERON HORSES.—A circular from M. W. Dunham, of Wayne, Illinois, states that although his sales this season have been numerous and satisfactory, he has still on hand at his Oaklawn Farm, 90 imported, acclimated, tried and guaranteed Percheron stallions weighing from 1,600 to 2,000 pounds, and old enough for service.

STEPHEN HOYT'S SONS, New Canaan, Conn.—An illustrated catalogue (80 pages) of apples, pears, plums, cherries, grapes (foreign and native), small fruits of all kinds; trees, shrubs, etc., for ornament; hedge plants, roses, clematis, etc., etc. A valuable feature of this catalogue is that it gives the season when the fruits are in use. This is a good, old trusty firm. Catalogue free.

GAME FOWLS.—Pamphlet from E. T. Baily, Mount Kisco, N. Y., well arranged, condensed and practical. Sound advice as to the treatment of the more common poultry diseases is given. All who are interested in these belligerent specimens of the feathered race will find much to interest them in this pamphlet.

RIVER-SIDE POULTRY YARDS.—Circular from R. Vanderhoven, Rahway, N. J. Good fowls from prize stock. The specialties are Bronze turkeys, Rouen and Pekin ducks, Langshans and Leghorns. We also notice pictures of White-Crested Black Polish, Black Javas and Wyandottes.

HOVEY & CO., 16 South Market St., Boston, Mass.—An illustrated catalogue of seeds. Among a long list of novelties we see the Monarch Rhubarb, which, last year, gave at the Rural Grounds the largest stems we have ever seen. It is said to be of superior quality.

A new potato, raised by Mr. Brezee, the introducer of the Early Rose, is announced. It is said to be about as early as Early Rose, of fine quality and very productive. Catalogue free.

THE NAIL HIT ON THE HEAD.

WHILE the genuine butter-makers have just cause to claim the protection of the Government from fraudulent imitations, it seems to me that the unwitting and innocent consumers have infinitely greater claim and cause for the same protection, and if they would combine their efforts and demand their reasonable rights through the proper mediums, and, if necessary, lay siege to the iniquitious abomination of "oleo" with all its allies, it can be overthrown. E. C. P.

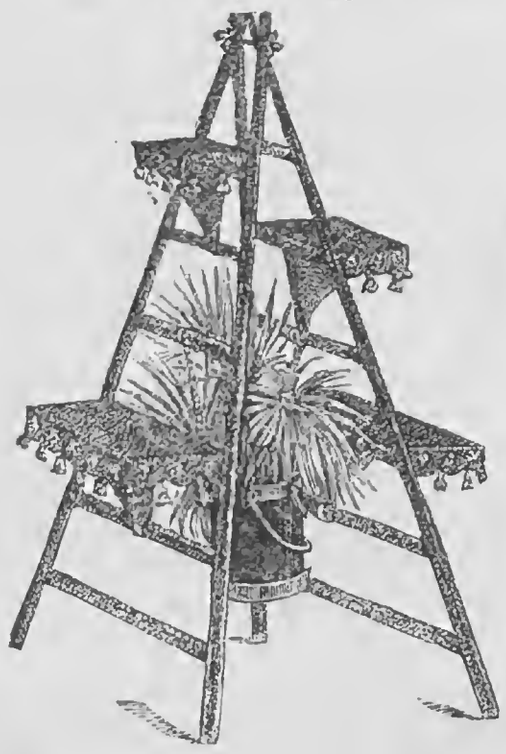
Rosemond, Ill.

For Women.

CONDUCTED BY MISS RAY CLARK.

ETAGÉRE.

A MODERN parlor without some article in it from the new schools of art is not to be thought of as finished. We do not advocate lining the walls with plush banners, plaeques, Christmas cards and such like, although a few of



such things can be used to good advantage if tastefully arranged; but because you have had a number of fancy articles given to you, do not feel under obligations to your friends to make a display of them all at the same time. Something new is always eagerly looked for, and we present our lady readers with what may be decidedly new to many, while at least it has the advantage in being of real service after it is made, which but few fancy articles can boast. This is an etagére for parlor or drawing room, and is in the form of a ladder, which is made of pine or white wood and covered with plush. It is an exceedingly nice piece of work to do this well, yet it can be perfectly done, and we suggest that there be no haste while doing it. A handsome shade of green plush is the prettiest, unless this color will not correspond with the other articles of furniture in the room; then, of course, select that color which will be best suited to them. Use the best white glue, and do not make it too thin, or it will moisten the plush too much. The top of the brackets look well if thickly studded with gilt or brass nails, or they may be covered with the plush also. A brass rod fastens the uprights at the top, where is tied two large bows of satin ribbon—yellow if green plush is used. A handsome art fringe is needed to finish the edges of the brackets, which can be put on with gilt nails.

A SURE WAY TO SUCCESS.

Prudence of the right stamp seeks the attainment of worldly objects by worthy and suitable means.
Old Maxim.

THIS old saying does not condemn the seeking after the good things of this world, but only to the use of unlawful or unworthy means in the attainment of them. The person who loves to stand in high esteem with those who know him, who seeks to elevate himself by decrying others of whom he is envious, for fear such a one may be in advance of himself in popularity, is using despicable means of elevating himself.

An office seeker, who to win a desired position tries to gain favor with those with whom the decision rests, by flattery or intrigue, displays no genuine prudence at all, but shows unmistakably his own unfitness to be trusted. Starting in life, the man who might truly be called prudent will not begin the foundation of a fortune by endeavoring to obtain an undue advantage over those with whom he deals, but will lay deep and strong the foundation of a character for uprightness, which will be worth more to him in the future than all his dishonest gains.

Success, to a well balaneed mind, means not the mere possession of abundant wealth, but the knowledge that no stain of unworthiness rests on the means by which they were won.

Motive determines the quality of an act, and a good man will endeavor always to act according to the rules of right, and will decline to profit by a promising opportunity, if to do so would be selfish or dishonest.

A conscientious lawyer will not throw the whole force of his talents on the side of a cause which he knows to be morally wrong; nor will an upright physician work on the fears or ignorance of a rich patient, with a view to making a large bill for attendance.

Men may try to excuse such conduct by pleading that everyone does such things who can, or that money is what people will work for, but it shows a low state of moral feeling in men when they do so.

A lawyer need not accept a client whom he sees is in the wrong, if he knows that another will be readily found who will accept the case. No man's prosperity depends on wrong doing, even if the world looks complaeently on such conduct. So, men should seek worthy ends by worthy means. SOLITUDE SWEETENED.

WORK AT SOCIAL GATHERINGS.

THE amount of work accomplished by the ladies of our sewing circle has been considerable.

At the time of our organization, the women were nearly all strangers to each other. They had come from almost every State in the Union, attracted by our healthful climate and our social and educational advantages, and also by the fact that our young city had been established with a temperance foundation that was as firm as that of older temperance cities in the country. So along with our first sewing came the task of getting acquainted with each other and a delightful task it was; for one might travel far and not be able to find another organization of women so earnest in purpose, so charitable and true as this sewing circle contained. Everything moved along with ease and harmony.

There being a scarcity of needy people in our thriving town and also a scarcity of domestic help, our work at once took the form of helping the different members out with their family sewing. The first year we tried sewing in the circle at 10 cents per hour each; but this proved unsatisfactory, and we changed the price of sewing to a given sum for each garment or piece. Sometimes a quantity of sheets and pillow-slips would be sent in to be made; again we had numberless garments for families of small children.

Numerous quilts and comforters were made for parties sending them in. We became quite proud of our reputation for quilting nice shell patterns, and for tacking comforters. Then we had chosen a woman for our president, who knew how to make all such things. Two sewing machines—second hand ones—were bought to help us along with the large amounts of sewing that we were called upon to do. These afternoons proved a great boon to the tired, worn-out mothers, giving them an opportunity for social life and that interchange of thought so dear to the heart of womankind. Work was planned at home so that the meetings could be attended. These meetings taking the place, in many instances, of social calls, for one afternoon at the sewing circle often proved as good as 20 calls, and the work seemed much easier amid the air of sociability than when done at home alone; and then the discussion as to ways and means were very suggestive and helpful. For instance, the question "Was it better to sew the seams of the sheets over and over, or stitch them up on the machine?" Some ladies had a way of always tearing off the selvage when it was to be hemmed, thus leaving it so elastic that there was no danger of the work drawing. Other discussions than sewing often engaged us. One afternoon, co-operative housekeeping in a town like ours was made to look quite feasible. The money received for this work proved quite a factor in defraying the expenses of the society. The supper hour, with hot tea and coffee prepared in the kitchen, was always thoroughly enjoyed; and when the baskets and packages of food were opened and the long tables set. The husbands came in at tea time to help eat this picnic supper. And now having kept up our organization for several years, we all feel that although the help to our household sewing is quite considerable, the chief good that these sewing circles accomplish is the promotion of social intercourse and that helpfulness, one to another, which such intercourse permits.

HOUSEKEEPING IN CALIFORNIA.—III.

MARY WAGER-FISHER.

"CLANG" went the door-bell half a dozen times a day—the postman; a man with potatoes, apples, vegetables; a Chinaman with ready-made underwear; an artist with samples of his work to show; a woman wanting to know if we wanted lace curtains "done up;" a man to mend umbrellas and chairs—and so on, through a multitude of inquiring people trying to get "business." Although we were in the land of "a thousand fruits and flowers," the best fruit of all is still lacking to California—apples. One can buy imported apples at from one to two dollars the box—an enormous price—or he can buy very poor California apples for from 85 cents to a dollar. The first apple man to ring the door-bell had what he called Rhode Island Greenings—raised in California. He said they had been hand-picked, were sound and good, and would keep two months. They were very small, but had a "Greening" look, and I took a box; but I never pared those miserable little apples without a feeling of pity for the stunted things, while there arose before my mind's eye visions of the loaded apple orchards in Oregon—thousands of bushels going to absolute waste for lack of a market, besides all the cider and "evaporated jelly" annually made. Moreover, the "Greenings" rotted rapidly and had often to be picked over, just such apples as an Eastern farmer would think hardly worth feeding to his pigs, and costing here $1 the box! And still Californians claim that as good apples can be raised in the State in the mountain nooks as can be produced anywhere else. But the great apple grower has not yet arrived, although the first premium at the New Orleans Exhibition was given for apples raised in Santa Barbara County. Judging from the native apples one sees in the San Francisco and Oakland markets, one wonders how it ever so happened! We paid 85 cents for a sack of potatoes. Sweet potatoes cost 10 cents the pound. (?!) Coal was brought and delivered in sacks like potatoes. The best evaporated peaches cost 25 cents the pound, but ordinary dried peaches could be had from 15 cents up; prunes of excellent quality for 10 cents; nectarines and apricots from 15 to 20 cents; but I never found fruit of good quality, either natural or dried, cheap. Dealers say that growers of fruit do not get much for it, and that the prices go up in the hands of middlemen. Probably in the millennium, the "middlemen" will be no more, and the producer will deal directly with the consumer, or at least with no more than the green-grocer between to share in the profits.

AN EXQUISITE THANKSGIVING DINNER.

As Thanksgiving Day neared, the laddie remarked with assurance, that we must have a turkey, of course! Anaximander said turkey was not half as good as chicken, while I declared turkey would be very poor if I had to roast it! It very unexpectedly happened however, that some friends to whom we had brought an introductory letter, invited us on the previous day, to dine with them, very informally, on Thanksgiving, saying that they would be quite alone—and they were but two people, no longer young, but of large wealth and living in affluence. Of course, any one who has had much social experience knows that even an "informal" dinner requires nice attention paid to the toilet, and when any one is in doubt as to just how much or how little dress may be demanded, it is safer to strike a happy medium, if one can. I have often thought of the experience of a French lady of rank, who described her "feelings" upon going to a friend's house to an "informal" reception in a walking costume, to see, upon entering the room, every lady in evening dress. "I can assure you," she cried, "that I walked out at once and ordered my coachman to drive me home, where I quickly changed my frock! It is positively frightful to spend an evening burdened with the thought of being unsuitably attired—particularly when you are not one of those superior women who can always rise above their circumstances." Many French gentlemen always "dress" for dinner at home, putting on the inevitable white tie and swallow-tail coat. But the latter is not much worn as yet in California society; for at a large reception which I attended very soon after we reached Oakland, for which 700 invitations had been extended—400 accepted—only the gentleman in whose honor the affair was given, wore a swallow-tailed coat, and he was just from Boston!

Our friend's carriage came for us at half-past five, and after being ushered into the drawing room, we chatted for a quarter-of-an-hour, when at two strokes on a silvery bell, the hostess, who was in a gown of black velvet, arose and we went out to dinner. Not since we left the East had we sat down in so imposing a dining-room and at such a dainty table. I had previously cautioned the laddie as to his behavior, as is necessary 365 days in the year, since he is one of the irrepressibles who are continually breaking out in a new spot. Only a short time before we had accepted an invitation to "tea" at the house of comparative strangers, and the laddie, observing the bright look of the silver, held up a fork, and in his clear tone, said: "Mamma, do you think this is *solid* silver? It *looks* like it, but really I don't *think* it is—do you, Mamma?" True, there was no danger of his ever repeating *that* offence, the likelihood was that the next violation of "good manners" would be of an altogether different and unexpected character. But the little fellow behaved most beautifully, not even making a spot on the exquisite napery, which had been laundried ideally, in a way that the best launderer I ever had, never even approached. How such ironing was compassed I do not know—I can only say that for this establishment of two people, there was a laundry quite removed from the dwelling and probably a laundry "artist" employed in it. In the middle of the table was a large, but low vase of rare flowers, with smaller vases in colored glass at each side of it. At each plate there were double sets of knives and forks, a lovely little china plate with a piece of bread on it, and three glasses up-turned—for water, sherry, and claret. The host said that it was only since he had become so far advanced in years, that he had taken wine with his dinner, and he found that he required it. The claret was a California product, and he preferred it to the imported article. We had soup, then turkey with cranberry jelly, sweet and white potatoes, and mixed pickles were passed from the sideboard, all side dishes being similarly served and not left on the table. After this course was removed a platter of salad, brilliant with nasturtium blossoms, was placed before the hostess for her to serve, and a platter of sliced, cold, boiled ham was placed before the host to accompany the salad, which was of tender, crisp lettuce, celery, and ripe, fresh tomatoes, with some delicious dressing; and bread was passed, if anyone desired it. The dessert followed the salad course, and first we had a pie that was all something very like meringue—very delicious and dainty. Then came fresh strawberries and "Jersey" cream and cake; next grapes and other fruit; then nuts, some of which had been heated. Cheese had been passed after the salad. At last we had black coffee. When the dessert plates were brought there was a finger bowl set in

Miscellaneous Advertising.

When Baby was sick, we gave her Castoria,
When she was a Child, she cried for Castoria,
When she became Miss, she clung to Castoria,
When she had Children, she gave them Castoria,

each one with ad'oyley under, and floating on the water was a double fuchsia—and my hostess was the first person I had heard, on this coast, who pronounced the name of this flower correctly—*fooksia*.

An hour later in the parlor, tea was served in very dainty cups, on a tray, and the entire dinner service, with its variety of china was most beautiful and costly, too. But the chief beauty of it all was in its perfect ordering, the leisureliness of the courses, no crowding of dishes, no confusion, a perfectly trained waiting maid to whom not a single word had to be addressed, and the hostess as apparently unconcerned as her guests. This much could often be compassed by housewives of far less wealth, if they would but make a determined effort to better train the table waiters and carry the effort into effect. Some Chinese cooks will prepare a dinner and serve it in the most faultless way; but they often have more method, in the performance of their tasks, than have domestics who are not "haythens."

KITCHEN TALKS.

ANNIE L. JACK.

"I SHOULD think potatoes are getting scarce from the market prices," said the Family Provider the other day, as he laid down the newspaper.

"Really," said the Student, "they are a very unsatisfactory crop to raise. The market is glutted if the potatoes are plentiful and the crop well secured, and if the rot comes, as it did this season, they are a great trial to those who have worked hard to raise them."

The Amateur Cook stopped peeling and cutting the decayed pieces out, and said: "They seem to grow poorer in quality this season, as the Spring comes on. We used to be able to depend on the White Elephant for later use, but this year there is not one of the sorts better than another. I wish some one would send out a new variety that would be sound and firm in June—till we can have new ones fit to eat. As it is, we are glad to use rice, or hominy for a change from the poor, watery things, as soon as the days get warm."

"Doesn't it improve them to put them in cold water several hours before cooking," asked the Investigator, a new member of our household.

"Yes," said the Cook, "provided you find time to peel them 'hours before'."

The Family Provider brought home a quantity of oranges this season, and our kitchen economy endeavored to use them to the best advantage. As a dessert we found the orange Charlotte the best in our varied experiments, and it is not difficult to prepare it, being very suitable for dinner on a bright spring day. Soak one-third of a box of gelatine for two hours in half a teacupful of cold water. Take the grated rind of two oranges, and all the juice of six, one teacupful of sugar, and as much stale sponge-cake as will line a mold to hold nearly a quart when full. When the gelatine is soaked, add to it half a cupful of boiling water. It wants good stirring at this point, and should then be mixed with the juice and sugar. It must be all thoroughly beaten, and then a quart or more of whipped cream can be gradually added, stirring briskly the while. It will be thick enough to pour into the cake-lined mold, and can be set away to cool. At this season, when one has plenty of milk, a great deal can be done in the way of fancy cookery, and cream is not hard to whip. It greatly improves a custard to give this delicate addition, and with the aid of a box of gelatine one can make a dessert, under these circumstances, a series of surprises.

A WEEK AT MRS. HOMESPUN'S.

(WEDNESDAY.)

AFTER breakfast, Wednesday morning, while the helpful daughter washed up the dishes and finished the regular morning's work, Mrs. H. brought out the clothes-basket rounded full of clothes, and proceeded to sprinkle and fold them ready to be ironed. Starching and rolling up the fine ironing, she rolled them up in a cloth, and laid them on the top of the coarser clothes, covered the whole with the ironing blanket, and after putting her sleeping-room and adjoining closet in order, brought from the cellar two fowls that had been prepared and hung there the night before, washed them well and put them in an iron kettle to parboil, preparatory to baking them for dinner. It was a custom of long standing with her to have baked fowl whenever the dry bread accumulated enough to be troublesome. She used it for dressing, and as the whole family were fond of it, it was easily marketed in this way. To prepare it, she chopped the bread fine in a wooden chopping bowl, then moistened it with some of the liquor in which the fowls had been boiled; a piece of butter, a sprinkle of pepper salt and a little sage were put in, also the giblets, chopped fine. After the fowls had been taken from the kettle and had cooled a little, they were filled with this dressing, placed on the dripper, and some of the liquor put in the pan, and they were then ready for the oven; but an hour and a half was all the time required to cook them.

The business of ironing was next taken in hand. The hot flat-irons were rubbed over with beeswax and polished with a flannel cloth, which left them smooth and free from rust. The starched shirts and the fine pieces were ironed first, because Mrs. H. said she could do them so much better when she began to iron than she could later when her hands trembled with the heavy labor of the large garments.

A good three hours' work followed before the last article was hung on the clothes bars. It would always have a soothing effect on any true housekeepers' nerves to see Mrs. Homespun's clothes bars after they were hung full of the freshly ironed clothes. They suggested ideas of order and purity in domestic affairs in a very marked manner. At dinner, baked potatoes accompanied the baked fowls; and brown bread, pickled beets and tomatoes and an apple pie completed the bill-of-fare. After dinner, the sober matron sat down to her sewing, while the young lady amused herself and her mother by pasting leaves, vines and flowers cut from gay pieces of cretonne, in the inside of a glass ice pitcher. She touched the edges with mucilage, and when dry they adhered. After arranging these in a manner to suit her taste, she filled the pitcher with salt, and set it carefully on the shelf where it made a very pretty ornament.

At supper time, the children having come home hungry from school, relished exceedingly the remains of the cold fowl with the dressing, besides warm johnny-cake and pumpkin pie.

In the evening the boys helped their father to shell the seed corn which had been hanging braided up overhead in the kitchen. It was put in paper bags and stored in a dry place.

HINTS FOR HANDY HOUSEWIVES WITH NIMBLE FINGERS.

To make a pretty splasher for a washstand, bind a piece of cream matting with braid or velvet, and paint with water colors, a cluster of large flowers, or embroider them in with coarse wool. Put a bow of satin ribbon in one corner.

A half yard of white surah silk will make as pretty a baby cap as you can buy for two or three dollars. Fit a muslin or flannel lining nicely to the head, and cover with the surah shirred on in half-inch puffs. Put a stitching of silk floss in herring bone on each row of the shirring, and a frilling of Valenciennes lace inside. A bow and strings of white ribbon finish the dainty trifle.

A handsome card-receiver can be made from a small tin pie-plate. Cover the top with a piece of crazy patchwork done with very small pieces, one piece in the center, of pink, white or blue satin representing a card. Cover the bottom of the plate with silesia, and border the edge with velvet, or conceal the joining with a silk cord.

A pretty little footstool can be made from a small box. Cover the top with a piece of cotton-batting, and over this tack a piece of garnet velveteen, with the motto "Rest thy weary feet" embroidered on it in silk floss; the sides and ends should be covered with garnet merino. Any color will do, and it could be made from an old dress of one of the children.

Chicago, Ill. EMMA VERNON.

BAKER'S COOKIES.—DOUGHNUTS.

IT is very pleasant to take dinner or tea with our village sisters occasionally and learn some of their ways of cooking, which are necessarily different from ours. Mrs. C. gave me her recipe for making cookies, which were like those purchased at a city bakery. They were better when two or three days old than when freshly baked. Two cups of granulated sugar, two eggs, one cup of milk, three-fourths of a cup of butter, one ounce of ammonia dissolved in the milk; flour to make a soft dough, roll out and, when about a quarter of an inch thick, sprinkle a little sugar over the sheet of dough and roll lightly; cut in any desired shape and bake in a moderately quick oven. The ammonia comes in ounce cakes and costs from five to ten cents an ounce, according to the avariciousness of the druggist.

EVERYDAY DOUGHNUTS.

ONE egg, one cup of cream, one cup of buttermilk, one-and one-half cup of sugar, a teaspoonful of soda and a half teaspoonful of salt; flour as for biscuit, roll to half an inch in thickness, cut into strips and form into "twisters." The "youngster" thinks a good fluffy, fat twister is more than twice as good as the little rings and balls, "'cause there are several mouthfuls in one." Fry in hot lard.

Pain in the Side

Is a symptom of disease. It may be caused by Rheumatism, or by Neuralgia, but it usually indicates a disordered condition of the Stomach, Liver, or Kidneys. Ayer's Sarsaparilla corrects the action of the vital organs, and removes every trace of disease from the system.

Last fall and winter I suffered from a dull, heavy, pain in my side. I did not notice it much, at first, but it gradually grew worse until it became almost unbearable. During the latter part of this time, disorders of the Stomach and Liver increased my troubles. I began taking Ayer's Sarsaparilla, and, after faithfully continuing the use of this medicine for some months, the pain disappeared and I was completely cured.—Mrs. Augusta A. Forbush, Haverhill, Mass.

Ayer's Sarsaparilla,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by all Druggists. Price $1; six bottles, $5.

Mason & Hamlin

ORGANS: Highest Honors at all Great World's Exhibitions for eighteen years. One hundred Styles, $22, to $900. For Cash, Easy Payments or Rented. Catalogues free.

PIANOS: New mode of Stringing. Do not require one-quarter as much tuning as Pianos on the prevailing "wrest-pin" system. Remarkable for purity of tone and durability

ORGAN AND PIANO CO.

154 Tremont St., Boston. 46 E. 14th St. (Union Sq.), N. Y. 149 Wabash Ave., Chicago.

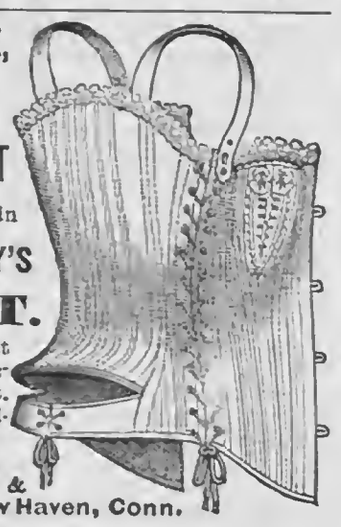
ALLEGER ORGANS you can get a strictly first class organ from $50 to $75, stool and book. Warranted 5 years. It will pay to send for circular before you buy. Address the manufacturer, H. W. ALLEGER, Washington, New Jersey.

ORGANS The most beautiful and finest toned in the world. Low prices, easy payment. Send for Catalogue. Address Weaver Organ & Piano Co., YORK, PA.

SONGS The Acme contains 114 American all WITH MUSIC, and is entirely different from any other collection. Also, 100 Songs of the Day, including "Wait till Clouds Roll By," "Spring Time and Robins have Come," "Climbing up de Golden Stairs," "Peek-a-Boo!" "When Robins Nest Again," "I'll Await My Love," etc. Both books, and catalogues of music, novelties, etc., free, on receipt of 15c. F. C. TRIFET, 408 Washington St., Boston, Mass.

ELEGANT SHAPE, HEALTH and COMFORT Perfectly Combined in MADAME FOY'S **CORSET.**

It is one of the most popular and satisfactory in the market. For sale by all leading dealers. Price by mail $1.30.



FOY, HARMON & CHADWICK, New Haven, Conn.

BLACK SILKS.

+ Over and above a 4 per cent. reserve on existing policies of that class.

THE SEVEN ADVANTAGES

OF THE

NEW YORK LIFE INSURANCE COMPANY'S

Nonforfeiting-Tontine Limited-Endowment Policy.

FIRST ADVANTAGE.—Insurance for a definite amount, or for an amount increasing with each premium paid, as desired.

SECOND ADVANTAGE.—A Definite Cash Endowment, and a Tontine Dividend, to Policies in force at the end of Endowment and Tontine periods, which periods correspond, and may be either Ten, Fifteen or Twenty Years.

THIRD ADVANTAGE.—Insurance for the full amount of the Policy, extended for as long a time as the value of the Policy will carry it, within the Endowment period, in case of discontinuance of payment of premiums after three years.

FOURTH ADVANTAGE.—A Grace of one month in the payment of premiums, during which time the policy-holder's security is unimpaired.

FIFTH ADVANTAGE.—Three valuable options, including cash value to policy holders who survive their Tontine and Endowment periods and keep their policies in force.

SIXTH ADVANTAGE.—Practical freedom of action with respect to occupation, residence and travel.

SEVENTH ADVANTAGE.—The payment of death-claims immediately upon the approval of the required proofs of death.

Do not insure until you have seen full particulars of this Policy. Do not fail to write the nearest Agent, or the Home Office, for such particulars—**at once.** The NEW-YORK LIFE INSURANCE COMPANY, **346 & 348** Broadway, New York City.

News of the Week.

HOME NEWS.

SATURDAY, March 27, 1886.

OF course, those negroes wounded and butchered at Carrollton, Miss., were the "aggressors;" Liddell's friends merely "retaliated," without receiving a scratch. Gov. Lowery says so, and that "everything is quiet," and no "executive interference" is needed.... ....Hon. Ward Hunt, Ex-Associate Justice of the United States Supreme Court, died at four o'clock Tuesday morning, in his 76th year.....In spite of repeated denials, rumors still prevail that another rebellion is soon to break out in the Canadian N. W. T... ... .The ore miners of Pennsylvania are working and starving at $3 per week..... Senator Logan wants the army increased from 25,000 to 30,000 men—that is 27,000 "effective men" instead of 25,636, the highest limit according to present regulations.....The Educational Bill is in danger of being "talked to death."....Matthews, the colored nominee for Registership of Deeds at Washington, has been reported adversely—ostensibly because a non-resident: really on account of his color. Cleveland not pleased.....The House Indian Com. will report favorably the Senate Bill opening to settlement 11,000,000 acres of the Sioux Reservation in Dakota..... ....There are over 7,500 bills before Congress; not more than 500 have ever been passed at any session; thus far fewer bills have been passed than in the same length of time by any former Congress.....Senator Don Cameron, of Pennsylvania, has introduced in the Senate a bill to admit to American registry the 10 foreign-built steamships of the Philadelphia line—and it may pass. A Pennsylvanian "betraying protection!" If 10, why not 100? If ships, why not ——?..... Everlasting muddles, legal and political, about fraudulent voting and registration in Chicago and Cincinnati. Several of the "fine workers" of both cities are now in jail; others on their way there; but it's hard to force them along, and hard to keep them in when there. .....An effort is being made before Congress to give women the right to vote in all the Territories. Woman suffrage has worked excellently in Wyoming and Washington, though Senator Edmunds proposes to abolish it in Utah as a "war measure" against Mormonism. Female suffragists have been busy holding State conventions during the week—much bitter denunciation, sweet approbation, high hopes and ardent aspirations marked the meetings.....The Central and Union Pacific R. R's. subsidized the Pacific Mail Steamship Co. for not cutting rates to the Pacific coast. In part-payment of advances, the Government gets 25 per cent. of the net income of the roads, after deducting "necessary operating expenses." Sec. Lamar decides the subsidy isn't included in these, and demands $354,000 from the U. P. and $500,000 from the C. P. for the Treasury's share of the earnings thus concealed for nine years.....Gov. Stoneman, of California, has appointed George Hearst, a mine, real estate and newspaper owner, a millionaire and "practical politician," as successor to Senator Miller..... ....Ohio has contracted to fund $2,250,000 of State indebtedness in new bonds bearing interest at 2.78, the loan to average only 10 years. This is the lowest rate of interest ever paid on a large loan—English Consols are now three per cent. Good for Buckeye credit!.... Capt. Crawford's death, just after he had hunted Geronimo and his band to earth, turns out to have been a deliberate assassination by Mexican troops. The Mexican authorities are investigating the matter with a view to punishing the murderers in compliance with the demands of the United States....The report that Geronimo had surrendered is untrue. Gen. Crook has gone to meet him, if possible..... Another "Tichborne claimant" has turned up in California. He has long been known as Ferris—Charles Ogden—under which name he has married twice and served in our army during the war. Is going to England to claim the great Tichborne estates.....De Lesseps, who has just reached Paris, maintains that the Panama Canal will be finished in 1889—as per promise..... .....There is a growing opposition in this State, begot of pride and independence, against Federal aid for improving the Erie and Oswego Canals. What is the pittance of $5,000,000 from the National Treasury to the Great and Wealthy Empire State!..... .....Washington is "agitated" about a "World's Fair" in 1892, to commemorate the fourth centennial of the discovery of America. So are Chicago, St. Louis, etc., etc.....Gov. Hill, of New York, has appointed five ladies notaries public for their respective counties in this State. "A great victory for the Women's Rights people," folks say. Well!.... .....At Pinconning, Mich., there is a case of sickness, which doctors say is exactly like Asiatic cholera. The patient, Smith, got from Valencia, Spain, a box of raisins which were "apparently fresh, probably of the crop of 1885." Asiatic cholera was raging about Valencia in 1885.....Brig.-Gen. Howard has been made Maj.-Gen. in place of Maj. Gen. Pope "retired for age." Gen. Schofield —senior Maj.-Gen.—will, at his own request, be transferred to the "Division of the Atlantic"—the smallest and least important—with headquarters in New York; Gen. Terry will have the "Division of the Missouri"—the largest and most important—with headquarters at St. Louis; and Gen. Howard will have the "Division of the Pacific," with headquarters at San Francisco. It seems that Terry was really confirmed Brig.-Gen. before Howard was nominated such; so no slight or injustice was done to the latter by the prior advancement of the former.....The five civilized tribes of Indians—Cherokees, Creeks, Chickasaws, Choctaws and Seminoles—have formed a compact pledging themselves not "to cede or in any manner alienate to the United States any part of their present territory." Provisions are made for the punishment of crime, restoration of stolen property, change of citizenship from one nation to another, and suppression of the sale of ardent spirits..... ....Sir John MacDonald, Premier of Canada, is seriously ill of sciatica, at Ottawa.....No peace yet for the transcontinental roads. Rates for freight and passengers still being cut—and cut. The Southern Pacific sold tickets from Los Angeles to Kansas City for $1 and to Chicago for $7! There are scarcely any rates from competing points west of the Mississippi—"No offer is refused." No prospect of immediate settlement..... The Dominion budget for the next fiscal year amounts to a little over $33,000,000, against $35,000,000 last year—no money wanted to suppress any rebellion next year. Expenditures upon public works, railways and immigration are to be reduced, while the charges for interest on the public debt, civil government and minor services will be increased.....Mormons reported jubilant over Murray's removal. They see "the hand of Providence" in it.....Mallard ducks were selling in Chicago last Monday at 60 cents a dozen—five cents each!.....Out of 49,000 fourth-class postmasters whose successors are to take office on appointment by the Postmaster-General without the consent of the Senate, only 8,635 were removed between March 4, 1885 (date of Cleveland's accession) and March 4, 1886, including 1,053 in New York, 255 in New Jersey, 100 in Connecticut, 127 each in Massachusetts and New Hampshire, 25 in Rhode Island, 128 in Vermont, 292 in Maine and 938 in Pennsylvania..... The railroad troubles on the "Gould system" are worse than ever. The mail and passenger trains are still allowed to run; but all freight trains have been stopped for three weeks, except an occasional one escorted by large numbers of heavily armed "specials." It is conceded that the strike—caused by the discharge of a single hand at Marshall, Texas—was started without adequate cause; but the men, now that they are out, insist that it is for "principle" they are contending. Vice-President Hoxie refuses to treat with the Knights of Labor as an organization, while willing to settle with the men as individuals. The efforts of the Governors of Missouri and Kansas to effect a compromise have proved ineffectual. The strikers are reported to be resorting more and more to violence; stopping and disabling trains, "killing" engines, burning bridges, tearing up tracks and switches here and there, and assaulting those who have taken their places. The trouble on the roads extends through six States. Owing to the stoppage of freight transportation, many of the places along the lines are short of fuel, flour and other articles of food. Thousands of workmen have been thrown out of employment, as materials could not be received or finished goods shipped. "Perishable goods" are being ruined for want of a market; stocks of some goods are exhausted in stores; trade is paralized; industry compulsorily idle; farmers unable to market their products or receive implements and supplies. Protests against the strike are rapidly increasing in number and loudness. The men threaten to extend the strike to the roads east of the Mississippi. Already the switchmen and other "yard" hands at East St. Louis, in Illinois, have struck, completely isolating St. Louis, whose trade with country places has fallen off over $750,000 a day. Men "obstinate;" railroad magnates "resolute;" militia under arms in many places—altogether a very deplorable muddle.....

AFTER two years' trial, we unhesitatingly pronounce the Boss ZINC and LEATHER COLLAR PAD, the only durable and successful one that we have ever used. It retains its shape, is cooling, prevents chafing, and thereby keeps the horses' necks clean and healthy. HIRAM G. DODGE & SONS, Wood & Coal Dealers, Madison, Wis.—*Adv.*

AGRICULTURAL NEWS.

SATURDAY, March 27, 1886.

Dressed meat shipments have not been wholly suspended, as threatened on account of the increase in freight since March 1; but they have decreased about one-half; the shippers merely wish to hold their trade till "something turns up."....Representative Miller, of Texas, has introduced into Congress a bill which proposes "to reserve from sale, settlement, pre-emption or location for 10 years, and to set apart for a National Live-stock Highway during that period the public lands in range number 41 along the east line of Colorado, it being a fractional range averaging about two miles in width." He expects it will pass during the present sessiod. Then what will the affected and protesting States do?.....A law enacted in Denmark last year compels all makers and sellers of adulterated, imitation and bogus butter to pack it in elliptical tubs, conspicuously marked "MARGARINE," and punishes infractions of the law by a fine of from 200 to 2,000 kroners (about $54 to $540). The enactment was forced by the agricultural element of the country, despite the opposition of the bogus butter people.....On Thursday morning the finest herd of blooded cattle in New England was burnt to death by an incendiary in the stables on the farm of Wm. H. Hopkins, East Providence, R. I. There were 61 Jerseys and three Ayrshires; 33 of the former, including Lemon Dandy, for which $2,500 were paid when three months old, belonged to one family. Value of stock $40,000; no insurance. Value of burnt buildings, $25,000; insured for $12,000. Two discharged farm hands are suspected..... ....Farmers' clubs and other organziations over the country are protesting against the discrimination against home-grown agricultural products in the Morrison tariff. There's some talk of substituting a more "acceptable" tariff bill by somebody else.....A St. Louis party is reported to be expressing oil from Indian corn, getting a gallon of clear, amber oil, worth 75 cents, from a bushel of corn, worth 35 cents, and the residue is said to be better animal food than any of the oil cakes now in the market. If this turns out true, there's a good time ahead for farmers—they can eat their cake and have it.....The Cotton Oil Trust, which controls every desirable mill west of the Mississippi and 60 per cent. of all in the country, is said to be a bantling of the notorious Standard Oil Company. The shining lights in the one are bright stars in the other..... The export of corn from St. Louis via New Orleans last month was 984,232 bushels, an increase of 240,305 bushels compared with February, 1885. No wheat was sent out either this year or last, so that "river transportation" of wheat for Europe, which made such a rumpus three or four years ago, has collapsed. .....Here are the prices of Texas cattle "for round lots of 1,000 and upwards, full ages, scalawags out, delivered near where raised:" Panhandle yearlings at $15; Western Texas yearlings, $14; two-year-olds, $19; Southern Texas yearlings, $8; two-year-olds, $12; Central Texas and Northern Texas yearlings at $10, and two-year-olds at $14; Eastern Texas yearlings and twos at $8 to $11." Smaller lots 50 cents to $1 cheaper per head; but the cost of "bunching" will offset this.....

H. J. BAKER & BRO. N. Y.

Gentlemen.—I used your Special for grass on good moist ground, about 400 lbs. per acre, season dry. I find it will insure a crop TWO YEARS WITHOUT ANY OTHER FERTILIZERS. I think it pays well for the investment.

WM. L. MUNSELL.

Sept. 21 st, 1885. Winchester, Conn.—*Adv.*

Crops & Markets.

SATURDAY, March 27, 1886.

On the basis of the crops of the last 10 years here are the average yields of the three leading cereal crops in the United Kingdom:

	Wheat.	Barley.	Oats.
Great Britain	28.80	34.02	39.04
Ireland	26.69	35.39	39.05
United Kingdom	28.07	34.13	39.04

How do these figures compare with those for your farm?

The Mark Lane Express of Monday says the general and timely changes in the weather had benefited clay lands. General outlook for growing crops favorable. Sales of English wheat during the previous week were 72,819 quarters at 31s. 1d. (92 cents a bushel), against 49,556 quarters at 31s. 11d. (97 cents a bushel) during the corresponding week last year. Little demand for foreign wheat; prices tending down.

The fruit production of California is marvelous. Fruit is sold there by weight, and last year the State produced 9,000,500 pounds of raisins—nearly three times as much as in 1884. She also marketed 1,500,000 pounds of prunes, 1,900,000 of peaches, 1,139,000 of plums, 650,000 of apricots, 1,250,000 of walnuts, 1,050,000 of almonds, and 1,823,000 of apples. Her apples are poor, however, and she draws her supply chiefly from Oregon. Just now, owing to the extraordinarily low rates of railroad freight, our Western States, especially Iowa, are shipping apples heavily to San Francisco, as the freight thither from Burlington, Ia., is somewhat lower than from Portland, Oregon. Vegetables, especially onions and potatoes, are also being shipped in quantity. Corn is also being shipped for feeding purposes from Western Missouri and Kansas.

The maple sugar men of Vt. all look for a good yield; season not extra early. Much complaint of low prices and of the unprofitableness of the business. Real new sugar can be bought for from 12 cents to 15 cents a pound, and some have sold, in advance, their whole crop for 10 cents, and even lower. It is predicted that 10,000,000 pounds will be made this season. It is charged by Western makers that a very large proportion of the maple sugar in stores is adulterated. . . The low price of sugar, due to the decrease of duty on the foreign product, and the enormous increase in the make of beet sugar in Europe, due to Government encouragement, has been disastrous to the sorghum sugar industry of this country. Germany, France, Austria and Russia, the great producers of beet sugar, tax the sugar consumed by the people of each, in order to increase the bounty paid to exporters. This diminishes home consumption, leaving more for export, while the exporters are enabled, owing to the home bounty, to sell very cheaply in foreign markets. The diffusion process was successfully practiced at Ottawa, Kansas, last Fall, and Com. Colman is trying to get $94,000 from Congress to buy a lot of "diffusion" machinery, which Prof. Wiley saw in successful operation in Germany, and to continue experiments in the manufacture of sugar from cane and sorghum by "diffusion." Under present conditions sorghum sugar-making is hardly likely to be profitable here, except at large factories supported by great capital—if cane enough can be secured within a "paying" distance of each. Kansas cane seems the richest in sugar and freest from impurities. Sorghum sirup-making has been profitable, however. For this no vacuum pan or expensive machinery is needed. Quick open-pan evaporation is found to give as good results. A cane shredder, to tear the cane before milling, permits freer feeding to the mill and secures more juice.

Nothing of consequence doing in hops. Prices have fallen 7s cents per cwt. in England. From September 1, 1885 to March 6, 1886 imports there amounted to 78,448 bales against 48,643 for the same time last year; but of late there has been a heavy falling off. Never was the sale of sets so small; hence fewer new hop gardens will be planted in Kent and Sussex. Hops are a "drug" at Nuremberg, Germany, the great hop market of the Continent. "Stagnation unparalleled." The Belgian markets are "weak." In some districts in Germany the Government is investigating with a view to reduce the hop area. There will be fewer "gardens" in 1886 than in any late year. Everywhere all old and unproductive plants should be rooted out; amateur hop growers should "quit;" and yards should be plowed up wherever hops are not generally profitable; for the crop thrives best in certain sections; elsewhere it is rarely profitable, and the aggregate of a multitude of poor crops hurts the general trade, while the poor crops are generally a loss to the growers.

Coughs and Hoarseness.—The irritation which induces coughing immediately relieved by use of *"Brown's Bronchial Troches"* Sold in boxes.—*Adv.*

MARKETS BY TELEGRAPH.

SATURDAY, March 27, 1885.

CHICAGO.—Compared with cash prices a week ago, "regular" wheat is 3c. lower (so is May wheat); No. 2 Spring, 3½c. lower; Corn, 1¼c. lower. Oats, 1½c. lower. Rye, 2½c. lower. Barley, steady. Pork, from 5c. to 7¼c. higher. Cattle, cows and bulls mixed, 25c. higher for medium and poor; 25c. lower. for prime; other classes from 40c. to 50c. lower. Hogs, from 20c. to 50c. higher, according to grade. Sheep, steady.

WHEAT.—Firm. Sales ranged; March, at 75¾@76¾c; May, 80¾c@81½c.; June, 82¼@83c; No. 2 Spring, at 70¾@75c; No. 3 Spring, at 69@70c. CORN.—lower; Cash, 35@35½c; March, 35¾@35¾c; May, 38¾@39c. OATS—Firm; sales ranged: Cash, at 27¼@27½c; March and April, 27c.; May, 31@31½c. RYE—No. 2, 56½c. BARLEY—No 2, at 60c. PORK.—Cash, quoted at $9 75@9 80; April at $9 75; May, at $9 75@9 85; June at $9 82½@9 92½. LARD.—Quiet and steady; sales ranged; Cash, at $6 00@6 02½; April, at $6 02½@6 05; May, $6 05@6 07½. BULKMEATS.—Shoulders, $3 90@3 95; Short rib sides, at $5 35@5 37½; Short Clear sides, at $5 60@5 65. CATTLE—Shipping steers, $3 90@5 60; stockers and feeders, $2 00@3 40; cows, bulls and mixed, $1 75@3 75; bulk, $3 00@3 30. HOGS.—Rough and mixed, $4 00@4 35; packing and shipping, $4 25@4 60; light $4 00@4 40; skips, $3 00@3 75. SHEEP.—Natives, $2 50@5 50; Western, $4 00@4 60; lambs, $4 00@6 00; Texans, $2 50@4 00.

ST. LOUIS.—Compared with cash prices a week ago, No. 2 Red wheat is 2½c. lower. Corn, ¾c. lower. Oats, ⅝c. lower. Rye steady. Pork, unchanged. Butter, steady. Cattle, considerably higher; but market fluctuating. Hogs, higher. Sheep about steady.

WHEAT.—No. 2 Red, Cash quoted at 88c; May, 89¾@90¼c; June, 90@90¾c.; July at 86c. CORN—Very quiet, but firm. No. 2, Mixed Cash, is quoted at 31c. April 31½c; May, 35¾@35¾c. OATS—No. 2 Mixed, Cash, 30c; April 29½c. bid, May, 30½c. bid. RYE, easy at 60c. HAY steady; prairie at $6@7 75; timothy at $11@14. BUTTER—Dull, but firm; creamery, is quoted at 25@30c; dairy, at 18@22c. EGGS—Firm at 10@10½c. WOOL.—Quiet and easy; washed at 27@35c.; unwashed at 16@24c. PORK, at $10 25. BULK MEATS.—Loose lots, long Clear, at $5 20; Short Rib, at $5 35; Short Clear, $5 50. Bacon steady; long clear at 5.75c; short ribs at 5.85@5.90; short clear at 5.95@6c. Hams steady at 8.50@11c. LARD—Steady at $5 87½. CATTLE—Market steady; fair to choice native shipping steers, at $4 80@5 80; butcher steers, $3 50@4 40; cows and heifers, at $2 50@3 75; stockers and feeders, $3 00@4 10. HOGS.—Light, $4@4 30, packing, $4@4 25; heavy, $4 30@4 45. SHEEP.—Market active at $3 75@5 50.

BOSTON.—CORN.—Easy; Steamer Yellow, at 50½c; do. mixed at 50c; and no grade, at 48@49½c. per bushel. OATS.—No. 2 white, at 42@42½c.; and No. 3 white at 41@41½c. per bushel. RYE is 67@68c, per bushel. BRAN is firm at $18@18 25 for Spring and $18 50@18 75 for Winter; fine feed and middlings at $17 00@20 00, and cotton seed meal at $24 50 on spot and $22 75 per ton to arrive. HAY AND STRAW—Hay is quoted at $18 50@19 00 ₱ ton for choice and fancy; fair to good, $17@18

fine, $16@17, and $13@15 for poor and damaged. Western choice $16@17, do fair to good $14@15. Rye straw is held at $19@20 00 for choice, and $12@14 for common to good. Swale hay, $11@12; Oat straw, $9@10 per ton. THE DANA WINDMILL CO.,
FAIRHAVEN, MASS., U. S. A.

LINSEED MEAL.

ABSOLUTELY THE BEST FEED FOR
CATTLE, HORSES, CALVES, SHEEP AND HOGS.

This Meal is the product of pure sound Flaxseed, Linseed being its other name, and is the most nutritious of all feed, because it contains the largest proportion of nitrogenous substance.
It is almost needless to say that, in order to derive much benefit from the use of Linseed Meal, it must be fed in quantity. At least one-half of all an animal consumes may safely and profitably be LINSEED MEAL.
☞Please send in a sample order or for circular and prices. Orders will be promptly filled by any one of the following parties:
Cleveland Linseed Oil Co., Cleveland, Ohio.
Toledo Linseed Oil Co., Toledo, Ohio.
Detroit Linseed Oil Co., Detroit, Michigan.

Can be mixed with other ingredients to excellent advantage. Price, per ton, $20, in barrels, f. o. b. GEORGE S. PICKERING,
135 Fifth Street, Troy, N. Y.

For the Young.

ATTENTION!

I SHALL send the Cousins something this year that will surely please them. It is a package of sweet peas. These will make the most beautiful flowers imaginable. They will retain their freshness all through the Summer. These flowers are sure to be very popular and we shall have hard work to keep our friends supplied with seed after one season's exhibition. The vines are hardy and strong and make a heavy growth. For cut flowers they cannot be surpassed. Plant them early—as soon as frost is out of the ground—in drills two feet apart. Put the seeds about four inches apart. Tie up strings for them to climb on, and see if UNCLE MARK is uot right in saying that they make the most beautiful flowers.

THE SONG OF GRASS.

I work while other workers sleep
The rights of none molesting,
By night and day I slowly creep
And never think of resting.

Beneath the frost and snow I hide,
Far down in Earth's warm cover.
I hear the wintry tyrant ride,
The frost chained country over.

And yet I smile, for well I know
The summer sun is coming,
To tame the cruel cold and snow
And tune the wild wind's humming.

I creep from out the ground and grace
The rough scarred face of Nature,
With gentle, loving touch I trace
New life on each dead feature.

I creep and creep, and work unseen,
I feed the hungry cattle,
I cover with a wave of green
The ugly marks of battle.

I shine and sparkle in the sun,
I smile at every felter.
I see the seasons past me run,
I see the world grow better.

And so I creep and creep along.
I strive to do my duty,
I make my life a merry song
I clothe the land with beauty.

LETTERS FROM THE COUSINS

DEAR UNCLE MARK: I went to Pittsburg on a visit and saw the big-footed girl. Her foot was 19 inches long. That beats the stories we hear about the Chicago girls. I planted a peck of White Elephant Potatoes and got five bushels. We have stored about 30 tons of ice, so we shall be able to make lots of ice cream next Summer. I hope you will come and help us eat it. I wish some of the Cousins would write. G. F. MENGEL.

Freedoin, Pa.

[I like ice cream. It is no disgrace for one to have large feet or hands. It is more disgraceful to wear such tight shoes that we can't possibly walk with comfort. When I was a boy they used to tell me that a person's heart is always the size of his fist, and his brain the size of his foot. So when we worry about the size of our hands we make our hearts uncomfortable, and when we try to make our feet smaller we show that we are losing a little common sense.—U. M.]

DEAR UNCLE MARK: I have been reading the letters from the Cousins in the RURAL and enjoying them very much. May I join them? I am a girl 12 years old. I live on a farm two miles from North Platte. We have been living in town, but I like to live on the farm better. We have 160 head of thoroughbred Short-horn cattle, three horses, two mules, 70 chickens and two kittens. The kittens' names are Tiger and Smutty. We received the Seed Distribution this morning and were well pleased. Hoping I may join, I remain yours,

North Platte, Neb. SUE HINMAN.

[Yes, you may join. We would like to see the cattle.—U. M.]

DEAR UNCLE MARK: My little girl has made an *attempt* to write you. She is but six years old and dearly loves flowers and cultivates them too. She has had much to say about Uncle Mark ever since she could talk and about the Cousins' letters too. I think that no other uncle ever had so much affection lavished upon him by the little folks. I think I had better send you a *copy* of her letter. MRS. S. BALDWIN.

"DEAR UNCLE MARK: I would like to join the Y. H. C. The flowers were very pretty from seeds which you sent my Mamma. I am six years old. GRACE S. BALDWIN."

Howard Lake, Minn.

[I am glad Grace wrote. No matter how the letter looks. Uncle Mark appreciates all the good words.—U. M.]

Letters have been received from Dean Spray; Henry C. Anderson; Eugene C. L. Morse; Susie R. Ball; Ida Davidson; Gertie Blanchard; Dora Shepherd; Lewis W. Peterson.

Miscellaneous Advertising.

A WOMAN OF PLUCK AND WISDOM.

PASSING up Front street, Philadelphia, the other day, your correspondent saw the name of E. Vannaman on the sign over her store. The name struck me as familiar, and after a little study I recalled it as one I had often heard mentioned in connection with a very unexpected recovery from the dread disease Consumption. Being curious to learn the facts from her own lips, I resolved to stop a moment.

Entering the store, I found the lady herself in charge. She was a sprightly, fair-skinned, good conditioned woman, who could entertain a visitor without neglecting a customer.

Salutatious were passed, and in reply to a question she said, "Yes, it was a terrible time for me. My husband was a long time sick, and then died. The care of the store fell on me. This, together with my housework, my long watching, the grief and worry at his death, told fearfully on me. Exposure brought on a terrible cold which broke me up entirely."

"When was all this?" I asked.

"In 1883. Over two years ago now. I had to put my son into the store to tend for me. Could not even do my housework. Got into bed, and had to stay there for days at a time. Everyone who called said I could not live three months. Yes I had two doctors, and good ones, but they shook their heads and gave me no hope. The best they could do was relieve my cough temporarily. I began to lose heart too, for my mother and every one of my family had died of consumption, and it looked as if my time had come." Here she tripped lightly around the counter to wait on a customer. After depositing the money in the drawer, she returned and I said:

"I don't wish to appear inquisitive, Mrs. Vannaman, but would you be kind enough to to give a little more in detail the nature of your sickness—the symptoms, as the doctors would say?"

"The most distressing was my terrible, racking cough, which worried me night and day. It was on my chest. I had hard pain all down my breast bone, and savage pains in my shoulders, back and limbs. My appetite failed. Every night I was exhausted with fevers and night-sweats. My nervous system was all broken up, and I shook at times as if I had the palsy."

"Well, Madam, you don't look now as if you had ever been so sick. How in the world did you manage to bring about such a wonderful change?"

"Why one day my son read from a paper about the virtue of Cannabis Sativa, the great East India cure for consumption. He said, 'Mother, it seems to be just what you need; I wish you would try it.' I said, 'Well, I can't live this way; we'll get some, and I'll take it.'"

"And did it do you good?"

"Good? Well, now, let me tell you. I never watched the effects of any medicine so closely, and, as you may believe, with so much surprise. The first thing to go was my nervousness. In one week that began to disappear. I felt the improvement all through me, and was encouraged. Then my appetite came back, and I have had a good one ever since. My weakness left by degrees, and I got up and about. Soon resumed my household duties, and by and by the care of the store. The pains left my chest, body and limbs, and have never returned. I took on flesh and came up from a skeleton till I now weigh 133 pounds. My cough was the last to go, but it gradually diminished, and now I never cough except when I have a cold. My lungs are all right."

"Do you take cold easily?"

"Not more readily than other people. But I take care of myself and don't invite cold by unnecessary exposure. I work hard, am active on my feet, and can endure as well as I ever could. My age, you ask? Now you know ladies are the least bit sensitive on that point. However, as I don't intend to marry again, I'll tell you in confidence, I'm 51. Yes, I keep Cannabis Sativa in the house all the time, and use a little along as a precaution. When I catch cold I always use it in full doses. It takes right hold of my colds and never fails to break them up by the second day. I never took anything that acted so promptly with me. Nothing can be surer than this, that if I had not taken Cannabis Sativa when I did, and as I did, I would not be alive to-day."

After so wonderful a recovery one is not surprised at Mrs. Vannaman's faith and precaution. Yet it is not greater than that of Hon. F. Mathews, American Consul at Tangiers, in Morocco, Africa, who writes to his friend, Mr. Albert Simon at Dansville, N. Y., recommending Cannabis Sativa to him as a specific for lung disease. Mr. Mathews had cured himself of an alarming cough, and had also cured several cases of consumption with it in Tangiers. He not only advises his friend, Mr. Simon, to try it, but asks him, in case he comes to Tangiers for a change of climate, to bring five packages along for his, Mr. Mathew's, further use among consumptives there.

Rev. A. L. Morey, formerly pastor Hampton F. B. Church, now the President of Ridgeville College, Ridgeville, Ind., writes: "Expert physicians pronounced my wife in consumption and treated her for it. She was informed she could live but a few months. She coughed, bled from the lungs, and tried consumptive remedies without avail, till I secured your Cannabis Sativa Remedy. Gradually her cough subsided and the dread disease retreated."

Dr. H. H. Davis, Rosebud, White Co., Ark., is not such a stickler for his own remedies as to let a patient die when they fail. He writes: "Send me your Cannabis Sativa Remedy for Consumption for one of my patients. I tried it two years ago. *It will positively cure consumption.*"

Mrs. M. Allen, Academia, Pa., like Mrs. Vannaman, of Philadelphia, keeps Cannabis Sativa in her house all the time. She inherited weak lungs and is the only one left out of a family of six—all having died of consumption. Three years ago she fell into decline and thought her time had come. She writes: "Cannabis Sativa saved me after all hope was gone. Last summer I did more work and enjoyed better health than ever in my life before. I cannot be too thankful."

For further particulars about Cannabis Sativa, the greatest East India Consumption Cure, send for a treatise telling of its discovery, its action in disease and the record of its cures. It will be sent free on application to W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

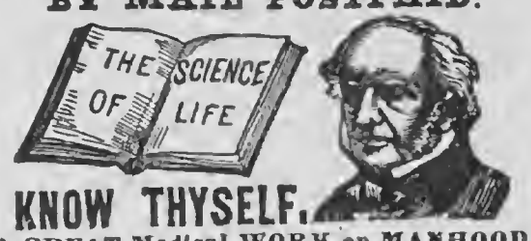
DYSPEPSIA Its Nature, Causes, Prevention, and Cure. By JOHN H. McALVIN, Lowell Mass. 14 years Tax Collector. Sent free to any address.

THE SCIENCE OF LIFE. ONLY $1.
BY MAIL POSTPAID.



KNOW THYSELF.
A GREAT Medical WORK on MANHOOD.
Nervous and Physical Debility, Premature Decline in man. A book for every man, young, middle aged and old. It contains 125 prescriptions for all acute and chronic diseases, each one of which is invaluable. So found by the author, whose experience for 23 years in such has probably never before fell to the lot of any physician. 300 pages, bound in beautiful French muslin, embossed covers, full gilt, guaranteed to be a finer work in every sense—mechanical, literary and professional—than any other work sold in this country for $2.50, or the money will be refunded in every instance. Price only $1 00 by mail, postpaid. Illustrated sample 6 cents. Send now. Gold medal awarded the author by the National Medical Association, to the officers of which he refers.
The Science of Life should be read by the young for instruction, and by the afflicted for relief. It will benefit all.—*London Lancet.*
There is no member of society to whom The Science of Life will not be useful, whether youth, parent, guardian, instructor or clergyman.—*Argonaut.*
Address the Peabody Medical Institute, or Dr. W. H. Parker, No. 4 Bulfinch Street, Boston, Mass., who may be consulted on all diseases requiring skill and experience. Chronic and obstinate diseases that have baffled the skill of all other physicians a specialty. Such treated successfully without an instance of failure.

PERSONALS.

CANON FARRAR offers $500 for proof of any case where drunkenness has been cured without total abstinence.

PASTEUR is suffering severely from over work. He has already had one dangerous paralytic stroke, and another is feared.

HENRY M. STANLEY is ill with partial paralysis of the stomach. The doctors are hopeful of his recovery, but it will be slow and probably not entire at the best.

AMONG the members of the United States Senate, Ingalls talks loudest, Edmunds most, Mahone least, while Evarts sits and muses quietly. Hoar looks most like a grandmother, and Gorman receives most callers and is a favorite of the pages, as he was once a page himself.

MONDAY was the 90th birthday of the Emperor William of Germany. He is still able to appear on all important public occasions, and seems in prime condition for a man of his years; but he has frequent fits of weakening, and the "inside circle" fear he may be "gathered to his fathers" any day or night.

IT is commonly remarked in France that if the Orleans princes were not so rich they would be the rulers of the nation; that is, if they had spent their money more lavishly they would have won a following strong enough to restore them to the throne. France is not the only country where thrift is unpopular, however.

GREEN MOUNTAIN POTATO

Yields 1391½ Bus. per acre. Beautiful form and unsurpassed quality | The stock secured at the enormous price of $200 per barrel.

Being the introducers of some of the best potatoes in the World, and having earned the title of the "Champion Seed Potato Growers of America," we think we know whereof we speak when we say the **Green Mountain Potato** is the greatest potato in this country. This wonderful potato is a cross between the Dunmore and Excelsior. Its handsome form, white skin and large size recommend it everywhere. Flesh white and fine; cooks dry and mealy; vigorous vines, and the hills completely crowded with fine, large potatoes. Ripen in August, and are **marvelously productive.** *They are the coming potato.* See our beautiful catalogue for proof of large yields. Price, 1lb $1; 3 lbs $2; 4lbs $2.50 by mail, postpaid. Our New Early Potato

THE EARLY PEARL As Good As The Early Rose Ever Was. Is as early, as good and as productive as the Early Rose ever was. *We guarantee this,* because we know it to be a fact, and if they prove otherwise, we will refund your money (See our Catalogue, Page 12). Every person knows what a demand there was for the Early Rose when first introduced. The same thing will be repeated in the Early Pearl. It will fairly spring into popularity and those who get a start now will reap a rich harvest. Price, 1lb $1; 3lbs $2; 4lbs $2.50. Besides the above wonderful potatoes, our catalogue contains an offer of 10 different varieties of Seeds **Free** *to introduce them,* descriptions, illustrations and directions for cultivating all seeds, plants, etc., reduced prices, inducements to gardeners, and is a most complete work, valuable enough for the library, and handsome enough for the centre table. Mailed free with a copy of The Agricultural Epitomist, to all who plant seeds; to others, 10 cents. Mention this paper.

THE MAPES MANURES.

Cauliflowers, Cabbages, etc.

Cabbages (15 *acres*), *Potatoes, etc.*

CHAS. COLLINS, Queens Co., N.Y., November 23, 1885, writes:

I used five tons of your Potato Manure and raised five hundred and thirty barrels of the largest and best potatoes that went into New York market. There is nothing in the market to beat your Potato Manure that I know of. I planted fifteen acres of cabbage, using one thousand pounds of Mapes' Cabbage Manure to the acre, alongside of stable manure, and using both pretty heavily. Where your manure was used, turned out the best cabbage. They were the largest and solidest. Your Corn Manure has given good satisfaction.

1,000 *barrels Cauliflowers from four acres.—Used Mapes' eight years.—Land improved.*

WM. H. TUTHILL, Suffolk Co., L. I., N. Y., November, 1885, writes:

I have used the Mapes Manures for eight years with uniform good results, having, when season is at all favorable, excellent crops. My potatoes are a very good crop this season. My cauliflower crop was very fine. I shall ship to my commission men over 1,000 barrels from 4 acres. Wherever Mapes' Manures have been used on my farm I always see, in after crops, the lasting effects, and firmly believe that my land has been improved by the use of Mapes' Manures.

921 *Barrels Cauliflowers* ($1,247) *from* 4¾ *acres.—"Believe if I had used the Mapes on the other ¾ acre, instead of another brand, that I should have realized* $100 *more from the piece."*

F. ASBURY TUTHILL, Suffolk Co, November, 1885, writes:

Used the Mapes Manure on potatoes and cauliflowers.

Used 3 tons of the Cauliflower Manure on 4 acres; had 4¾ acres in cauliflowers; on the ¾ acre used another brand; sold 921 barrels ($1,247) from the 4¾ acres; believe if I had used Mapes on the other ¾ acre, instead of another brand, I should have realized $100 more from the piece.

Have used the Mapes since they were first introduced here and have never failed to get a good crop since I used them. I am a strong believer in the Mapes Complete Manure for large profits and lasting results from their use.

Now is the time to Top Dress Grass Lands and Lawns, Fruit trees—Strawberry beds. Send postal for Pamphlet.

Is made from Red Iron Ore mined in Rossie, N. Y.—Is the best and most durable Paint for Tin, Iron and Shingle Roofs, Barns, Fences, Farm Utensils, Etc., Will not crack or peel.

Will protect roofs from sparks. Valuable for coloring mortar. Samples free. Ask prices of

Rossie Iron Ore Paint Co.,
OGDENSBURG, N. Y.

HOW TO BUY FERTILIZERS.

Will the farmers take a suggestion from a manufacturer on this point?

First,—Buy fertilizers according to *your* wants.

Second,—According to their strength,

Third,—According to their solubility;

for the strength, solubility and forms of plant food *best* suited to the crop which *you intend to grow*, have more influence on the crop for the first *sixty days* than at any other period of its growth.

A calf that is *stinted* for the first two months is *stunted* for life; so a crop which is *stinted* for the first few weeks by not having the right form of plant food in an available condition, is usually a failure.

Please read and compare the analyses of the following fertilizers. At the prices quoted, *one is as cheap as the other*, so far as strength is concerned, but in their adaptibility, cost of handling and applying, the *first* is cheaper than the *second*, and both are cheaper than the *third*.

STOCKBRIDGE MANURES,

(For Special Crops.)

Average Analysis, *all kinds:* **Price, $45 per ton.**

5 per ct. Ammonia. (All available and principally in the most costly form of chemicals.)

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XLV. No. 1889. NEW YORK, APRIL 10, 1886. PRICE FIVE CENTS. $2.00 PER YEAR.

Entered according to Act of Congress, in the year 1886, by the Rural New-Yorker in the office of the Librarian of Congress at Washington.

Pomological.

THE HAWTHORNDEN APPLE.

THE Hawthornden, shown at Fig. 148, with a cross-section at Fig. 149, (p. 234.) is a well-known Scotch apple originating in the town after which it was named. The tree is a strong grower, upright, spreading, though somewhat pendulous while in bearing. According to the latest Am. Pom. Report, it succeeds fairly well in New Hampshire, Rhode Island, New York, Ontario, Michigan, Missouri, Nebraska, Kansas, Utah, California and Alabama. It has not, as yet, received double stars in any State. The fruit is somewhat flattened, tapering to the calyx, stem, seven-eighths of an inch long, slender, set in a small, deep, regular cavity which is nearly covered with a delicate russet. Calyx very small, firmly closed and deeply planted in a small, corrugated basin. Color, a beautiful waxen white nearly overspread with a faint blush, deepening to a bright red in the sun. The surface is studded with small, transparent dots which appear to show through the outer skin. The apple is very fragrant and a good shipper. Core small, with small brownish seeds, rather long and slender. Flesh white, tender, fine-grained, mild subacid, juicy, not high-flavored, but pleasant; quality good. Eaten Sept. 18th, in good order, but perhaps a little past its prime.

IOWA FRUIT LISTS.

PROF. J. L. BUDD.

Experience in different sections; gloomy reports; causes of mishaps; root-grafted trees perish; top-grafted on hardy stalks survive; experiments with hardiest Russian fruits.

THE RURAL asks for an approved list of the orchard fruits found hardy and profitable in Iowa. The query is a difficult one to answer. On the lacustrine soils of Southwestern Iowa such common varieties as Ben Davis, Willow, Roman Stem, Grimes's Golden, and in many cases even the Maiden's Blush, Jonathan, and Dominie were reported perfect in tree, and the yield of perfect fruit the past season was unusually good. Again, the portion of the Missouri slope farther north, and the loess soils in all parts of what is known as the central and southern districts, are favorably reported as to condition of fruit trees and the perfection of the fruit crop. With these exceptions, the reports from at least four-fifths of the counties are gloomy in the extreme, and the wholesale destruction of the varieties which have been recommended by our local societies, has extended not only over a large part of Iowa, but over an area of rich prairie in Wisconsin, Illinois, and even Indiana, large enough to make three or four of the small kingdoms of Europe. The present feeling of the orchardists north of the 42nd parallel in Iowa, may be guessed from the fact that the committee appointed to revise the fruit lists of what is known as the "North District," gravely reported, "We recommend for general culture, of the old lists, only the Duchess, Whitney's No. 20, and Tetofsky." The report from the prairie districts of the central and many parts of the southern districts are, in reality, not much better with regard to root-grafted trees.

As a rule, the trees in orchard and nursery were killed by rupture of the bark of the stems, while the terminal points of growth were often in good condition for use as cions. With less hardy varieties the damage included the whole tree. This state of things has created quite a boom in favor of top-grafting, as in every case the varieties killed by stem injury have stood well and borne fair to good crops the past season when top-worked on Duchess, Tetofsky, or Gros Pomier stocks. Our wholesale losses of root-grafted trees at this time on the rich prairie soils, where the same varieties stood perfectly on iron-clad stems, seem to support the well settled views on this subject, which we found common to all the rich prairie districts north and east of the Carpathian Mountains in Europe. The art of root-grafting is there well known; yet the universal practice is to top-graft, or bud all orchard fruits on stocks known to be exempt from sun-scald or other stem injury. Over large areas of the prairies many now believe orcharding may be made profitable in this way with a few of the old varieties.

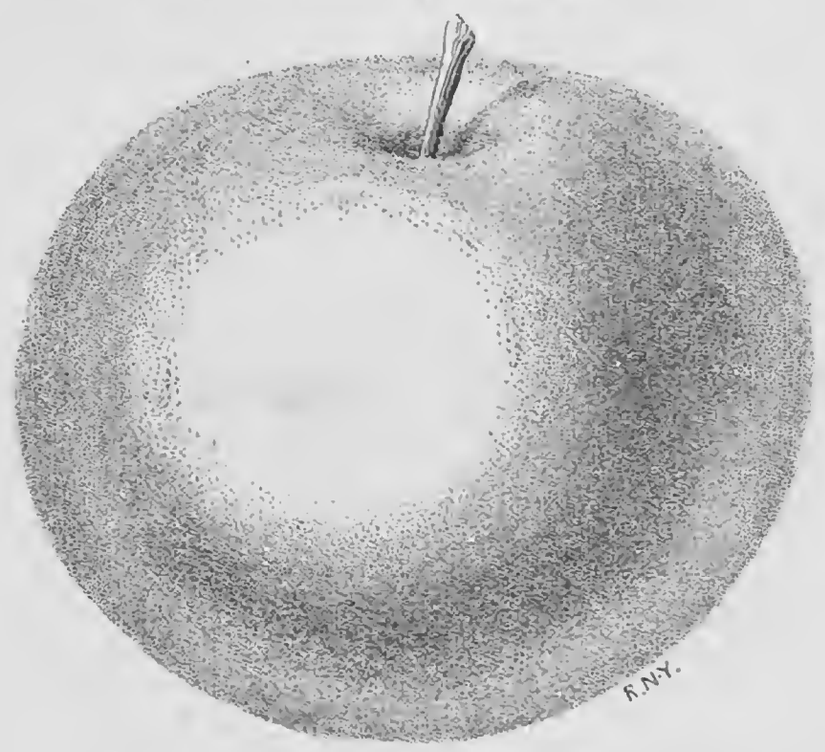
In the meantime, we are experimenting with the most promising results with the apples, pears, cherries and plums from the home of the Duchess. All of the inland varieties of Russia seem true iron-clads *as root grafts*, and the varieties fruiting with us are by far exceeding the fondest hopes of many in size, appearance, quality and varied season. Again, we are making every effort to secure crosses combining the hardiness of tree of the Russians with the quality of fruit of the Grimes's Golden or Jonathan. With the liberal aid of our Legislature we have just perfected the list of premiums for the encouragement of the production of seedling fruits. Already we have bearing trees of the hardiest known varieties from Russia, which will be pollenized this Spring in many places with our best late keepers.

Though we have had many reverses in our attempts to acclimate the fruits grown east of the lakes, we expect in the very near future to conquer the situation, and to raise the standard of fruit growing in Iowa as high as that of our sister State of Michigan, which is supposed to be on the right side of the great lake.

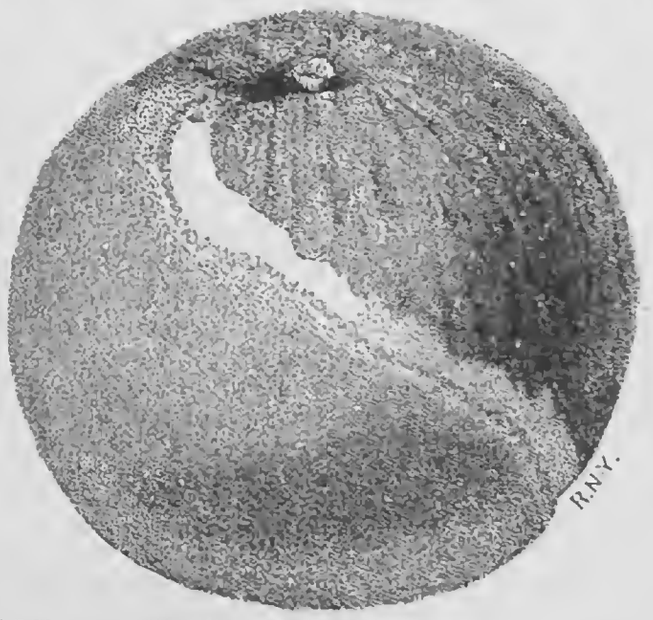
Ames, Iowa.

A POMOLOGICAL FREAK.

AT Fig. 143 is shown an apple, half Russet and half Canada Red. The apple from which our engraving was made came from C. L. Jones, of Newark, N. J., who received it last October from G. S. Eyre, of Vincenttown, in the same State, together with two others of the same kind. They all grew on a branch of a Canada Red, which interlocked with a Russet, and all three were distinctly marked as shown in the cut. The Russet marking was only skin-deep, however, for when cut, the appearance and quality of the fruit declared it to be a Canada Red.



HAWTHORNDEN APPLE. From Nature. Fig. 148.



HALF RUSSET APPLE. From Nature. Fig. 143.

THE PEAR FIGUE D'ALENCON.

A NUMBER of these pears (Fig. 150, with cross-section at Fig. 151, p. 235.) were sent to us by Gen. W. H. Noble, of Bridgeport, Conn. They were received in fine condition in December, as we remember. The fruit is obovate-pyriform or nearly Buffum-shaped. The variety originated in Alencon, France. The tree is vigorous and productive. The fruit averages large, and is greenish-yellow, sometimes with a brownish cheek partially russeted. The stalk, as shown in our illustration, is short and stout: calyx open; basin small, shallow and uneven. The flesh is greenish-white, juicy, melting, sweet and vinous. Its season is from October to December. As we ate these pears the question occurred to us, why is this pear cultivated so sparingly and so little known?

PROLONGING THE SEASON OF THE WINTER NELIS.

AN IMPORTANT SUGGESTION.

IN '82 I put cions of Winter Nelis into four pear trees that had been in bearing about 10 years. Three were Flemish Beauties, the fourth a Bloodgood. Last October I gathered about three pecks of fine Winter Nelis pears from the Bloodgood, and about a barrel from the Flemish Beauties. There was no perceptible difference in size or fairness, but those gathered from the Bloodgood were green, while the others were yellow-brown. The two sorts were kept separate. The Flemish Beauty Winter Nelis all ripened before the end of December. The Bloodgood Winter Nelis kept through January. In other words, the season of this delicious pear was prolonged a full month. In the grafting about one-third of each tree was changed. I had previously noticed that in a list of 25 varieties, the Flemish Beauty was the first to stop growth and drop its leaves, while the Bloodgood continues growing and holds its leaves very late. My experience, unless exceptional, points to an easy way of prolonging the seasons of choice late pears, and possibly of earlier ones.

Amherst College, Mass. A. D. MORSE.

THE RITSON PEAR.

THIS pear, see Fig. 146, (p. 235) with a cross-section at Fig. 147, is of Canadian origin, and is introduced by Stone & Wellington, of Toronto. The original tree still stands on the grounds of Mr. Wellington's grandfather, at Ossawa, 30 miles east of that city. It is from seed planted by his grandmother, 60 or 70 years ago, and bears good crops yet. Several other trees in the same neighborhood, grown from suckers of the Ritson, like the original bear large annual crops, and in no instance has any tree of this variety failed from disease, though other sorts planted beside them have, at one time or another, succumbed to blight or other maladies. The tree is a good, though not rank grower. It is quite hardy, iron-clad indeed, as, we are told no specimen has ever been injured by the severe Winters of the region. The fruit is of medium size, conic, resembling Tyson in shape, pyriform; skin a greenish-yellow, more or less russeted on one side towards the calyx end. Stalk, one inch long, slender, inserted in a fleshy protuberance, calyx open in a very small basin, very regular. Flesh fine-grained, melting, juicy, somewhat buttery, not of the highest flavor, though good and pleasant, sweet. Eaten Oct. 22, in good condition.

Horticultural.

NOTES ON 1885.

E. P. POWELL.

LAST year brought in a line of improvement in almost all products. Let us take the most notable in order.

GRAPES.

Empire State probably stands first, or as high as any of the varieties most recently pronounced upon by good judges, Mr. Campbell, of Ohio, whose judgment is always safe and carefully considered, says the variety cannot be too highly commended. It has stood every

test uninjured, and has more good points, without faults, than any new grape I have tested. Its color is white, tinged with yellow and covered with a thick white bloom. Its bunches are long, large and handsome. Flavor sweet, rich, sprightly; skin thin but firm. The fruit continues in good condition a long time on the vine. So far as at present tested, it is the nearest approach to the perfect grape, that I have yet tried. [We regret that the vine we purchased when this grape was first announced, nearly died, otherwise we should be able to report as to its merits and demerits.—EDS.]

The Dutchess may be said to be another grape that fully sustains itself wherever climate and soil give any vine a fair chance. Reports are often published of failures of vines of all sorts, from localities wholly unfitted for grape culture. With me the Dutchess gives abundance of fruit, bunches very long, fruit of delicious quality, ripening sufficiently early and keeping admirably. It is, says Mr. Campbell, a fine shipping grape. The vine has proved to be quite hardy, but is all the better for being laid down. [Our reports show that this variety is somewhat tender.—EDS.]

Lady is a third grape which we can say 1885 has raised in public estimation. It is extra-early, ripening in August. It is very prolific, a good white in color, bunches not large, but plentiful and of good shape. It is hardy and healthy. I have had no rot or mildew on this or Duchess or Pocklington, the last of which I rank close with the others, and much higher than on first acquaintance. It is also a superb keeper, and when well ripened the quality is very fine. [We have never seen a bunch of Pocklington that could fairly be called so.—EDS.]

The Vergennes supplies what we need, a superior light grape that will keep so well as to be fairly classed as a winter grape. The vine is absolutely hardy, full of vigor, and bears glorious crops of dark-red grapes that keep like winter apples. I feel sure that this grape will prove to be very profitable for market after all other grapes are well gone.

Jefferson is probably the standard of all our grapes in quality. It bears enormously of fine, large-shouldered bunches, and ripens very closely after the Concord. It will be best to lay the vines down in Winter; but, for all that, they are by no means to be classed as tender.

BERRIES.

We have, in our records of 1885, good reports of a new fruit for which we may be very grateful. I refer to the Lucretia Dewberry. Two years ago I got a few plants from the introducer, Mr. E. Y. Teas. Not expecting much, I gave them a poor location and no care. But last year I picked some really superb berries of excellent quality. Here we have a berry as large as the Kittatinny Blackberry at its best, and looking like a Wilson; its habit of trailing keeps it close to the ground and protects it in Winter. It is enormously productive. We have long needed a blackberry that we could rely on for a crop every year, and for sweet and large berries. Here we have it.

I believe Ellwanger & Barry have secured for us a very great advance in the way of a hardy, prolific, handsome, rich gooseberry which is sent out as the Industry. It has so far won only commendation. If we can get a berry that will make the growing of gooseberries what it is in England, it must be larger than Houghton or Smith, and absolutely free from mildew. The Industry seems to be a decided step in the right direction. The Wilson Jr. Blackberry is all well enough, except it is not hardy. But its canes are slender, and I have laid it down. We shall have to do this with any good blackberry that we yet have. The Golden Queen Raspberry is pretty sure to be a stand-by, and Marlboro as well. Rancocas is hardy, early and good; but we have nothing new equal to Cuthbirt, unless it be Golden Queen. For an early black, we have yet nothing to displace the very old, but quite good Davison's Thornless.

PLUMS, ETC.

Among new plums we have several that are very interesting indeed. Prunus Pissardii, the Purple-leaved Plum, proved all that was promised of it. The color of its leaves ranges from crimson to purple, and remains in good order all Summer. Prunus Simonii, an apricot-shaped plum from Northern China, proves to be entirely hardy, and the fruit is very handsome and good. Prof. Budd reports it to be hardy in Iowa. He says that young trees stood the Winter of '84–'85 as well as, or better than the Ben Davis Apple. In all respects it is a botanical curiosity. In color of bark and other points it resembles the peach. The fruit looks more like a flattish, brick-red tomato. In odor and flavor it resembles a nectarine.

The RURAL NEW-YORKER has "gone daft" on the Japan Chestnut, but its insanity is wisdom and method; for there has been of late no addition to our nut trees to compare with this. It bears when a mere bush, and yields profusely year after year a large and delicious fruit. The chestnut has so many good qualities that we must rank it almost or quite at the head of trees. Its timber is superior. Its beauty is hardly surpassed. Its fruit is profitable as well as a delightful addition to our crops for home use.

None of the new quinces seem to be all they are advertised to be in quality, and they are hardly worth the planting. We still need *very great* advance in the way of a large, rich-flavored, and perfectly hardy quince. This fruit is more tender here than it was 25 years ago. My father used to raise fine, large crops of 100 bushels where I can rarely get a peck.

SHRUBS.

Three or four of the new shrubs are worthy of special notice and should be generally planted. Among these are the Japan Snowball, the Japan Judas-tree, the Scarlet Willow, the Hybrid Purple-leaved Catalpas, and the Blood Japan Maple. There are also others of the older shrubs not yet appreciated, such as the White Fringe, the Weigela floribunda, the Variegated-leaved Weigela and the Variegated-leaved Althea. Among my hybrid catalpas, procured from Mr. Teas, I obtained not only very fine purple-leaved specimens, but some with rich golden foliage. Too much cannot be said of these grown as shrubs instead of trees.

Oneida Co., N. Y.

STARTING MELON SEED, ETC.

FOR the device for starting the seeds of melons, squashes, etc., shown at Fig. 153, we are indebted to our friend Thomas Paxtou, Clermont County, Ohio.

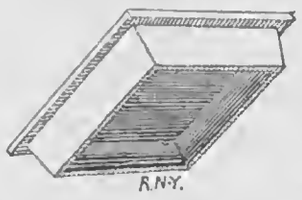


Fig. 153.

Occupying a farm which mostly faces the north—soil a strong clay loam—he found considerable difficulty in starting the seeds, and after several trials with other contrivances, found this box so satisfactory that he has been using it for over four years. It is made of inch stuff, and the sides are so cut that the bottom is slightly narrower than the top. It is four or five inches deep, and has a board cover projecting about an inch beyond the sides all round. When preparing for planting, the ground is slightly ridged, and the box is placed on the ridges. Then standing on it, the operator draws the earth up and around it, compacting it so as to make a neat hill. The earth should be pressed pretty firmly under the projection of the cover, so that when the box is removed, a neat impression of it remains. A glass cover from half to three-quarters of an inch larger than the top of the box, is then placed over the hole, and the job is complete. Before the box is placed on the ridge, some earth is drawn to the spot and lightly trodden down, so that the box will not be pressed down too far, and in order that the depression may be made to face the sun as much as possible. The planting of the seed and care of the young plants need no description.

PRUNING SAW.

The saw, Fig. 152, for pruning raspberry, blackberry and gooseberry bushes, is made of

Fig. 152.

No. 6 steel wire. One end is twisted as a handle; the other forged to the thickness of a saw blade, three inches long and three-eighths of an inch wide, teeth being filed in it as shown. A good one can be made by fastening a bracket saw-blade in the end of a split stick. The whole of the tool from which the drawing was made was 14 inches long.

THIS is the season when the seed catalogue appears, bristling with novelties. Very picturesque are the descriptions of such novelties, but we must give the palm in this direction to the "Manchoorian Ginseng," introduced by a prominent seedsman. This is the most costly drug in the Chinese *materia medica*, having a tuberous root, which sometimes assumes a curious likeness to the human form, like the old-time mandrake. The climate of the United States is well suited for its culture, consequently, as the ingenious introducer suggests, "there's millions in it." This remains to be proved, but it is a fact that we export considerable quantities of the American Ginseng (Panax quinquefolia) to China yearly, though it is not considered as valuable as the native article. However, Ginseng culture seems rather an uncertainty at present, and the average price of $100 per picul (120 pounds), in Hong Kong, may mean a very small return to the American grower.

Another revived novelty, which is to bring fortune to Southern growers, is the ramie plant (Bœhmeria nivea) yielding a fine, silky fiber, which is made into Oriental grass cloth. This plant is grown to a considerable extent in British India, but the difficulty in separating the fiber has prevented its culture in other countries, where labor is less cheap and abundant. We are told that there are several companies now being formed for the purpose of making up the fiber here; but the success of their projects is still uncertain. Until such possibilities become accomplished facts, it would hardly be wise for any one to embark extensively in ramie culture.

Our accomplished florists have forced in mid-winter, daises and buttercups and red clover—it only remained for them to force the meadow itself, and this seems likely to become an accomplished fact. At a flower show in the Opera House, New York City, held last week, there was, in the auditorium, a real grass lawn, forced—we suppose in sections—by a prominent florist. What next?

A prominent Philadelphia paper recently contained a learned editorial on the culture of hardy cocoanuts along the New Jersey coast. The intelligent writer had evidently read a paragraph descriptive of the Chili Pine, in which the fruit was compared with the cocoanut. The article was unconsciously one of the funniest things I have seen.

Among seed novelties this season is the "Tree Tomato of Jamaica," a shrubby solanum five or six feet high, with leaves 12 inches long. The fruit is described as a combination of gooseberry and apricot, the plants are raised from seed, and come into bearing in two years. The introducer does not say whether it is hardy or not.

This "Tree Tomato" seems to resemble the "Strawberry Tomato" (Physalis Alkekengi) in the quality of its fruit. The latter closely resembles the ground cherry of our sandy fields, an agreeable, though somewhat insipid little fruit.

It seems probable enough that the "novelty" is Solanum anthropophorum, a native of the Fiji Islands, whence it was introduced into England some years ago. E. L. TAPLIN.

NOTES AND COMMENTS.

I HAVE at one time or another grown most, if not all, of the principal varieties of watermelons in cultivation at present, and can recommend the following as being the best for amateurs: Phinney, Mountain Sweet, Ice Cream and Cuban Queen. With me the Phinney has always proved the best of all the early varieties, while for later use, none can equal the Cuban Queen. The Mountain Sweet and Ice Cream generally ripen after the Phinney and before the Cuban Queen, so that I find it necessary to sow equal quantities of each to insure a constant and uninterrupted supply.

Watermelon seed should not be planted until the weather has become warm and settled. In this vicinity about the middle of May is soon enough. Do not stint the quantity of seed; place from 16 to 20 in a hill, and when the plants come up, remove all but four of the most promising. Watch the young plants as soon as they begin to make their appearance, and if they appear troubled by any insects, dust them freely with soot, ashes or tobacco dust when wet with dew.

If large watermelons are desired for show or exhibition purposes, give the vines a very deep, well enriched soil, and do not permit more than one fruit to remain on a vine. Pinch back the leading shoots occasionally, and be very careful not to injure the vine in any way during its season of growth.

There are several varieties of leeks enumerated in seedsmen's catalogues, and if all were grown alike and under favorable circumstances, I do not think that much, if any, difference would be found between many of them. I always grow the Large Flag. It should be borne in mind, however, that if large leeks are desired, the ground cannot be made too rich or deep.

Horse-radish should be planted as early in the season as possible, or just as soon as the ground can be properly prepared, and if large roots are desired, the soil cannot be made too rich and deep. In planting, always use sets. These are the rootlets or branches of the main root, which are too small for table use. They are cut into pieces about four or five inches in length, and in such a manner that there will be no danger of setting the roots upside down. Sets planted upside down will never make good roots.

Some persons always insist on planting the crowns of horse-radish instead of sets; but I would not advise any one to do this, as it not only destroys the most valuable part of the roots, but the crowns produce only a mass of rootlets that are only fit for use as sets for another season's planting.

Horse-radish should be dug out in the Fall, and on no account should it be left over for another season. If this is done, the main root will become partially rotten, and assume such a woody texture as to render it entirely unfit for use.

The best varieties of lettuce for summer use are the Yellow Butter and the White Summer Cabbage. In a deep, well enriched soil they stand the heat well and remain for a long time in a condition fit for use. These varieties form large heads, and on this account are objectionable to some persons. Where a variety with smaller heads is desired, I do not know of any better than All the Year Round. This may be described as a very compact-growing variety, with small, close, dark-green, crisp and tender heads which remain in a condition fit for use for a long time.

The Early Prize Head Lettuce is a most excellent variety for spring and early summer use. The heads are of large size and remarkably crisp and tender. It is one of the best for home use, but I suppose unsuitable for market purposes, as the heads are so tender that they cannot be handled.

The best varieties of musk-melons for amateurs to cultivate for home use are the Hackensack, Montreal Market, White Japan, Christiana, Sill's Hybrid, Bay View, Casaba and Surprise. Musk-melons do best when grown in a moderately enriched, light sandy loam, although very satisfactory results will be obtained by growing them on any soil that has been deeply cultivated for a previous crop, providing it has been properly prepared and the growing crop well cared for.

Field Crops.

A NEW NOTION.—A SUCCESS.

Sowing oats on snow in a wheat field; advantages of the practice; a success last year; spring wheat sown in the same way; the practice on wet land; sowing on top of manure.

COL. F. D. CURTIS.

To day, March 22d, seven bushels of oats have been sown on a part of a wheat lot. The snow was three inches deep. It fell the night before on top of the mud, and the frost is out of the field about six inches. My idea is that these oats will settle down into the ground, and as soon as the weather is warm enough, they will come on and grow up with the wheat. The wheat was not sown until October 17, and has all been killed down to the roots. I am afraid it will be thin, and the oats have been sown to make a good crop, and so save the use of the land without any further trouble. The grass seed will be sown on in a few days, and then I expect a good crop. The oats and wheat will ripen together, and make the best of feed for anything. The mixture can be fed to the horses whole, or it can be ground and make the very best kind of food for young pigs, or cattle or sheep. There is no theory about this plan except the extra-early sowing. Last year the same thing was done here, and it was a complete success. The oats were sown in April right in the mud, when there were big snow banks in the field. I have tried the experiment of an earlier sowing this year, to see how it will work. It is the right way to get oats in early, and to fill out the winter-killed spots in the wheat and rye fields, or to supplement the entire crop, if it is not promising enough. There never was a finer crop of oats on the farm than the wheat-oat crop sown last year in the mud when the frost was coming out of the ground. Where there was any wheat, it asserted its right and grew well, and where there was none, the oats took entire possession of the ground and stooled out wonderfully. The truth is, such conditions are best suited to oats; they want a mellow surface, and a firm under soil, lots of moisture and cool weather. When sown in the way I have described, they get the best part of the season for growth, and a gain perhaps of several weeks more than they would if time was taken to plow and fit the ground.

Spring wheat may be sown the same way, and it will grow and ripen with the winter wheat, and a crop be insured. It is quite a saving to get a crop in this way, so as not to lose the use of the extra surface manuring put on the wheat, and to get the grass seed put in as we desire, and not have to put it in with a later spring seeding. Sometimes the Timothy has been sown in the Autumn, and one dislikes to plow this up. I am certain that wet lands may be plowed and fitted for seeding in the Autumn and ditched out, and then left till Spring, and sown with oats or spring wheat, and that a better crop will be had and a much better seeding with grass seed than by putting the seed in when the ground would be in a fit condition. When I want to seed down a wet field, I shall most certainly fit it in the Autumn and sow the grain and grass seed on when the frost is coming out, and if there is a fall of snow, utilize that and so keep out of the mud.

The oats and wheat will grow when sown early, without covering with the soil, as the spring rains and the wetness from the frost coming out will keep the surface moist, and the grains will absorb enough of this moisture to cause them to germinate. First the root is sent out, and after this takes hold and strikes down into the ground, the blades will shoot forth. This new way of putting in grain might be carried to the extent of spreading manure in the Winter on the surface and sowing the seed in early Spring on top of it. The grain would be more apt to grow than when harrowed in with the manure, for in that case, it might not be able to penetrate through the manure; but, being on top of it, it would all be sure to grow and be nicely protected and enriched.

SPRING GRASS SEEDING.

I THINK it poor policy to sow grass seed at all in the Spring and particularly so with grain, because the chances are very much against it; for there is almost always a drought of longer or shorter duration in the fore part of the season, during which the grain, being stronger and growing faster, absorbs the moisture to such an extent that the grass, being small and tender, is nearly or quite destroyed. Even if it survives, it is never as clean and free from weeds and other foul stuff as it is when sown alone in the Fall. August would be a better time, or as soon as the oats or wheat or whatever else it may be, are taken off. Don't leave the job till September or October, but plow up the stubble immediately and sow the seed; then it will be there ready to start on the first rainfall that comes, which is very necessary in order to give it all the time possible to get a good root-hold and produce top enough to protect the tender roots from the frosts and snows of the succeeding Winter.

If the seed is sown alone in the Spring, it doesn't have time enough to mature a full crop, and to cut it before it matures is an injury from which it never fully recovers, and consequently there is a partial loss of the ground for the season; whereas, if one follows oats or any other grain, he gets a full crop of grain the current season, and a full crop of grass the succeeding one, so, all things considered, I think the extra work of plowing and seeding a stubble in the latter part of the season is fully paid for. CHARLES LEE.

Morris Co., N. Y.

THE ANGEL OF MIDNIGHT CORN.

I experimented last year with 18 varieties of corn. All claimed to be early. Last season was too wet and unfavorable for a rapid growth, and hence a very early maturity was not obtained with any; yet, as all received like treatment—four kernels to the hill, no manure, but thorough culture, cut when fully glazed—it would seem that the relative earliness of the different sorts ought to be maintained. By this test the Angel of Midnight is a late variety, being the sixth in order, and requiring in this latitude, 119 days to mature. My seed was obtained of the introducers, and was genuine. I also planted a peck of this corn on one acre in competition for a prize offered by the introducers. The ground was manured of course, and well cared for. Result:—Sound corn, 51 bushels; poor, 22 bushels; total, 73 bushels! I didn't get the prize. Three other parties, all reliable men, grew this corn to my knowledge, in this vicinity. The experience of two of them coincides with my own; while the third, upon high, warm ground, on a clover sod, obtained a fair crop of excellent corn.

The stalks, however, in no case, were small or short; but quite the reverse,—a characteristic undesirable, at least to corn-growers in this locality. By measure they averaged a little over eight feet in hight.

This statement of facts is designed to show what should be more fully recognized—that corn, unlike oats, cannot be grown outside of its own latitude without the "strangest behavior," commonly resulting in deterioration, the first year. L. W. P.

Cornwall, Vt.

ANOTHER COUNTERBLAST.

G. W. Davis, Litchfield County, Conn., speaking of some Angel of Midnight Corn obtained from the originators, Breck & Sons, and planted with Longfellow on the same sort of soil, and under similar conditions, says: "The Longfellow proved fully two weeks the earlier, and was cut up early in September, ripe and sound. The Angel of Midnight not being ripe, was topped and left till husking time; but it did not mature, a large proportion being unsound."

[The same kind of corn acts, as is well known, very differently in different soils and climates. But the A. of M. is strangely variable.—EDS.]

EXPERIENCE WITH ANGEL OF MIDNIGHT CORN.

LAST Spring I planted one quart of Angel of Midnight Corn. Part of it was not planted until the 15th of June. It all got ripe; but the late planted did not do as well as that planted earlier. Some ears were 14 inches. Nearly all the stalks had two large ears. I never planted a variety that cared better. I like it very much. I think the RURAL has made no mistake this time in placing this corn in its Free Seed Distribution. W. S. M.

Scrofula

Probably no form of disease is so generally distributed among our whole population as scrofula. Almost every individual has this latent poison coursing his veins. The terrible sufferings endured by those afflicted with scrofulous sores cannot be understood by others, and their gratitude on finding a remedy that cures them, astonishes a well person. The wonderful power of

Hood's Sarsaparilla

in eradicating every form of Scrofula has been so clearly and fully demonstrated that it leaves no doubt that it is the greatest medical discovery of this generation. It is made by C. I. HOOD & CO., Lowell, Mass., and is sold by all druggists.

What Others Say

THE AGRICULTURAL STATISTICS OF THE UNITED KINGDOM for 1885, which have recently been issued, show that in England, as compared with crops of 1884, there has been a decrease in wheat of 2,628,211 bushels, in peas, 1,336,558 bushels; in beans 210,783 bushels; in potatoes 544,099 tons; in turnips 6,522,497 tons, and in mangolds 87,809 tons. In Ireland on the other hand, there has been an increase of 197,016 bushels of wheat; 136,386 tons of potatoes; 43,859 tons of turnips and 60,253 tons of mangolds. There has been an increase of 5,338,519 bushels of barley in England, and one of 473,998 bushels in Ireland.

DEEP AND SHALLOW CULTIVATION OF COTTON. Experiments at the Alabama Experiment Station with deep and shallow cultivation for cotton, show the great superiority of the latter. The usual cultivation of the plant has been to run a plow by the side of the plants deep enough to cut off the lateral roots. A cultivation of one inch gave a gain of 109 pounds of seed cotton per acre over the old method. Prof. J. S. Newman estimates that this difference in cultivation, all through the Southern States, would make a difference of 1,308,000 bales, worth $58,860,000. It is strange that so little attention has been paid to improved varieties of cotton and improved methods of culture. The cotton crop is a necessity at the South. It cannot be entirely done away with. It will be wise to improve varieties and culture so that a smaller area could be made to produce the amount that is now taken from the entire farm.

THE RURAL'S LUNCH.

MANY readers of the RURAL NEW-YORKER are anxious to improve their seeds, and desire to test the novelties which are announced in current catalogues if they could be assured that their money would not be thrown away. The RURAL has already tested many of those announced this Spring, while those of any promise whatever have been sent for or are already sown under glass. With a view, therefore, of offering suggestions to our readers, and of answering many questions asked, we make the following notes.....

THE New Giant Pera Cucumber, offered by W. Atlee Burpee & Co., of Philadelphia, Pa., is certainly worthy of trial if it is not one of those long varieties that thrive only with the protection of frames. The advertisement represents it as growing to the length of 18 inches, while the flesh is said to be white-crisp, tender and with very few seeds.....

BURPEE'S Sweet corn is said to be two weeks earlier than Stowell's Evergreen, while the ears are fully as large, grains as deep and quality superior. "It is *sweeter* and *finer*, flavored than *any other* variety" are the words used.....

LAXTON'S Evolution Pea is said to bear from a single sowing as long as three months. The quality is said to be unsurpassed, while the vines which grow three feet high are immensely productive. We have received seeds of all the above from Burpee & Co., for trial, and shall report in due time.....

BURPEE'S Self-blanching Celery was tried at the Rural Grounds last year. It is a strong-growing variety, but the stems were coarse and stringy.....

STORRS, HARRISON & Co., of Painesville, present in one of their catalogues a list of new roses, such as W. F. Bennett, Sunset, Her Majesty, and a long list of newer chrysanthemums. Canna Ehemanni, Asparagus tenuissimus, the Zebra-striped Eulalia are plants that all will be pleased with. They also offer the Japan Chestnut, the Lucretia Dewberry and a full list of ornamental trees and shrubs.

PETER HENDERSON & Co., of New York, make specialties of Nichol's Medium Green Cucumber, unequaled as a pickle; the Palmetto Asparagus which, it is claimed, is superior in earliness, yield and quality; the new Summer Cabbage Lettuce and the new self-husking corn, claimed to be the earliest field corn in cultivation, and the Clydesdale Oats first offered last year. Our report may be referred to.....

THORBURN & Co. (New York), call special attention to the new Thorburn Potato; to the Bird Cantaloupe, Golden Perfection Melon, Mammoth Sandwich Island Salsify; to the Low's Champion Bush Bean, etc. Their catalogue presents the best list of hardy shrubs and tree seeds that we know of.....

JAMES VICK, of Rochester, N. Y., gives a prominent place to the new oat called American Banner. Sown on light, sandy soil, it yielded at the rate of 70 bushels per acre, outyielding the neighboring crops of Welcome, White Russian and Probsteier.....

D. M. FERRY & Co., Detroit, Mich., offer the highly prized spring wheat "Saskatchewan" and the Rhode Island Crease Back Bean which is said to give pickings of both snap and green shelled beans for from 30 to 40 days.

B. L. BRAGG & Co., of Springfield, Mass., are the first to offer for sale the remarkable "Top-over" Corn which has the smallest ear stalk of any variety known, while the kernels cover the tips and would cover the butts but for the pipe-stem stalk. We have raised this corn for two seasons.....

J. J. H. GREGORY, of Marblehead, Mass., speaks well of the Cory as a first-class sweet corn. Mr. G. says that the Longfellow Field Corn is the largest-kerneled variety of yellow field corn that he has ever found it safe to plant in the climate of Mass. On one measured acre his crop was last year 210⅝ bushels of ears. The Longfellow, as we know from experience 10 years ago, bears ears often 14 inches long. The cob is small.....

JOHN SAUL, of Washington, D. C., offers one of the best lists of pelargoniums we know of and for general bedding purposes or for house growth there is no plant to surpass them. Easy to grow, not troubled with insect pests, blooming freely, and easily propagated: all should have a selection of the best "geraniums." Mr. Saul's lists of bedding plants in general; of palms and tender plants are full. He offers the beautiful hybrid perpetual rose Marshall P. Wilder.....

JOS. BRECK & SONS, of Boston, Mass., are the originators of the Angel of Midnight Corn, which proved the earliest field corn last season ever tried at the Rural Grounds. Evidently, however, it has not so proved in some other places. Reports from the RURAL'S present seed distribution will settle it. This firm is also headquarters for the Pearl of Savoy Potato.....

BARTLETT & DOW, of Lowell, Mass., offer Spring Rye, Welcome and Triumph Oats. Their "Common-sense Milk Pail" is prized by those who are using it.....

PRICE & KNICKERBOCKER advertise the Rural Branching Sorghum, which we should be glad to have our newer readers try. If this is the true variety, and it is properly sown in good soil, it will not disappoint those who anticipate a fine yield of fodder. It will not seed in this climate, though it may be cut twice.....

HENRY DREER, of Philadelphia, gives prominence to his Early Golden Cluster Wax Pole Bean, which is said to be distinct in seed, color and habit. The pods are yellow, and about six inches long and retain their tenderness long after the beans have attained a large size.

THE Telephone and Stratagem Peas, tree seeds, tobacco seeds, bird seeds, poultry food, all sorts of insect destroyers are offered by Mr. Dreer.....

J. A. FOOT, of Terre Haute, Indiana, presents in his lists the Mammoth Long Rose Radish, the Prolific Tree Bean, the Rural New-Yorker Pea, several varieties of broom corn and sweet potatoes.....

ROBERT BUIST, of Philadelphia, makes a specialty of cabbage, and he thinks that his Improved Drumhead is the best in the market. We wish our readers would try the Drumhead Savoy and Early Dwarf Ulm Savoy. In quality there is no other variety to equal them.....

AARON LOW, of Essex, Mass., catalogues Waushakum, Longfellow, Chester Co. Mammoth and Blount's Corn; Low's Essex Hybrid Squash, the Golden Dawn Pepper; Low's Champion Bush Bean, which Mr. Low in all his experience as a market gardener finds unequaled, whether for the table, garden or market.....

HIRAM SIBLEY, of Rochester, N. Y., offers a well selected list of oats, millets, grass seeds; also Manshury Barley and Silver Hull Buckwheat.....

ROBERT J. HALLIDAY, of Baltimore, Md., presents many floral novelties, among which are new abutilons, carnations, chrysanthemums, coleus, crotons, begonias, dahlias, gladioli, clematis and roses.....

F. N. LANG, of Baraboo, Wis., praises the Badger Queen Oat in high terms as earlier and yielding better than the Welcome or Clydesdale. He kindly sends us a sample for trial.....

W. H. SMITH, of Philadelphia, Pa., thinks highly of the Chartier Long Scarlet Radish. It is crimson at top becoming nearly white at the bottom. It is tender and remains so some time after attaining its growth. He also offers the Leaming Corn, Smith's Half-dwarf Celery and Banana Muskmelon.....

CHAS. C. MCCOLGAN & Co., of Baltimore, Md., mentions as specialties the Upland Cress, the Pride of Georgia Watermelon, Horsford's Market Garden Pea, Red China Squash, Teosinte and Johnson Grass.....

JOHNSON & STOKES, of Philadelphia, claim to have the earliest cabbage—being 10 days ahead of any other kind. The Spanish Beauty Muskmelon is spoken of as the best of all the European varieties. King of the Mammoth Pumpkin, Bonanza Sweet Corn, the Rose Muskatel Tobacco are among the kinds to which particular attention is called.....

W. H. MAULE, Philadelphia, Pa., mentions the Mammoth Prize Long Red, Maule's Champion Yellow Globe and the Yellow Tankard Mangels as the best in cultivation.....

SAMUEL WILSON, Mechanicsville, Pa., mentions a new Australian millet. He thinks he has the true Leaming Corn. He thinks the new Brazilian Flour Corn will revolutionize the grain markets of the world. He says that when properly ground and bolted, it will make as good flour as that made from the best wheat. He claims that from four to seven ears grow to a stalk, averaging seven inches long. The cob is small, bearing white grains about half the size of ordinary field corn. For boiling, it is said to be equal to the best kinds of sugar corn. We shall try it.....

O. S. BLISS says, in the N. Y. Tribune, that winter laying is not an inbred characteristic of any breed or family of fowls. In the choice of a breed of fowls, he would not be governed in the least by any reputation claimed for them as winter layers. Winter eggs result from giving the fowls spring conditions—warmth, good air and plenty of food, without excess of fat.....

HE also says that the duck every little while is pushed to the fore. With proper accommodations, the duck certainly may be made to pay in flesh, feathers and eggs. But the duck is a water fowl and too much of a scavanger to do well in confinement or in large flocks. The eggs are rank and ill-flavored....

FOR an early flint corn, try the Longfellow.

ELLIS BROS., of Keene, N. H., present a list of the finest pelargoniums, carnations, fuchsias, roses, most of which are offered for 10 cents each in lots of $1.....

IF feeders would increase the palatability of their pork for the American taste, they must feed their pigs on something beside clear meal or corn. Milk, apples and roots from the farm, and wheat middlings from the markets, mixed with meal, will produce a better grade of pork, while at the same time the cost will be diminished. So says the N. E. Farmer.....

HARPER'S Magazine states that 1,000,000 female cattle have left Texas for the northern grazing grounds during the 10 years past, whose bones lie is disjointed, wolf-gnawed fragments on the arid, bunch-grass ranges, low-lying monuments of man's inhumanity to the dumb animals he has arrogantly assumed charge of.....

SLOVENLY and pernicious is what the Jersey Bulletin calls the habit of feeding cows bran, meal or cut feed in permanent mangers, with sharp angles to catch and retain the leavings until they sour, mildew, and in many cases become infested with maggots.....

MR. I. K. FELCH gives a formula for a chicken food, which he says will give a pound extra in 12 weeks, or a 20 per cent. gain in the egg basket. Twenty pounds of corn, 15 pounds of oats, 10 pounds of barley, 10 pounds of wheat bran, to be ground fine and well mixed.....

PROF. BROWN says that the experience of 30 years convinces him that of all animals on the farm the pig is the most free from dental irregularities; and the evidence of age, which a skilled inspector may obtain from a careful examination of the teeth, may be accepted as free from any suspicion of error.....

A WRITER in the Poultry Keeper keeps what he calls "home-made tincture of iron" in a bottle of water in which a handful of rusty nails has been placed. A little of this placed in the hens' drinking water adds greatly to their health, he thinks, but it may be doubted.....

FEEDING for manure will be one of the most important points in future agricultural science.

DR. HOSKINS insists that it is cheaper to buy hay than manure. The New England Homestead advises farmers to buy hay instead of phosphate.....

DR. W. J. BEAL of the Mich. Ag. College has tested for several years over 200 kinds of grasses and clovers, both native and foreign. He would sow, for lawn making, two bushels of seeds (in the chaff) of June or Blue Grass and two bushels of Red-top. This seems a large amount of seeds to sow. But the aim is to secure many fine stalks instead of a few coarse ones.

JAMES HUNTER, of England, in his manual on Grasses says: "Careful analysis of the

(*Continued from page 236.*)

mixed lawn grass seeds sold at high prices show they consist of from 40 to 50 per cent. of Rye Grass. Not a single seed should be included in any mixture for producing a lawn."

DR. BEAL strongly advises, as does the R. N.-Y., against purchasing the mixtures advertised in seed catalogues, as it will be both cheaper and safer to buy each sort separately, and only one, two or three sorts are desirable.

Sow the seeds before May without any "sprinkling" of oats, and as soon as the grasses get up a little and the straggling weeds get up higher still, mow them and keep mowing every week or two all Summer... .....

THE rarer grasses are mostly imported and generally possess low vitality, besides containing bad foreign weeds.

KEEP the heads of peach trees low—the trunks ought not to exceed three feet in hight. Cut back weak shoots and shorten the strong ones. Sickly shoots should be cut clean off...

E. & B. consider it of the first importance in planting peach trees to cut them back severely. Reduce the stem one-third and the side branches to one bud.....

Everywhere.

RURAL SPECIAL REPORTS.

Canada.

ST. CATHERINES, Ontario, March 29.—The RURAL seeds did exceedingly well. The corn is the best I have ever grown or seen. Flageolet Beans did well. The two kind of Peas were very good and productive. Tomatoes good to very good. The flower seeds did not do quite so well. Success to the RURAL, I think it is the best paper of its class published in America. I consider the Free Seed Distribution worth the price of the paper. W. S.

Delaware.

DOVER, Kent Co., March 23.—Some little plowing done; some oats sown. Peach buds are making some show for blossoms where two weeks ago it was thought all were killed, and we hope for a few after all. In some sections it is claimed that there will be a fair crop. Oats, 40 cents; clover seed, 13½ cents to 14 cents per pound; Timothy, $2.75 per bushel; potatoes, 40 cents to 50 cents; sweet potatoes, 50 cents to 60 cents; butter, 20 cents to 25 cents; eggs, 12 cents; chickens, 10 cents; pork, $5 to $6 per 100; lard, nine cents; fresh beef retails at eight to sixteen cents per pound. S. T.

Iowa.

BLOOMFIELD, Davis Co., March 26.—Almost all the RURAL'S seed proved a success. They were worth the price of the RURAL. The White Elephant is the finest potato I have ever ate—so say all who have eaten them. Rural Heavy Dent Corn too late for this climate. R. N.-Y. Peas fine and very early. We have already made most of our gardens, having planted onions, lettuce, radishes, peas and early potatoes. The RURAL is the best and most trustworthy agricultural paper it has been my lot to examine. Cannot do without it. W. T. G.

Kansas.

JEWELL CITY, Jewell Co., March 14.—The past Winter was the most severe of the last five; still stock is in fair condition. It is estimated that this county alone lost $50,000 worth of hogs within the past six months from various diseases grouped together under the name of "hog cholera," and $10,000 worth more in January through lack of proper shelter from the blizzards. Fall wheat has been badly killed in the eastern part of the State—according to the papers—still it is in fine condition now hereabouts; but the ground is very wet and it is hardly likely to be able to withstand the freezings and thawings yet ahead of it. On thousands of acres, last year's crop is still on the ground where it grew, and is consequently badly damaged. The Rural cross-bred corn was a failure through neglect. Beans fine; rye nothing extra. In spite of the chinch bugs' depredations I got a quart of D. M. Wheat, and am confident it will do well. From the R. F. S. D. I now have three varieties of wheat, three of potatoes, one of tomato, two of beans, one of peas, one of watermelon, and a fine lot of flowers. The immigration to this section is becoming immense. I. N. P.

Minnesota.

VIVIAN, Waseca Co., March 15.—Spring cold; Summer and Fall dry. Tomato seeds did not all come up. King Humberts bore well, but in flavor are not desirable. Prince of Wales Peas did well, and are of fair quality, not quite so sweet as Horsford's Market Garden. Stratagem the largest and best dwarf pea I ever grew. Garden Treasures fine. Wheat averaged about 12 bushels per acre; oats about 30; corn about 20. Tops of early potatoes died of what was called "mildew" before the advent of the potato rot, and consequently the crop was light. I could not do without the RURAL. S. K. O.

Montana.

FRIDLEY, Gallatin Co., March 18.—I came from Chenango County, N. Y., three years ago, and found upon living here that the country had been grossly misrepresented. I had supposed it was almost out of the world and that the climate was somewhat like that of Greenland; but I have found it very different. The real truth has been misstated by parties here who own large herds of cattle and horses; for if they had told the truth their profits would have been cut down, as people wishing to go into cattle raising would have come here instead of going to Texas, Colorado, Kansas, etc. The Winters are never over six weeks' duration. I speak of the valley and vicinity of the Yellowstone—Madison, Gallatin and Jefferson Counties. We have the finest of grasses, pure water and shelter for stock, and since I have been here the losses have been a mere nothing. I have for the past Winter not heard of the loss of even one animal from exposure, in the whole circle of my acquaintance, and in my vicinity are over 8,000 head. The cattle owners don't want settlers to come in, as every man that locates 160 or more acres they look upon as robbing them of so much pasture. For grain raising this section can't be beat; for instance, the wheat crop of Gallatin Co., for 1885, averaged over 40 bushels to the acre, and oats and barley were splendid crops. Vegetables of all kinds were a success last year and the year before, for in both years there was no frost from May till into September. People here have not tried fruit culture to any extent. Wild cherries, currants, strawberries and gooseberries are abundant, and I see no reason why cultivated kinds won't do well. Fruit ripened last year on a Catawba grapevine in a garden here. Some of the old resi-

NEW POULTRY BOOK!

16 YEARS' EXPERIENCE In Artificial Poultry-Raising. This book will be found **worth many times its cost** to every one who keeps a flock of hens. Old poultry raisers pronounce it the **most remarkable contribution to poultry literature** ever issued. The author, Mr. James Rankin, is undoubtedly the best **practical authority** on the subject. For the **past 30 years** he has been engaged in **growing thousands of chicks and ducks** yearly. In this book he gives his **actual experience,** but advises nothing but **sound theory, confirmed by actual experiment.**
A FEW OF ITS VALUABLE FEATURES: Early Experience With Incubators. The Location, Management and care of Incubators. How to distinguish between fertile and infertile eggs, with **illustrations never before made** showing the **development of the chicks** and the **appearance of the egg** at different states of development. The chapters on these subjects are **each worth the cost** of the whole. **How to Make and Use Brooders is Fully Treated.**
DISEASES OF POULTRY. Particular attention is given to **describing these diseases,** so that the novice can **prevent them.**
RAISING EARLY DUCKS FOR MARKET is a chapter that will excite **intense interest.** This **exceedingly profitable** branch of Poultry raising is but **little known.** The **ducks are easier to raise than chicks,** not one per cent of fertile eggs failing to hatch, and the ducklings being very hardy. The cost of raising is only **26 cents per head,** leaving a **net profit of 75 cts. to $1.75** PROFIT OF $1 APIECE and **tells how he does it. How to make an Incubator** for $25 apiece. Mr. Rankin makes an average and brooders for $5 that will do the work of $100 machines is told for the first time by the man who has done it successfully for several years. **All fully Illustrated.**
WHAT THE POULTRY MEN SAY: It is the **most useful** of any work I have ever seen on the poultry business.—Geo. S. Hosie, Franklin, Mass.
It is the **best thing out** and if its suggestions are faithfully and practically carried out, will **not fail to insure success.**—D. J. Hathburn, Rockville, Ct.
It is the **most practical common sense** Poultry Book I have ever seen and should be in the hands of every poultry man or farmers whether they intend to use an incubator or not. The chapter on Testing the Eggs and Development of the chicks are **worth many times the cost** of the book.—F. A. Hanaford, Chicopee, Mass.
Price Postpaid, Only 25 Cents. Postage Stamps Taken. 5 Copies $1.
Mention this Paper. **THE PHELPS PUBLISHING CO., Publishers, Springfield, Mass.**

(*Continued from page 237.*)

dents here have tried setting out apple trees, but with no success, as in the first place they were swindled by the fruit agent. I set out apple, pear and other trees on one of my places, and my daughter sent me five barrels of apples from those trees in the Fall. When I was bargaining with the fruit agent I told him I wanted trees that would bear while I was on earth, and got large trees. I never lose any trees, as I set them out right by giving them plenty of room for roots, and putting the ground in good shape. I don't think there is a more healthful country than this; the air and water are pure and there is plenty of both. Most of the time the wind blows from the south. The Yellowstone National Park is only 35 miles above here. B. P. V.

Nebraska.

ZEVEN, Sherman Co., March 25.—All the RURAL seeds did well except the Johnson Grass. Wheat, 57 cents; corn, 18 cents; potatoes, 35 cents; hogs, $3.40. Yield of corn equal to last year's, but quality poorer. Raspberry plants perfectly hardy. No seeding done yet. "X."

New York.

SHARON CENTER, Schoharie Co., March 26. Produce is very low. Hay, $13; oats, 35 cents; butter, new, 25 cents; eggs, 12 cents; cows, $35; clover seed, $6.50 to $7; potatoes, 50 cents. Hired help by the month and board from $12 to $20 as to quality. Stock has wintered well, and there is fodder enough to last till grass. S. L.

Virginia.

CHERLEMONT, Bedford Co., March 27.—After the most severe Winter for 29 years, we are enjoying a nice spell of weather. Wheat came through all right, being covered with snow during the hardest freezes. Farmers have nearly finished sowing oats, clover and grass seeds; a good deal of tobacco and corn land broken. Prices: wheat $1.00; corn 55 to 60 cents; oats, winter, 60 cents; spring, 40 to 45 cents; Timothy 95 cents; meadow hay 35 cents per 100 pounds; potatoes 60 to 75 cents; butter 15 cents, and eggs 8 cents per dozen. E. S. M.

LOVINGSTON, Nelson Co., March 23.—Wheat is looking well, and there is a larger area seeded than usual. Oats about all seeded, but area smaller than last year's. Plant beds for tobacco all sown. Stock of all kinds in better condition than for years at this season. Hogs very scarce on account of disease last year. Everything in our line cheap. Wheat, $1.00; corn, 50 cents; oats, 40 cents; eggs, 12 cents; butter, 20 cents for prime; beef, 8 cents; pork, 6 cents. Success to the RURAL! J. R.

THE FARMER'S CLUB

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention. Before asking a question, please see if it is not answered in our advertising columns. Ask only a few questions at one time. Put questions on a separate piece of paper.]

FERTILIZER QUERIES.

E. C. W., Thetford.—1. I have a lot of raw bones which I wish to use on a plot of ground for strawberries next Spring. I also have a No. 3 Wilson Bros. Bone Mill with which I will grind the bones, but it does not reduce them as fine as I desire, or as would make them immediately available as plant food; can I not mix them, after grinding, with wood ashes in deep boxes, and by keeping them damp fit them in time for early use? 2. Would it not be a good plan to burn a part of the bones and then grind them, as by this means I can get them much finer. 3. On five-eighths acre of corn ground that was rich enough to bear a good crop last year, I propose to put 30 one-horse loads of excellent stable manure; what shall I add in fine bone and wood ashes to produce the best results? 4. I can buy whole bones at $10 per ton; the grinding will cost $6 to $8 more; is not the product worth half as much as the fine bone which I buy costing from $40 to $45? 5. If the bone is used as proposed in No. 1, would it pay to use nitrate of soda?

ANS.—1. You can do no better, using about twice as much ashes as bone, and being careful not to use so much water as to leach the potash from them. 2. No. If the bones were ground and mixed with the ashes, they would soon be thoroughly decomposed and in the best condition for use. 3. It is a matter of trial, and no one could advise you correctly without experimenting. Try different quantities of the reduced bone and ashes, as described—from 400 to 1000 pounds per acre. Mark the plots and watch the results. 4. A ton of the bones bought at home, when reduced by grinding and the use of ashes, will be worth more than any ton of fine bones you could buy; besides, it will have the advantage of the ashes. 5. This also is a matter of trial. The bones would contain much nitrogen, and if used in connection with the stable manure, that would add much more, and still a moderate application of nitrate of soda in the Spring of the second or bearing year, say just after the main crop has blossomed, may add much to the yield. Try in a small way, using 200 pounds per acre.

SMALL FRUIT ANSWERS.

"Fruit Grower," Western, N. Y.—1. As to the direction of the rows of small fruits, those for grapes should run north and south; it makes no difference for berries. 2. The most convenient length of rows for picking is about 300 feet. 3. Having "enough plants for an acre of Wilson Strawberries," on a sandy loam soil, three other kinds would be enough for another acre—Crescent, Woodruff and Sharpless. 4. Tyler for early; Ohio for medium, and Gregg for late black raspberries are quite enough varieties, unless you wish to test a few new kinds. 5. Having enough Cuthbert and Shaffer to set an acre of each, Marlboro alone would be good on two acres more. No; it would not be advisable to set more Cuthbert; Marlboro is usually more profitable in your soil and location. 6. "A good yield of red raspberries, per acre," would be 50 bushels. 7. For planting on "a sandy loam, strong enough to raise a fair crop of corn," besides the Kittatinny Blackberry, of which you have enough, we would suggest that Taylor's Prolific is hardy, of good size and fine quality. 8. Victoria, Cherry and a few Fay's Currants would be advisable. 9. Downing and a few Industry Gooseberries. 10. Rows of black raspberries should be seven feet apart, and the plants two or three feet in the row. 11. Rows of red raspberries should be four feet apart; hills four feet apart each way. 12. Of blackberries the rows should be eight feet apart; plants three feet apart in the rows. 13. Of strawberries the rows should be three-and-a-half feet apart; plants one foot apart in the rows. 14. Currants should be set four to five feet apart both ways.

FERTILIZER QUERIES.

"Comanche," Comanche, Tex.—1. Although this section has a very rich soil, yet we need fertilizers. Barn-yard manure, unless thoroughly composted, does more harm than good in a dry season. What commercial fertilizers can be safely and economically applied? 2. In a soil naturally rich, is Peruvian guano enough for garden crops? 3. What is the best fertilizer for the first crop of cabbage?

ANS.—1. If the barn-yard manure is plowed in sufficiently early so that it may get thoroughly wet after plowing, it will hold the moisture nearly all Summer, and we can not see how it could do harm. 2. Bone dust, made very fine, would not have any caustic properties whatever. 3. Peruvian guano gives good results; but we doubt its being as cheap as some of the complete fertilizers. We should use barn-yard manure composted with the bone dust, and also apply wood ashes if we could get them, bone dust and potash in some form, either wood ashes, kainit or muriate of potash, with a heavy dressing of rotted barn-yard manure plowed in. Special fertilizers for cabbage are offered by the chief manufacturers of fertilizers.

HORSE IN "POOR CONDITION."

L. B., Bellville, Ohio.—It seems impossible to put flesh on a six-year-old horse. He has not eaten his hay or grain well all Winter. The hair has disappeared from the places touched by the harness, and elsewhere it looks dead. There are small pimples on his right side. What should be done for him? Drawing his wolf teeth did him no good.

ANSWERED BY F. L. KILBORNE, B. V. S.

That the horse is badly out of condition is very evident; but I cannot tell by the description what is the cause of this condition. I suspect, however, that the animal lacks both proper food and care. Feed more liberally. If the animal does not do well on whole grain, try ground feed. Mix equal parts, by measure, of corn meal and wheat bran, two parts of ground oats and one eighth part of oil-meal. Feed four to six quarts three times daily. Give the animal good, thorough grooming daily, not for five minutes, but for, at least, half of an hour. This will greatly improve the appearance of his coat and the condition of the skin. As a tonic, one-half ounce each of powdered gentian, ginger and sodium bicarbonate, and two drams of niter twice daily may be beneficial. We suggest that the next time you are "out-of-sorts" you employ a dentist to draw your wisdom teeth. You can expect to derive the same benefit from the operation that the horse did by having his harmless wolf teeth drawn.

FOREIGN GRAPES FOR A COLD HOUSE.

J. B. S., New London, Ohio.—What foreign grapes can be successfully grown under glass without artificial heat with good care?

ANS. In asking questions of this kind, it should always be stated whether the grapes are to be grown for market or for family use; and it would be well, too, to state the size of the house. The following kinds may be "grown under glass, without artificial heat, with good care:" Black Hamburgh, Muscat Hamburgh, Black Frontignan, Trentham Black, Welcome, Grizzly Frontignan, Royal Muscadine, (Chasselas de Foutainbleau,) White Frontignan. These are all excellent grapes for a cold house. If grown for market, take the Black Hamburgh alone. It would be unwise to attempt the Bowood Muscat or the Muscat of Alexandria in a cold house, except under very favorable conditions of exposure.

IMPERVIOUS TEAT ON A COW.

G. N. Y., Woodbine, Ia.—A cow's teat froze the past Winter; the end has healed over, leaving no aperture. How shall I treat her when she calves so as not to lose the teat?

ANS.—Make a small opening in the end of the teat, which shall communicate with the natural duct. Insert a small goose quill in the opening thus made, tie it in, and allow it to remain until the teat is healed. The quill should be first dipped in vaseline or a mixture of equal parts of spermaceti and almond oil, and the teat daily dressed with the same. It would be well to open the teat now and allow it to heal before calving. While healing in the first place something should have been placed in the opening to prevent its closing, thus avoiding the necessity of a subsequent operation.

ANASARCOUS SWELLINGS ON COLT.

V. M. L., Mill Village, Pa.—About six weeks ago an enlargement appeared back of each fore-leg of my yearling colt, extending the entire length of the belly, the two "ridges" meeting between the hind-legs, forming a large bunch. The urine is of a nasty yellow color, and the hair rough and unhealthy-looking. Appetite good and he is quite thirsty. Stupid when turned out. Feed and exercise plentiful. What's the matter?

ANS.—The swellings are anasarcous or dropsical. Give, three times daily, one dram chlorate of potash, two drams of niter, and three drams of sweet spirits of niter. After the swellings have gone down, give, twice daily, one dram each of powdered cinchona bark and niter and two drams of powdered gentian root. See Arasarca, in the Farmers' Club of Oct. 24, 1885.

Miscellaneous.

W. W. R., Lucas Co., Ohio.—For eight pear trees for family use in your climate, we would choose Angouleme, Anjou, Bartlett, Howell, Lawrence, Louise Bonne de Jersey; Seckel, Sheldon, Tyson, Winter Nelis. Winter Nelis might take the place of either Lawrence or Louise Bonne.

J. M. W., Calhoun Co., Mich.—No import duty can be levied in any part of Montana on wheat brought from any part of Dakota. To charge duty on any commodity taken from any State in the Union to any other is against the Constitution of the United States. Import duties are chargeable only on goods imported into the United States from some other country; and the same rates of duty on similar articles are charged on goods from all countries.

C. W. A., Falcon, Mich.—1. Do watermelons, musk-melons, cucumbers, squash, citrons, pumpkins, strawberries, etc., of different kinds mix when planted close together? 2. Do any of the above mix with one another when planted together; if so, which should be kept apart, and at what distance? 3. How can pear trees that grow upright be made to spread out?

ANS.—1 and 2. Yes; that is, the seeds will be mixed probably, or are liable to mix. Different varieties should be planted a considerable distance apart. It is very doubtful if the fruits of the current season are changed. The mixture will show itself only in the seedling progeny. 3. Cut back the tops of the branches. That is all you can do.

R. L., Newark, Ohio.—1. Bohemian Oats are "hulless" and in quality and yield about the same as the average run of oats. They are worth about the same price per bushel—perhaps a trifle more for those who fancy hulless grain. 2. No, they are not injurious for any sort of farm stock; and all will eat the grain and straw as well as those of any other varieties of oats. There is no sense in disparaging the grain because it has been one of the means by which swindlers have duped farmers in various States. Poor for milling.

A. M., Council Bluffs, Ia.—The hog fat from tankage (bone, blood, and fatty matter) has no fertilizing power. It will injure the solubility of the potash, nitrogen, phosphoric acid, etc., in the other ingredients.

DISCUSSION.

C. M. H., Boston, Mass.—A late RURAL says that it is a move in the right direction to say "geraniums, properly pelargoniums," but does not tell us why. Will it please do so? Because the geranium is botanically a pelargonium is no more reason it should go by the latter name than that the Mountain Ash should be called the Mountain Pear just because it is a pyrus. By and by, according to this rule, we can drop a great many names as superfluous: azaleas, for instance, are nothing but rhododendrons botanically, and our old favorite, the hollyhock, is properly a hibiscus; the lily of the valley, properly convallaria, and the pansy properly viola. While the London Garden is trying to popularize names, the RURAL goes in for scientific terms exclusively. I must admit I love old names and associations and would as soon think of calling the blue-bell a campanula and the foxglove a digitalis as to call the old geranium a pelargonium.

R. N.-Y.—No, no, we do not favor botanical names in familiar talks or writings. We are heartily with our good friend, the London Garden, and our esteemed correspondent, too. We have true pelargoniums—like those commonly known as Lady Washington Geraniums, for instance—and true geraniums, such as G. maculatum, G. sanguineum, which are hardy herbaceous plants. The botanical differences are marked. To call a pelargonium a geranium or *vice versa* is in this case, therefore, simply to confuse botanical with familiar names. It seems to us that pelargonium is as acceptable as a familiar name as geranium, and that there is really the same objection to calling pelargoniums geraniums as there would be to calling a rose a hawthorn, both belonging to the same order, but generically different. As to the apt illustration of our correspondent, we certainly do think that the Mountain Ash is an unfortunate name, and one that has often misled people in ordering trees from the nurseries.

E. B., DAKOTA.—An answer to an inquiry, in a late Farmers' Club, as to what shrubs would be likely to succeed in Nova Scotia, in latitude 45 degrees 35 minutes, recommended, among others, the Japanese Quince, the viburnums, Purple Hazel and deutzias. The Japan Quince is not at all satisfactory here—latitude 42 degrees—neither are the viburnums. The Purple Hazel is not hardy, and the deutzias must be protected in Winter. The list of desirable shrubs for the "cold North" can be expanded by judicious covering. The Snowball is not mentioned in the list, though it is a grand, vigorous, free-growing shrub. It is a glorified hydrangea. He who has induced a farmer to plant one of these has done well. The same issue recommends the Yellow Transparent and Wolf River Apples for Dakota, and rejects the Gros Pomier. Considerable observation in the Northwest convinces me that the Gros Pomier is hardier than the Wolf River; so is Plumb's Cider. In our dry air the Yellow Transparent lacks in vigor, and is troubled with "sun scald." Those who, in the cold North, will begin their orchards with Duchess, Gros Pomier and Wealthy will do well.

R. N.-Y.—The advice given as to the apples is that of Prof. J. L. Budd. Our friendly correspondent will agree with us that he is accepted as our first authority as to the adaptability of fruits to the N. W. As to not mentioning the Snowball; is not the Snowball a viburnum? Our friend probably refers to the Guelder Rose V. opulus.

A. D. M., AMHERST COLLEGE.—Will you please give the weakest solution of Paris-green which will destroy the canker worm; also the strongest which will not seriously injure the foliage?

R. N.-Y.—This question is submitted to our readers and contributors. We cannot answer.

T. H. H., NEWPORT, Vt.—The Primate Apple, spoken of in a late F. C., is about as hardy as the Baldwin, or, perhaps, a little hardier, and in Maine, New Hampshire and Vermont it succeeds only along the southern borders of those States. It is a fine apple where it does succeed.

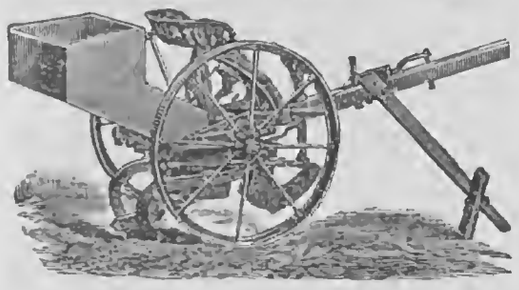
Implements and Machinery.

THE ASPINWALL POTATO PLANTER.



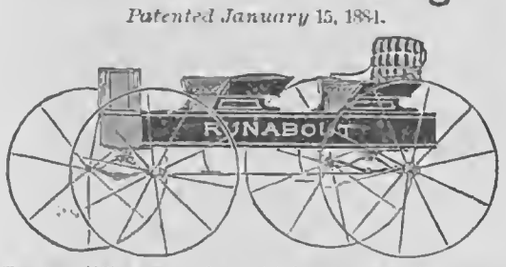
It Marks! It Furrows! It Drops! It Covers! It Distributes Fertilizer!

CORN PLANTER ATTACHMENT FOR 1886.
Send for Circular to

ASPINWALL M'F'G CO.,
THREE RIVERS, MICH.

The Runabout Wagon.

Patented January 15, 1884.



Twelve different styles. *Light, Strong, Convenient* and *Low-priced.* The popularity of the RUNABOUT is such that its sale exceeds that of all other vehicles of its class combined.

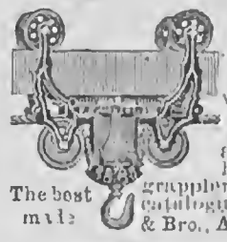
Send for Illustrated Catalogue and price list direct to the manufacturer, ORVILLE H. SHORT, Syracuse, N. Y.

$25 A DAY saved by using the **Little Giant Road Machine,** instead of making roads in the usual way. It is the cheapest and the best. Send for circular.
STRONG & PARKER, Vergennes, Vt.

MYER'S FORCE PUMP.

The only double acting Force Pumps with Expansive Plunger Bucket and GLASS VALVE SEAT. **The only Successful Drill Well Pump.** Simple, durable, powerful, easy to operate. **Never affected by frost.**

MYER'S DOUBLE LOCK REVERSIBLE HAY CARRIER



A perfect reversible carrier. New Myer's Iron and wood track carriers the simplest carriers made. Double and single harpoon hay forks, pulleys, grapplers, etc. Illustrated catalogue free. F. E. Myers & Bro., Ashland, Ohio.

The best made.

The Best SIDE HILL PLOW in the Market

WARRANTED TO DO AS GOOD WORK AS ANY PLOW IN THE MARKET.

We manufacture a full line of Tools, including the Mudgett Hay Tedder. Circulars and Price Lists FREE. Agents wanted in all unoccupied territory.

B. & J. W. BELCHER,
P. O. Box 75, Chicopee Falls, Mass.

IT IS A FACT

THAT THE

COOLEY CREAMERS

Are used by more fine butter makers and stock breeders than any other apparatus, because they have proved to make the **largest quantity** and **best quality** of butter with **least labor** and **expense.** They surpass everything in the Cream Gathering System. Patrons realize from 3¼ to 4½ cents per quart for milk. Send for Circulars giving facts and references sustaining these claims. *Davis Swing Churns and Improved Eureka Butter Workers.*

Vermont Farm Machine Co., Bellows Falls, Vt.

THE BRADLEY HANDY WAGON

The Coming Wagon. Light, strong, convenient, and low priced. **Handy** to get into and out of. **Handy** for single horse or pair. **Handy** for one person or more. **Handy** to load or unload. ***Send for free circular "How to purchase direct from Manufacturer."***

BRADLEY & CO., SYRACUSE, NEW YORK, or 22 COLLEGE PLACE, NEW YORK. 32 S. MARKET ST., BOSTON.

YANKEE SWIVEL PLOW

The LEADING WOOD BEAM REVERSIBLE **PLOW** of NEW ENGLAND for both 1 and 2 Horses.

Send for Circulars.

Made of Patent Steeled Metal, with Patent Steel Shifting Lever & Clevis, enabling the Plowman to take any desired width of furrow without stopping his team.

The **BELCHER & TAYLOR AGRICULTURAL TOOL CO.**
CHICOPEE FALLS, Box 75 Massachusetts.

The Machines are light, strong, easy-running, admirable in design and finish. Practical all-day Tools.

S. L. ALLEN & CO.
127 and 129 Catharine Street,
PHILADELPHIA, PA.

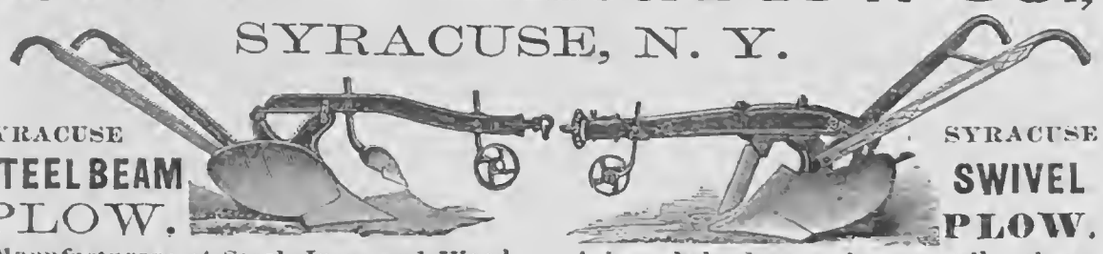
"PLANET JR" GOODS

Send now if you are interested in Farming, Gardening, or Trucking, for our **1886 CATALOGUE,** which fully describes our Seed-Drills, Wheel-Hoes, and Hollow Steel Standard Horse Hoes and Cultivators. Free to all.

CORRESPONDENCE SOLICITED.

Syracuse Chilled Plow Co.,

SYRACUSE, N. Y.



SYRACUSE **STEEL BEAM PLOW.**

Manufacturers of Steel, Iron, and Wood Beam Plows; Sulky Plows, Swivel Plows, Steel and Wood Frame Cultivators and Road Scrapers. Our Steel Beam Jointer and Wheel Standards will not break or bend.

SYRACUSE **SWIVEL PLOW.**

Acknowledged superior to all others. Working equally well on level land, Small sizes specially adapted for Vineyards, Terracing, or Gardening.

Correspondence solicited. Send for Catalogue.

PERFECTION IN BUTTER MAKING.

THE **O. K.** OUTFIT EXCELS THEM ALL.

O. K. CREAMERY Has the largest cooling surface takes less cooling material, less labor, and gives best results. All cream raised between milkings. Skimming glass whole depth of can, showing condition of milk without touching creamery.

O. K. CHURN Has improvements over the best. Easy to clean, easy to operate. Made of White Oak. Cover Castings will not break.

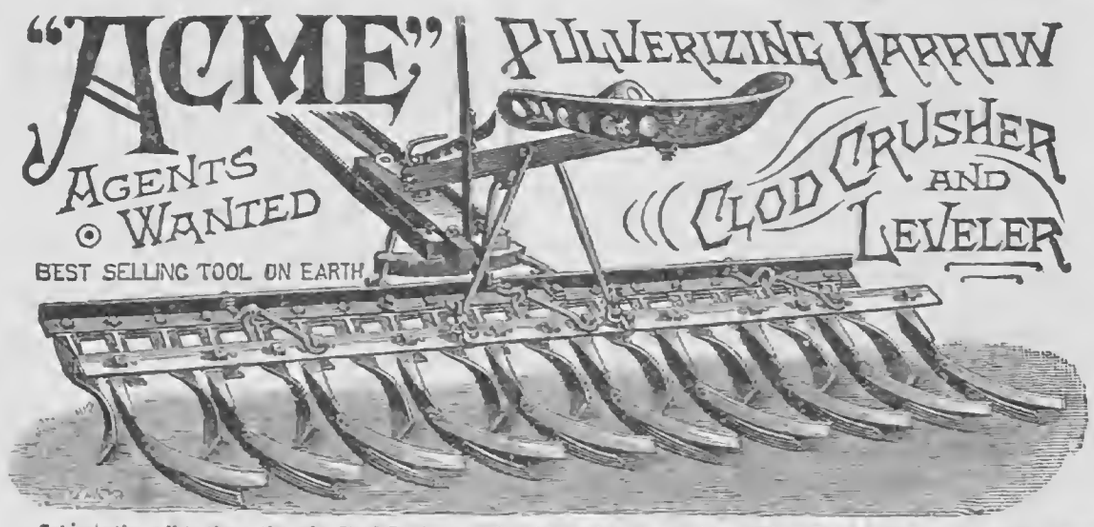
O. K. BUTTER WORKER Made on scientific principles. Adjustable bed. Preserves the grain of the butter. Solid wood roller. THE MOST PERFECT Butter Worker ever put on the market.

JOHN S. CARTER, Sole Manufacturer, SYRACUSE, N. Y.

"ACME" PULVERIZING HARROW AND CLOD CRUSHER AND LEVELER

AGENTS WANTED

BEST SELLING TOOL ON EARTH.



Subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting, Lifting, Turning Process of Double Gangs of Cast Steel Coulters. Immense cutting power. Crushing, Leveling and Pulverizing performed at the same time. Entire absence of Spikes or Spring Teeth avoids pulling up rubbish. Only Harrow that cuts over the entire surface of the ground. Sizes, 3 to 15 ft. wide. With and without Sulky attachment. We deliver free at Distributing Depots.

FAIR PLAY. **DO NOT BE DECEIVED.** Don't let dealers palm off a base imitation or some inferior tool under the assurance that it is better. SATISFY YOURSELF BY ORDERING AN "ACME" ON TRIAL. We will send a **double gang** Acme to any responsible farmer in the United States; if it does not suit, he may send it back, we paying return freight. We don't ask pay until tried on his own farm.

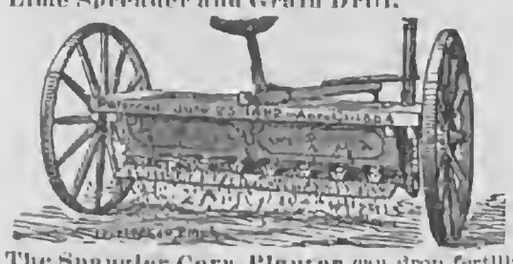
Send for pamphlet containing thousands of testimonials from 48 States and Territories.

Branch Office, HARRISBURG, PENN. **NASH & BRO.,** Manufactory and Principal Office, MILLINGTON, NEW JERSEY.

N. B.—"TILLAGE IS MANURE" and other essays sent free to parties who NAME THIS PAPER.

THE SPANGLER

Corn Planter, Single Row and Broadcast Fertilizer Distributor, Vegetable Seeder, Lime Spreader and Grain Drill.



The Spangler Corn Planter can drop fertilizers with corn, or mix with soil before covering. The dropping of the corn is fully exposed to the operator, and can drop it in hill or drill. **The Spangler Vegetable Seeder** can sow any seed large or small, put in the fertilizer, cover and roll it, all at one operation. **The Spangler Potato Fertilizer Distributor** distributes fertilizers six inches wide in potato rows with cultivator tooth attached to mix with soil; shovels can be lowered or raised. **The Spangler Lime Spreader** will spread unslaked lime from 30 to 60 bushels per acre. **The Spangler Broadcast Distributor** will sow ashes, plaster and all kinds of fertilizers from 200 to 1000 pounds per acre with perfect regularity. **The Spangler Grain Drill** gives full view of the discharge of grain and fertilizer, and is made with or without seed regulator.

The merits of the **Spangler Fertilizer Feed** are attested also by their most successful use by A. B. Farquhar in his Pennsylvania Drill, Keystone Cultivator (under conditional license from J. W. Spangler which expires January 1st 1887), and on Bench's Cultivator. **Galvanized** feeds are furnished when desired. For further information send for illustrated catalogue.

THE SPANGLER MANUFACTURING CO.,
(Successor to J. W. Spangler & Bro.) York, Pa.

SAVE Your POSTS and use SHAW'S WIRE FENCE TIGHTENER. Can be adjusted to any wooden post; can tighten or slacken, according to climate, with an ordinary monkey wrench. Price $8 per doz. For full particulars, apply to

W. SHAW,
Delaware, Ontario, Canada.
Agents wanted. Patent applied for.

FARMER'S FRIEND M'F'G CO.,

DAYTON, OHIO.

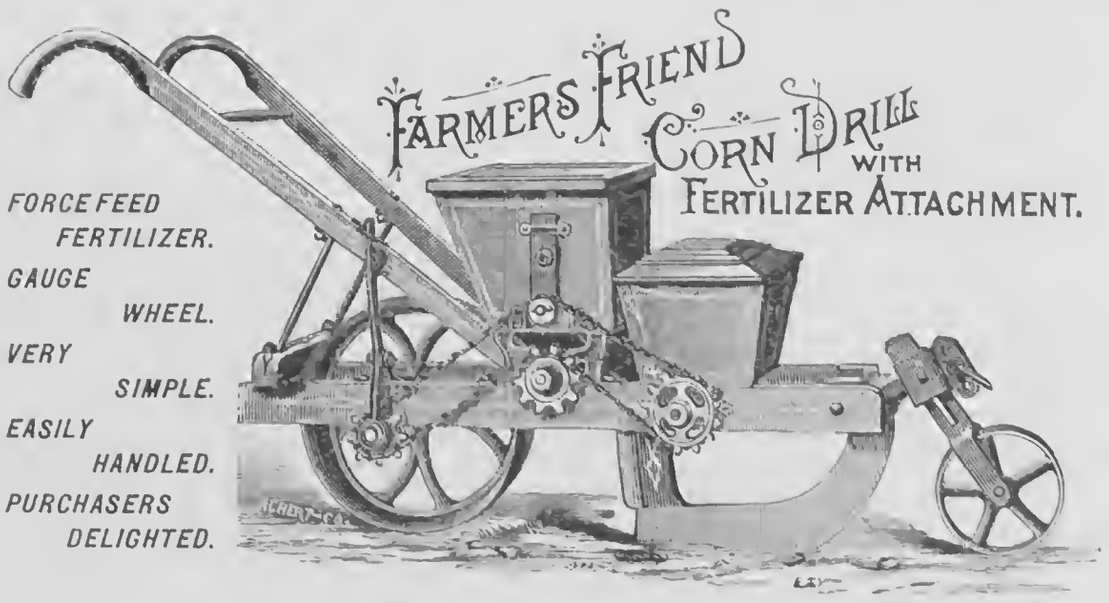
CORN PLANTERS, CHECK ROWERS, CORN DRILLS

AND THE

"EXCELSIOR" LEVER FOLDING HARROW

FOR PULVERIZING, SMOOTHING AND CULTIVATING, ARE OUR IMPLEMENTS FOR SPRING USE.

FORCE FEED FERTILIZER.
GAUGE WHEEL.
VERY SIMPLE.
EASILY HANDLED.
PURCHASERS DELIGHTED.



STEEL RUNNER AND CONCAVE COVERING WHEEL.

WE ALSO MAKE

2-Horse Corn Planters,
2-Horse Corn Drills,
Fertilizer Corn Planters,
Wire Check Rowers,
1-Horse Corn Drills,
Fertilizer Corn Drills.
2-Horse Grain Drills.
3 and 5-Hoe Wheat Drills.

Our Planters and Corn Drills are recognized as the best in all the Corn States.

Circulars, Cuts and Prices Free.

Supply Houses in all parts of the Country.

We sell to responsible farmers where we have no agents, and ask no pay until satisfied.

THE
RURAL NEW-YORKER.
A National Journal for Country and Suburban Homes.

Conducted by
E. S. CARMAN, Editor.
J. S. WOODWARD, Associate.

Address
THE RURAL NEW-YORKER,
No. 34 PARK ROW, New York.

SATURDAY, APRIL, 10, 1886.

IF the number on your address label is 1889, your subscription expires with this number; if 1890, next week; 1891, in two weeks, etc.

THE children at the Rural Grounds have been grafting the red-flowered Japan Quince upon the white, the white on the red, the variegated cornus upon the plain, etc. They may not "take," but really, friends, one can do worse than to interest the young people in such pursuits. Don't you think so?

Do you raise poultry for pleasure or profit? Do you raise poultry and yet feel that it is not worthy of special care, and so, beyond throwing the fowls in the morning a quantity of grain to last until the next morning, leave them to take care of themselves? Have you ever considered that it would pay you to confine your poultry? Whether it is worth while to see that the houses are preserved free from insects, and bright and clean? Does it pay you to keep 10, 50, 100, or 1,000 fowls? If it pays to keep 10, could it be made to pay to keep 1,000? Why not? What is the best breed for your climate and facilities? Are there any specifics for poultry diseases? If so, what are they? We design that our POULTRY SPECIAL shall answer such questions as the above. We shall be glad, during the next ten days, to receive any short poultry notes from any of our readers North, South, East and West.

A GOOD INVESTMENT.

SUPPOSE a miscreant were to destroy to-night every ornamental tree and shrub upon the finest private grounds of your neighborhood. How much would the market value of the place be diminished? Very well; if we agree upon this point, let us figure a little upon the cost of these fine trees and shrubs. Suppose there were a hundred of them, a rather large estimate, and that they cost, set out in the present positions, $1.50 apiece. This would make $150 dollars. The interest on this sum, say for 15 years, would amount to about as much more, which would make the whole cost $300. If they were all cut down and dragged off to-night, would the place be damaged more or less than $300 worth? Would it not make double this difference? If it would, then you have an opportunity to invest a few dollars where the money will pay you double interest, besides adding more to your comfort and self-respect, in the end, than it would in any other place you can put it. We have to apologize to our better nature for holding out such a niggardly motive for the improvement of our homes. We would far rather urge the planting of trees and shrubs, by appealing to our duty, to our children's interests, and the prospective comforts of old age. But, if we had talked in this strain, would we as well have engaged the reader's attention?

THE WAR AGAINST "OLEO".

There are half a dozen or more anti-oleomargarine bills now before Congress, one in the Senate, the rest in the House. Had the introducers consulted together beforehand, and agreed upon a single bill to be introduced simultaneously in both Houses, and combining the best features of all, it would have been better for the dairymen of the country, both because the product of so much combined wisdom would be more likely to be transcendent, and because there would then be no doubt among the advocates of anti-oleo legislation as to the bill which they should urge their Congressmen to support.

Last Wednesday representatives of the dairy interests of all parts of the country as well as of the butter trade in most of our large cities and other centers of the business, appeared before the House Committee on Agriculture in support of Congressional legislation against bogus butter. The general sentiment is that the bill introduced into the House by Representative William L. Scott, of Pennsylvania, placing the manufacture and sale of imitation butter under the control of the Department of the Interior, and taxing it ten cents per pound, is that which best promotes the interests of dairymen and which should receive their heartiest support. Let all producers interested in suppressing the fraudulent competition of bogus dairy products, as well as all consumers unwilling to pay for and eat counterfeit butter instead of the genuine article, and all the public desirous of fair dealing, write to their respective Senators and Representatives in Congress urging them to support this measure. Do it at once. Now is the acceptable time.

SPECIAL.

Those who, having applied for the Rural's present seed distribution prior to March 30th, have not yet received it, will kindly notify us by postal at once.

The seed packages for Canada subscribers have been expressed, to be mailed there, and all should have received them by this time.

WANT TO BE FARMERS.

WE receive many letters from young city men who desire a home in the country, where they can build up health and strength that city life has wasted. Most of these men know nothing of farm life, and would make poor hands at the manure pile or in the stable. They make a great mistake in supposing that farm work is simply a labor of the hands, and that brain work is unnecessary. Let them once get out of the city, and the truth will flash over them that it takes as much brain building to shovel dirt properly, as it does to measure a yard of cloth. The young men are right, however, in thinking that they can regain health and strength in the country. Cities make the greatest show, but the very brains that work out the wonderful development are produced from the farm-raised blood, bone and muscle. Spring brings to these young men a desire to push out into the world, and throw off the cramping conditions which city life has fastened upon them. The world would be much better off if more of them could be induced to go to the farm. They could save more money than they now save, besides enjoying health and contentment that at present they know nothing about. They would be awkward and almost useless at first, but if they could muster up the pluck to stick to the work, they would, in time, be far more valuable than many of our present farm laborers. For some unaccountable reason, thousands of our young men can see more dignity in a yard stick, than in a hoe or an axe, while many young women would sooner live in a state of semi-starvation in the city, than to handle milk and butter, or perform house work in some comfortable farm house. The city young man who desires to be a farmer, must carefully rid his mind of the idea that he needs no preparation for farm work, or that the members of the farming community are pining for his society.

ARBOR DAY.

ARBOR DAY approaches. No particular day common to all the States, can be named for this beneficent festival. Thanksgiving and Decoration Days can be celebrated at the same time from the Canada line to the Gulf, from the Atlantic to the Pacific. The period of flowers is so long that floral glories can honor the dead on the same day all over the country. Any day of the 365 is admirable for thanksgiving. Arbor Day, however, should fall in each State at the time best suited for setting out trees. Experience in several instances, has taught even politicians that a date at which frost is still in the ground in most of the State, is hardly suitable for planting trees. Ten States now have Arbor Days officially designated by the Governors, and in several others the duties of the day are observed, more or less widely, on some day named in advance by the patrons of Husbandry, Farmers' Alliances, farmers' clubs, village decoration societies, and district school boards. Originally instituted by the Prairie States, and still most widely and effectively observed in the West, the obvious benefits of the day have made it popular in other States also, and its observance is every year extending. Under the impetus given to tree planting by its recurrence, large areas have already been covered with trees in Dakota, Minnesota, Iowa, Nebraska and Kansas, and the aggregate of smaller efforts in other States has been quite extensive. In view of the rapid destruction of the forests in older States, and of the beneficial effects on climate and drainage, of an abundant growth of trees, as wind-breaks, hindrances to evaporation, and for storage reservoirs of moisture, every encouragement should be given, especially by farmers, to all excitements to tree planting. Let the children have a holiday. For the good it does and the training it gives, let each set out one or more trees in some suitable place, for nuts, for sugar, for ornament or utility, and for a memento in the brown Autumn of life of a good work done in its bright spring-time. Let the old folks, too, each set a good example to the little ones. Let each plant at least one tree. Let no one think this advice is like that heard from the pulpit on Sundays—excellent for his neighbors, but hardly applicable to himself.

WIDESPREAD STAGNATION.

THE farmers of Orange County, New York, are in great distress. The supplying of milk to this city is one of their chief industries. What cotton is to the South and wheat to the West, milk is to them—their great "money" product. Cotton is exceptionally cheap in the South, wheat is by no means dear in the West, and milk is ruinously low-priced in Orange County. Three years ago the farmers there got 40 cents per year, or an average of 3⅛ cents per quart; now the very best dairies can get no more than 35 cents, while ordinary dairies must be content with 32 cents. This means a decrease in their receipts of over half a million dollars. All grades of cows share in the shrinkage, commanding lower figures than for many a year, and in view of the increased and closer competition from more distant points favored by railroads, farmers are beginning to ask whether agricultural land near large cities is not held at too high a price in comparison with the value of cheaper lands elsewhere.

Similar complaints are heard in the neighborhood of other large cities—Boston, Philadelphia, Cincinnati, Chicago, St. Louis, and also less populous centers. The suppliers of milk to such places are everywhere discontented with prices. But what farmer is content nowadays with the prices of what he has to sell? Indeed the same question can be fittingly asked with regard to those engaged in every branch of business in every country in Christendom. This is an era of low prices everywhere. To what is the universal stagnation due? Is it to middlemen? Middlemen flourish best in the flushest times. Is it to overproduction? The world could readily use all that is produced. Is it to railroads? They can aggravate, but how can they cause it by increasing the facilities and cheapening the rates of transportation? Is it to the tariff? The distress is as great in free-trade England as in the protectionist United States and Germany. Out West it is widely attributed to the persistent contraction of values due to the policy of making gold (the production of which is steadily diminishing) the only standard of value, thus increasing its price and correspondingly decreasing the price of all that is to be bought with it. The true solution of the problem is a hard task; but it would be harder to get everbody to acknowledge it when worked out.

PROTECT THE BIRDS.

SPRING has arrived, and the song birds are coming north, how shall they be greeted? Vanity, gluttony and greed have already, within a few years, robbed the season of much of its joyousness of song and brilliancy of plumage. Shall these vices be permitted still more to silence the melody of our beneficent visitors in woodland, orchard, meadow and pasture, and rob our homes and walks of the charms of their flittings and the radiance of their wings? Shall the most destructive foes of the fast-multiplying myriads of insect pests that every year cause agriculture losses high among the millions—shall these best friends of the farmer and therefore of humanity at large, continue to be butchered to gratify a barbarous vanity, a gluttonous palate, a thoughtless caprice or the mean cruelty of greed?

Within the last four years so baneful has been the slaughter of orioles, bobolinks, blue birds, yellow birds, red-winged blackbirds and many other species whose gay plumage and gladsome warblings beautified and thrilled country places, that even if the destruction ceased at once, the man is not now living who would see the saddening effects of recent recklessness effaced. It is estimated by ornithologists that three generations must pass away before the evils wrought in the last half dozen years can be undone.

The thoughtless vanity of woman is chiefly blamable for this wholesale massacre; but man's gluttony has cruelly aided woman's vanity. Reed birds (the winter name for bobolinks), the most glorious songsters of our northern meadows and the most beneficent friends of the farmer, are now served up in all our fashionable restaurants, and that too just before the season of mating and nesting! Oh, the barbarism of dishing up a dozen such embodiments of beauty, beneficence and song, on toast; of destroying the music, grace and gladness of a hundred Summers to transitorily tickle an epicure's palate!

This slaughter of the innocents is more than a matter of sentiment; it is destructive of the crops of the country, of the food of the people, of the fullest happiness of mankind. It is a crime against the order of nature, the beauty of the world, the welfare of society. Public opinion should denounce it in every corner of the land; stern laws should forbid it in every State of the Union. It should be made a criminal offense to kill birds for any purpose, except game birds used for food, and the few birds needed for strictly scientific purposes. No farmer should permit the killing of birds on his land, and every farmer and every lover of nature should at once urge his representative in the State Legislature to insist on the prompt passage of laws to protect these beautifiers of the country and preservers of its crops. Every wing or bird on a woman's hat or dress is a token of cruelty done, of joy debarred, of loss incurred. Instead of a grace to her head, let such ornamentation be considered a reproach to her heart. Let the greeting be, not "Oh how pretty;" but "Oh how cruel!" Thoughtlessness has been the instigator of this wicked fashion; let reflection be its destroyer. Hundreds of good reasons for the protection of our melodious, graceful, beneficent friends appeal to the head and the heart; not one for their destruction can appeal to either.

BREVITIES.

ELLWANGER & BARRY are of the opinion that the Marshall P. Wilder Rose will prove, all things considered, the best of all hardy roses.

MARSHALL P. WILDER, at the late Mass. Hort. Exhibition, displayed one of his large azaleas "Exquisite," which measured around the head 21 feet, and stood seven feet high.

FOR the second time the Lady Washington Grape (Ricketts) has been killed to the ground. We have given this grape a trial of eight years, and now reluctantly give it up. It has some splendid qualities where it succeeds.

WE very much regret that we are so far behind in the publication of answers to questions. We have and do answer all questions as soon as possible, but we cannot find space for them at once, and our friends must be indulgent.

LAST year we planted 100 roses of the more tender varieties, such as Teas, Bourbons and Noisettes, commonly known as "ever-blooming or monthly roses." In early Winter the stems were laid over and covered with leaves, and upon these an inch or so of soil was placed. We now find that all are alive. This protection may be given with little trouble, and in this way we secure the delicate beauty, fragrance, range of color, and frequency of bloom of the everblooming roses, with the sturdier and somewhat more restricted charms of the hybrid perpetuals.

THE schedule adopted by the Connecticut, Massachusetts and New Jersey Stations for this year shows that potash in high-grade sulphate is 1¾ cent lower than last year, viz. 5½ cents per pound; potash in kainit is the same as last year, 4¼ cents per pound, and in muriate the same as last year, viz., 4¼ cents per pound. Nitrogen in ammonia salts and nitrates is 18½ cents per pound—half-a-cent higher than last year; in dried fish and fine-ground bone, 17 cents—one cent lower. Organic nitrogen, as in guano, blood, meat, cotton seed, linseed meal, bone, is about one cent lower. Phosphoric acid, soluble, is also about one cent cheaper per pound. Insoluble forms are much the same as last year.

AMONG farmers, as among other toilers, there is a disposition to complain of the very unequal distribution of wealth in the world, and consequently to sympathize with all the poorly paid wage-earners who are struggling to wring from capital a fairer share of the results of their labors. This source of sympathy with strikers in workshops, factories, mines and railroads is natural. But such strikes and any consequent increase of wages, are really against the interests of farmers. Under present conditions these cannot strike or otherwise combine to raise the prices of their products, while an increase of wages in workshops, factories, mines and railroads means higher prices for the goods they have to buy and higher rates of transportation.

Sheep Husbandry.

Notes from the Rural's W. N. Y. Farm

LAMB RAISING AND FEEDING LAMBS.

WATER AS ESSENTIAL AS FOOD.

It is a very common notion that sheep need very little water, some going even so far as to assert that they do best if entirely deprived of it when at pasture, and given but a scanty supply when kept on dry feed. Nothing could be more erroneous. Of every 100 pounds live weight, not less than 75 are simply water, and every particle of the solid part is taken up by the "absorbents" only as dissolved in water, and the process of digestion can be carried on only when the forage and grain are floating in water. The fact is, few animals drink more, in proportion to their weight, and none drink so often as sheep when the water is accessible. Even when fed two full rations of roots per day, they will be found, though drinking but little at a time, drinking many times each day.

THE WATER MUST BE CLEAN,

that is given for drink to any kind of stock to have them do their best. But while cattle, or even horses, can be so accustomed to dirty water, or that quite foul with the soakage of the manure piles, that they will temporarily drink it almost in preference to pure water, sheep will never become used to such water, and will absolutely suffer from thirst before they will drink even a limited quantity. They are quite as particular about the cleanliness of their drinking dishes. Let a sheep put merely its foot into one of these, or let the shepherd wash only his hands in one, or let the least particle of manure fall into it, and no sheep will do more than "snuff" the water until the vessel is cleaned and filled afresh. It is therefore essential that the drinking vessels should be so placed that no droppings can fall into them and that the sheep cannot put their feet into them, and at least twice each day every one should be looked at, and if in any way fouled it should be emptied, scrubbed out and refilled with clean water.

THE WATER SHOULD BE WARM.

It is a common practice to compel sheep to take what moisture they must have by eating snow, or by drinking water from ponds or troughs out-of-doors, and often containing ice, or frozen over. This is not only cruel, but foolish as well. Nothing taken into the system as food or drink can be appropriated or even digested, until it is warmed to the temperature of the stomach, which is full-blood heat or a little more. And as all the animal heat comes from the consumption of food, and at a great disadvantage in its generation, it seems absolutely foolish to pump water from wells (from which source most stock water is supplied) usually at a temperature as high as 60°, and allow it to cool down to 32° before it is drank by the lambs.

The rule, then, in watering feeding lambs is to give them plenty, to furnish it clean and in clean drinking vessels, and either to pump it directly into the troughs from the wells or to keep it in tanks in the barns, where it will remain at least as warm as it came from the well, and, better, if it could be artificially warmed to about 70 to 75 degrees before it is given to the lambs.

Mr. A. W. Morse, of Madison Co., N. Y., asks if we would not advise the sowing of flax-seed with oats or barley as a food for sheep, the crop to be used with and without thrashing. We certainly would not so advise, for two reasons: first, the flax straw is not only worthless as a food, but it rots so slowly that unless it is run through a cutting-box, it is a nuisance in the manure; second, flax seed contains altogether too much free oil to be a healthful food, except in very small quantities, and, further, the oil which it contains has a commercial value much higher than its feeding value, and the residue after the oil has been extracted, is worth almost as much as was the whole seed, and a ton of the residue is worth several times as much as a ton of the whole seed. We should prefer to raise the flax separately, sell the seed to the oil mills, and purchase cake in its place, and to sell the straw to the paper mills.

Another good friend at Orville, Ohio, asks if we are not mistaken in preferring a mixture of kerosene and lard oil or kerosene and fried meat fat to kill ticks in preference to a decoction of tobacco. We have tried both, and while we know that tobacco water will kill ticks and lice if put on strong enough, it nearly kills the animal as well, and, besides, it is nasty to apply, unless used by one who has already poisoned his system by its filthy use, and, further, the sheep cannot be safely dipped in cold weather. The other mixture is equally efficacious, much more easily applied, does not make either sheep or applier sick, and really increases the growth of wool.

We are receiving many letters asking if we are really keeping our stock as we describe in these notes; and if the writers may come and see. We answer that we would scorn to write anything for the press not based on our actual experience and knowledge, unless we so said. We not only invite all to come and see for themselves; but we ask the dozens who have come and who are constantly coming to see, to tell what they have seen. They are not only at liberty to expose us, but are urged to say if they have not found everything fully up to their expectations.

Dairy Husbandry.

A GOOD DAIRY.

About two years ago, I asked a reliable dairy farmer, Mr. Comfort, to weigh the milk from each of his cows separately. He had not been accustomed to keeping any milk records, but he agreed to do so, so that I might have the results for comparison. He is a reliable, honest and well-to-do farmer, who has been in the dairy business in Iowa for 15 years; and when moving from the vicinity of Palestine, Illinois, he left a dairy that had few superiors. He has the reputation of having the best dairy in Buchanan County. He feeds well all Winter, and usually sells about 500 pounds of milk per day for the season. He keeps about 20 to 23 cows on an average. His cows, Summer and Winter, are in fine condition, and ready for the block at any time he is compelled to sell because of a failure to breed, or for other reasons. I give below the figures obtained from him:

Lbs. Milk each cow gave, Feb. 1st, 1885.	Date of Calving.	Date of Service.	Wt. of Cow Lbs.	Escutcheon.
24	Oct. 27, '84.	Dec. 17, '84.	1100	Good.
20	Nov. 10, '84.	Dec. 26, '84.	1050	Fair.
23	Jan. 26, '85.	—	1000	Poor.
29	Jan. 26, '85.	—	1050	Fair.
10	June 10, '84.	—	1150	Good.
20	June 12, '84.	Dec. 30, '84.	1000	Verygood
8	March 9, '84.	June 24, '84.	1200	Good.
31	Jan. 29, '85.	—	1025	Verygood
24	Nov. 3, '84.	—	1110	" "
21	Nov. 20, '84.	—	1050	Fair.
6	May 9, '84.	June 30, '84.	1000	Good.
13	June 15, '84.	July 4, '84.	1100	"
16	May 1, '84.	July 2, '84.	1200	Verygood
23	Dec. 15, '84.	—	1000	Good.
29	Dec. 20, '84.	—	1160	Fair.
9	June 23, '84.	Aug. 8, '84.	1150	Verygood
305				

Of my own herd I keep weekly milk records the entire year, and am therefore enabled to make some interesting comparisons, from which the reader may draw his own conclusions.

Date of Calving.		Date Served.		Feb. 1, '85. Lbs. Milk.	
Comfort's.	Writer's.	Comfort's.	Writer's.	C's.	W's.
May 1, '84.	May 1, '84.	July 2, '84.	Sept. 24.	16	15½
Mar. 9, '84.	Mar. 3, '84.	June 24, '84.	June 13.	8	8
June 10, '84.	Mar. 31, '84.	Not bred.	Sept. 3.	10	10½
May 9, '84.	Apr. 16, '84.	June 30, '84.	July 27.	6	4

The No. 1. cow of Comfort's is a seven-year-old, and said by himself to be the best in his dairy. The writer's cow which calved at the same time, is a two-year-old and gave 9,192 pounds of milk for the year, which sold for $72.22, at the creameries where prices varied from 50 cents to $1.04 per 100 pounds. The remaining Comfort cows are also compared with two-year-olds. These figures certainly show that there is a remarkable difference in cows, and that in all well managed dairies, the greatest care should be used in making selections to fill vacancies. I am confident, having visited Mr. Comfort's dairy many times, that both herds were fed equally well, and that the comparison, though not strictly scientific, has an important practical worth to every reader. Both parties fed liberally of bran, and ground oats and corn the entire Winter, with all the good Timothy hay they would eat.

I am quite sure it does not pay to keep a cow that gives only 4,500 pounds per year, and yet hundreds of such are wintered year after year. Generally speaking, dairy cows are too small, averaging perhaps 1,000 or less. The size is due, of course, to the average inferior care of the heifers when young. The size as well as the quality of Iowa dairies generally needs improving by a mixture of other blood.

Jessup, Ia. J. N. MUNCEY.

MANAGEMENT OF COWS COMING IN MILK.

A large majority of the cows of the country are coming in milk during this season. Care should be taken to have them in a healthy, thriving condition; but not fat nor rapidly taking on fat. Such cows are liable to inflammations and fevers. A relaxing mess of feed now and then, just before calving, will be found beneficial. If the udder is excessively caked and hard, it is better to draw a little milk from it than to let it remain in this painful condition. It will help to ward off garget. More udders are spoiled, however, in drying off, than by inflammation created by an excess of milk secretion just before coming in. The evil comes from the secretion of more milk, when milking is stopped, than can be absorbed and gotten rid of by natural processes. Hence the bag, or a portion of it, may be spoiled, but the trouble will not be noticed until the cow comes in milk again. Care should be taken when drying off a cow, to see that the milk does not thicken in the teats, but constantly grows more and more watery. If the milk thickens, draw it off. In case the cow is thin and weak in the Spring before calving, feed her generously, but not excessively, and get her system in good tone. Avoid all heating foods, like corn-meal, except in small quantities. Less fattening but more strengthening and cooling diet is preferable. Wheat bran, middlings, oat-meal, and roots or moderate rations of sweet silage are good. Cows at this season should be carefully protected from sudden changes of weather. Give them freedom, and a chance to sun themselves on fair days. Avoid exciting them, or suddenly setting them in motion, or in any way hurrying or hustling them around. Last, give them a quiet place by themselves. T. D. C

Miscellaneous.

CATALOGUES, ETC., RECEIVED.

Sixteen Years' Experience in Artificial Poultry-raising.—By James Rankin, published by the Phelps Publishing Co., Springfield, Mass. This excellent little book is evidently the work of one who has handled and manipulated incubators. Mr. Rankin does not hesitate to say that his first experience with artificial incubation was unsatisfactory and unprofitable. It was only after he had carefully studied the matter in every detail that he could report even a fair success. We believe in this way of stating the question. Money can be made in the poultry business: in some instances wonderful profits have been secured. These were not made by any hap-hazard operations, but were the legitimate outcome of study, observation and experiment. The teacher who starts with this acknowledgement is likely to be reliable. We advise all those who think of procuring an incubator to secure this little book and study it carefully. Price, 25 cents.

American Patent Portable House.—Circular from the manufacturing company of the above name, office 31 Wall Street, New York.—The design of this company is to furnish houses made in sections so that they can be put together without the aid of skilled labor. The poultry and dog houses will be appreciated by those who have no time for building. The light houses for campers, sportsmen, etc., are said to be almost as cheap as tents, and as easily erected. Full explanations of the houses are given in the catalogue. Send for it.

T. C. Robinson, Owen Sound, Ontario, Canada. An excellent list of strawberries, raspberries, blackberries, currants, gooseberries and grapes. The Fay's Prolific Currant and Niagara Grape are well illustrated. Our readers know what we think of these. The Parry, May King and Jewell Strawberries are offered. The catalogue is well arranged and printed. Our Canadian subscribers will do well to note the address.

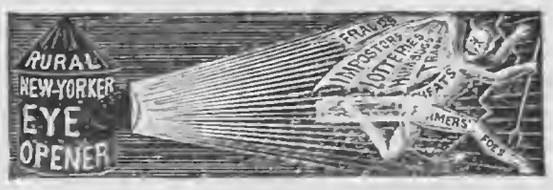
Enterprise Poultry Farm.—Circular from Peter Beuerlien, Newton, N. J. White Leghorns are put forward as the specialty of this yard. Brown Leghorns, both single and rose-comb, Plymouth Rocks, Wyandottes and Light Brahmas are also offered. The Enterprise Chicken Brooder is advertised as the simplest, cheapest and most easily managed brooder in the market.

Ant. Roozen & Son, Overveen, Holland. De Veer & Boomkamp agents, 47 Broadway, New York.—A circular of gladioli, dahlias, lilies, amaryllis, ranunculus, etc., etc. For $3.75 as many as 225 bulbs and plants are offered. Orders received now will be delivered during April and May. The firm is trustworthy and liberal in every way.

Berkshire Pigs.—Catalogue from Springer Bros., Springfield, Ill. The Berkshire Pig has wonderfully improved American pork. The animals noted in this catalogue are exceptional in breeding. South Down Sheep, Jersey cattle and Light Brahma poultry are also offered. A reliable firm.

L. G. Sherman & Co., Nos. 32 and 33 South Water Street, Providence, R. I.—An illustrated catalogue of seeds of all kinds, creameries, churns, agricultural implements, etc. Free to applicants.

Williams, Clark & Co., New York, send samples of their colored cards, illustrating the effects of the fertilizers sold by them The cards will be sent to those who apply.



We do not by any means recommend any dealings with T. S. Gardner of the "Farming World," Cincinnati and Chicago. By the way, what has become of that libel suit brought by him against an esteemed Western contemporary for its trenchant exposure of several of his "enterprises"? The most pestiferous schemer may bring a suit for libel against any one who exposes the "true inwardness" of his machinations; but such a fellow must either have some faith in his own projects or place great reliance on the gullibility of juries to carry the case to trial..... Editor Pond, one of the proprietors of *El Latino Americano*, a paper alleged to be published regularly in this city, was arrested the other day on the charge of carrying on a lottery in offering premiums for subscriptions to his paper. We have frequently denounced such practices not only for their immoral tendencies, but because in nearly every case the concerns offering such lures are sheer swindles. The value of the goods offered is grossly exaggerated; any thing of real worth is always sure to go into the hands of a confederate: most of the premiums are never sent at all; those that are given are worth less than the extra charges demanded for postage, packing, etc.; the papers that resort to the dodge are mere catchpenny affairs, which either collapse after the subscription season is over, or drag on a miserable, worthless existence until they can get another chance of gulling another set of dupes the following season. T. S. Gardner is accused of being an adept in this sort of "business." Not long since he started, in Chicago, a paper to which he gave the name of the "Chicago Farm Journal," prefixing the word Chicago to the name of our esteemed Philadelphia contemporary which has had an office in Chicago for some time. It is a common practice among sharpers to take for their "titles" the names of reputable concerns (making such slight alterations as to escape prosecution from forgery,) in the expectation that some of the unwary public will mistake the fraudulent for the honest..... Justice Butt, of England, has just decided that a divorce obtained in this country from a marriage performed in England is invalid. The courts in several of our own States, with regard to marriages performed in them, deny the validity of divorces openly and legally obtained in some of the other States. Investigations and exposures of late show conclusively that a very large proportion of the "divorces" procured "without exposure" by the fellows known as "divorce lawyers," are fraudulent and absolutely invalid. In thousands of cases the signatures of judges and court officers on the "divorce papers" were forgeries; while in a large number of cases the courts and judges, who were reported to have granted the "divorces," had absolutely no existence. Several prominent "divorce lawyers" in this and other cities and towns are now "fugitives from justice," on account of detection in such rascality. Frequently the divorced persons have married again and have had children; but such marriages are, of course, illegal and the children illegitimate. People who have had recourse to underhand means for divorce, however, deserve little sympathy for having been duped..... To Several Inquirers.—The Co-Operative Building Plan Association of this city, will send for cash the book they advertise.... There is absolutely no chance whatever of obtaining counterfeit money from the rascals who advertise "green goods," through the mails. The real "shovers of the queer" are too cautious to "give themselves away" in that fashion. These offers are *always* made by sharpers, who, from the outset, intend to swindle all the "suckers" who may be mean and dishonest enough to deal with them. Of course, their dupes, being engaged in an illegal business, have no right to legal redress, and having intended to swindle their friends and neighbors at home, are, most of them, too conscious of the turpitude of their own designs to publish their folly and rascality by "squealing."..... We do not, by any means recommend "Dr. Wells" of this city, or his "treatment" widely advertised through the mails.....A. L. Spencer & Co., Farm and Household, the Conn. M-f-g. Co., and the Hartford Card Co., are one and the same. The many-named concern is said however to be filling orders satisfactorily.... We do not recommend the goods advertised through the mails by F. Crosby & Co., chemists, this city..... T. P. Simpson, Patent Attorney, Washington, D. C., is reliable.....Be very careful about paying money to "claim agents" at Washington or elsewhere on account of pensions or any increase thereof, which they may say they are able to collect for you from the Government. Of course, if no pension can be due for "war services," the agents are either mistaken or trying to swindle you or Uncle Sam—and it is much easier to swindle you than Sam, however smart you may flatter yourself you are. Be still more careful if they say they have discovered a debt due to you by the Government, "not in the nature of a pension;" but about the true nature of which they are mysteriously silent. Even if they offer to collect the "claim" for a contingent fee, do not sign any power-of-attorney they may forward to you, without consulting a lawyer in your own neighborhood. If you do not consider the "chances" at Washington worth his fee, why bother your head at all about them, or run any risk from the sharpers and shysters that "fill the woods" about the national capital, and manage to swindle even the Washington boarding-house and hotel keepers?

For Women.

CONDUCTED BY MISS RAY CLARK.

REQUIREMENT.

JOHN G. WHITTIER.

We live by faith; but faith is not the slave
  Of text and legend. Reason's voice and God's,
  Nature's and duty's, never are at odds.
What asks our Father of His children, save
Justice and mercy and humility,
  A reasonable service of good deeds,
  Pure living, tenderness to human needs,
Reverence and trust, and prayer for light to see
The Master's footprints in our daily ways?
  No knotted scourge nor sacrificial knife,
  But the calm beauty of an ordered life,
Whose very breathing is unworded praise—
  A Life that stands, as all true lives have stood,
  Fast rooted in the faith that God is good.

GRANDMOTHER'S SOLILOQUY.

"I WONDER," said Grandmother, as she put on her spectacles and took her knitting, "I wonder what this world is coming to! I never saw such times! Why, when I was a girl, men worked out for 50 cents a day, and could support their families comfortably at that; and now, when a man earns a dollar and a half, they say his family suffer for the necessities of life! Provisions are as cheap now as they were then. Cloth is cheaper. I admit it does not wear as well as our homespun used to do, neither is it as thick and warm; but then it is cheap! I cannot understand why the times are so hard. Why, I can look back 50 years, and I really think people were happier and healthier and more sociable then, than now. Oh, people are changed! They are selfish, they do not care for their neighbors. Only think of a woman lying sick three weeks and dying, and the nearest neighbor knowing nothing about it. Not a soul called on her or ministered to her. Why it looks to me as if people were hard-hearted. Death is nothing outside of one's own household. When I was a girl, a death in a neighborhood cast a solemnity over the whole community. Now, nobody minds a death; it is nothing to them; it is none of their business, and they go on their way, just as unmindful of the grim messenger as if it would never come their turn to die. Yes, times are changed; everything has changed, and I don't believe folks are as happy as they used to be either. Such good times as we used to have—evening visits, quiltings, huskings, paring bees and all such jolly gatherings! They have all gone out of fashion, and you do not see your nearest neighbor once a month; and when they do come in, it is for a five minutes' call; they are prinked up with their best bib and tucker on, and look just like French dolls. All they talk about is the latest styles, the new clothes or hats such a one has got; and in five minutes they start out to making more calls. They cannot afford to dress up just for one call. Now there is no genuine sociability about such calls; it is all formality and show. I sometimes think that the human heart is different from what it was half a century ago. Nobody ever feels glad or sorry now-a-days. It is not genteel to make any demonstration of feeling. If you have any natural affection, it must all be kept out of sight. It is not fashionable to make any outward display of either grief or joy. I would give more to hear a good hearty laugh from a merry-hearted girl, or a shout from a laughter, loving boy, than to see the simpering smile that is stereotyped for every occasion by the young folks now-a-days. Talk of boys and girls! There are none. As soon as a boy gets out of his round-a-bouts, and a girl sheds her bib aprons, they are young gentlemen and young ladies, and expect to be treated with due consideration. The first thing a young lady thinks of is a beau, and the lads are flirting with girls before the down starts on their upper lips. Oh, what lots of fun and good times they lose by sprouting up into ladies and gentlemen so young. But all that buoyant jollity must be suppressed. Oh yes; crush it down, suppression is the fashion; suppress your fun, suppress your griefs, suppress your joys, suppress all natural affections! That is the style of the present generation. It is not thought to be genteel to laugh or to cry, so the voice of nature must be stifled, and the more stoical and rock-like a person is, the more genteel and polished they are considered. Well, everybody says each generation grows wiser, but I do not believe anybody will claim that they are happier or better. I know I am growing old, and old folks look backward instead of forward, and really I think the past held brighter prospects that the future holds. If knowledge and wisdom increases, happiness very evidently does not. There! my needle has slipped out, and the stitches are running down.

GRANDMOTHER.

A PLEA FOR BACK DOORS.

WHAT is the difference between a back door and a front door? Why should the back door be so persistently ignored, while the front door is kept spotless and shining? One is for visitors and holiday occasions, the owners of country houses will tell us. The other is for the passage of provisions, and the thousand and one articles of daily use, for ashes and dirt, debris and swill. It is easy to keep a front door tidy, but what housekeeper can find time and strength to be everlastingly scrubbing back doors, and picking up waste papers and strings, and bones, and the litter that has to accumulate somewhere? Yes, but that back door is very dirty. The finger marks, large and small, that have made a fresco of filth a yard square or more are enough to take away the healthiest appetite.

But what can be done with a door constantly used by your husband, children, and workmen, you ask? Your workmen would soon learn to use the latch or knob, if spoken to kindly a few times. It is not so easy to predicate about your husband, who perhaps feels himself privileged to make all the dirt he pleases. But the mother, who does not instruct her children to open and close doors by their handles, deserves to spend her life scrubbing finger marks.

Then why should you allow this back door yard to be littered? There would certainly be very little to pick up if nothing was thrown down.

Then about that swill barrel that blubbers in the summer sun? You have got to save your swill you say. That is not saving it. It is worse than wasting it. The leavings of your table, the food that you can eat yourself, without detriment, is none too good for your hogs. This pestering, fly-blown stuff not only poisons the neighborhood as it stands there, but it is sure to injure those who are fated to partake of the pork raised by such means. That swill barrel is almost as bad as a small-pox hospital next door. You shudder yourself when you lift the cover from this seething mass, and the great fat flies and the myriad swarms of tiny insects buzz round your ears. You admit it is nasty, but comfort yourself with the thought that it is necessary. You are mistaken. Pollution means sickness and death. Cleanliness, health and life. You are never quite well, but you haven't the remotest idea what is the matter with you. It is the pork in your cellar—ten to one—and the swill barrel at your back door. The very sight of the back door itself is enough to make you sick. So banish the swill, feed your hogs on decent food, scrub and paint the back door, and then save yourselves, and set an example for your neighbors. ELEANOR KIRK.

SNAPPY SPELLS.

WE asked a little girl of three or four one day, which she liked the best, her mother or her grandmother at whose house she spent so much of her time.

"My grandma," she answered promptly, to my great surprise. "I like my mamma very well, only she has such snappy spells!" I wonder if other little ones would not give a somewhat similar testimony about us mothers, if they should speak out of the abundance of the heart as did little Lizzie! A little girl sent away to pray over her bad temper was heard to add to her little prayer: "And please make my mamma better tempered, too." The listening mother stole softly away to ponder over the honest words.

Everything is catching with children, and measles and whooping-cough are not so much to be dreaded as the habit of cross speaking and feeling. "Snappy spells" in the mother are sure to be repeated in the children, unless they are indeed little angels only lent for a year or two. We have sometimes known a little one who bore with a wayward mother so patiently, though grievingly, that it seemed most fitting that it should be transferred to a home where all was love and brightness and all voices were sweet spoken. There is often a good deal of heartache left for a mother when the chances have gone by forever in which she could have spoken the loving words for which the little spirit so hungered.

Said a little one the day before he was taken down with a fatal sickness, as he gazed earnestly into his mother's face:

"Isn't I a good boy sometimes?" I think that mother can never forget that tone and look.

It is more a matter of habit, and perhaps of inheritance, this cross speaking, than of real provocation. "Trifles light as air" stir up the evil venom and embitter all the household. Even when the trouble is great one may lighten the skies for themselves even by speaking pleasantly, and how much more cheering for other people. By talking cheerfully after awhile one gets in the mood for it. Mr. Wesley says: "I no more dare to scold and fret than I would to curse and swear." If only all could cherish the same sentiment it would hasten the millennium of peace on earth.

OLIVE.

BABY'S HOOD AND CLOAK TRIMMING.

USE Shetland floss any desired color, and a medium-sized bone crochet hook. For the front make a chain of 30 stitches. Turn, and in the third stitch make two double crochet (by putting thread around the hook once); chain one, and make two more in the same place. This forms a small shell. Make a shell in every third stitch until the end of chain. There will be 10 shells. Turn the work and make a chain of eight stitches very loosely, and fasten between each shell. The third row is the same as first, making shells in the preceding shells. The whole work consists of these two rows, keeping the shells on the wrong side, and the long fluffy loops on the right. Make the strip long enough to go around the face, and allow for a cape. Then crochet a strip for the crown in the same way, and the same number of stitches, allowing for the length of cape in this also. Leave the crown square across the top, and sew in. Crochet a piece about eight shells square and place on the top of the hood letting a corner come over the front a little. Place a bow of ribbon at one side and at the back where it is shirred for the cape. A Cashmere cloak is pretty with trimming made to match the hood. A drab cloak with blue trimmings and blue hood or, a beautiful one can be made of eider-down cloth with white hood and trimmings.

FANNY FLETCHER.

THE fragrance of the alabaster box of ointment has come down through the centuries. The widow's mite is swollen perhaps to millions. But God would never have so blessed the mite, if it might have been a denarius.

IT will be sweet sometime if we may hear the King say to us, "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me." It will be worth everything to us, and how much to the souls we have helped in their struggles with sin, and saved for eternal life! ZEA MAYS.

Domestic Economy

CONDUCTED BY EMILY MAPLE.

KITCHEN TALKS.

ANNIE L. JACK.

"I DO not know why I cannot make as good puff paste as Auntie Jane," said the Amateur Cook discontentedly, as she rolled the butter in the flour and prepared it for the tarts. There was pathos in her voice, that implied more than mere dough, and it lay in the fact that a party of young friends were coming to visit us, who would test her cooking, which she very much desired should be first-class. Our old friend, Aunt Mabby, was sitting in the kitchen, busy helping me with some rugs. She looked up smiling. "There is a little secret in puff paste, dear," she said; "it is to make the butter waxy. You should always wash it in cold water, flatten it into wafers, and set on ice a few minutes to make it brittle. Then, instead of kneading it, work it in with a knife, flouring your hands when you are obliged to touch the paste. A very little salt and as much sugar make a great improvement if you wish light paste, and be very careful not to add too much water; for if the paste is too soft, it cannot be handled, and the working over in that condition makes it hard." The Cook thanked Aunt Mabby for her useful hints, and told her we often wished that she would go on the recipe book for the RURAL. And then the dear old lady put on an apron and made some apple custards that were really delicious. She put a crust on the plates, pared some juicy apples and sliced them thin till the plates were half full; then poured over them a custard, and baked quickly. The top was covered with whipped cream flavored with lemon, and it certainly was a pretty and dainty dish that our guests all seemed to appreciate fully.

The days lengthen, and busy housekeepers are anxious to get on with sewing and other work that can be better attended to before spring work comes in. The bright, sunny days reveal all the results of the Winter's smoke and wear, and make one long for house-cleaning time. But it is not best to begin too early, even when our fingers ache to turn over the hidden dusty corners, and investigate the stove pipes. Better to get all the sewing and mending done, give ourselves the needed rest, and make all preparations to begin the contest. As the sunny days render the wearing of furs unnecessary, it would be as well to put them away before moths find lodgment among them. Many things are recommended; but we all know that a little benzine sprinkled in among them, if the box is tight, is sure death to these pests.

NOTES AND COMMENTS.

IN looking over the RURAL of February 20, I noticed some experiences on "Winter Butter-making." I am not a very old housekeeper, but I have had several years' experience in butter-making, both in Summer and Winter, and have had but very little trouble, seldom churning more than half an hour and very often not more than 10 minutes, and the butter comes out yellow and solid. Neither am I among those who have patent appliances and regulators for making butter. I use the old-fashioned wooden dash churn and a wooden butter tray and ladle for working the butter.

My way of making butter in the Winter is to skim the milk while it is sweet, and when the cream jar is nearly full, set it by the stove for a day before I want to churn, so that it will sour just a little, and also get sufficiently warm to churn easily (I have never met with success in trying to make butter from sweet cream). I test the cream by dipping the tip of my finger in it and touching it to my face (I have no thermometer); when it feels just a little warm it will not take long to churn. I always wash my butter twice and sometimes three times, then salt and set away till the next morning, when I work it again, and I always have good, sweet butter. I did have two churnings two or three years ago, that seemed very refractory. I don't know why (it was in the summer time), but I put in boiling water till the cream was as warm as new milk and then the butter separated from the milk in a hurry. Of course, it was white, but I would rather have white butter than none at all. I have had no trouble since.

I like "Annie L. Jack's" method of washing on Tuesday. I prefer to soak my clothes overnight, and I don't think Sunday is the proper day to gather up clothes and get them ready for washing, so I seldom wash on Monday. The "Oxford Blue" in square packages I think better than the "Ball blueing."

"Alice Brown" tells us, in the RURAL of January 16, of a woman's conflict with her temper. She says: "She was a neat and careful housewife, and her husband and children gave her occasion for scolding every day, by carelessly leaving scattered about hats, boots, books and numberless other things, and she never failed to scold them sharply." At last her husband retorted that "she was growing to be as great a scold as Aunt Lizzie Riton." Then she tells us how the wife locked herself in her room, and "all day long looked over her shortcomings," and at last conquered her temper so that she could speak to her family without scolding. Now, while I admire the spirit that prompts one to govern an unruly temper, I also admire the spirit that prompts one to keep from ruffling another's temper. Why is it that some men must always throw their coats and hats on the floor or on chairs instead of hanging them up?—just as if a woman with a husband and children to work for did not have enough to do without picking up after her family. I think such a man deserves scolding, and more too. Then children always think they can do as Papa does, and it is very hard to train them to neat habits with such an example always before them. The husband ought to look over *his* shortcomings, too. I think if I had such a husband, I should throw my things on the chairs and floor and see how he would like that kind of housekeeping. CANADIAN.

SOME SUGGESTIONS AS TO COUNTRY WEDDINGS.

A WEDDING in the country where guests come from a distance and with their own conveyances, is more convenient early in the day. Noon is the best time; but on no account should it be later than 2 P. M., unless some come by rail and it has to be timed to suit the train. Neither would I have it earlier than 10 A. M., as wedding breakfasts are hard to manage and provide for. An evening wedding where the purse is ample, is, of course, brilliant and dazzling; but even then some of the elderly ones whose company is prized the most, will be kept at home, by the lateness of the hour.

The preparations, as far as possible, should be made before the appointed day. As country people seldom keep servants (in the house at least) but rely upon the assistance of their most intimate friends, every one that is expected to assist in any way should be informed so that he or she may come prepared.

The house may be decorated with autumn leaves and pressed ferns, if in Winter or Summer with flowers that are in season. A small table should be set in the hall or remote cor-

ner of the parlor to receive the gifts. China and glassware that are to be borrowed should be in place before the guests arrive.

Although the bride's dress is foreign to the subject, I cannot refrain from saying a few words with regard to it. Let it be of some dark silk, if silk can be afforded. If not, some of the all-wool goods make up very rich and handsome, and are very reasonable in price. Let the color and style of making become the wearer. Unless in a very wealthy family, I think light silks and satins are very unbecoming for country brides. A handsome dress, of which no bride need be ashamed, can be made of dark American cashmere with plush to match. "B."

CRAB SALAD.

BEEFSTEAK SPANISH STYLE, AND SUNDRY GOOD THINGS.

At a wedding breakfast where the following salad was served, the pretty bride laughingly remarked that usually the bride was the principal attraction at a wedding, but that in her case it was the salad. We will not, therefore, advise its use on such occasions, but in the case of staid married people, where wives have learned to subordinate themselves to a good dinner and to be content with such crumbs of affection as may fall to them after their lords have been well fed, it is always policy to spread an attractive board.

To make this wonderful salad, then, pick out a pint bowlful of crab-meat—one of the mammoth crabs of the Pacific Coast is sufficient—chop it fine and mix with a small onion that has been grated or chopped very fine, and season the whole with pepper and salt. Put this in a neat mound in the center of a flat dish, place around it a circle of the small inner leaves of crisp lettuce, that have been washed and shaken dry in a towel. Take the larger leaves, pile them one on top of the other, and with a keen knife cut them across several times each way, and put them around outside the small leaves. Cutting the lettuce in this way will not bruise and wilt it as chopping would. Now for the very poetry of dressing: beat light the yelks of two eggs; add seven tablespoonfuls of good vinegar (a few drops at a time so as not to curdle the eggs), and one of sugar; mix with a little of the vinegar, two thirds of a teaspoonful of mustard, half one of salt and a quarter of pepper, and put all in a small saucepan set within another containing hot water; add butter the size of an egg, and stir constantly until the mixture thickens like very thick cream. Remove from the fire, and when cold stir in a cup of rich cream that has been whipped until just ready to turn to butter; it must be beaten longer than for Charlotte Russe. Pour this over the crab and lettuce, and garnish with nasturtium leaves and blossoms, or with cresses if the nasturtiums are not in bloom.

The following recipe for beefsteak cooked Spanish style is from the note-book of a celebrated caterer, and although a somewhat peculiar dish, is remarkably good as well as cheap:—Take a slice of round steak an inch thick, lay on a pie-plate, add a little water to baste it with, and bake for 30 minutes, take out and cover with a layer of sliced onions, and bake until the onions are tender; cover with a layer of sliced tomatoes and bake 20 minutes; sprinkle on two tablespoonfuls of grated cheese and place in the oven long enough to melt the cheese. During the baking it should be basted every 10 minutes.

In answer for a request for a recipe for pineapple pie I give the following, with this bit of unasked advice:—unless you are indifferent to the expense, wait until pineapples and eggs are cheap. Grate a pineapple, take its weight in sugar and half its weight in butter; cream the butter and beat it with the sugar and the yelks of five eggs, that have been whipped light; add a cupful of cream, the pineapple and the whites of five eggs beaten to a froth. Line pie-plates with paste and fill with this mixture, bake and eat cold.

Let anyone who is inclined to sneer at hash, try it made as below, and see if he does not find it a nice breakfast relish. Use the thin part of a cold rib roast where streaks of fat intersect the lean, and chop very fine three parts of meat with one of potatoes and a small white onion; season with salt and Cayenne pepper. Put in a frying-pan a bit of butter and a little gravy if you have it, if not, a gill of boiling water—this for a dish of hash for six persons—stir in a teaspoonful of flour wet with cold water add the hash, and stir with a broad-bladed knife until smoking hot. Trim the crust from six thin squares of toast, butter them and mound up the hash on each piece; lay around a delicately poached egg for each person, alternated with sprigs of parsley, and in the words of a charming writer on culinary subjects, "There's poetry in such a dish, and he who would decline it, 'is fit for treasons, stratagems and spoils. Let no such man be trusted.'" PALMETTO.

DOMESTIC RECIPES.

OYSTER PIE.

I would like the readers of the Rural to try the following for a delicious oyster pâté. It may be made in one large or several small pies. Line a deep dish holding about a quart and a pint, with a rich paste. It is most important that this should be good, so if you do not happen to have a well-tried recipe of your own, I give a few suggestions that will insure success. For anything approaching puff paste, never use lard or even a mixture of it. Butter, in the proportion of half a pound to a scant pound of flour, will give a very nice article of puff paste. Sift and weigh the flour and put it in an earthen bowl; sprinkle over it a teaspoonful of sugar, and stir in the yelk of a beaten egg mixed with a few teaspoonfuls of ice-water. Do this slowly, working it meanwhile with the tips of the fingers until you have a firm, smooth paste. Enough ice-water must be added for this purpose, but very gradually, lest the mass become too soft. Now roll out into an elongated square as evenly as possible, spread over it half or one-third of the butter as smoothly and evenly as possible; fold it from right to left, and repeat this process three times, the last time folding and rolling it without the addition of butter. The great secret of success in making puff paste depends upon having the oven very hot and the paste very cold, so you may put the latter on the ice or in a cold place, while you attend to the heating of the former.

Having lined your dish, fill it with stale bread, which may afterwards be used for breading, or if you have none on hand, lay in a clean folded towel. Butter the edges and fit on a neat cover of paste, pinching it down very lightly in several places. It should not require more than 15 minutes' baking; cover with a piece of paper to prevent burning. While it is in the oven, prepare the filling: put over the fire in their own liquor a quart of oysters, and just as they are beginning to simmer, skim them out quickly with a perforated ladle. In another sauce-pan, melt a lump of butter size of an egg, and stir in a heaping tablespoonful of flour, add to this, pouring slowly, a cup of boiling milk and the juice from which you have just lifted the oysters, season with salt and Cayenne pepper, add the beaten yelks of two eggs and the oysters, and when they are well heated, lift the top crust from the dish, fill and send to table. If there is too much to fill the dish, send part of the sauce to the table in a boat.

A few words will finish these somewhat prolix directions. In adding the yelks of eggs to any hot soup or sauce it is always best in order to prevent curdling, to pour a little of the hot liquid slowly into the bowl containing the beaten eggs and then to pour this gradually into the remainder. If by any mischance your dinner is kept waiting, do not fill the crust or put the oysters into the sauce until your guests or family are ready. A few seconds will suffice to reheat both oysters and crust. This recipe cannot be excelled, and I am quite sure that any of your readers who try it will give it a place among their standard recipes. MRS. L. M. C.

New York City.

WATERMELON CAKE.

One cup of white sugar, one-half cup of butter, one-half cup of sweet milk, whites of four eggs, one-half teaspoonful of soda, one of cream-of-tartar, two scant cups of flour, one-fourth cup of sour milk, two-thirds cup of pink sugar, one-fourth cup of butter, one-half teaspoon of soda, whites of two eggs, one teacup of raisins, flour enough to make rather stiff. First and second half of recipe to be made up separately, and mixed like marble cake before baking.

MOLASSES CAKE.

One cup of sugar, one of molasses, to be warmed a little, two eggs, one cup of milk, two teaspoonfuls of baking powder and four or five cups of flour.

YELLOW FILLED CAKE.

Two eggs, one cup of sugar, one-half cup of butter, two-thirds cup of sweet milk, two cups of flour, one teaspoonful of baking powder.

WHITE.

One-and-one-half cup of sugar, one-half cup of butter, two-thirds cup of sweet milk, whites of five eggs, two cups of flour, two teaspoonfuls of baking powder.

FROSTING.

One-and-a-half cup of sugar, five tablespoonfuls of water boiled to a sirup. Beat the yelks of five eggs 30 minutes, add to the sirup while boiling and stir rapidly until smooth. Flavor with vanilla.

MRS. W.'S COOKIES.

One teacupful of sugar, one-half cup of butter, two eggs, about one teaspoonful of saleratus. Mix hard enough to roll out.

AUNT RACHEL.

Worth Knowing.

THAT, as a household remedy, for children and adults, Ayer's Pills are invaluable.

THAT, in Colds, with headache, backache, coated tongue, symptoms of fever, and a constant feeling of weariness, Ayer's Pills will often effect a cure when other remedies fail.

THAT these Pills are sugar coated, perfectly safe to take, do not gripe, and contain neither calomel nor any other dangerous drug.

I have used Ayer's Cathartic Pills in my family for the past thirty-five years. For stomach or liver troubles, or any irregularity of the bowels, and in case of Colds, Ayer's Pills are unequaled. I am never without them.—Frank Tisdale, Montpelier, Vt.

Ayer's Pills,

News of the Week.

HOME NEWS.

SATURDAY, April 3, 1886.

Mr. Landrey's motion in the Dominion House of Commons to censure the Government for hanging Riel has been defeated by 94 majority—146 against 52—a very emphatic indorsement of the Government. Considerable race bitterness still exhibited. Members for the French sections, who voted against the motion, blacklisted at home..... The deficit in the Dominion income for the present year is estimated, by the Finance Minister, at $1,450,000, owing to the cost of putting down the Riel rebellion. Besides giving large land-grants, the Government advanced most of the money for building the Canada Pacific Railway, taking its own land-grants as security. This land it is now about to release, so as to enable the road to sell or otherwise raise money on it, and thus it will be able to pay $20,000,000 of its indebtedness to the Government by July 1.....American fish masters are chartering Canadian vessels to transport fishermen hired in Canada to their vessels beyond the three-mill limit. The cruiser Lansdowne has warned off a number of Yankee vessels that ventured within the "tabooed" league.....The Northern P. R. R has, at last, deposited with a St. Paul bank $1,173,383 survey fees for its lands in Dakota. After the lands have been surveyed the title will pass from the Government to the roads, and the land can be taxed. To avoid local taxes, all the land-grant railroads have for years allowed their land to remain unsurveyed and the titles to rest in the Government until the lands were actually sold. Congress and a late decision of the U. S. Supreme Court have stopped this tax-shirking trick. .,..... The inhabitants of Western Kansas claim theirs is the richest part of the State, and that the capital being hundreds of miles away, and all the State institutions along the Missouri border, their section is deprived of its due share of advantages; hence they are talking about making it a separate State..... .....Senator Sabin (Minn.) introduced a bill last Wednesday to declare forfeited to the United States all lands granted to any State or corporation to aid in the construction of railroads, that have not been earned by the construction of the roads..... .....Senator Vance (N. C.) is opposed to "official immortality" and wants the abolition of the Civil Service Commission, and "Civil Service" tenure of office. He is backed up by tens of thousands of "outs" who want to get "in," as well as by their friends, "practical politicians," "fine political workers," etc., etc. Early Civil Service rigor seems to be relaxing—just a trifle now, with a tendency to more..... ....The House Committee on Rivers and Harbors wants an appropriation of $15,164,200 for improvements in navigable waters. Some of the places to be "improved" wouldn't float a pleasure shell. The Senate is bound to make additions, to be allowed or cut down by a conference committee. Of the 15 members of the Com. on R. and H., one is from N. Y.; one from Pa.; and one from Mass.; of the other 12, five are from the West and seven from the South. The W. and S. "go in," in a big-handed way, for generous appropriations. The Mississippi claims $3,800,000; and the Missouri and Ohio, $1,200,000... Sheridan, like Logan, favors an increase of the army. "The savings on transportation bills in bringing troops from a distance to quell Indian outbreaks" would nearly pay for the increase.... .....The Pension Bill calls for $75,000,000 —$15,000,000 more than last year. The present pension outlay would be nearly doubled, if all the pension bills now before Congress were passed.....Mrs. Warner objects to the seizure of property by the sheriff, in accordance with the late judgments against her husband. Warner has disappeared with all the "portable property," and the rest is in the name of his wife—an "innocent holder"..... ....Reduction in public debt during March is estimated at $14,250,000.....A half-million-dollar hotel will soon be erected in Kansas City. Phew!.....The Western Silk Association in session, Wednesday, at Chicago, is to order an advance of 20 per cent. in manufactured silk—it is said. The American Silk Association, representing Eastern manufacturers, have formed a union with the Western men "to control the entire silk-producing industries of the country."..... ...Truly tropical rains early in the week in Alabama, Georgia, La., Tennessee, very heavy rains also in adjacent States—eight inches in two days were common in the Gulf States, and ten inches, in three. Hillsides badly "washed" and gullied; growing crops and garden truck greatly injured, or ruined in many places; rivers booming or flooding bottom lands; many mills and buildings near water-courses wrecked or engulfed or swept away; considerable loss of fences, stacked crops and live stock. Tornadoes, thunder showers, cloud bursts and local winds-storms reported. Melting snows, ice gorges and heavy rains are also booming rivers in New England, especially in Me., N. H. and Vt. Much property destroyed. The West, too, is suffering from or threatened with floods..... .....The whole surface of Lake Michigan is rising at the rate of four inches per year: surface now two-and-one-half feet higher than it was seven years ago Chicago likely to be submerged, to the exceeding great joy of St. Louis.....The Bureau of Statistics reports that the total values of our exports during the twelve months ended February 28, 1886, were $663,723,574, and during the preceeding 12 months $748,003,201, a decrease of $84,279,627. The total values of the imports for the twelve months ended February 28, 1886, were $607,711,701—and for the preceding twelve months $604,489,440, an increase of $4,222,261, a total difference of $87,501,888 between our exports and imports this year and last, against this year. Small wonder that while we imported gold from Europe last year, we are sending millions of it abroad now; nearly the whole difference is due to a decrease in our exports of agricultural produce..... ....A great fire at Key West, Fla., has burned up most of that little wooden, rock-based, sea-girt town; 4,500 inhabitants homeless—mostly "patriotic" Cuban cigar-and-cigarette makers, the principal part of the population of the broad-veranded, palm-and-palmetto-shaded place. Total loss about $1,500,000; famine staring the employment-less population grimly in the face..... .....What little chance Eads' ship-railway had ever had has been killed by the publication of his "jug-handled" concession from Mexico. The United States is to guarantee an annual income of $2,600,000; Mexico half as much. The U. S. is to pay cash; M. in 20 year bonds. "Americans" must pay freight in gold; Mexicans in silver. Mexican government vessels etc., etc., to be carried free; those of the U. S. to pay 75 per cent. of regular rates. The U. S. can't use the road at all at any time without the consent of M.; M. can size and appropriate the road in certain contingencies. In return for these "concessions" the U. S. becomes liable for $37,000,000, without any security, and all litigation must be carried on in Mexican courts!..... ....Of the Bell Telephone Company's capital of $10,000,000, only $3,000,000 are paid up: on this the dividends last year amounted to $1,500,000! The company convened at Boston the other day, and all were cheerful..... The Pan-Electric scandal is still being ventilated at Washington, and the disclosures of greed, cunning, trickery and unscrupulousness continues. Because one of these companies is as bad as the other is no reason why the public should allow itself to be oppressed or swindled by either.....General Master Workman Powderley, head-chief of the Knights of Labor, is very sick at his home in Scranton, Pa., where he called Wednesday on his way to St. Louis from his conference with Jay Gould here. He is troubled with sleeplessness, a sore chest and symptoms of typhoid fever. He has also quinsy, boils and fractured ribs. Absolute rest and no worry prescribed. He has been "winning golden opinions from all sorts and conditions of men."..... Strikes here and there all over the country are still "the order of the day." That on the "Gould railroad system" still continues stubbornly. Early in the week Master Workman Powderly, of the Knights of Labor, held an amicable conference with Jay Gould in this city, and it seemed agreed that arbitrators should be appointed to settle the matter. Orders were sent at once for resumption of work. Next day Gould declared that he had been misunderstood, and those of the men who had gone to work again "knocked off." The same thing has been repeated since then, owing to another "misunderstanding." The men refuse to return to work unless all are permitted to go back; the railroad officials will not permit the return of ringleaders or of those who have damaged property. A large number of freight trains are running on all the roads in charge of new hands. Strikers starving, exasperated and "ugly"—ready for violence to property and "scabs." Militia gone to Parsons, Kans., and Fort Worth, Texas, where the roads are blocked, armed strikers massed and serious trouble feared. The commerce and trade of the whole country are sufferiug; those of the tributary regions, of course, most severely; hopes of early settlement; fears of much bloodshed, great trouble and considerable delay..... Transcontinental rates are still being cut, passenger rates down to $6, last Wednesday, from the Mississppi to the Pacific. Freight rates still "ruinously" low; though the Union Pacific refuses to take first-class freight below $1.05 per 100 pounds, to San Francisco Other roads cut that class much lower, and all knock down rates on other classes. A settlement perhaps in May—then the Canadian Pacific will be open and claim a bite of the cherry... A bill introduced in Congress by Representative John J. O'Neil, of Missouri, Chairman of the Committee on Labor, provides for the voluntary submission of disputes between railroads engaged in interstate commerce and their employés to boards of arbitration, the members of which are to be chosen one by the employers, one by the employés, and a third by the two first chosen. These arbitrators are to have the powers and pay of United States commissioners, being empowered to subpœna witnesses, and compel them to answer under oath, and their salaries are to be paid by the Government. The bill in its present shape seems to have no compulsory features except what are included in the grant of commissioners' powers to the arbitrators. Much opposition is displayed, and many emasculating "amendments" are being pressed. Several States are also legislating with regard to arbitration between employers and employés....

After two years' trial, we unhesitatingly pronounce the Boss Zinc and Leather Collar Pad, the only durable and successful one that we have ever used. It retains its shape, is cooling, prevents chafing, and thereby keeps the horses' necks clean and healthy. Hiram G. Dodge & Sons, Wood & Coal Dealers, Madison, Wis.—*Adv.*

AGRICULTURAL NEWS.

SATURDAY, April 3, 1886.

The Ohio State Board of Agriculture asks from the Legislature $24,000 to help complete the new fair grounds, and is likely to get it.. .....Distinguished European arrivals in Boston from Glasgow last Wednesday: 9 Clydesdales, 13 Shetlands, 21 Aberdeen-Angus, and "the prize Hereford of all the world,".... Thursday the Ohio Wool Growers' Association argued before the Ways and Means Committee against any decrease in the tariff on wool.. ..The railroad troubles of the Southwest and the change in the freight scedule from Chicago so affected the supply of dressed beef sent to Philadelphia, that the price has been raised from $1 to $1.50 per 100 pounds.....In spite of oleomargarine, it is estimated that there are 1,516,410 milch cows in the State of New York, which produced the following quantities and values in 1885, viz.: 127,541,820 pounds of butter, worth $31,885,455; 136,223,664 pounds of cheese, worth $14,984,603; and 927,083,522 pounds of milk not counted for butter and cheese, valued at $11,563,531, in all $58,433,889.....There are 495,000 fewer sheep reported for taxation in 1885 in Kansas than in 1884.....Gov. Pattison, of Pa., has named April 16 as Arbor Day, the same as last year, although then the frost was still in the ground in most of the northern parts of the State.

Notice—All persons who have bought or intend to buy my 82 to 85-day Seed Corn. I offer $10 cash to one who raises most corn from one pound of seed, and $20 on best acre. This corn took 1st premium out of 60 varieties tested in Ohio. W. M. Woodworth, Irwin, Ohio.—*Adv.*

Crops & Markets.

SATURDAY, April 3, 1886.

The West is the great hog-packing section of the country, the number packed each year elsewhere being comparatively small. The packing year is divided into two sections—the summer, from March 1 to Nov. 1; and the winter, from November 1 to March 1. Summer packing first acquired importance in 1872, when 505,000 hogs were packed. Since then the business in the eight months has steadily increased, as may be seen by the following table, for which, with most of the other information here given, we are indebted to the careful compilations of the Cincinnati Price-Current:

1885	4,965,000	1878	3,878,600
1884	4,058,000	1877	2,543,000
1883	3,781,000	1876	2,307,000
1882	3,210,000	1875	1,262,000
1881	4,803,000	1874	1,200,000
1880	5,322,000	1873	1,063,000
1879	4,051,000	1872	505,000

Last summer there was a gain in the number packed each month except August, the heaviest inrush of hogs being in October, as growers were frightened by the prevalence of hog cholera, especially in Mo., Kans. and Neb. The approximate number of hogs packed in the 12 great Western packing States was:—

	1885.	1884.	1883.	1882.
March	375,000	285,000	200,000	330,000
April	530,000	345,000	310,000	470,000
May	765,000	690,000	585,000	590,000
June	870,000	730,000	640,000	485,000
July	640,000	510,000	480,000	525,000
August	675,000	490,000	420,000	275,000
September	440,000	425,000	425,000	265,000
October	870,000	680,000	630,000	470,000

Here are the lowest and highest prices for the summer months at Chicago, packers mostly buying at 20 to 35 cents per 100 pounds below the extreme range:—

	1885.	1884.	1883.	1882.	1881.
March	$4 00	$5 10	$6 40	$5 90	$5 10
	5 05	7 60	8 10	7 65	6 75
April	4 20	4 75	6 85	6 35	5 40
	4 85	7 10	8 15	7 80	6 65
May	3 50	4 90	6 65	6 90	5 45
	4 55	6 20	7 90	8 60	6 60
June	3 65	4 50	5 70	7 00	6 35
	4 35	5 90	7 25	8 75	6 30
July	3 80	4 60	4 70	7 40	5 70
	5 30	5 85	6 60	9 00	7 10
August	3 75	4 50	4 50	7 40	5 90
	5 35	6 90	6 50	9 50	7 05
September	3 40	3 50	4 35	7 50	6 00
	4 80	6 90	6 00	9 30	7 45
October	3 20	3 50	4 00	6 00	5 75
	4 35	5 90	5 40	9 25	7 40

The total number of hogs packed during the Winter is equivalent to 6,121,037 of the average weight of the Winter of 1884–85, making the decrease equal to 339,203 hogs, or 5¼ per cent. The following table of the number packed in the 12 States in the four winter months, with comparisons, is interesting and instructive.

States.	Number of Hogs Packed.		Average Gross Wt.		Cost, gross.	
	1885-6	1884-5	1885-6	1884-5	1885-6	1884-5
Ohio	499,095	559,003	265.16	267.08	$3 80	$4 43
Indiana	380,621	406,655	245.19	248.17	3 72	4 26
Illinois	2,532,139	2,526,743	263.01	277.11	3 70	4 37
Iowa	719,348	760,593	251.33	268.72	3 48	4 08
Missouri	1,180,139	1,198,092	256.47	262.41	3 66	4 21
Kansas	9,200	19,849	272.65	288.36	3 16	4 02
Nebraska	195,391	242,240	284.17	272.09	3 53	4 08
Minnesota	64,000	51,700	287.28	298.40	3 36	4 17
Wisconsin	392,240	397,393	244.82	258.43	3 67	4 23
Michigan	91,065	70,579	262.71	268.45	3 66	4 28
Kentucky	138,121	182,812	258.14	264.18	3 73	4 42
Tennessee	30,468	27,880	253.01	255.05	3 67	4 32
Miscel'ous	66,566	49,842	242.34	245.49	3 61	4 18
Totals, &c.	6,298,566	6,460,240	258.98	266.51	$3 66	$4 29

The total average yield of lard was 35.22 against 36.02 last year.

The following table shows most of the packing is done at Chicago and half-a-dozen other chief centers, that done at other places in the 12 States (clubbed together opposite "Interior") being comparatively small. The ratio is about the same for summer packing:

	Number of Hogs.	
Cities.	1885-6.	1884-5.
Chicago	2,396,052	2,368,217
Kansas City	656,109	606,787
St. Louis	369,130	442,087
Milwaukee	343,423	336,645
Cincinnati	332,696	385,435
Indianapolis	290,700	316,971
Louisville	122,261	164,912
Totals, etc	4,507,171	4,621,054
Interior	1,791,824	1,839,186
All points	6,298,995	6,460,240

The great rush of hogs in October lessened the amount of winter packing.

The January report of the Department of Agriculture assigns 28,280,949 hogs to the 12 "packing States," against 28,680,565 at the same time last year. The relative number of hogs in the several States reported, by percentages, is as follows, compared with 1884:

Ohio 99, Indiana 99, Illinois 97, Iowa 101, Missouri 99, Kansas 103, Nebraska 102, Minnesota 102, Wisconsin 99, Michigan 99, Tennessee 105.

The estimate of supply made by the Price Current from a multitude of reports, after March 1, is as follows: Ohio, 93; Indiana, 97; Illinois, 93; Iowa, 90; Missouri, 82; Kansas, 77; Nebraska, 80; Minnesota, 90; Wisconsin, 80; Michigan, 100; Kentucky, 95; Tennessee, 98. Applying these averages to the relative importance which each State maintains in the basis of supply, the general average is 89, or 11 per cent. decrease, in number of hogs, compared with last year—which would mean something over half a million in number. These exhibits indicate the larger decrease to be west of the Mississippi River—the average for Iowa, Missouri, Kansas and Nebraska being 84, and for the other States 94.

Editor Murray (whose forecasts generally approximate facts) is convinced that, in spite of these figures compiled from his reports, the chances favor a supply of hogs available for the coming Summer fully equal to last year's number, especially if growers should, later in the season see reasons for holding back their stock for November or later packing. Since March 1, the number of hogs sold is somewhat larger than in the corresponding period last year.

No Safer Remedy can be had for Coughs and Colds, or any trouble of the Throat, than *"Brown's Bronchial Troches."* Price 25 cts. *Sold only in boxes.—Adv.*

MARKETS BY TELEGRAPH.

SATURDAY, April 3, 1886.

Chicago.—Compared with cash prices a week ago, "regular" wheat is unchanged; No. 2 Spring, a shade higher. Corn, ½c. higher. Oats, 1⅝c. higher. Rye, ½c. lower. Pork, 50c. lower.

Wheat.—Quiet; sales ranged: April, 75¾@76¾c; May, 80¾@81¾c; June, 82¾@83¾c.; No. 2 Spring, 76@78¾c. Corn quiet, Cash, 34¾@36¼c.; April, 35¾@34¾c.; May, 38⅛@38¾c.; June, 33⅛@33¾c. Oats—Sales ranged: Cash, 29@29¼c; April 26¼c.; May, 30¼@30¾c. Rye.—No. 2 56c. Barley—No 2, at 60c. Mess Pork.—Cash, $9 25@9 30; May, at $9 25@9 35; June at $9 32½@9 40. Lard.—Quiet and steady; sales ranged: Cash, at $5 87½@5 90; May, $5 90@5 95; June, $6 00@6 02½. Bulk-meats.—Shoulders, $3 85@3 90; Short rib sides, at $5 20@5 22½; Short Clear sides, at $5 90@5 95. Cattle—Market steady. Shipping steers, $4 00@5 75; stockers and feeders, $3 00@4 50; cows, bulls and mixed, $2@3 90; bulk, $3 00@3 50. Hogs.—Rough and mixed, $3 60@4 30; packing and shipping, $4 20@4 45; light $3 80@4 25; skips, $2 90@3 70. Sheep.—Natives, $3 00@5 85; Western, $4 00@4 60; lambs, $4 85@6 12; Texans, $2 50@4 25.

St. Louis.—Compared with cash prices a week ago, No. 2 Red wheat is ½c. higher. Corn, ¾c. lower. Oats, ¾c. higher. Rye steady. Butter, from 1c. to 2c. higher. Eggs, from 1c, to 1½c. lower. Pork, 25c. lower.

Wheat.—Fairly active but weak; sales ranged; No. 2 Red, Cash at 88¼c; May, at 89@89½c.; June, at 89½@90c; July, at 85¾@86c. Corn.—No. 2 mixed at 33½@33¼c; April, at 33¼@33¾c; May, at 34¼@34¼c; mixed, Cash, at 30¼@30¾c; April, at 29c. bid; May, at June, at 31¾@34¾c. Oats—Dull and easy; No. 2 30c. asked. Rye—Steady, at 60c. Butter—Steady, and firm; creamery, is quoted at 27@32c; dairy, 18@23c. Eggs—Easy at 9c. Flaxseed—Steady at $1 09. Wool.—Quiet and steady; washed at 26@31c.; unwashed at 13@32c; Texas wool, at 9@22c. Pork—Steady at $10. Lard.—Firm at 5.80c. Bulk Meats.—Loose lots, long Clear, at $5 60; Short Rib, at $5 35; Short Clear, $5 20. Bacon—Firm; long clear at 5.50c; short ribs, 5.80@5.82½c; short clear, 5.87½@5.95c. Hams, firm at 8.50@11c. Cattle—Market dull; fair to choice native shipping steers, at $3 40@4 75; butcher steers, at $4 35@4 65; cows and heifers, at $2 50@3 75; stockers and feeders, $4 00@4 25. Hogs.—Light, $3 85@4 00; packing, $3 50@4 00; heavy, $4 15@4 25, Sheep.—Market dull at $3 75@5 50.

Boston.—Corn.—Steamer Yellow, at 50@50½c; do. mixed at 50c. per bushel. Oats.—Quiet, No. 2 white, in the elevators, at 42@42½c.; and No. 3 white at 41@41½c. per bushel, and barley oats range at 44@44½c. ₱ bushel. Small sales of Rye at 67@68c, ₱ bushel. Sales of bran at $17 50 for Spring and $18 00 for Winter; fine feed and middlings at $17 00@20 00, and cotton seed meal at $23 25 on spot and $22 25 per ton to arrive. ECLIPSE
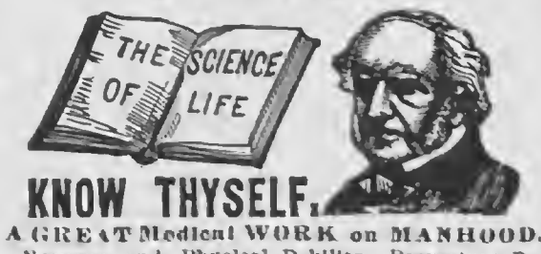
POST HOLE DIGGER.
The Greatest LABOR-SAVING tool ever invented for digging holes in the ground. This machine works on a new principle, and is unlike anything in the market. It is neither an Auger nor a Plunger, but is driven in the ground with a driving rod, which works in a pipe similar to a telescope. We claim for this tool:
1st. That one man can dig from two to three hundred holes two feet in ordinary ground in one day.
2nd. That it will dig holes any size or depth required.
3d. That it will work successfully in very hard or rough ground where other diggers and augers will not work at all.
4th. You stand up straight while using it, consequently no back-breaking work is required.
It will pay you to send for descriptive circulars and prices to COLE & FLEMING, Manufacturers, Springfield, O.

THE SCIENCE OF LIFE. ONLY $1.
BY MAIL POSTPAID.



KNOW THYSELF.
A GREAT Medical WORK on MANHOOD.
Nervous and Physical Debility, Premature Decline in man. A book for every man, young, middle aged and old. It contains 125 prescriptions for all acute and chronic diseases, each one of which is invaluable. So found by the author, whose experience for 23 years in such has probably never before fell to the lot of any physician. 300 pages, bound in beautiful French muslin, embossed covers, full gilt, guaranteed to be a finer work in every sense—mechanical, literary and professional—than any other work sold in this country for $2.50, or the money will be refunded in every instance. Price only $1.00 by mail, postpaid. Illustrated sample 6 cents. Send now. Gold medal awarded the author by the National Medical Association, to the officers of which he refers.
The Science of Life should be read by the young for instruction, and by the afflicted for relief. It will benefit all.—*London Lancet.*
There is no member of society to whom The Science of Life will not be useful, whether youth, parent, guardian, instructor or clergyman.—*Argonaut.*
Address the Peabody Medical Institute, or Dr. W. H. Parker, No. 4 Bulfinch Street, Boston, Mass., who may be consulted on all diseases requiring skill and experience. Chronic and obstinate diseases that have baffled the skill of all other physicians a specialty. Such HEAL treated successfully without an instance of failure. THYSELF

I WILL INSURE YOUR HOGS!
DR. JOS. HAAS'
HOG AND POULTRY REMEDY

[None Genuine without this Trade Mark.]
Is the only Practical Preventive of the so-called Swine Plague.
It has never been surpassed as an increaser of pork and general system tonic. Aiding digestion, stimulating the biliary organs, preventing torpor and engorgement of the liver, and regulating the bowels, it removes and prevents the formation of disease germs, and preserves to the well bred hog his natural constitution. Where it has been fed to such animals in the prescribed quantities, and other directions faithfully observed, it has proved a thorough preventive against swine disease.
AS AN EVIDENCE OF FAITH
in my remedy I make the following offer:
1. I will insure herds of swine of not less than one hundred in number against disease, at a small fee per head, provided they are fed my remedy under my direction, and prove upon examination prior to contract that they are in a healthy condition, and are neither in-bred, close-bred nor the progeny of such.
1. I will forfeit $100.00 to any breeder whose offer to examine for insurance I decline, provided he forwards remittance to cover my expenses to and from location of hogs, or I fail to prove to the satisfaction of any disinterested party, that failure to respond to invitation is caused by prior engagement or by matters of at least equal importance.
2. I will forfeit $500.00 if I decline upon examination to insure such herds, if my judgment as to their condition of health is overborne by the result of an examination made by at least two properly qualified and graduated veterinary surgeons.
Facts are Better than Assertions.
Please read the following testimony:
GIBSONTON P. O., PA., Feb. 2, 1885.
Dr. Jos. Haas—Dear Sir: About a year ago our herd here numbered about 2,700 head. Disease broke out, and no remedy we had would arrest the trouble. Our losses were heavy and we had to give up feeding entirely for about two months. We then heard of your remedy and bought a trial lot, and began feeding again. We have used it constantly ever since. We have since April last received about 5,000 head of hogs into our herd and have not had a single death from swine disease. This is our experience. Our opinion is that the remedy has prevented disease, and we would not think of being without it. As an aid in fattening pork, we believe it to be good. On this point, however, we have not made an actual test, *as we would not risk feeding a pen of hogs without the Remedy.*
Yours very truly, WHITE & CO.
[N. B.—While & Co., since writing the above letter, have purchased $450 worth of the remedy.]
The remedy can be procured of all Druggists, or from my laboratory. Prices, $2.50, $1.25 and 50 cts. per package. 25 lb. cans, $12.50.

For the Young.

BE careful about taking cold this damp and muddy weather. Spring is an unsettled season, with many sudden changes of temperature. It is a battle ground where the heat of Summer and the cold of Winter seem to fight. One day will be warm and pleasant, and the next will be cold and blustering. Keep on your warm clothing. Don't get angry because mother wants you to do this. She knows more about it than you do. Keep your feet dry. Be sure and wear your rubbers whenever the ground is damp. Let the boys keep their boots well greased.

Some of the boys may think they are a little too smart and manly to plant and tend flowers. Some boys seem to think that the growing of flowers is regular girl's work and not suited to men. They make a great mistake when they so decide. The great trouble with most of these men who seem so hard and stern and make work so monotonous is that they have never cultivated any of the finer and better feelings. They leave all such work to the "women folks" and then growl because their wives and daughters want flowers and other pretty things. I want my boys to make men of a different stamp. We want all the flowers and pretty places we can have. Never make fun of the girls for working in the flower garden. You will show yourself more of a man by helping them with the harder part of the work, or even tending a few flowers yourself. Some boys that I know have no sisters. Mother would like to have a flower-bed in front of the house, but father is too busy, sometimes, to do the work. Now boys, put yourselves on mother's side and see that the work is done this Spring. With a little extra work you can make the place so beautiful that father will notice it and wish he had done the work himself.

KANSAS STATE REFORM SCHOOL.

DEAR UNCLE MARK: Do not from the heading of my letter imagine me enclosed by high walls and surrounded by vicious youngsters; but on the contrary, in one of the brightest, happiest homes in the whole State of Kansas. As yet, the State supports no Reform School for girls, and the building is all too small even for boys alone. The present number of inmates is a little above 100, but as many more boys in the State would be here but for lack of accommodation. A few years ago I was utterly ignorant of the workings of reform schools, and had but a vague idea of them as something cruel and dreadful. Had I known even a year ago that I would eventually make my home in such an institution, I should have considered my days of happiness at an end, but not so has it proved. It is the aim of the superintendent and matron of this school to make a home for every boy under their charge while the employés are made to feel in every way that they are at home and may enjoy home privileges.

No strangers could come to our house without feeling at once that the work was done for the boys by some one who had an interest and care for them.

I cannot express what I would better than in these words of our superintendent: "We endeavor to make all our surroundings homelike and our discipline not coercion, but practicing obedience to law and duty until it becomes a fixed principle. To train the mind and body—in short, to make men of those who have erred is the object of the Reform School."

A majority of the boys sent here have had no home life of the right kind, and the lessons they learn in kindness and good manners will be of inestimable value to them, to say nothing of the practical education they receive in all the common branches. Just now a line of 50 boys passed out, and I can hear them laughing and shouting, enjoying their recess exactly as other boys do.

The arrangement of the institution is such that each boy attends school half of the day and works the other half.

In time we will have shops where the boys will work at their trades, but now their work is all about the house or farm, and we are as one large family, each member with special duties. Many of the boys working under ladies, are as neat and apt at house duties as girls of their age would be.

The Christmas holiday was made full of delights for all, and though I've spent a great many jolly Christmases, never one came up to the standard of this last. Every boy expressed himself, as having had the best time of his whole life, and if you could have seen the laurel and mottoes, candies and nuts, heard the music and entered into the spirit of the day, you could understand it all.

The farm contains 160 acres, through which Soldier's Creek flows in unaccountable turns and twists. New buildings are being erected, and within a year we will see great changes for the better. From the front of our building we have a good view of Topeka, two or three miles to the South, though the country is so level we can see but a small part of the city. The State house though incomplete, is the most prominent building, and may be plainly seen from our front door.

I really supposed when I left Ohio that I was coming West but it is all "Out West" here as it was at home, and the people are so like those I have always known, and so many are from Ohio, I cannot realize that I have not some-how brought the good old Buckeye State right along with me.

We have had a terrible Winter, as who has not? but Topeka and vicinity has not suffered. The poor and inexperienced on the prairies have had everything to bear, and hundreds, it is supposed, have frozen to death, while others have lost great numbers of cattle. After all, it is not to be wondered that we talk so much in our daily life of the weather, for it is a powerful agent in the universe.

Very truly yours, BERTHA KNOWLTON.

[We are glad to know about those boys. We all hope they will make good men. There is no reason why they should not, with such good influences around them. One great secret of success in life is the art of learning how to obey. No man or woman has any right to expect obedience from others, till he or she can obey the right. The easiest and best time to learn how to "mind" is when we are boys and girls. Remember that. Those who do not think so will find it out to their sorrow.—U. M.]

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK: I will drop you a line, as the boy said when he went fishing. I am nine years old, and I live on a farm. We have five horses, eight head of cattle and many hogs and chickens. I like the horse best. I often ride our horses over the prairie. I tried to have a little garden last Summer, but I failed. The chickens hoed it too much. Pa is going to fence the yard, so I want to make a garden, where we can try some of the RURAL seeds. From your nephew,

CHARLES W. PRACOP.

[You dropped the line and caught a place "in print." I hope the other boy did as well. Fence out the chickens by all means. They have less business than weeds in the garden.—U. M.]

DEAR UNCLE MARK: I am a little girl 12 years old. I have never written a letter before, so I thought I would say a word or two for you and your nieces. We live on a farm of 33 acres. We have two cows and one Arabian colt that will be 30 years old next Fall. For pets, I have three cats. I have a flower bed, but not a very large one. I hope Cousin Annie Roberts will write a longer letter next time. I have five sisters who are married. I have two brothers; the youngest is 21 years old. I have 14 nieces and nephews. My youngest brother has a yoke of oxen. My grandpa lives with us; he is 83 years old.

Your niece, EMILY BLANCHE RHODES.

[That colt has seen considerable history. I hope your flower bed will be larger this year. —U. M.]

Letters have been received from George Greethurst; Ralph E. Swartz; Abram H. Prince; Hetta M. Hauser; Pressa Maud; Frankie Willoughby; J. G. Campbell; May Greethurst; William Heaton; Mattie E. Heaton; John E. Cory; Ada May Cory; Lizzie B. Lynn.

Miscellaneous Advertising.

THE UNITED STATES MAIL.

ON the end of a business house on Market street, Philadelphia, adjoining the new United States Post Office, there is an exceedingly suggestive picture, in two panels, giving the old and the new ways of delivering the United States mails.

The one indicates a very little to do, with leisure in which to do it. The other, much to do, for which haste is required. To one who is familiar with the growth of the postal service, this picture starts a very interesting train of thoughts. One of these brings back the old stage-coach and the horseback rider, and the fact that between these two the work of distributing the mails of the country was divided. Over against these come to mind the facilities of the present day, with the high rate of postage reduced to figures hardly more than nominal by comparison. From the external mechanical changes the mind turns to the contents of the letters both of the old time and the new.

One of the most engrossing topics in which people everywhere always have had, and always will have a common interest is the matter of personal health.

A large class of writers seeing in the public press the statement of cures by the Compound Oxygen Treatment, which has been so widely advertised, at once write to the references for fuller particulars. The patients who have been cured are so numerous, and they have so freely spoken of their restored health, that the divided task has been to many a light one. But one lady in Maine writes us that she has answered letters from nearly every State, and from some sections very many.

Hon. William D. Kelley, member of Congress, answers a very large number, saying that he owes the good health he has enjoyed for 10 years to the treatment. Hon. William Penn Nixon, Editor of the Chicago Inter-Ocean, receives hundreds of inquiries as to the genuineness of his testimonials, and as to the permanence of results. These he answers through the mail, as it was through a letter received from a relative in Boston that he learned first of the value of the remedy. Once in a while one too hard pressed finds it necessary to ask relief from part of the task, as in the case of a prominent member of the bar of Topeka, Kansas, Hon. H. P. Vrooman, whose title came through service in the courts for a term as judge. He is also prominent in temperance work, being Chairman of the State Executive Committee of the Prohibition Party of Kansas. In one of his letters he says, "I have been interrupted about 20 times since commencing writing." This brief statement gives some idea of the value of his time. The reason for his being called upon on this subject, and letters written to him, is found in a letter to Doctors Starkey & Palen, June 27, 1882, telling of the benefits his wife had received from their Compound Oxygen Treatment. We quote exactly: "In the interest of suffering humanity, I send you for publication an account of the *almost miraculous cure* which your Compound Oxygen performed in the case of my wife. Her condition was a very peculiar one. She had a complication of diseases, dyspepsia, torpid liver, or liver complaint, as her physicians have always called it, and general nervous prostration.

"If you will refer to my description of her case, when I made the first order for your Treatment, in December, 1877, you will see that she was suffering from severe attacks of colic and vomiting. These attacks first came once in two or three months, when she would vomit herself almost to death's door, and until she would raise a large amount of green bile. When her stomach was relieved from this she would become better at once. But as soon as a certain amount of bile would again accumulate, there would be another attack of colic and vomiting. Each time the attacks came at shorter intervals, and were more severe, until she became so weak and exhausted that *we are sure she could not have lived many days longer, had not your Oxygen Treatment come just as it did and saved her*, for the colic and vomiting had become almost perpetual, *and her strength and life were nearly exhausted.*

"*We could see a change in her condition from the first inhalation*, for she never had so severe an attack of colic afterward, and had more strength to endure the pain and retching. She continued to gain steadily, and for the past four years has had no severe attacks. If she is threatened with one, she takes an inhalation or two, and so escapes any severe paroxysms.

"We have used in all nearly five Home Treatments in four years. One of our boys, fourteen years of age, had an attack of inflammation of the bowels, which left him in a very bad condition. The Treatment did him nearly, if not quite, as much good as it did Mrs. Vrooman.

"I think it but right that we should make known to others what Compound Oxygen has done for us and therefore send you this statement for publication."

Such a statement of necessity attracted wide attention, especially among invalids, who naturally wanted particulars. These, Judge Vrooman has in all cases cheerfully given, so far as his time would permit. This he has continued to do for nearly four years, to the gratification of all who need such aid. At the same time his business engagements have made it desirable that a portion of the time thus occupied might be saved. This wish he expresses in a letter, dated February 24th, 1883. It is as follows:

"Since I sent you my testimonial, which you published in June, 1882, I have received scores of letters from all parts of the United States asking almost all kinds of questions about the Oxygen, etc.; but the main thing most of them wished to know was whether I do really exist, or whether I am a mere myth, and you only humbugging the people with fictitious names for the purpose of deceiving them.

"And now I wish to say to the public further (if you will publish it), to save my answering so many letters, that my wife has not been compelled to take any more treatment for nearly five years, since which time her health has been constantly improving, and she weighs more than she ever has before, and she has borne a fine, healthy boy, now almost four years old, who, of course, is smart, he being the seventh son.

"I impart this information to show the public that Compound Oxygen is not merely a temporary relief, but that it will permanently cure and give new life and vitality to the whole system; and if any are still solicitous to know whether I am or not, I will say in the language of Daniel Webster, 'I still live,' and may be found with my law sign still out at 155 Kansas Av., Topeka, Kansas.

"I hope what I have said may remove some doubts concerning the permanency of the cures performed by Compound Oxygen, and that afflicted ones may not delay too long in testing its efficacy."

The request that Judge Vrooman makes that we print his statement, we cheerfully comply with, and agree with his thought that what he has said should remove some doubts. What he has written to patients, has undoubtedly helped many to accept the evidence so freely and abundantly given of the curative power of Compound Oxygen. There are others coming forward to divide the task with him, and a very interesting letter just at hand, giving in one report the record of results in three cases, one thousand miles apart, will serve to show how this relief is coming. The writer, Rev. Isaac Leonard, of Sperry, Iowa, says:

"I have been able to labor in my old field beyond all my expectations. Some Sabbaths have four services, and some weeks preaching every evening.

"My old friends express their surprise that I appear so young and vigorous. For this I am largely indebted to your Compound Oxygen Treatment. My nephew, James L. Leonard, of Iona, N. J., writes me that he has been able to accomplish more the past season than for four years past, all owing to the Compound Oxygen.

"My sister, Mrs. Mary S. Leonard, has gone to Lake Worth, Fla., at the urgency of her physician. She writes me that she discontinued the Compound Oxygen Treatment on arriving there, but that she became so nervous that she could not sleep, and became so miserable that she hardly knew what she was doing. She then resumed the treatment, and in one week was quite comfortable again. I see many that need the Compound Oxygen, and am not slow in recommending it. You are at liberty to use my letter as you desire, with the hope that others may derive the same benefits that my friends and I have received from the use of the Compound Oxygen Treatment.

"P S.—Two of my friends whose address I enclose, have applied to me for your address; one in the State of Indiana, and one in Burlington, Iowa. They want to see your Treatise. Please respond."

These letters show the widespread interest in this method of treatment for diseases, and in the vivid light they throw on the freedom of communication between different parts of the country, give emphasis to the thought of how great an institution is our United States mail.

A Treatise of nearly two hundred pages, entitled "Compound Oxygen," its mode of action and results, giving full and interesting information, is mailed free to every applicant by DRS. STARKEY & PALEN, 1529 Arch St., Philadelphia, Pa.

PILES. Instant relief. Final cure in 10 days, and never returns. No purge, no salve, no suppository. Sufferers will learn of a simple remedy, free, by addressing C. J. MASON, 78 Nassau Street, N. Y.

CARDS! 60 Fancy Pictures and 25 Elegant Cards in Gilt Edge, Silk Fringe, Hidden Name, &c. 1 Souvenir, 1 850 Prize Puzzle, and 8 Parlor Games, all for 10 cts. Game of Authors, 10c. IVY CARD CO., Clintonville, Ct.

300 FOR 10 C. GAMES, Puzzles, Parlor Magic, Conundrums, Songs, Album Quotations, Embroidery Designs, and pack of Name Cards, Gilt Edge, Silk Fringe, Hidden Name. TODD CARD CO., Clintonville, Ct.

CHEAPEST and BEST. Prices REDUCED. HOLMAN'S NEW **PARALEL BIBLES!** Over 2,000 pages. *Fully Illustrated.* Agents Wanted. Circulars free. A. J. HOLMAN & CO., Phila.

WRITTEN CARDS. 13 cards, with your name elegantly written in various combinations, 25c. G. S. FOSMIRE, Meadville, Mo.

IT PAYS to sell our Rubber Printing Stamps. Samples free. J. M. Mitten & Co., Cleveland, O

100 New Scrap Pictures and Agents' Samples for 1886, 5 cents. S. M. FOOTE, Northford, Conn.
